Houses in Multiple Occupation (HMO)

Free advice and guidance for landlords, managing agents and tenants
What is an HMO?

The Housing Act 2004 defines your property as an HMO if it meets any of the following criteria:

1. A house or flat that is let to three or more unrelated households, who share a kitchen, bathroom, or toilet.

2. A building which has been converted entirely into self contained flats, and that conversion did not meet the standards of the 1991 Building Regulations, where more than 1/3 of the flats are let on short-term tenancies.

3. The property must be the tenant’s main home or principal address. Properties let to migrant workers or students will be treated as their only home.

It is important to remember that this is not an exhaustive list. If you would like advice or help to decide whether your property, or a property that you manage, is an HMO, please contact us using the telephone or email details given on the back page.

A copy of The Regulations are available on the council’s website.

We aim to make sure that all residents living in Dacorum have a home that provides a safe and healthy environment, that is free from any hazards that have the potential to pose a health and safety risk to any occupier or visitor.

The Management of HMOs

The Management of Houses in Multiple Occupation (England) Regulations 2006 impose duties on a person managing an HMO in respect of:

1. The provision of appropriate information for all occupiers, for example: ensuring signs displaying the contact details of the landlord are made available to each household in the HMO. Such details should be clearly displayed in a prominent position in the HMO.

2. Ensuring the HMO has adequate safety measures, for example, relating to fire precautions and appropriate methods of fire detection where necessary. The manager must ensure that all means of escape from fire in the HMO are kept free from obstruction, and maintained in good order and repair. The person responsible for the management of the property must ensure that any fire fighting equipment and fire alarms are maintained and in good working order.

3. The person responsible for the management of the property must maintain the property in a reasonable condition. For example, all fixtures, fittings and appliances, lighting in communal areas, windows, doors and gardens, need to be maintained in good order and repair.

4. The person responsible for the management of the property must ensure the provision and maintenance of gas, and/or electrical supplies, and all fire system installations, and obtain the relevant safety certificates.

For further advice on the requirements of the Management of Houses in Multiple Occupation (England) Regulations 2006 please contact us using the telephone or email details given on the back page.

A copy of The Regulations are available on the council’s website.
The Housing Health and Safety Rating System (HHSRS)

All properties, including HMOs are subject to the HHSRS. HHSRS is a comprehensive risk assessment tool used to assess potential risks to the health and safety of occupants in residential properties in England and Wales. It is used to make sure that housing standards are met.

The HHSRS allows for the assessment of all the main housing related hazards and places emphasis directly on the risks to health and safety.

There are 29 hazards that can be taken into consideration including:

- Fire Safety
- Damp and Mould
- Excess Cold
- Electrical Safety
- Falls on Stairs
- Security
- Overcrowding

There are also other requirement levels for basic amenities for HMOs. These are shown on our website at: www.dacorum.gov.uk/property-conditions

For more information, please see our website.
Outline requirements for fire safety

Fire Risk Assessment

A suitable and sufficient Fire Risk Assessment should be carried out for a House of Multiple Occupation (HMO). A fire risk assessment will help you to identify, and deal with, the fire hazards and risks which your tenants could be exposed to.

The Fire Risk Assessment must be specific to the property. It should be recorded, and include the following:

1. Identify the hazards within the premises.
2. Identify all persons who reside or may resort to the premises and any persons who may be particularly at risk, for example; young persons, elderly or those with specific requirements.
3. Evaluate the level of risk in the premises and remove or reduce any fire hazards where possible, and reduce any risks you have identified.
4. Record your significant findings and any actions you have taken, for example; an action plan to complete any works/deficiencies in a given time frame and the necessary control measures in place.

Arrange to review your Fire Risk Assessment, (we recommend every 12 months) and if you suspect it is no longer valid or there are any significant changes in your premises, (for example; structural alterations or new occupiers) then you should arrange a new assessment.

The following requirements are also illustrated with example property plans on pages 6 and 7.

DETECTION/WARNING

PLAN 1: A system of mains powered interlinked automatic smoke and heat detectors to form a Grade D LD2 system in accordance with BS 5839 Part 6 (or equivalent). System to incorporate interlinked smoke alarms with integral battery back-up throughout the escape route. Interlinked smoke alarms with integral battery back-up in each bedroom, communal living room, and cellar. Interlinked heat alarms with integral battery back-up in communal kitchens.

PLAN 2: A system of mains powered interlinked automatic smoke and heat detectors to form a Grade D LD2 system in accordance with BS 5839 Part 6 (or equivalent). System to incorporate interlinked smoke alarms with integral battery back-up throughout the escape route, any communal living room, and cellar. Interlinked heat alarms with integral battery back-up in each bedroom containing cooking facilities.

PLAN 3: A system of mains powered interlinked automatic smoke and heat detectors to form a Grade A LD2 system in accordance with BS 5839 Part 6 (or equivalent). System to incorporate interlinked smoke alarms with integral battery back-up throughout the escape route, in each bedroom, communal living room and cellar. Interlinked heat alarms with integral battery back-up in communal kitchens.

PLAN 4: A system of mains powered interlinked automatic smoke and heat detectors to form a Grade A LD2 system in accordance with BS 5839 Part 6 (or equivalent). System to incorporate interlinked smoke alarms with integral battery back-up throughout the escape route, any communal living room, and cellar. Interlinked heat alarms with integral battery back-up in each bedroom containing cooking facilities. Additional non-interlinked smoke alarms with integral battery back-up in each bedroom. It is recommended that these have a hush facility.
CONTROL PANEL
PLAN 1 and 2: Not required
PLAN 3 and 4: Must conform to BS EN 54: Part 2. Must be located in an easily accessible position within the escape route.

CALL POINTS
PLAN 1 and 2: Not required
PLAN 3 and 4: Manual break glass points should be installed in numbers and positions determined by fire risk assessment. At least one should be installed close to the final exit of the escape route.

FOR ALL HMOs
EMERGENCY LIGHTING
PLAN 1, 2, 3 and 4: Conventional lighting is required throughout the escape route. Emergency lighting may be appropriate if the route is complex or there is no effective borrowed light. The requirement for, and the degree of emergency lighting, will depend on the design of the property and the location of the escape route, and form part of the overall Fire Risk Assessment. Where considered necessary it must be designed and installed in accordance with BS 5266 Part 1 (or equivalent).

ESCAPE ROUTE
PLAN 1, 2, 3 and 4: The escape route should allow occupants from all parts of the building to reach a place of safety outside without passing through a higher fire risk area. The route should be kept free of obstructions and combustible materials at all times, and the walls and ceilings should be free of flammable materials such as polystyrene ceiling tiles and heavy flock wall paper. At least 30 minute fire resistance should be provided to the route as indicated by red on the accompanying plan. There is no requirement for additional fire separation between rooms, but the walls and floors should be of sound traditional construction.

FIRE DOORS
PLAN 1, 2, 3 and 4: A fire door of at least 30 minute fire resistance, with cold smoke seals, intumescent strips and self-closers, must be installed in each doorway leading onto the escape route, except bathrooms and WC’s (unless they contain a fire risk such as a boiler).

SECURITY OF DOORS
PLAN 1, 2, 3 and 4: Security devices on bedrooms and final exit doors must be capable of being opened from the inside without the use of keys, i.e. Yale type or thumb turn locks.

FIRE BLANKETS
PLAN 1, 2, 3 and 4: A fire blanket should be provided in each area where there are cooking facilities, be wall mounted 1.5m high adjacent to an exit door and away from the cooking appliance. These must comply with BS 6575 (or equivalent).

FIRE EXTINGUISHERS
PLAN 1, 2, 3 and 4: Although not a requirement, where your risk assessment indicates that fire extinguishers are required, they shall be multipurpose extinguishers and located as requested by the risk assessment. If provided, they shall be maintained in working order and residents instructed in their use.

OTHER
PLAN 1, 2, 3 and 4: Polystyrene ceiling tiles should not be used within the premises. Portable heaters using gas cylinders or flammable liquids should not be used or stored in the premises. Generally signage relating to fire precautions is not necessary. However, fire doors across escape routes, communal kitchens, and boiler rooms should be marked ‘Fire door keep shut’. Gas and electric meters and consumer units within escape routes should have 30 minute fire protection.

Please Note:
Alternatives to these standards will be considered if they provide a sufficient level of protection to residents. It will be necessary to demonstrate this in your fire risk assessment. The council’s Private Sector Housing team and the Hertfordshire Fire and Rescue Fire Safety Officer must agree to any alternative solutions.

For further technical information regarding fire safety and fire risk assessments, please refer to British Standard BS 5839 and the National Guide for Fire safety.

FIRST FLOOR
- Bedsit
- Bedsit
- Bedsit
- Bedsit
PLAN 3: Typical three storey HMO with shared cooking facilities

PLAN 4: Typical three storey HMO with cooking facilities in each let

KEY TO PLANS

- 30 minute fire resistance (wall/door/partition etc.)
- Sound traditional construction
- Smoke detector – interlinked, mains wired with battery back up
- Heat detector – interlinked mains wired with battery back up
- Smoke detector – independent mains wired (recommended hush facility)
- Fire blanket
- Emergency light
- Control panel for fire detection system
- Break Glass point
- Electricity meter
- Gas meter
Mandatory HMO Licencing

Under the National Mandatory HMO Licencing Scheme, an HMO must be licensed if it is a building occupied by five or more tenants.

If you would like advice about whether your property should be licenced please contact us using the details below.

A more detailed guide to HMO Licencing is available on our council’s website: www.dacorum.gov.uk/hmo
