<b>Comment</b>	With the on-going mention of new affordable housing is this just for the private sector. I cannot see how, with the average house price being listed as £453,950.00 that any local first time buyer/s earning the average income of £33,984,00 can afford to buy a home. . Why when back in the late 50,s through to the early 80,s was there enough housing for the new town of Dacorum to support a vibrant industrial estate, much of which employed many manual operatives, and yet now the businesses and work force has been demised is there a real requirement for new homes to support the foreseen

economic growth Of the planned 16,500 new homes how many are planned to be ARCH owned and be let at affordable rents.

With the new housing plan has the infrastructure planned for more community centres, Doctors surgeries, shops, amenity supplies and usage. Will there also be sufficient off road parking for the residents of these new proposed properties.

With regards to the green and renewable energy are there any such plans to use bio mass boiler systems to produce a cheap affordable heating system in any of the new builds. Are there any infrastructure designs for wind farms within the Dacorum, South west Herts plan?

Will the new open green and connecting spaces be maintained by the local authorities are just left to fall into decline like so many other areas, which appears to stop locals from using as walking routes.

Dacorum has 5 railway stations, not listed in your economic growth section as is not Luton and Heathrow airports. These could be mentioned to any new potential businesses as an alternative to road freight transport for either shipping there goods or receiving materials.

This Vision and the Strategic Objectives has been developed prior to the current Conservative Governments objective that new developments should take place in brown field/urban sites in the South of England and most othe development in the North of England. There are already plans in place for considerable growth in housing in Dacorum and the impact of such development on the local environment will be significant. These plans cannot be considered Sustainable with Climate Change because of the loss of greenbelt and the impact on the water aquifer. Climate change is currently--and projected in to the future will produce more extremes in weather. In the case of water that means we will experience heavy rain in the winter but prolonged drought in the summer. These proposals with the significant increase in demand

for water will result in the drying up of the River Gade and River Bulbourne. These are Chalk Streams and protected under many regulations. In no way can you say these developments will result with the status of Good Quality Water when there will be no water running, they will be dead. Water companies in our area, also Thames Water and Anglia water to the North have described their aquifers as depleted. Any significant increase in demand will result at frequent droughts.

**Comment**

As the vision pertains to Berkhamsted, I support the objective of the new plans to the south and southwest of the town. I understand that there is a proposal for an alternative development to the east of the town, known as Bulbourne Cross, and I would like to register my opposition to that scheme, as it pertains more to Bourne End and Hemel Hempstead West than it does to Berkhamsted, and does greater violence to green belt land.

<b>Comment</b>	<p>The local plan that was adopted only in 2017 provided sufficient growth in the right areas of Dacorum, and particularly in Berkhamsted and Northchurch. What is being proposed is effectively the destruction of Northchurch and Bourne end as separate entities and is entirely disproportionate. The emerging plan has no reference to travel both within the borough and outside and as such I don't think that the plan can be demonstrated to be valid.</p> <p>The environmental sustainability evidence is also not plausible in this section and there is no reference to air quality which would be significantly reduced.</p>

<b>Comment</b>	I cannot reconcile the climate change and environmental ambitions with the huge scale of development, the environmental impact of the construction of the homes and roads, the increased pressure on the roads and natural areas. The vast majority of these homes will be car commuting households.

<b>Comment</b>	<p>You want to cram the maximum number of houses into historic market towns such as Tring and Berkhamsted at minimum cost, with no care for the destroying of green belt or the infrastructure to sustain the increase of both people and cars.</p> <p>Northchurch is a village community in itself and you are totally disregarding the narrow lanes and difficulties there will be moving traffic around, particularly by the school on New Road. A child has recently been killed in the High Street by a speeding car and the bulk of traffic will only get worse.</p> <p>The government's assessment of the number of houses needed in the south east in the future is unreliable at best, and once built, the area will be spoilt for ever.</p> <p>While more housing is no doubt needed, it should be social housing that young people and front line workers can afford, not poorly built, crowded houses selling for around £1m by Taylor Wimpy, who have no care for the area and are making huge profits.</p>

<b>Comment</b>	<p>The plan envisages a growth in population far in excess of that from the existing population. As a consequence there is an incorrect number for housing required. The destruction of green belt and green sites is therefore unnecnsary and should not go ahead.</p> <p>Any housing built should be of higher density on existing housing and brown field sites.sites. Any housing built should be carbon neutral, theCouncil has agreed there is a CLIMATE CRISIS but building CO2 emmitting houses will only add to this.</p> <p>Please can someone look at the big picture? If you add the houses planned here to those being planned by Aylesbury Vale we are creating a massive housing estate from Hemel Hempstead to Ayesbury, the A41 is already choked with traffic bringing pollution and noise this will only increase.</p> <p>Please take responsibility for nature Iknow Developers can make huge profits building houses in this area but we need to keep oit GREEN for us our children and grandchildren. Once it has gone it can nevre be reinstated.</p>

<b>Comment</b>	<p>I believe the document is full of excellent aspirations. However as a Berkhamsted resident, for the most part I can only speak about Berkhamsted where the reality falls well short of the aspirations.</p> <p><i>Berkhamsted will accommodate growth of at least 2200 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment in sustainable transport initiatives open spaces and sports facilities.</i></p> <p>How does development enhance the town centre, or strengthen its function as a key market town – when the town centre cannot expand because it is constrained by residential development? I note there are no proposals for town centre enhancements – this is just words</p>

**There appears to have been a decision taken that Berkhamsted must take substantial growth because of its current size with no cognisance given to its constrained location, topography, and the impact on the town of the proposed developments.**

Indeed the SHS, carried out because the Inspector at the time of the Core Strategy, said that further consideration of the constraints of the settlements in determining the Hierarchy was needed, still does not take that into consideration. It effectively considers only the size, facilities and public transport links with Hemel Hempstead.

The resultant proposition of a 24% increase in Dwellings, most of which are at the top of the valley sides where the only feasible means of transport is by car is completely unsustainable.

Its constrained and steep sided valley location, mean that the " *significant new investment in sustainable transport initiatives ...*" which are essentially enhancements, for pedestrians and cyclists, ( minor junction modifications, more crossing points and additional foot ways) do nothing to mitigate against additional traffic from developments located along Shootersway, where, as stated, the only feasible means of transport to access the towns facilities, and station is by car. No safe cycleways from the developments are proposed, even if people can make it up the hill. (or there is mass growth in the use of electric bikes) There is an acceptance of this in the Transport and Movement sections 2.13, 2.16.

*P 23.119 recognises the key challenge for Berkhamsted of congestion, constrained roads, difficulties with bus movements and limited cycling infrastructure, and subsequently acknowledges that "there are few opportunities for new road capacity in the town"*

Yet whilst acknowledging the existing issues, the Sustainable ( joke word) Transport Study proposes nothing to address them, and indeed DBC is content to exacerbate them, with a further 2200+ dwellings.

Para 23.121 – *ensuring growth areas on the edge of town are well connected; accessible to the town centre and station (only by car for most); public and sustainable transport options are enhanced.* How is this to be achieved? Where are the detailed proposals. There is nothing in the Transport Study proposing sustainable transport options from the developments to the town centre/station.

In fact the Transport Study as already mentioned concentrates only on minor junction improvements for pedestrians and does not even acknowledge Shootersway ( where a substantial amount of the development is proposed) as a major thoroughfare, categorising it as simply a residential road, serving county lanes and Champneys!

I welcome the proposed provision of a secondary school in the West of Berkhamsted, given that on current forecast Ashlyns is already 1 class short of meeting current need without the proposed developments, and catchment issues mean it is the children in W Ward and Northchurch who will have issues getting places in their local school.

The proposals for open spaces and play areas on the sites are welcomed, however I understand those detailed in the IDP are simply formula based aspirations, with no guarantee that they will materialise. Recent acceptance of large developments (Bearroc 1 and 2) with no mandated requirement for play areas or significant open space, must cast doubt on these proposals.

<b>Comment</b>	<p>Whilst I believe in general the vision/objectives are good:</p> <p>*I believe that it would be appropriate to consider whether the covid-19 crisis will have long lasting change on the properties and services that the local population need/want. For instance, will large central retail units be required? Or will retail be more local and online?</p> <p>*Although building affordable homes is mentioned, there is no mention of social housing - which there is just too little supply of at the current time.</p>

<b>Comment</b>	Dear Dacorum planning

I have very strong concerns about building on green belt land, especially when there does not seem to be cross party consensus on this . The starting principal should be that the countryside belongs to every one as we all have a stake through various public pathways and then the wild life that flourishes there that we can all enjoy along with the open space that is vital for wellbeing . Importantly the biodiversity that flourishes on green belt land belongs to us all as well and should not be given away cheaply. I understand that the government has put legal pressure on councils to develop a Strategy for Growth; this is not the same thing as having to build immediately on greenbelt land as this policy might change indeed I believe it already has.

Any building should be done very cautiously with proper consultation with the local community. If I am correct there are barely any comments displayed clearly on this portal; this is not ok and reflects very poorly on the council. By this stage I should be able to see hundreds of comments. When the many councils set up their parking fine policy they were sure to include a rule where parkers had to display their ticket clearly or they would be fined. Likewise the council must make this consultation process incredibly easy for the public to see and comment on. At the moment it is only suitable for dedicated professionals and in fact excludes the public by design . A strategy this important can not be left until the decisions are sewn up between the councilors and the developers. If this was the case it would reflect very badly indeed.

(On that note I would like to draw your attention to the fact that there are no clear addresses for the planned developments or a way for the public to simply work out where the developments are precisely and the maps not of sufficient detail for us to identify these areas . Equally your map shows the development sites over the green belt colouring so we have to assume all red areas are green belt, this is not clear enough as their may be brownfield sites here which would be preferable for building , like the proposed Aldi or Lidl supermarket site near Jewsons and Northchurch . )

furthermore I see your comments here:

Responding to, planning for, and managing change requires us to engage with our residents, businesses and with the Government and our partner organisations. This allows us to act in the best interests of our residents as the Plan is progressed and be aware of all views and latest opinions. In 2017 we consulted on the issues and options facing the Borough in the future. Wherever possible, we have responded positively to previous representations whilst recognising this process has not been easy - as we will have to make hard and often unpopular decisions.

Over the past three years we have developed evidence, engaged with key stakeholders and partners as well as landowners to develop this document. Using this evidence, alongside responses from the previous consultation we have developed an Emerging Strategy for Growth for Dacorum.

I am concerned about this because you have said you have engaged with key stakeholders , but I only found out about this recently how have you engaged with the community ? your portal is very difficult to use, has massive amounts of information and is only accessible to certain types of professionals not the wider public.

At the very least developments built on green belt land should be of the highest quality and should actively aim to solve the housing crisis by being aimed at social housing and affordable homes for emergency workers . Building unattractive bulk standard homes executive homes like on the Belroc park development is a very disappointing response to the housing crisis. I do not believe the Belroc park development in any way is a considered project that benefits the wider

community and can be considered a development of high quality . In fact it smacks of developers looking to make an easy buck.

Here is just one articles which you might like to read which explains why we have to be cautious about how we deal with the housing crisis , because once the Green belt is gone it is gone for ever . Building more houses is a very simplistic response especially when the market demands a bottle neck of supply to keep costs high: “Property is an investment, bought in the expectation that its value will rise in the future. If prices start falling in an area, this does not stimulate demand but curtails it.”

<https://www.thelandmagazine.org.uk/articles/why-building-more-houses-not-answer>

Equally London population appears to be declining that may not help us here in Berkhamsted but it shows there is not one simple answer and reminds us of demographic change while building on greenbelt is permanent.

<https://www.theguardian.com/uk-news/2021/jan/07/london-population-decline-first-time-since-1988-report-covid-home-working>.

I am only a concerned citizen, not a professional in any way. I am dyslexic as well so excuse my grammar. So inevitably this is no doubt an incomplete response. However this is all I have time for here in my response; and until the council make it easier for us to engage by actively seeking our opinions, I don't have the confidence that you are truly listening .

I look forward to hearing from you about your first public meeting , at least the first I have heard of.

I write in respect of the plans for Berkhamsted. Our transport links (A41) are already stretched and quite unsafe. Some of the roads through the town are often unsafe already with the sheer volume of traffic. You can talk about providing

transportation - in the form of buses etc., but the demographic of our town is not one that will ever use public transport. It's a sad position, but that's how it is. If you walk along Kings Road, Charles Street, Doctors Commons Road, the High Street, Castle Street at rush hour for example you will witness gridlock, with large vehicles often mounting pavements and endangering the lives of pedestrians - often children on their way to school. Our town cannot take any more traffic. The A41 is a log jam at certain times, and there are often crashes. Adding 2,200 new homes to the area will make the road even more hazardous.

The effect of the plan on our greenspaces is devastating. All of that greenbelt and other farmland that will be lost to these developments. Not to mention the effect on air pollution of the added traffic.

I appreciate the need for more housing, but there are many brownfield sites that can be developed. I appreciate the fact that Berkhamsted has become a desirable place to live, but I seriously doubt these plans will do anything other than to line the pockets of developers such as Taylor Wimpey - who despite the well intentioned statements in plans such as yours, will not provide affordable housing for those that need it.

These developments will affect the quality of life of people who were born, or have moved to the area in an attempt to get away from traffic, pollution and have access to our wonderful countryside.

England is a green a pleasant land. Please keep it this way.

<b>Comment</b>	<p>One cannot argue with the over arching themes but the reality is that this draft Plan is essentially about building an excessive number of new homes in the Borough despite many constraints, and to a lesser extent providing employment opportunities.</p> <p>The new housing will not all be in "sustainable locations" because approximately 35% of the target the Council have chosen to achieve will be built on Green Belt.</p> <p>The proposed growth will not be environmentally sustainable - it will have an adverse affect on the Chiltern hills and the character of the countryside and our valuable and rare chalk streams will be at risk.</p>

In terms of Dacorum Places, this is a missed opportunity to grow and revitalise Hemel Hempstead and the planned growth for Berkhamsted and Tring will be to their detriment and will have the opposite impact to that outlined in the Vision.

**Comment** All further development should be located to the south of Berkhamsted where a proper Masterplan can be put in place to provide a new area which would be sustainable providing an additional school, shops and connectivity. This site can also utilise the existing train station and has good access to the A41. The other sites in Berkhamsted appear piecemeal and will just add to the existing congestion in this historic market town. The existing roads cannot cope with any additional traffic and therefore the additional housing required needs to be located in one sustainable location.

<p>Yes / No * Yes * No</p>	<p>No</p>
<p><b>Comment</b></p>	<p>This draft plan has many admirable objectives which I totally support. However, the actual plans for housing and development do not appear to deliver many of these and are not in sufficient detail with sufficient commitment to give me confidence that the aims will be achieved in the ‘finished product’.</p> <p>Furthermore, the sentence:</p> <p><i>1.8 ‘What is clear is that if all the proposals are taken forward it would have a significant impact on the Plan we are preparing but until planning legislation or guidance changes we must prepare the Plan against current guidance.’</i></p> <p>makes me question why we are being asked to comment on this plan at all if it is likely to change, Will there be another draft plan in the future which will be an amended version of this one? And will we be asked to comment once again?</p> <p>Meantime, here are my comments on the parts of this draft plan which I find concerning.</p> <p>In section <b>2.2‘Vision and Strategic objectives’</b> - The Plan Context and Challenges, the statement</p> <p><i>‘The growth offers real opportunities to deliver significant and meaningful measures to combat the effects of the climate change emergency.’</i></p> <p>And again, in the section ‘Environment and sustainability’ the statement</p> <p><i>‘Growth in Dacorum will have been environmentally sustainable and have helped to reduce the Borough’s contribution to climate change through the location and design of development, by having promoted energy efficiency and renewable energy and sustainable construction, by having facilitated a significant increase in sustainable travel modes and through having supported reductions in the use of finite resources’</i></p> <p>is obviously untrue and is simply ‘greenwash’. Building more houses can’t possibly combat the effects of climate change. Any additional building will put more strain on the climate, by using water, fossil fuels for heating, increasing traffic etc. Indeed the actual building of any houses etc. causes a significant amount of CO2 and other pollutants to be put into the atmosphere and uses a considerable amount of energy.</p> <p><b>2.4</b> In the section on ‘<b>Housing Growth</b>’, The statement</p> <p><i>‘We need to significantly increase the number of affordable homes that are genuinely affordable to local people’</i></p> <p>is a good aspiration, but the majority of homes built on the Green Belt will be much too expensive for local buyers who are looking for ‘affordable properties’ to purchase, which is why developers are keen to build there.</p> <p>Furthermore, a recent survey by estate agents has shown that 25% of current sales in Dacorum are to people moving from London, so many of the new properties may well be bought by people moving from other areas, who are likely to want to commute back into the city to work each day, causing pollution and congestion as a consequence.</p>

*2.4 In addition, the Borough's high average house prices means that buying market housing is increasingly difficult for many households. The dream of owning a home is now out of reach for the majority of young people with the average age of house purchase currently being 32 years old. We need to significantly increase the number of affordable homes that are genuinely affordable to local people. This in turn should also aid households to live in adequately sized accommodation where they may have outgrown their current home.*

Increasing the number of affordable housing in Dacorum is a laudable aim, but unfortunately, merely building more houses does not tend to decrease house prices. The borough needs a to build more council houses to rent at a reasonable rate, so that local people can afford to live in them.

**2.109.2***'recognises the importance of a diverse range of 'main town centre uses', including retail, leisure, entertainment and more intensive sport and recreation uses (e.g. cinemas, restaurants, pubs, health and fitness centres), offices and the arts'*. However, there is no mention of improving access to the arts in Hemel in this draft plan – no theatre, concert hall, visual art centre. Does the council think that local residents are not interested in the arts? With such a large population planned, surely the least the council could provide is some sort of arts centre for the benefit of the local people. This would undoubtedly add to the vibrancy of the town, especially to the evening economy, which is currently more or less dead in Hemel at the moment

**2.15** Under the 'Transport and movement' section, the aspiration:

*'We are developing detailed Sustainable Transport Plans for our main towns to identify the transport interventions that are required to deliver growth, and ensuring development is well connected and less reliant on the car over the long term. Growth will deliver attractive opportunities to travel by bus, foot or on a bike. Future technology will be promoted to deliver and support low-carbon transport. Electric vehicles of all types (including electric bicycles) will feature strongly in this, and necessary infrastructure will be provided to ensure the usability of such vehicles'*

is admirable, but at the moment the borough has not got a good track record for public transport or encouraging bike use. In Gadebridge where I live, none of the local shops have bike racks and our bus service has been reduced from every twenty mins to a bus every half an hour, and even this is nor reliable. How can we have confidence that these aspirations will be achieved, when presently they seem to be unattainable?

**Natural environment 2.20** *Making effective use of urban land can also help reduce the pressure on the natural environment by limiting the overall scale of greenfield development. New developments can also play their role by: linking to existing green networks, creating new and varied green spaces, and promoting opportunities for biodiversity and nature conservation.*

In the section: Managing the change, the aim of:

*2.44 Protecting the character of the wider countryside and the value of protected / important sites as far as possible (such as important landscapes, heritage and biodiversity.)*

**and the borough vision to 2038 3.6** 'Environmental Sustainability', the aspiration

*'The natural beauty of the Chiltern Hills and the varied character of the countryside will have been enhanced and continued to be admired and cherished.'*

will not be achieved by building houses all over our beautiful Gade Valley. The proposed spread of the Garden community in north Hemel on to the side of the Gade valley is **inexcusable**. This is very close to the area of Outstanding Natural Beauty and is outstanding in itself. Anyone who looks over the valley from Gadbridge exclaims what a beautiful view this is. Have all the councillors been over to look what building on this land will spoil for ever?

England is in rapid change, with Covid and Brexit likely to lead to long term behavioural shifts. Alas I read of an ever growing wealth gap, so would particularly like to see emphasis, regulation and enforcement around "Providing good quality affordable homes, in particular for those most in need".

<b>Comment</b>	I totally disagree with the development of green belt. There are soo many brownfield sites which have better infastructure... roads designed for heavy traffic. These areas also are cheaper and encourage development of poorer areas. Bolting onto rural communities is damaging to the environment. Encouraging urban sprawl and inzeased car and transport use. Please look at regenerating existing urban areas and better use of brownfield sites.

<b>Comment</b>	Why don't you include in your "new homes per town" figures how many homes are already in each location and the planned percentage increase? Tring might be an "inclusive market town" but its town center has grown to serve the needs of a steady increase in local population over the last seven centuries. Adding 2,700 houses (10,000 people, 5,000 cars?) is completely out of proportion. The town centre doesn't have parking enough at the moment and noone is going to be walking in to town from Grove Fields - and they're unlikely to walk to the station either, where the car-park is at capacity.

<b>Comment</b>	<p><b>Comments on Section 3</b></p> <p>Theme 1: Building Dacorum's future with homes for everyone. We fully agree with the aspiration of homes for everyone. Our main comment on this theme is that it would appear the number of 16,600 new homes is an Government top down target? If so, it would be excellent to understand how the local plan changes if the target decreases.</p> <p>At present, we can see land set aside post 2038 to deal with increases in the top down target, but not for decreases. It would also appear that the Hemel Garden Communities, to be built on what was once green belt land are at the top of the list of developments to be delivered i.e. those delivered first. Would it not be more appropriate to in fill in existing urban sites first, and then understand the demand for housing and then, and only then, decide to build on the green belt?</p> <p>Theme 2: The idea of Hemel becoming a centre of enviro-tech is really exciting. And one we are in agreement with. However, the local plan as set out at present doesn't appear to apply enviro-tech to the development proposed. It is hard to see reference to digital technology which can help monitor e.g. air traffic pollution, flood risk, water flow and usage, managing ambient temperature around offices and homes with natural solutions such as soft landscaping, trees, hedgerows alongside busy roads. Nor does there appear to be thinking about how to stimulate green transport and increase in biodiversity in the towns and villages across the region. One would have thought that one would have wanted, especially in Hemel, to promote Hemel as a working example of a town with enviro-tech at its heart, such that it can increase investment in the sector and attract businesses, because of the example it is setting to the country.</p> <p>Theme 3: Again, we feel an opportunity appears to have been missed in this space. There is a significant body of research which proves that greener cities, towns and villages have lower requirements for social care and policing, lower instances of violent and disruptive behaviour amongst the community. That by embracing the environment at the heart of the plan, this in itself helps to make Dacorum happier, healthier, and safer. We are not suggesting that the aims and activities in Theme 3 are wrong, but that we simply haven't gone far enough in taking advantage of what greening the region and especially Hemel will do for citizen's health and economic prospects.</p> <p>Theme 4: We would like to see greater detail as to how the local plan creates a clean, green and attractive Dacorum. A scan of the costs of new transport solutions reveals that the majority of these solutions are "old school, car and carbon based". There appears to be little detail as to how the region will increase biodiversity within the towns, villages and rural spaces in the region. And the target of 10% increase (I think this is correct?) is almost comically low. In a country</p>

which has some of the lowest levels of biodiversity in the world, we are submitting a local plan which is centred around creating Dacorum/Hemel as an enviro-tech hub with the ambition to have biodiversity remain pretty much where it is now? One cannot but feel that the environmental benefits the local plan seeks to deliver are both too low and lacking sufficient detail on implementation as to inspire confidence. Greenwashing is an emotive word, but unfortunately an apt one with regards to this plan?

Theme 5: The words "on track" for a better transport network are worrisome. It feels like an objective which the local plan has given up on before it has begun. Surely, we should be looking to ensure that a properly functioning multi-modal transport system is in place at the start of the plan, and is a driver of a healthier, greener region.

Theme 6: Love the aspiration, but can't quite understand what the local plan means by this. Is this simply Herts IQ becoming an enviro-hub, is it all our region's citizens having accessing to the multi gigabit connections which will be de rigueur over the coming 20 years, or is it rolling out digital curriculum and health services for our communities?

<b>Comment</b>	<p>I am pleased that Dacorum is considering the environment and sustainability in relation to climate change as part of its plan and I am glad that a climate emergency has been declared.</p> <p>I am concerned that the vision and strategies objectives listed here are too focussed on economic growth and housing at the cost of the environment and the balance with nature that we need to sustain in order for our communities to thrive. I agree that good quality, affordable home for those most in need should be a priority but the scale of the growth in terms of housing and school developments looks as though the plan is focussing on a bracket of wealth where people are able to afford a car to be able to travel to shops, etc and will be building on green belt spaces in order to accommodate them, thereby reducing nature and important ecosystems and significantly increasing the amount of road traffic.</p> <p>I would like to see a local plan with strategic objectives driven by the community with a bottom up approach, where local priorities for local people are identified and that solutions are truly sustainable, including strong plans for developing and supporting rewilding and protection of wildlife ecosystems, local food growing and local community ventures, with community need, not economic profit and development being the central driving factor.</p>

<b>Comment</b>	The extensive use of the Greenbelt for development between Redbourn and Hemel Hempstead goes against the purposes of the Greenbelt as described in the NPPF. Specifically, the Hemel Garden Communities project will see urban sprawl into the Greenbelt and the narrowing of the gap between Redbourn and Hemel Hempstead. In addition, the extensive use of the Greenbelt will damage the local environment and ecology adding to the problems of climate change. On these issues, Redbourn Parish Council objects to the draft Dacorum Local Plan.

<b>Comment</b>	<p>This might be a vision but it is not a set of strategic objectives. The word objective means that you have a destination in sight and to get there you must have a route plan. There is no such plan in evidence. Statements are made with no guidance on how they will be delivered and achieved. This is not a plan simply a wish list.</p> <p><i>e.g. The countryside will have been actively managed and enjoyed and will have continued to support a healthy local economy and diversity of wildlife. Water quality in the rivers and streams will be good.</i></p> <p>Where is the explanation of how this will be achieved? The countryside is not owned by DBC so how will they ensure its active management? What will change to ensure improved water quality ?</p>

**Comment**

I do not believe that expanding development in Dacorum can be sustainable. Most of the building will be on green belt land reducing the food supply, green space and the natural removal of carbon dioxide. It will inevitably increase traffic, greenhouse gases and pollution.

Increasing the size of Tring by more than 50% most of which will not be in walking distance (judging by people's current behaviour) will overwhelm the narrow town centre and require considerably more parking than is currently available. The plan is to reduce the space that could be used for parking in the current market place by building on that.

Expanding Tring by this amount will destroy the large village feel and community spirit. It will generate more traffic on its narrow and poorly maintained roads. It will increase plastic and noise pollution. It will have a huge impact on the local wildlife with huge areas been taken from it and what is left turned into small corridors.

The existing attractions of the Tring reservoirs and Ashridge already suffer from too many visitors (look at the attempts by the National Trust to stop parking on the roads). The promise of a new secondary school in Tring will not be sustainable with a 50% increase in population so there are probably plans to increase the size of the town further. Additional business units will probably not be staffed by people moving into Tring so they will generate additional traffic rather than reduce as is stated in the plan.

The planning rules to only allow parking for 1.8 cars per property are clearly inadequate given that the new housing will not be close to existing facilities. Most people moving into the area will require 2 people in the household to work and their jobs will not be in Tring. This will lead to on street or more likely on pavement parking which will deter walking and cycling.

There are 2 mentions of cycle infrastructure in the vision for Tring but there is no action now and little space to put more infrastructure for bikes and pedestrians in the existing areas of Tring without taking it away from cars. I do not believe this will happen. I would love for someone to show me how it could be done. Although there is cycling infrastructure from Tring to the station this is of poor quality as it is shared with pedestrians, has an appalling surface (in spite of being resurfaced recently) and no lighting. It is poorly maintained with fallen leaves and overgrown bushes blocking the pedestrian side for most of the year. The road has huge puddles which mean that pedestrians and cyclists are constantly soaked by passing cars. I mention this as the report mentions with pride this infrastructure several times.

Pedestrian links are also mentioned twice in the 6 bullet point summary but there is little to suggest these are more than just words. Although it cannot be more than 1/2 a mile to the nearest primary school in Tring a large proportion of children travel to school by car. Because of the number of cars and no enforcement of parking regulations it has become dangerous for primary school children to cross the roads. If Dacorum were really interested in encouraging walking it would stop cars parking on pavements and on bends and provide clear sections of road to allow children to cross the road safely.

The evidence based on recent developments and current council policy suggests that far from being "an inclusive market town that meets the needs and aspirations of existing and new residents and visitors" it will become suburban sprawl indistinguishable from any other town expanded beyond the capacity of its infrastructure.

This plan will kill the town that the residents and I love.

**Comment** I have read and support the submission from the One Voice Alliance.

The scale of the proposed development is unsupported, both in general and specifically for Tring. It is unnecessary and disproportionate and will destroy Tring as a market town. While the plan is very precise regarding the number of new homes it is unacceptably vague about all the supporting policies and infrastructure. The plan is essentially led by opportunites for developers, not the interests of Dacorum residents and the council's voters.

The timing of this plan is wrong, as it becomes clear that the Covid pandemic is accelerating many changes in the ways that we live, work and shop. Previous assumptions about retail and transport requirements will no longer be valid but we cannot yet know what will be the situation. Planning on this scale should be paused while we live through the pandemic and then understand what permanent changes it has brought about.

<b>Comment</b>	<p>The Vision for Dacorum's Places sets out development opportunities within a hierarchy of settlements. Significant growth is directed towards the larger settlements within the Borough, which is supported. Larger villages of Bovington, Kings Langley and Markyate are also identified for certain levels of growth promoting affordable housing and strengthen their roles within the local community. The Vision then highlights that within The Countryside and other small villages, "they will be protected from development".</p> <p>This statement suggests that no development will be allowed in small villages. At the very least it is considered that this statement needs to be more specific and refer to "inappropriate" or "harmful" development. Alternatively, a case could be made that further consideration should be given to development within small villages and how this form of valuable development could provide greater opportunities SME developers and deliver high quality developments.</p> <p>By turning its back on development within villages, the authority will significantly limit the opportunities for SMEs to provide a valuable contribution to the housing supply.</p>

<b>Comment</b>	<p>I believe that the Dacorum Plan should be based on the most recent ONS figures from 2018 which suggest a housing target for Dacorum of around 500 houses per annum half the figure in the Dacorum Plan and which would significantly reduce the need to build on Green Belt.</p> <p>I understand that DBC have challenged the total housebuilding figure provided by central government and if this challenge is successful then much of the Plan will need to be torn-up and thousands of hours of work will have been wasted. In the meantime areas of Green Belt may be unnecessarily de-classified never to return to their previous status.</p> <p>I do not believe that many of the proposals to build on Green Belt land are justified or provide the exceptional circumstances required for planning consent on Green Belt.</p> <p>I do not believe that sufficient account has been taken of the potential to build on brownfield sites and in particular the potential given the decline in bricks and mortar based retailing to re-purpose buildings and land from retail to residential in our existing town and village centres.</p>

<b>Comment</b>	<p>Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the sheer scale of the proposed development. In my view, the Council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>It appears that the recent Government guidance on calculating housing need has been, at best, confusing. There has been significant campaigning locally and nationally against the nonsensical algorithmic method for calculating housing need. I firmly believe that housing need should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has based its calculations on the outdated 2014 data which, in my opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p> <p>Furthermore, since the estimates were originally produced, no account has been taken of the changes to employment, shopping and living patterns which will almost certainly arise from or be accelerated by the pandemic, and which will result in more currently commercial and retail space becoming available for repurposing as residential.</p> <p>In trying to comply with Central Government's demands, the plan places too much emphasis on the development on Green Belt land, rather than maximising the use of brownfield sites. Of the proposed new housing, 60% is proposed on green belt land involving the loss of about 850 hectares of green belt. This is inappropriate in Dacorum, situated as it is, close to and partly in the Chilterns AONB</p> <p>If the housing projections are almost double current ONS estimates and more commercial and retail buildings become available for alternative use because of pandemic accelerated change, there will be scope for more development on brownfield sites and less need for building on the Green Belt.</p>

<b>Comment</b>	<p>The house building targets set by central government are wrong for the country and especially wrong for Berkhamsted where I live. If the anticipated increase in population based on new houses for Berhamsted is exrtapolated across the south east it represents a massive shift of population from other parts of the UK to London and the south east. This contradicts the government declared policy of 'levelling up' the country. This directive from cetnral governmentt needs to be opposed by Dacorum Borough in collboration with all other local authorities. We should be concentrating building affordable homes in the poorer parts of the country to enable people to live and work there</p>

The proposal to build 1200 plus houses between Shooters Way and the A41 bypass without a major improvement to the roads should be thrown out immediately. The idea of a new school at Darrs lane beggars belief. This is a narrow single track road with no pavements. It would expose children to a level of risk that would amount to extreme negligence.

The vision I have of the plan is one of chaos, congestion and increased pollution coupled with damaging the green belt. My impression is that developers have come forward with plans to build on green belt land as that is the most profitable for them. The target set by central government is only a target and may not be appropriate for Berkhamsted. Dacorum have a responsibility to first establish what is right and sustainable for Berkhamsted before inviting proposals from developers.

The changing nature of the way we live and work needs to be reflected in the strategy and that for the UK economic growth and regeneration. Commuting is essentially dead (look at Tring station car park) so why grow towns at the expense of areas of natural beauty when there is so much empty housing stock in other parts of the county that could be regenerated?

Great roads, great railways, everyone spread out with great technological communications links is the way forward. Double the size of Tring and you ruin the market town it is today and turn it into something else. The old people will gradually die off but anyone that can afford to will leave.

The phrase 'truly affordable new homes' is nonsense unless it comes with jobs, wealth creation and quality of life. Packing more people into smaller spaces with worse public services will not do this. As for Dacorum as a tourist destination - many parts are now, it won't be if it's one massive, poorly built housing estate.

## Comment

Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.

My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.

The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.

Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity?

You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan.

It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.

Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.

These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town

by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

**Comment** The proposed level of growth in Tring is excessive and will fundamentally change the character and identity of this rural market town which is attractive, has a small community family feel and supports and enjoys wildlife with protected greenbelt. It won't be able to meet the needs and aspirations of the existing residents and visitors therefore.

<b>Comment</b>	There has been many changes to the way people live and work due to the Coronavirus epidemic and the long term impacts are not yet known but as an HR Director I have seen a trend to intend to continue working from home, at least partially, in the long term and people are moving out of London but further afield than the easy commuter towns such as Berkhamsted where housing is cheaper. This proposal may well be premature and to build on such a large amount of Green Belt land (60%) in an AONB must not be taken lightly as once it is done there is no going back and the legislation is current and exists for a reason.

<b>Comment</b>	With the recent change in the focus from the National Government and the uncertainty around how the pandemic will affect working, communicating and living patterns longer term surely it makes sense to put these deeply unpopular strategic plans on hold until there is clarity about what the strategy should be.

<b>Comment</b>	<p>The vision for Tring is for major growth in the number of homes. The growth proposed for Hemel Hempstead and Berkhamsted is roughly proportional to population although slightly lower for Berkhamsted. For Kings Langley, Bovington, Markyate and the rest of the borough the growth proposed is approximately 50% of that based on current population levels. There is no clear explanation for this in the plan. The proposals for Tring will completely change the character of this very rural town, which is surrounded by farms and farm land. If the number of new homes proposed were proportional to the population it would mean growth of 1,200 to 1,300 new homes over the next 17 years rather than the 2,731 in the plan.</p> <p>The use of farmland for the majority of the development in Tring is not environmentally sustainable. The suggestion that transport could cope with the number of new households is questionable, especially in respect of the capacity of Tring station and the trains into London, as I am assuming you based your plans on pre-covid use.</p> <p>It s also not clear how the plans fit with NHS plans for Hertfordshire.</p>

<b>Comment</b>	<p>Whilst I can see the pressure that this government is putting on all councils, I'm afraid the targets are unrealistic and the vision and strategic objectives are at odds with each other due to the housing targets themselves. I can see that Dacorum has attempted to "square the circle" but the vision and strategy are fundamentally flawed.</p> <p>I strongly object on four points:</p> <p>1) Dacorum is already HEAVILY, heavily congested, massively lacking in basic infrastructure, decent local shops, services and investment (notably healthcare/hospitals, doctors, police and council services to support a clean, sustainable and enjoyable place to live).</p> <p>2) Although environmental pledges are stated, these are totally in contradiction to the chosen locations for housing expansion and proposals to concrete huge areas of green belt and areas of outstanding natural beauty, particularly around the Berkhamstead, West Hemel Hempstead and Tring areas (in particular in Tring where the town appears to be doubling in size in an area of nationally renowned natural beauty and conservation).</p> <p>3) The plan shows no recognition of new working practices (particularly remote working) that has been hugely accelerated by the COVID situation. Why is there so much mention of proximity of housing to stations and new office space when most businesses are now looking to REDUCE their dependency on both commuting to London/other major cities and REDUCE their dependency on office space in general. This vision and strategy makes no mention of connectivity in terms of telecoms/fibre to the home or remote working in general to reduce the environmental impact of car use and travel in general.</p>

<b>Comment</b>	<p>Since this plan was written there have been substantial changes to the way people are living and working. In December 2020 the Government announced plans to revise their housing targets, preferably downwards, to protect rural areas in the south east, as reported by the BBC on 16th December 2020. This should be addressed before plans are finalised.</p> <p>Theme 1</p> <p>Berkhamsted and Tring are very attractive market towns. Excessive development will destroy the essence of what makes these towns so special.</p>

I applaud your stance on providing homes for local people but another feature of the Covid pandemic has been that there has been a significant increase in number of people wishing to move from London (Estate agent told me that 60% of enquiries on houses were from people wanting to move out of London). What this has done has pushed up the prices out of the reach of local people and therefore how will you ensure that trying to build houses for local people will not still be out of reach as Londoners outbid local people.

#### Theme 3

If the plans go ahead there will be a 28% increase in housing across the whole area. This is unimaginable. The addition of thousands of extra people in the area will make roads (which are already over crowded) impossible. - An increase in traffic will certainly not make me happier or safer. I don't believe 'sustainable transport' will work. Most of the housing is a long way from both Berkhamsted and Tring town centres so residents in these new areas will most definitely have to travel by car to access shops, schools and other services. Infrastructure will struggle - ie doctors, schools, social services. Water supplies, which are already stretched in dry years will not be sufficient to cope with such large demands.

#### Theme 4

Unfortunately what will suffer most is our very vulnerable environment. The UK generally has one of the worst levels of bio-diversity in Western Europe and whilst you give statistics for improving your goals for carbon emissions, such large levels of destruction of what are not open spaces will have an irreversible impact on our flora and fauna.

I regularly go litter picking and our streets are disgusting. With a further increase in population this will also continue to increase.

the importance of nature has been shown to be so important over the past year - THIS is what we need to prioritise for the people of this area. Not ruining what is a beautiful part of the country so that people from outside the area are able to come in and buy up properties that local people cannot now afford.

<b>Comment</b>	They are planning too many houses, far more than are needed are being planned, 3,000 in Tring alone is far too large a scale. Smaller amounts will work better and there is no reason to go so excessive. As a collection of small market towns, Dacorum has character and the plan won't fit in with it.

<b>Comment</b>	Dacorum's vision is most laudable, but it will be difficult, if not impossible, to reduce reliance on motor vehicles for travelling, especially for the villages. Increased housing will put additional pressure on the roads. Public transport is too sporadic for everyday journeys.

For example, Bovingdon does not have a safe path /cycle way into Hemel Hempstead. Hempstead Road/ Box Lane is a fast, busy road, used by heavy vehicles. It will need investment in road calming and safe pedestrian & cycle paths to enable a modal shift.

Whilst recognising the competing demands of such a wide ranging Plan, I dispute that the development of so much green belt and green field land in Dacorum for housing can be undertaken without the deterioration of the environment, particularly the adjacent AONB areas, and without severely undermining the quality of life and character of the towns of Berkhamsted and Tring in particular.

<b>Comment</b>	The Covid-19 pandemic could radically change what is needed and how things should be planned. It might make more sense to have less density of housing, more green space and less high rise flats without gardens. Also the need for retail and office space may change as more people may permanently work from home.

<b>Comment</b>	I believe that the vision is wrong, in the sense that it is trying to grossly increase housing, and encroach on not only the countryside beloved by local residents, which is wrong in its own right, but also to breach the designated Green Belt area around Tring. Hence, I believe the the vision is wrong and definitely not in the best interests of the borough.

<b>Comment</b>	The aspirations of the council to deliver a vibrant economy , a healthy and safer Dacorum and housing for all are very worthy but I do not believe that the current plan is the correct way forward to deliver the vision . I think the proposals and the massive increase in housing will detroy the distinct character of the market towns of Tring and Berkhamsted . Northchurch should be regarded as a settlement in its own right and not be included as Berkhamsted.I think the starting point for the local plan should be the housing needs of the borough determined by using the most up to date ONS data . If this is done the housing requirement of the borough would be roughly half of that proposed . The recent government white paper said that green belt should only be developed in exceptional circumstances .I do not believe the delivery of housing numbers way above that that the most recent data demonstrates is needed qualifies as exceptional circumstances .Berkhamsted is classed as sustainable because it has some facilities eg ,station, shops etc.No account is taken of the nature of the town, its topography and its already stretched ttransport infrastructure..The vast majority of the development in the borough will be on green belt land which can only be supported in exceptional circumstances. The housing number calculation should be challenged by the council .

<b>Comment</b>	<p>Whilst the words in the vision are entirely laudable , they are not really supported nor will they be delivered by the plans being proposed .</p> <p>Are the plans based on sound judgements about population requirements . Particularly when one would hope to see an econmic rebalancing towards the rest of the country ,as we become less London centric . The fundamental assumptions need to be revisited .</p> <p>This revaulation is also needed in the light of the pandemic and Brexit . Both these events will certainly have implications for housing and the way our economy works .For example the pandemic has fundamentally changed how we shop . The ' high street ' needs to be reimaged ,as does the supply of office accomodation . Both these create new opportunities for housing on existing sites which can be repurposed .</p> <p>These are impacts at a macro level that disconnect the strategy goals from the actual plans . At a plan level it is clear that Berkhamsted and Tring for example willl no longer be market towns retaining their small town character . This should be be clearly recognised in an open honest way to show a clear intent . Rather than as now it might be thought of as just an unintended consequence .</p> <p>Whilst down at a site level there appears to be serious disconnect with the vision. Talking about cycling and walking is excellent . But not when your major deveopments in Berkhamsted are on the top of a ridge with the town in the valley . Even regular cyclists struggle coming up the valley side .</p> <p>I would urge the planning and council authorities to critically examine each site plan and whether it meets the the requirements of the wider strategy once that in itself has been properly reviewed .</p> <p>We need more homes and authorities have a very difficult job . But it is very easy to see the planning follies and also successes that are evident across the borough .Please learn from these and build on past successes.</p> <p>Will future generations look back at these plans and praise the wisdom and foresight of those who put them in place . Or despair at the urban blight , traffic , poor infrastructure , the views of concrete and brick ,and the diminished natural environment .</p>

<b>Comment</b>	<p>A quote from the text - "Growth will have been accompanied by supporting services and infrastructure which were delivered at the right time and benefited new and existing communities, particularly transportation, education and open spaces, to have created healthy and sustainable developments.". I do not believe, the local plan, as set out, achieves this. The supporting services and infrastructure for several of the smaller developments on brownfield sites, as well as some of the larger developments do not take into account the core foundations of residence that plague even existing communities - such as stretched local services such as GPs, a lack of parking in most residential areas and simple factors such as utilities and drainage. The volume of roadworks to support existing utilities grinds the area to a halt on a regular basis and will be exacerbated not just by the proposed scale of the developments during the build phase, but through the sheer strain on underlying infrastructure continue to damage the 'lived experience' of Dacorum for years after.</p> <p>"having facilitated a significant increase in sustainable travel modes" - how exactly? The proposed plan includes very little development by way of jobs to support a significantly increased population in Dacorum. Sustainable travel through an electrified rail network or electric buses, enhanced cycle ways etc still requires significant travel for work and despite best efforts will likely see a population who choses to maintain and travel by car - noting one of the selling points of the area is it's proximity to the M25, M4 and M1. Even an abundance of electric vehicles cannot be supported through Victorian streets with incredibly limited off street parking - and in some instances significantly congested on-street parking where the likelihood of getting a space near enough to your house to utilise any electric charging points for vehicles, will likely see the area have a significantly lower uptake on electric vehicles for personal use than many others. Youe 'Economic Growth' section seems to rely on the proximety of the M1-M25-A41, thus accepting that a signficiant proportion of additional traffic will be required to deliver even the marginal economic growth likely to be delivered by an 'Innovation Quarter'. I hope someone sees the irony in this and the link to the Enviro-Tech centre, and the lack of coherency across</p>

your plans to deliver sustainable travel whilst equally relying on a road network, with little available access to residential parking let alone electric charging points for vehicles.

**Comment** In principle the strategic objectives are sound but the reality will not match them if as per the proposals there is an excess of new housing without the infrastructure, which intrudes on the green belt, exceeds development by 114% from the core strategy and is unlikely to be inclusive on local development's past track record. It also seems to go against national planning policy and I have not been able to find any exceptional circumstances to warrant the excessive development in an area which includes an AONB and historic buildings.

<b>Comment</b>	<p>Far too many houses are put forward as the "correct" level for building targets, given the doubts over the real requirements. The impact on the environment of the Green Belt and existing settlements it is meant to enhance, will be suddenly damaging, dramatically tragic and totally irreversible.</p> <p>Starting from a premise that is suspect and therefore contentious, the overarching Vision is questionable; the prospective high build rate will adversely impact the principal urban centers and especially the unwarranted loss of swathes of Green Belt, including around Berkhamsted/Northchurch, that are designated in the Draft Local Plan as 'Growth Areas'.</p>

<b>Comment</b>	<p>There are many fine sentiments expressed in this section, but this is not what this plan is about. It's about building lots of new houses, primarily on Green Belt land, to meet a supposed government target, which the government has made very clear is not a target and should not be used as a reason to destroy the Green Belt. They said in December 2020 "We should be clear that meeting housing needs is never a reason to cause unacceptable harm to such places." I am at a genuine loss to understand why DBC is not pushing back to explain that the kind of new housing numbers suggested for Dacorum are unachievable without destroying precious countryside that will never be recovered.</p>

<b>Comment</b>	<p><b>There are several notable and important gaps that require formal and explicit inclusion.</b></p> <p>In the comments below we give considerable evidence to indicate that the proposals for Tring are <i>not compliant with the Plan's own stated strategic objectives</i> – even if dwelling growth numbers are significantly reduced. We acknowledge that (as per section 1.12, Page 6) we are not reviewing a final Plan, nonetheless there are many points that must be addressed in those sections that are more advanced in their evolution:</p> <p><b>Section 1.30 'Working with Others' (Page 9)</b></p> <ul style="list-style-type: none"> <li>This section notes the importance of cross-boundary matters. For Tring, bounded on <i>two</i> sides by Buckinghamshire, the plans of that county have a significant bearing on employment, traffic, local land use etc. In the Plan, we can</li> </ul>

find no reference to Aylesbury Vale District Council or Buckinghamshire, and few to local villages in that county, contrary to NPPF para 35c. This is a concern and may have led to what we feel are flawed conclusions on matters ranging from employment to the siting of additional retail (see detailed response to later questions) and (importantly) the number of houses for the immediate area.

### **Section 2.1 ‘Opportunities of Growth’ (Page 14)**

- It should be explicit here (and reflected in all other relevant sections) how the Plan will meet new Environmental Sustainability challenges formalised during the latter part of 2020, including the revised Sustainable Hertfordshire Strategy (and associated targets) and the priorities defined by the Hertfordshire Climate Change and Sustainability Partnership (HCCSP). These go far beyond references to this topic on page 22.

### **Section 2.2 ‘Climate Change’ (Page 9)**

- *‘A central thread of the Local Plan is to plan for a low-carbon future in which carbon emissions and other greenhouse gases are reduced.’* This is a welcome statement; however, we feel an opportunity is being missed to take a more robust stand, for example by referencing DBC’s Climate Emergency Declaration and zero carbon target of 2030. Other authorities, for example, have already mandated inclusion of solar energy capture (thermal or PV) in new builds, community renewable energy schemes, tough building standards and more. Given that we are planning for a mid-21st-century environment we believe Dacorum should also take a more robust and mandated approach.

### **Section 2.12 ‘Vibrancy of Town Centre’ (Page 15)**

- *‘We do not believe [there will be] a significant requirement for new [Retail] floorspace over the lifetime of the Plan.’* We broadly agree with this, especially given the higher percentage of empty retail space in Tring High Street compared to (at least ) Berkhamstead – however, Tring has long retained a market feel and there are opportunities to make changes to support a much larger, vibrant, ‘destination’ market space (see also our comments on Delivery Strategy).

### **Section 2.19 ‘Natural Environment’ (Page 16)**

- We strongly support this intention – and would like to see more instances of this aspect of the strategy made explicit elsewhere in the Plan.

### **‘Local Distinctiveness’**

- There are over 20 references to the importance of local distinctiveness in the Plan, e.g., page 22: *‘All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.’* We strongly support this position but are concerned that there are no references to what makes Tring distinctive, or to a process by which that will be agreed and at what stage it will become binding on this LP.

We strongly feel that this needs to be formally addressed. Placed at an important ancient crossroads, Tring’s market heritage is deeply rooted, it has a track record of many ‘firsts’ including clean water supply, land set aside for public

amenity and nature conservation and water and wind-based energy generation and is also located in the midst of more SSSIs and officially designated natural beauty than other locations in Dacorum.  
See our more detailed comments on this point in our response to Question 9: 'Do you have other comments on the plan?'.

**'Vision for Dacorum's Places' for Tring (Pages 22, 23)**

- At such a high level it is difficult to comment. It would be good to see a version of this with five or six explicit and detailed bullet points on the key means to achieve this, reflecting local knowledge. For example:
- How will the viability of Tring as a market town be maintained with such an increased population and associated pressure on a town centre that will have to accommodate more traffic?
- How can sensitive views and landscape be maintained? (See later comments – Q9 – on this).
- There is not yet a joined-up cycle and footpath plan for Tring and there are gaps where this extends beyond residential or connecting streets.

<b>Comment</b>	<p>I don't support this Local Plan.</p> <p>The housing target is based on incorrect, superficial and out of date data(based on 2014 ONS data). The change of formula has increased the housing target and is unrealistic for this area. The vision should be adapted to consider sensible and intelligent housing numbers that reflect the Dacorum of today and of the future. The housing numbers being proposed for Dacorum will change the character of our market towns, greatly impact on surrounding wildlife and destroy AONB vistas and valuable greenbelt land. It will remove working tenant farms and by this will impact heavily on individual livelihoods (Tring) and reduce the opportunity for our children to gain employment in these farms.</p> <p>Already, there have been significant societal changes which have impacted on our current and prospective population growth; how we live and function as a community; the use of retail and commercial property; and what is now more valuable and urgent in terms of our environment against a backdrop of climate change.</p> <p>I don't feel this overarching vision takes these matters fully into account for Dacorum and seeks to avoid these facts, basing its strategy around the housing numbers which are not sensible nor logical.</p> <p>There will be significant issues which will impact on the health and wellbeing of current and future Dacorum communities, should these housing numbers go ahead.</p> <p>One such example (there are many), is that the housing target does not compute with the level of local employment opportunities and will force communities to travel further afield for work. This in turn will increase and maximise capacity on roads and transport links which are already stretched, given the large scale developments further afield (Aylesbury et al) which have also impacted on the train lines into major cities (London &amp; Birmingham).</p> <p>The vision and objectives, also sets out to compromise heritage landscapes and greenbelt land and is limited in its consideration of climate change. Its very apparent that the out of date housing numbers will negatively impact carbon emission targets and this is contrary to national policy, the Strategy's own policies, and both the Chilterns Conservation Board (CCB) Management Plan 2019-24 and its Position Statement Development Affecting the Setting of the Chilterns AONB (2011, revised 2014).</p>

It is also concerning that the vision does not go so far as to give assurances or guarantees as to any targets for housing developers in consideration of construction waste disposal/recycling and reuse of materials; quality of housing in line with Dacorum's climate change policies; sensitive consideration and care of ancient hedgerows; rare habitats; tree and woodland preservations; increases in housing garden space; quantity of community spaces, in particular allotments and wild spaces; creation of further wildlife habitats and nature sites to offset of use of land for development.

The plan does not consider enough, the amount of alternative urban/brownfield sites currently available for change of use or residential development. There is significant amount of commercial and retail property available, car parks & public houses; garages and urban/brownfield land which should be considered first, before greenbelt land.

I dont believe this vision nor strategy considers these points in any detail and uses technical terms and greenwashing to avoid consideration.

<b>Comment</b>	<p>The development plans for Dacorum seem overly ambitious given the recent Covid pandemic has caused a shift in home working and decreased mobility; there is now no sound argument for the significant dwelling capacity required, focused in the south east of the country.</p> <p>This is coupled to the Govt imperative to redress the economy and increase the infrastructure development and wider community opportunities in other parts of the country.</p> <p>There needs to be a collective pause and re-consideration of these housing &amp; infrastructure requirements, both nationally and at local govt levels.</p>

<b>Comment</b>	<p>I do not agree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is simply too much for the town – with circa 500 dwellings planned in Northchurch Parish and around 1700 in Berkhamsted, it equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt. I note that the 2013 Core Strategy vision of “maintaining the strong valley and linear character of the settlement” has been dropped from the new Local Plan. Where previously the Council asserted that “The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported” (and put this argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built “in a way that takes account of sensitive views and landscape”. I strongly disagree with this position and believe the 2013 vision should be re-instated.</p> <p>Siting developments at a distance (3-4km) from the town centre at the top of a significant hill does not make sense. People will have to use their cars to get to the station and park for shopping in the centre. People need accessible town walk which are accessible. South Berkhamsted provides for this admirably and provide a local green areas to keep the local resident fit and healthy in the open spaces.</p> <p>I find it very concerning that Dacorum Planning have completely shifted the Council's position from one of planning within the constraints of the Borough, with the wellbeing of current and future residents in mind along with protecting the unique and historic assets of the two market towns and their environments, to a position that makes no attempt to protect valuable assets of the Borough including large areas of Green Belt. It appear that Dacorum is no longer wishing to be the custodians to preserve the market towns and the surrounding countryside which have been carefully protected (eg Local Community of Berkhamsted Resistance to Lord Brownlow attempt remove Common Land that is now known as Berkhamsted Common) over many generations since 1066. This is not acceptable and should not be allowed to happen The current Dacorum Borough Council position seems to be also in direct conflict with Central Government Policy on Green Belt;</p> <p>Here are 6 examples</p>

1) The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests. 2) In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”. 3) Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.” 4) On December 16th 2020 the Government published a response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.” 5) The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.” 6) And further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.” The 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the Dacorum Borough Vision in this plan fails to reflect any of this.

<b>Comment</b>	With the vast number of developments planned it is difficult to see how the vision of creating a 'vibrant economy' and also protecting the natural and historic environment could actually be achieved. Crowding housing onto green belt town fringes and overfilling the small market towns of Berkhamsted and Tring would appear to fly in the face of this vision.

<b>Comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.</p> <p>The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents.</p>

<b>Comment</b>	I have significant concerns about Dacorum's proposed Local Plan, titled "Emerging Strategy for Growth 2020-2038". If implemented, these damaging proposals would result in the loss of a massive 850 hectares of the Green Belt, the wider countryside and urban green space for development. This is the equivalent of 1,214 football pitches, and would cause irreparable harm to the environment. We believe the Council's growth strategy fails to address the climate emergency and the impact on infrastructure, and underestimates the potential to provide housing on existing developed sites. Green Belt land is threatened at Berkhamsted, Tring, Hemel Hempstead, Kings Langley, Bovingdon and Markyat

<b>Comment</b>	<p>I write in respect of the housing over development proposed in this plan in Hemel Hempstead and in the Dacorum area and in particular building over green belt where better suited brownfield sites and affordable housing are needed in the Midlands &amp; North and not so much in the Home Counties in and around London.</p> <p>Also the calculation used old data from 2014 ONS rather than the more recent 2018 ONS data.</p> <p>The effect of the plan on our greenspaces is devastating. All of that greenbelt and other farmland that will be lost to these developments. Not to mention the effect on air pollution of the added traffic.</p> <p>I appreciate the need for more housing, but there are many brownfield sites that can be developed. I appreciate the fact that Dacorum has become a desirable place to live, but I seriously doubt these plans will do anything other than to line the pockets of developers &amp; DBC - who despite the well intentioned statements in plans such as yours, will not provide affordable housing for those that need it.</p> <p>These developments will affect the quality of life of people who were born, or have moved to the area in an attempt to get away from traffic, pollution and have access to our wonderful countryside.</p> <p>The impact of Covid has changed the way those dormitory towns have now places where people will WFH, enjoy and spend a lot more time without having to commute into London anymore for most local people.</p> <p>England is a green a pleasant land. Please keep it this way.</p>

<b>Comment</b>	The target of c.17,000 new homes over the Local Plan period is excessive when compared with Dacorum BC's previous estimates of what is required as well as with ONS estimates. Furthermore the target and the distribution of where housing sites will be available has been overtaken by the effects of the Covid-19 pandemic in terms of changes to commuting, shopping and other living patterns, as well as office and retail sites which might become available for housing within

urban areas. This will enable a more intensive use of brownfield sites for housing to the benefit of the Green Belt and the Rural Area.

The use of some 850 hectares of Green Belt is inappropriate having regard to the proximity of areas allocated for housing to the Chilterns AONB.

Dacorum BC should make use of exceptions to the target housing figures if meeting the target adversely impacts the Green Belt and the Chilterns AONB.

<b>Comment</b>	<p><b>Growth area TR06 – off Brook Street Tring</b></p> <p>TR06 comprises Tring Market Auctions, The Tring Local History Museum, the Fire Station and Forge Car Park.</p> <p><b>Tring Market Auctions</b> is located at the rear of the site of TR06 with access from Brook Street and a license to access the Forge Car Park.</p> <p>The ownership of the site is divided between Tring Town Council (Auction Rooms, Museum and the Market Place <i>hardstanding area</i>), Dacorum Borough Council (Forge Car Park) and Herts County Council (The Fire Station). The Freehold ownerships make it a somewhat complicated issue should planning proceed.</p> <p>In the proposal, no mention has been made for Tring Market Auctions to be included in the future plans of TR06, but mention has been made that if the site is re-developed Tring Market Auctions would be offered an alternative site in the town – where? The Auctions currently comprise about 16000 sq ft of buildings alone together with the adjoining parking areas. No detail has been provided and no mention of re-location provisions has been made. It appears the proposals are an afterthought to the Dacorum local plan. Tring Market Auctions occupy under the terms of a lease with Tring Town Council.</p> <p><u>The History and Current use of the Site</u></p> <p>In 1893 under the requirements of the Board of Agriculture and with the assistance of Lord Rothschild, the sale room with office was constructed in Brook Street. It was let to W Brown &amp; Co. who conducted the first sale by auction in January 1894, since when auctions and sales have been held continually on the site for over 125 years – surely this qualifies the location to be part of Tring’s heritage.</p> <p>During recent years from 1960 there has been numerous enquiries and planning applications to develop the site with offices and supermarkets together with residential, all of which have been rejected.</p> <p>In 1993 the livestock auction ceased to operate leaving the chattel auction business to continue and flourish under the directorship of Stephen Hearn who took Tring Market Auctions to become independent and grow into the fine company it is today.</p> <p>It now has an extensive complex of four Auction Rooms, forming one of the largest and best known venues of its type in the Home Counties.</p> <p>The sales attract a very large number of vendors and buyers from Tring and the surrounding towns and villages together with an ever-growing number of people from throughout the Home Counties and Internationally. Many of the buyers represent the trade and other specialist collectors in all categories.</p>

The auctions provide a friendly and entertaining atmosphere on sale days making it an enjoyable venue for both business and pleasure. Regularly around 500 visitors attend on viewing and sale days, many of these attending the auction visit the town shops and local attractions.

Tring Market Auctions is a unique and key component of the town's economic town centre fabric. It provides a key fulcrum for maintaining the town centre economic sustainability. Visitors to the auctions provide business for other local shops and enterprises not just on sale days but across all the sites activities, its town centre location is fundamentally linked to many other local business and the town market continued sustainability.

The auction rooms provide a unique component part of maintaining Tring Town Centres' viability and supporting Tring based economic development. If Tring is expected to grow then business, jobs and economic infrastructure growth needs to be matched, Tring Market Auctions needs to be maintained as it supports this economic ambition of the Local Plan through continued town centre provision of a business that is complementary to local shops and does not provide competition, as would the proposed supermarket.

The Saleroom operates with a permanent staff of some 20 people which includes consultants and additional part time staff during sale days. The venue is a key local employer, bringing training and development and job opportunities for local young people.

The Auction sales deal with all periods of furnishings and collectables, processing over 50,000 lots each year providing an effective and affordable house furnishing option for many local people. It has a growing importance as a recycling centre, particularly when it is estimated over 20 tonnes of furniture timber is recycled every fortnight, which supports the climate ambitions in the Local Plan.

In addition the Auction provides a key income stream to the Town Council reducing precept impact on local residents and contributing to a sustainable model of local government

The Auction provides a service to both the local community and professional organisations throughout the Home Counties and beyond.

#### Points of Consideration

- It is positioned on a site with a long history of auctions and marketing of stock
- It is an important asset for the Town
- The auction attracts a large number of visitors to Tring throughout the year
- It employs local townspeople
- Town Centres should reflect the distinctive characteristics of a Market Town
- The site would not lend itself as a supermarket, particularly when this proposal is unproven
- The Auction Rooms occupy a strategic position at the head of an open space and wildlife corridor which runs from the Tring Park Mansion vista through to Icknield It is very much part of the local community, supporting many of the Town's organisations and groups

-

#### Planning Matters for Consideration

- Brook Street has a notorious reputation for being dangerous in parts where it is very narrow making it often difficult for vehicles to pass
- Tring High Street has introduced traffic calming measures
- It is suggested in the development plan that a supermarket would be served with a new carpark. Bearing in mind the development would include the existing Forge Car Park, does one interpret this as denying the town parking facilities
- Recently, two large planning applications have been refused in Brook Street both in close proximity to TR06, one being the residential re-development of Market Garage and the introduction of a residential development on the North Eastern side of Silk Mill works. In both instances, the reason for refusal included over-development of the respective sites and the dangers of access to Brook Street
- The plan proposals to create new food and drink leisure uses is difficult to understand when there are currently so many retail outlets available in Tring
- It states that any re-development of the site would only be permitted once replacement facilities are provided elsewhere in the town. The only specified new location is in Growth Area TR01 (Dunsley Farm) for the Fire and Rescue There is no detail with regard to the siting of Tring Market Auctions, nor the Local History Museum.
- One can create new buildings but one cannot create history

TR06 is not a redundant site, it forms an important part of Tring Town Centre with Tring Market Auctions and the local Museum providing both business and pleasure to hundreds of people throughout the year.

Too much green belt being used. Over developing Markyate. It will cause increased congestion on the A5 and the M1 which will effect the environment.

<b>Comment</b>	<b>Overarching Vision for Dacorum's Growth by 2038</b> The vision is week on sustainability. Inclusion of a zero carbon target along with a focus on a regenerative economy seeking to enhance our natural environment is necessary. We have huge potential within the Green Belt area to provide more environmental services and should not rest merely on openness.

<b>Comment</b>	Once again we have a plan full of “vision” (SP 21/22) and yet present and future reality is/will be somewhat different. While it is laudable to aspire, experience suggests such aspirations will not be delivered. We have just looked back at our submissions for the 2017 consultation; they are depressingly similar to our present comments, indicating how little progress has been made in the interim, particularly with regard to infrastructure and biodiversity.

<b>Comment</b>	<p>I understand from the Council for the Protections of Rural England (CPRE) Hertfordshire, that DBC has a duty to protect the Chilterns Area of Outstanding Natural Beauty (AONB). This includes considering the impact that development of surrounding areas would have on the Chilterns AONB. It is highly likely that building houses right up to the boundaries of the Chilterns AONB would be detrimental to that area in terms of light, noise and traffic pollution, and general disturbance.</p> <p>I also understand that the Chilterns Beechwoods Special Area for Conservation (SAC) could also be badly affected by proposed developments in the Local Plan, in contradiction of its own stated objectives.</p>

<b>Comment</b>	<p>Section 3. Borough Vision.</p> <p>The vision is worthy but in reality unobtainable because neither the environmental or the natural resources are protected. The impact of 5954 new homes on Green Belt land ignores National Planning Policy, as Government ministers and the Prime Minister have stated that only in exceptional circumstances should Green Belt be developed. There are no exceptional circumstances for Dacorum's plans and certainly if built they cannot be said to be protecting the environment and natural resources.</p>

**Comment**

I believe the proposed growth is too much for Berkhamsted (where I live) and Tring. With around 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, it is a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt.

The 2013 Core Strategy vision of “maintaining the strong valley and linear character of the settlement” has been dropped for the new Local Plan. Why has this been done when these are the key characteristics of Berkhamsted? The Council once said that “The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported”, DBC now promote the land for removal from Green Belt and suggests that

development can now be built “in a way that takes account of sensitive views and landscape”.

I appreciate the vision to provide “significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town”, however most of the developments are located on higher ground and located away from the town centre and train station. I currently live at the top of Swing Gate Lane and can confirm that while I walk my children to school and I walk into town for a coffee - I have to drive to town if I am visiting the supermarket or looking to buy sizeable items. I also drive to town if I am short on time which is often the case! I have lived on Swing Gate Lane for 10 years and I can only just manage to cycle to my house at the top of the road. The sites included are located even higher than my house- there is no way people and families will be cycling to and from town. Young children will not be able to walk and parents will struggle as I did to push a buggy up the hill. There is simply no avoiding the fact that there will be a huge increase in vehicle traffic around town.

Many families do you use the footpaths at the top of Hall Park / Swing Gate Lane and they provide a fantastic space and sense of release. The local plan seeks to remove many of these areas that have been used by the community to access the wider countryside.

Berkhamsted doesn't have the road infrastructure to cope with the extra traffic, nor is there the ability to provide it given the historic built nature of the town.

Berkhamsted is a special place to live - somewhere I feel fortunate to live. The Draft Plan does not seek to preserve what makes Berkhamsted special or focus on the well being of current residents. The Green Belt land around Berkhamsted is used for recreation but also provides a sense of space and freedom from residents windows. This will be a huge loss.

The draft plan references an "exceptional circumstances" exist that requires the

removal of Green Belt. I DO NOT agree with this statement. The target is still under debate and should not be used as justification to lose Green Belt land forever. A target does not mean that the level of housing is correct and justified for a specific area. The required number of homes cannot be built without massive detrimental impact on Berkhamsted and Tring.

The target set by central government should not just be adhered to without question by the local council. The Government has made it clear that the numbers are a starting point only and it is up to Local Authorities to know if local constraints such as Green Belt means that the numbers cannot be delivered.

There are many examples that could be used, but BRAG - of which I am a member has limited itself to highlighting just six examples of guidance issued by Government that shows the policy on Green Belt protection is clear and unambiguous:

- 1) The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests.
- 2) In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”.
- 3) Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.”
- 4) On December 16th 2020 the Government published a response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”
- 5) The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”
- 6) And further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the Berkhamsted Residents Action Group (BRAG) Draft Response to DBC Draft Local Plan Consultation level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine

precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.”

DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that “Any option below the standard methodology would have to be robustly justified” (paragraph 5.8 of The Development Strategy Background Topic Paper).

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, BRAG fails to understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified”.

Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.

‘The Vision for Dacorum’s Places’ for Hemel Hempstead is similarly confusing. The vision leads with “The Hemel Garden Communities programme will be delivering new homes, green spaces, green businesses, and community facilities and is a catalyst for transforming Hemel Hempstead and taking forward the legacy of the New Town”.

But the bulk of the dwellings that make up the Hemel Garden Communities initiative are being held back to be delivered after the Plan timescale. So, it is difficult to understand how they are going to contribute to a ‘vision’ for the town over the plan timescale when the land is to be ‘safeguarded’ over that period.

Most of this land is Green Belt and, as stated above, the Government numbers do not constitute the exceptional circumstances required take the land out of Green Belt. But then as the bulk of the development is after the Plan period and doesn’t form part of the allocation to meet the ‘targets’, DBC clearly have other exceptional circumstances for removing the Green Belt status, but those circumstances are not evident in this Plan.

DBC are receiving funding from Government to help develop the Garden Communities program and BRAG understands that the Garden Communities project is in fact a joint initiative with St Albans. Any cross-boundary initiatives can be complicated, but if the ‘exceptional circumstances’ required to change the land designation is the chance to transform Hemel Hempstead, then DBC have completely missed the opportunity to provide a truly bold regenerating vision for the Dacorum’s main town.

In truth, these plans simply lay the foundation to tack on new housing estates long past the Plan period that fail to rejuvenate Hemel Hempstead and in the meantime destroy the historic character and setting of Berkhamsted and Tring.

In the context of the Local Plan out for consultation the visions outlined are far removed from reality. To garner support they should stand a realistic chance of being achievable. So, in summary, it is my opinion that as currently presented the draft Plan is unsound and would not pass Public Examination.

I firmly believe it is the wrong future for Berkhamsted and one that would irrevocably damage the nature of the town.

<b>Comment</b>	<p>Thank you for the opportunity to comment on what is a huge amount of hard work. I lack the skill to comment on some detailed aspects, but in regard to the 'overarching vision':-</p> <p>This is said to be a 'central government requirement' but our part of the South East is already severely overcrowded. If seeking to build so many new homes in such profusion - and that case is not clearly made in my view - such dwellings should be towards the north of the country as part of the levelling up agenda. I query if the numbers have been foisted on us as your very detailed plans show virtually every possible remaining space in my area of Berkhamsted is to be built on.</p> <p>Dacorum is already virtually 'full' and we have yet to see the impact of the pandemic on the way we shall live in future.</p>

<b>Comment</b>	The vision and objectives seem to contradict one another. How can the borough be more environmentally sustainable while giving up a significant amount of the green belt for housing, which will encourage more car journeys? How can the loss of 2,000 acres of green and open space deliver on the vision of being a 'commercial hub', new link roads, new neighbourhoods etc etc.

<b>Comment</b>	<p>I believe that there are a number of significant macro-economic factors that will significantly impact the plan in the next 5 years or so, that have not been factored in sufficiently. These changes may well significantly impact the amount of green belt land that is needed for the houses planned in this Plan - and once green belt land is de-classified as such it will not be re-classified if no longer needed for housing, in say 5 years time.</p> <p>The factors are:</p> <ul style="list-style-type: none"> <li>- Brexit - the population in UK is already showing net-emigration in the last year</li> <li>- Powerhouse North/levelling up UK - if the Government wants to "level up the UK" and create more opportunities in the North, why so many houses need to be built in the South?</li> <li>- Covid-19 - the impact of Covid-19 on future working patterns is not yet fully known but it is clear that more people will work from home in the future. This will result in less office space being needed, providing more opportunities for conversion to housing.</li> </ul>

Looking at the Strategic Plan 2050 why do we have to keep growing Dacorum, especially as it is recognised that a high %age of Dacorum is AONB/green best? Why can we not "just" seek to take advantage of the exisiting spaces (brownfield etc etc) available for expansion to business or housing, and then leave it at that?

The plan should allow for flexibility to allow the Council to see the impact of the above and adjust the plan accordingly, while it is still possible.

<b>Comment</b>	Growth for Berkhamsted & Tring are not (as suggested) sustainable or tenable. A 24% increase in housing in Berkhamsted is unreasonable and not required (but a target) by the government. There is no necessity for most of this development to come from greenbelt land, and the requirement for building on this sensitive area can in no way be 'robustly justified' furthermore there are no 'exceptional circumstances' that mean that this is a viable option. The plans appear to totally overlook the opportunity to reinvigorate the failing town of Hemel while ruining the Market Town character of both Berkhamsted and Tring. Why the vision has shifted so far from the 2013 core strategy of maintaining the town character of Berkhamsted and Tring is without comprehension.

<b>Comment</b>	<p>Having lived in Dacorum most of my life in Tring, Hemel and Northchurch, there are some good elements. Hemel Hempstead does present the opportunity for economic growth and it is good to see the focus.</p> <p>My concerns are that Northchurch has been identified as West Berkhamsted when it is a village in its own right, with fabulous views over the Chilterns (AONB) and a gateway to the National Trust Forest of Ashridge. The vision identifies villages should be protected from development and support the rural community, and the countryside pursuits so important now for mental health and a happier and healthier community but this has not been the case for Northchurch.</p> <p>The vision muddies the urban with the rural.</p> <p>The vision prioritises meeting an excessive level of housing over the protection of Green Belt, this is contrary to national policy, DBC's own policy and both the Chiltern Conservation Board Management Plan 2019 - 24 and its Position Statement Development Affecting the Setting of the Chilterns AONB (2011, revised 2014). Although it states that a key objective</p>

is "minimising and managing the requirement for the development on Green belt land and on the impact on the Chilterns AONB, this is clearly not the case.

The strategic plan has not taken into consideration the CCB Management plan 2018-2024 which says a development outside the AONB boundary can cause to the AONB even if it is some distance away; a particular example is the Northchurch proposals.

Dacorum's numbers are clearly wrong and with Brexit and the pandemic there is already significant signs of further retrenchment in the economy and housing need.

3.5 This is growth for growth's sake imposed by a Borough out of touch with local communities. These fine aspirations, such as protecting the countryside, health and well-being of existing residents etc., are contradicted by the plans laid out below. If existing developments such as Bearoc Parc go ahead without proper drainage installed and reduced biodiversity, there is every reason to think this plan will result in reduced quality of life.

<b>Comment</b>	<p>The overall level of growth is too high and will cause too great an impact on the borough, changing it's nature and destroying areas of countryside for ever. We all accept that we need more houses, enough for current residents and their families and future families, but the plans indicate establishing whole new areas with increased employment and industries which will bring more people from outside the area. While we are told that these housing figures are imposed by the government, what steps have the council taken (on behalf of their residents) to contest these number? Your documents make clear that 85% of the borough is countryside, including Green belt land, areas of Outstanding Natural Beauty and internationally important beech woods - is this not sufficient to make an appeal to the Government for reduction</p>

in housing numbers? It is the council's duty to fight on behalf of residents to maintain these special features unspoilt for future generations.

<b>Comment</b>	<p>Dacorum should push back further to Central Govt. The plan numbers place demands on Dacorum which in proportional terms is in excess of demands for other parts of the country. It represents yet further over development of the home counties.</p> <p>The strategic objective of requiring Berkhamsted to ‘play a much greater role in delivering growth in the Borough..’ effectively states that the town should take more than it’s fair share of population growth, with no mention at all that the infrastructure will be in place to support this.</p> <p>The loss of Green Belt land is wrong in principle, and will further harm the character of this area of the Chilterns and Berkhamsted in particular, sited as it is in a narrow valley with an already congested town centre.</p>

<b>Comment</b>	<p>Throughout this plan you talk about the excellent green belt and the environment, with lots of green spaces.</p> <p>You also talk about protecting the character of the countryside and later on that the countryside and other small villages will be protected from development.</p> <p>However, when looking at the actual plans it seems to destroy over 850 hectares of countryside and green spaces, and have a dramatic and unnecessary impact on Green Belt. The consequences of the over-development proposed in the strategy is contrary to national policy, the Strategy’s own policies, and both the Chilterns Conservation Board (CCB) Management Plan 2019-24 and its Position Statement Development Affecting the Setting of the Chilterns AONB 2011, revised 2014.</p>

<b>Comment</b>	<p>Sufficient weight is not given to review of population change and there are additional aspects that should be included in the vision. See sections below.</p> <p><b>General Comment</b></p> <p>Even after taking into account that both Vision Statements are meant to be aspirational, I cannot shake off the thought that they are intended to persuade and misdirect rather than be informative. They assume the reader is desperate, gullible or worse.</p> <p><b>Overarching Vision For Dacorum's Growth</b></p> <p>As a vision I am pleased it includes the provision of new homes to have met the needs of older people, people with disabilities and those with specialist needs, however I am deeply disappointed that it does not include the vision of a <i>substantial reduction in unmet need for affordable and social housing in general.</i></p> <p><b>Environmental Sustainability</b></p> <p>The government is concerned about vulnerable species loss and achieving at least a 10% gain in net biodiversity, therefore recognition of the additional challenge should be included in the vision, such as: <i>We will have taken active steps to reverse the decline in local populations of our vulnerable native wildlife species and boosted biodiversity' .</i></p> <p>Ideally this would include that <i>'building developers have been supported and encouraged to cost-effectively maintain biodiversity and wildlife corridors and preserve the Chiltern Beechwoods and other important wildlife sites by embedding conservation principles into their development design'</i> e.g. include cat-flap sized holes at the bottom of fences to enable hedgehog recovery, install bird and bat boxes, ponds, etc. It is far cheaper to leave a hedge and verge intact and enhance it if there are gaps with a few native saplings, than it is to flatten it, pull out the hedges, lay turf and plant a few token young trees. In this respect an 'active step' would also include increased use of Hedge Retention Orders (with ideally a 10m buffer zone) on current rural hedges (which are usually surrounding farmland and pasture). There are</p>

many that are still present in areas of Dacorum described a 'urban' that are proposed for development that are currently receive protection under the Hedgerows Regulations 1997. The council has the power to continue both to protect the hedge and enable housing development if it chooses to do so.

The statement '*The impact of growth on the Chilterns Beechwood Special Area of Conservation will have been effectively mitigated*' is also a concern as it strongly suggests the decision has already been made that the Beechwoods are an acceptable casualty and that the measures to restore biodiversity (effectively with populations of common species rather than specialist habitat species) take immediate effect. It will take hundreds of years before saplings and turf become as species rich as the globally important Chiltern Beechwoods and our ancient hedgerows in Northchurch and sadly, they may never do.

In support of the Climate Change agenda, the achievement of a net reduction in Carbon Dioxide has two components, 1) reducing production of it and 2) increasing capture of it. *Increasing capture or at least maintaining current capture mechanisms* should be included in the vision. Conversion of farmland to housing will generally increase imports of food increasing our carbon footprint through transport related emissions. Unnecessary removal of our hedges, trees and woody verges will decrease capture, so why not strive to keep them?

### **Economic Growth**

The Innovation Quarter is an excellent vision, although I am concerned that there is a real risk that it will not achieve the 'Centre of Excellence' status needed to really thrive as an Enterprise Zone if there is not an early identified *partnership* developed with a leading academic or research institution, such as a Russell Group University. Consider two outstanding examples - Bristol Temple Quarter Enterprise Zone is a collaboration between the University of Bristol and Industry focusing on Digital and High Tech Innovation. A centre of excellence for Bio-Tech and Life Sciences is the Cambridge Compass Enterprise Zone which is facilitated by the expertise of graduate scientists from the Cambridge University scientific community.

Given the rise of home-based working following Covid, the vision should *support the creation of new home-based businesses and facilitation of working at home*. For this it is essential that all homes in Dacorum have access to superfast broadband, strong mobile phone signals and eased planning applications to convert domestic outbuilding for home office use. There are clear secondary benefits for the reduction of traffic, carbon dioxide, etc.

I am disappointed that in this section there is no recognition, declared support or direct preparation for the real prospect of areas of Dacorum becoming part of the proposed Chilterns National Park (as recommended in the Glover Report 2019, pg117). This would surely provide additional economic benefits and give a nominal commercial value to the maintenance of the view and beauty of sites adjacent to Areas of Outstanding Natural Beauty, as in Northchurch.

### **Vision For Dacorum's Places**

I take specific issue with the statement: '*All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.*' As a resident from the village of Northchurch, I share concerns with neighbours in the hamlet of Dudswell that the council does not appear to recognise that we regard our settlements as both distinct and separate from each other and historically distinct and separate from Berkhamsted.

We want to keep our local character – we are not Berkhamsted. If that is not recognised now, it will not be in the future for other settlements in Dacorum. Please... demonstrate your ‘detailed understanding of place’ and prove me wrong!

Therefore please consider adding the italics below to the points in section: **Berkhamsted will have grown and will:**

- Be an inclusive market town *that retains the character and rural feel of the adjacent settlements of Northchurch and Dudswell* and meets the needs and aspirations of existing and new residents and visitors.
- *Have interconnecting wildlife corridors along the canal and up either side of the valley forming strategic traversable connections to Bourne End and the major wildlife sites in Ashridge, Hockeridge, Dancers End and through to Wendover Woods.*

There are some Strategic Objectives that I believe should be enhanced as follows:

- Delivering Dacorum’s Future With Homes For Everyone
  - *To review and refine Dacorum’s housing requirements as significant new evidence becomes available (See # below the bullet points)*
  - *To substantially decrease unmet need for social housing*
- Generating A Vibrant economy With Opportunities For All
  - *To support working at home*
- Mitigating and Adapting To Climate Change
  - *To promote the use of renewable resources, reduce carbon emissions, protect natural resources, reduce waste and increase natural carbon capture.*
- Conserving and Protecting The Natural Environment
  - *To provide a biodiversity net gain that also supports recovery of vulnerable wildlife*
  - *To preserve and enhance networks of habitats, wildlife corridors, green and blue infrastructure*
- Enabling the Delivery Of Infrastructure
  - *To coordinate the delivery of sufficient new infrastructure with development*

# As the population data provided are based on 2014 Office For National Statistics (ONS) figures and a Census is imminent, a commitment to review need based on the latest trends should be included in this section. The CPREHerts (See CPRE Herts review of DBC Local Plan Final) calculate housing demand to be significantly lower based on the most recent 2018 ONS data. It has been reported that calculations made by the Economic Statistics Centre of Excellence show that the reduction in population size due to Covid is likely to be as many as 1.3 million people and their report consequently questions the accuracy of the current official estimates provided by the ONS which they believe are too high. This strongly suggests that demand growth trends, both are slower and will continue to be slower than estimated in the Local Plan, even allowing for some post-Covid recovery. Projections of need should be reviewed now based on the 2018 ONS data, again when the latest reliable update is available and thereafter several times over the course of the duration of the Local Plan.

<b>Comment</b>	Vision and Strategic Objectives. The targets are unrealistic for the demographic and structure of the landscape and the development targets are based on an out of date matrix. You will not decrease pollution (which by the way is already horrendous in Dacorum) by building more houses in areas where people are living up massive hills and need to use cars to get shopping etc. On top of that cutting down woods and destroying green belt damages further our already fragile environment and its ability to regenerate and purify the air around us. The bulk of the new homes are to be sited in what you call greenfield growth areas, the true name of which is Green Belt on the outskirts of Berkhamsted and Tring.

In arriving at this position the council have ignored national planning policy in the NPPF and the statements of ministers including the PM that green belt should not be developed except in exceptional circumstances. The council has made no effort to explain what the exceptional circumstances are in this borough for the removal of green belt. The councils proposals are neither justifiable or sustainable (the need of open space and woodland has been highlighted particularly with the covid situation of the last year, along with numerous reports of the dangers of losing wildlife habitats from the likes of David Attenborough, and the dangers of increased pollution on people's health with regard to fertility and lung and breathing complaints) and this is the core of our opposition to this draft plan. DBC should revert to the core strategy vision statement.

<b>Comment</b>	I am looking at the plan from the perspective of a Tring resident of over 35 years. The details of your plan are labarynthian in structure but really contain nothing but buzz words/sentences. The overriding impression is that nearly 3000 houses will be built in the TRing vicinity, many of them on green belt and near to AONB. The assertions of sustainability and renewal that have no facts behind them and will, in my opinion, totally destroy the look, feel and nature of our Market Town. I have no idea from reading your plans how Tring will accommodate the growth given that at a modest average of 3 people per new household that will be approximately 6000 people (including at least 2000 more children). In addition, an extra 2700 homes, at an average of 1.5 cars per home, will mean an extra 4000 cars on local roads that you, as a council, fail to properly maintain already. Tring already has limited parking and with potential extension options for parking being part of your development plan, I am not certain what can be done about that. In addition Tring has neither the current service station capability, which you have already tried to build on more than once, nor have I seen any mention of providing the necessary charging points when the country goes fully electric. On the the basis that life will eventually return to normal post COVID-19, Tring Station cannot currently cope with the number of cars to be parked at the station. In addition, the peak trains are always crammed.

<b>Comment</b>	I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I work in Real Estate and am currently working on downsizing plans for commercial real estate of c.30% - this will be millions of sq feet in London. I can say with personal knowledge that landlords are re-purposing this real estate into RESIDENTIAL. The demand for sub-urban commutable housing to London will be impacted as working patterns have changed permanently - work from home will remain as organisations have invested Millions into IT infrastructure.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

This is also in line with the Nations targets for decarbonising the economy - why are we about to build on green field land when we are looking ahead to counter the affects of climate change on our wildlife.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel

Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment**

The world is facing a climate and ecological crisis. This requires acknowledgement of the inconvenient truth that traditional-style growth needs to be abandoned and be replaced with green and sustainable growth. This plan will only add to the climate and ecological crisis by planning for many more homes and destroying more of our local environment. The number of new homes planned for in this strategy should be halved and only sustainable growth should be countenanced.

<b>Comment</b>	<p>In my view Central Government's demand for 17,000 new homes in Dacorum is based on housing estimates which have been shown by the ONS to be a significant over-estimate probably by a factor of 2.</p> <p>Furthermore, since the estimates were originally produced, no account has been taken of the changes to employment, shopping and living patterns which will almost certainly arise from or be accelerated by the pandemic, and which will result in more currently commercial and retail space becoming available for repurposing as residential.</p> <p>In trying to comply with Central Government's demands, the plan places too much emphasis on development on Green Belt land, rather than maximising the use of brownfield sites. Of the proposed new housing, 60% is proposed on green belt land involving the loss of about 850 hectares of green belt. This is inappropriate in Dacorum, situated as it is, close to and partly in the Chilterns AONB</p> <p>If the housing projections are almost double current ONS estimates and more commercial and retail buildings become available for alternative use because of pandemic accelerated change, there will be scope for more development on brownfield sites and less need for building on the Green Belt.</p>

<b>Comment</b>	In theory the council's vision is a good one but actually cramming in an excessive number of new homes on Green Belt sites is not something I want for my family and my community particularly as the Council are ignoring national Planning Policy which both ministers and even the PM state should not be contravened except in "exceptional circumstance". The Council have not cited what these exceptional circumstances might be. I strongly feel the planned developments should not go ahead.

<b>Comment</b>	Given the scale of the ecological and climate crisis, and also the stated aims to support sustainability and biodiversity and indeed promote healthy lifestyles, I am profoundly disappointed with the thinking behind this plan: which appears to be based on more and more growth. Unfortunately, the continued drive for growth is incompatible with promoting sustainability, biodiversity and healthy communities. The envisaged number of new homes should be halved and all villages in the green belt (including Kings Langley) should be protected and cherished for the areas of low mass housing that they are.

<b>Comment</b>	<p><b>Dacorum's Vision</b> is one of urbanising utopia, in a largely rural region. It does not respect the beautiful countryside, Green Belt or the Area of outstanding Natural Beauty that make up the majority of our Borough. The proposal of approximately 1,000 houses to be built a year, totalling 17-18,000 by 2038 comes with <b>the sacrifice of approximately 2,000 acres of Green Belt and green field land.</b> Overwhelming our Market towns and villages with excessive development, sets out to be divisive not inclusive and not sustainable given the topography and current inadequate infrastructure. It is based on an estimated housing need of 16,899. <b>These are Government numbers which are not evidenced based,</b> but based on out-of-date 2014 data. The Office for National Statistics (ONS) recent data (2018) suggests a figure of housing need of <b>approximately 40% less.</b> Add to this a population decrease in 2020 of 1.4m, and the statistical need has been reduced to 170k per annum.</p> <p>As such, the Dacorum plan is grossly over estimated and should be rejected.</p> <p>We do need homes, but realistically only about 500-600 per year, based on up-to-date data of housing need. The types of housing envisaged are commendable, in particular affordable housing, and adaptable housing for the elderly and disabled.</p> <p><b>Sustainable Environment.</b> The Garden Community planned to the North of Hemel Hempstead, is attractive in concept but is being built on Green Belt abutting an Area of Outstanding Natural Beauty, largely in the rural Parish of Gt Gaddesden; and it is maintained that it is sustainable. A community of 1,550 homes (with another 4,00 to follow) built outside Hemel Hempstead, on Green Belt with no connections to the town centre or station, not within cycling/walking distance for the average person and no certain plans for infrastructure, just aspirations. It ignores the fact that the Borough, is geographically hilly and liable to periods of high rainfall. Not conducive to the average person cycling/walking anywhere far. It ignores the fact that in the rural areas of the Villages there are scarcely any buses, and the car is the only form of transport for most people. The same can be said for the planned developments of 2,200 houses on the outskirts of Berkhamsted and the 2,700 houses outside of Tring. It is hard to see how they can be sustainable, unless you have Council subsidised buses, (as currently these are private businesses) and regular 30 minute hop-on hop-off services.</p> <p>Yes, we do need more housing but <b>not in these numbers</b> which which will blight our countryside, Green Belt and AONB and cannot be argued to be environmentally sustainable.</p>

**Economic Growth** - while acknowledging the strategic location of Hemel Hempstead (and to a lesser extent Berkhamsted and Tring), it is only to be hoped that the business sector will continue to grow. Hemel Hempstead does have a vibrant industrial sector which has planned expansion built into the Plan. The expectation that Hemel town centre or any other town centre will continue to be a focus for shopping, must be less certain following the current Pandemic restrictions on smaller high street businesses. And what about Berkhamsted and Tring? The road connections in these market towns are congested at the best of times and the new communities are expected to use the A41 apparently, which is already heavily congested at the M25 end.

So much of the economic growth is based on Hemel Hempstead projections while elsewhere it is hoped that sheer numbers will generate economic growth?

The timing of this consultation is disappointing, with lockdown meaning that face-to-face questioning of the detail of proposals is impossible. Coupled with this, the government is making vague noises of 'building back better'. This may mean substantial changes to national directives for housing and employment.

Decisions made now could be rendered inappropriate.

The planned expansion in housing is massive and will lead to the loss of huge swathes of green belt. Whilst the strategy makes all the right noises about environmental sustainability and health and wellbeing it is difficult to see how these match up to the proposed loss of the environment. It is often said, but still true, that once the green belt has gone it cannot be returned.

It is perhaps time to reconsider some of these proposals.

<b>Comment</b>	<p>Environment Sustainability -</p> <p>1. Brought into focus by the recent Covid pandemic restrictions, the shift to home working and decreased mobility means there is no sound argument for the significant dwelling capacity quoted, in particular as 2014 projections have been used for the local plan rather than later, lower, figures that should have been the basis for this plan.</p> <p>The correct approach should be to pause and reconsider the housing and infrastructure requirements, yes, nationally, but more particularly at local level, especially in the commuter areas surrounding London, such as Dacorum.</p> <p>2. Thames Water has already enquired of residents in Tring as to their water usage, and exhorting us to find ways of using less. How will a 50% increase in houses in Tring be environmentally sustainable in just this one utility?</p> <p>3. Flooding. The fields off Station Road to the east of Tring frequently flood in heavy winter rains, the addition of many hundreds of dwellings and associated infrastructure will further impact on local flooding.</p>

<b>Comment</b>	<p>Climate Change Emergency The central to the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.</p> <p>Overarching Vision: Environmental Sustainability The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency.</p> <p>All public transport must be electrified.</p> <p>At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers.</p> <p>All power must be supplied by electricity or hydrogen generated from sustainable energy sources.</p> <p>Overarching Vision: Economic Growth The affect of the covid is unknown on the economy, working and shopping practices. this is the wrong time to be making long term plans, which may soon be outdated. Preference should be given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders &amp; installers to help decarbonise Dacorum, and small and medium size businesses.</p> <p>Berkhamsted &amp; Tring Developments The housing need should be recalculated. The proposed number of houses to be built should be significantly lower than the target to reflect <b>actual demonstrable need</b> for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes</p> <p>Affordability needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.</p> <p>It is likely with the significant changes to working patterns due to the COVID pandemic, the need for housing will further reduce.</p> <p>The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.</p> <p>The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the</p>

green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

**Comment**

All 'vision' statements are inevitably framed with positive language around well-meaning sentiments. The 'Overarching Vision for Dacorum's Growth by 2038' is no different with grand statements claiming improvements will be achieved relating to Environmental Sustainability, Economic Growth and Health and Wellbeing.

However, much of the plan under consultation works against those aspirations, particularly for the two historic market towns of Berkhamsted and Tring.

BRAG represents residents of Berkhamsted and Northchurch (as DBC consider Northchurch as West Berkhamsted) so will generally confine comments to issues relating to Berkhamsted and Northchurch, but much of BRAG's comments could equally apply to Tring.

Specifically, BRAG does not agree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is simply too much for the town – with circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, it equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt.

BRAG notes that the 2013 Core Strategy vision of "*maintaining the strong valley and linear character of the settlement*" has been dropped for the new Local Plan. Where previously the Council asserted that "*The open valley sides and ridge top*

*locations are especially sensitive to new building and development in these locations will not be supported” (and put this argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built “in a way that takes account of sensitive views and landscape”.*

BRAG strongly disagrees with this premise and believe the 2013 vision should be re-instated.

BRAG welcomes the vision to provide “*significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town*”, but BRAG fails to see in this plan any real commitment to make that investment in Berkhamsted. Siting developments at a distance (3-4km) from the town centre at the top of a significant hill (some gradients greater than to be found anywhere on the Tour de France!) will only serve to promote unsustainable high-carbon forms of travel rather than walking and cycling.

Indeed, the plan removes areas that have become and are becoming increasingly popular walking/rambling routes and easy access to the wider countryside. Removing these areas will further increase the need to travel for recreational walking/hiking/running purposes. Over the pandemic residents have not flocked to the likes of Velvet Lawn to do laps of a sports’ field, but rather the immediate and wider countryside.

The increased number of car movements within the expanded urban area will be circa 15,400 per day. Berkhamsted doesn’t have the road infrastructure to cope, nor is there the ability to provide it given the historic built nature of the town – BRAG focuses more on this in the comments on section 21 but suffice to say the plan being promoted cannot be anything other than detrimental to both the Environmental Sustainability and Health and Wellbeing visions.

BRAG finds it disturbing that Dacorum Planning have completely shifted the Council’s position from one of planning within the constraints of the Borough, with the wellbeing of current and future residents in mind along with protecting the unique and historic assets of the two market towns and their environments, to a position that makes no attempt to protect valuable assets of the Borough including large swathes of Green Belt.

Paragraph 1.37 of the introduction sets the tone by “making a bold commitment to significantly increasing the supply of land to deliver 922 dwellings per year.” From this point on the 922dpa target is taken as the single argument that “exceptional circumstances” exist that requires the removal of Green Belt.

BRAG disagrees with the housing target being set at 922dpa and will discuss this when commenting on other sections in the Plan, but frankly the dogged insistence that the target is the only requirement for Green Belt release needs correcting at the vision stage as it is clear that ‘The Vision for Dacorum’s Places’ has been retrospectively moulded to suit the absurd acceptance that the promoted plan can deliver the numbers without detrimental effects.

The 922dpa originates from Central Government, and specifically the Conservative manifesto promise, which has potentially been usurped by 1023dpa. BRAG has sympathy with DBC given the mixed messages from Central Government do confuse matters when deciding what the starting point for analysis will be, however Government has made it crystal clear that the numbers are a starting point only and it is up to Local Authorities to know if local constraints such as Green Belt means that the numbers cannot be delivered.

There are many examples that could be used, but BRAG has limited itself to highlighting just six examples of guidance issued by Government that shows the policy on Green Belt protection is clear and unambiguous:

- The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests.
- In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”.
- Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.”
- On December 16th 2020 the Government published a response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”
- The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”
- And further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.”

DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that “*Any option below the standard methodology would have to be robustly justified*” (paragraph 5.8 of The Development Strategy Background Topic Paper).

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, BRAG fails to understand why DBC Planning felt unable or unwilling to make a case that can be “*robustly justified*”.

Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.

‘The Vision for Dacorum’s Places’ for Hemel Hempstead is similarly confusing. The vision leads with “*The Hemel Garden Communities programme will be delivering new homes, green spaces, green businesses, and community facilities and is a catalyst for transforming Hemel Hempstead and taking forward the legacy of the New Town*”.

But the bulk of the dwellings that make up the Hemel Garden Communities initiative are being held back to be delivered after the Plan timescale. So, it is difficult to understand how they are going to contribute to a 'vision' for the town over the plan timescale when the land is to be 'safeguarded' over that period.

Most of this land is Green Belt and, as stated above, the Government numbers do not constitute the exceptional circumstances required take the land out of Green Belt. But then as the bulk of the development is after the Plan period and doesn't form part of the allocation to meet the 'targets', DBC clearly have other exceptional circumstances for removing the Green Belt status, but those circumstances are not evident in this Plan.

DBC are receiving funding from Government to help develop the Garden Communities program and BRAG understands that the Garden Communities project is in fact a joint initiative with St Albans.

Any cross-boundary initiatives can be complicated, but if the 'exceptional circumstances' required to change the land designation is the chance to transform Hemel Hempstead, then DBC have completely missed the opportunity to provide a truly bold regenerating vision for the Dacorum's main town.

In truth, these plans simply lay the foundation to tack on new housing estates long past the Plan period that fail to rejuvenate Hemel Hempstead and in the meantime destroy the historic character and setting of Berkhamsted and Tring.

In the context of the Local Plan out for consultation the visions outlined are far removed from reality. To be credible they should stand a realistic chance of being achievable. So, in summary, it is BRAG's contention that as currently presented the draft Plan is unsound and would not pass Public Examination.

<b>Comment</b>	<b>Over-provision of housing based on inaccurate and superseded data</b>

I believe the council's vision is flawed as it is based on out of date ONS data which has led to a significant over-estimate of Dacorum's housing needs. Please see my comments for Question 7. Put simply, the predicted levels of growth and hence yearly targets for associated housing development are too high.

**Climate Emergency Issues**

Dacorum Borough Council has declared a climate emergency and indicated that this should be a central pillar in any future plans for the borough. This local plan vision as published prioritises economic growth and greenfield land development over considerations for the climate emergency. It has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

**Protecting Green Belt land & Conserving and enhancing the natural environment**

The plan should guarantee the protection of existing natural habitats, the plan has not given sufficient weight to these sections of guidance in the National Planning Policy Framework (NPPF)

**Berkhamsted & Tring Developments**

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

<b>Comment</b>	There is no evidence that this can be achieved. Past performance indicates vision does not materialise because DBC planners do not have the powers to enforce policy let alone vision. Blue sky visions are not the same as strategic plans and amount to hot air and broken promises in this context: <i>By 2038, Dacorum will have embraced the next phase of its development by having built on its strengths and the opportunities to deliver balanced communities with the homes, jobs</i>

*and supporting infrastructure needed. As a result of having managed the change, Dacorum will have remained an attractive and desirable home for residents and for a wide variety of businesses.*

*New housing will have been provided in sustainable locations to a high standard of design. Affordable housing will have been provided and been genuinely affordable having had regards to local circumstances and new homes to have met the needs of older people, people with disabilities and those with specialist needs. New housing will have delivered our ambitious place-shaping objectives and secured high quality design and sustainability outcomes. All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.*

As evidenced by LA3 West Hemel Hempstead and Ashill development on Pix Farm Lane, Bourne End.

The plan does not provide a happier healthier safer dacorum. The happiness and health benefits of the fields, trees and woodland are being ignored as the plan is encouraging the removal of precious greenbelt land. This land provides value to the environment, community physical and mental health. It is definitely not promoting a green and attractive Dacorum but rather a suburban sprawl. The plan changes the nature of the local road network making it more built up increasing traffic and air pollution.

<b>Comment</b>	<p>Uncaring destruction of the Green Belt to provide building land - lots of talk about planting new trees, why concrete over what's already here?</p> <p>No mention of increased public transport - cycleways and pathways are fine, but what about less active people? Bus services have declined over the last 5 years, there needs to be planned development of the bus network, not just relying on the whim of the bus operators.</p> <p>Berkhamsted and particularly Tring are shouldering the burden of the housing growth outside Hemel Hempstead for the whole of Dacorum. If the need for housing is Dacorum-wide, the burden should be shared across the borough. The character of <i>all</i> communities needs to be protected, not just villages.</p>

Comment	I fully understand that extra housing is needed, however I think the proposal has no recognition of the climate crisis and has made very few recommendations in light of current environmental government policy. There is an emphasis on carbon off setting and retro fitting which is not addressing the 'climate emergency' which Dacorum has signed up to.

<b>Comment</b>	<p>In general terms, I feel that the aspirations for the future of the towns and villages described in the Dacorum Local Plan are inappropriate and based on obsolete estimates of population growth and fail to give sufficient weight to the importance of agriculture and the establishment of a carbon neutral economy.</p> <p>Whilst accepting the need for a degree of organic growth of the towns in Dacorum, I consider that the establishment of a balance between the numbers of houses and business premises in the towns on the one hand, and the rural environment on the other, are of the utmost importance. The Chilterns landscape with its hills and steep-sided valleys inevitably limits the space in which to build new housing estates without permanent loss of agricultural land and damage to the local amenity. I have particular concerns about the proposals for Tring and will comment in section 5 below.</p>

<b>Comment</b>	<p>Climate Change</p> <p>Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.</p> <p>The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.</p> <p>Overarching Vision: Environmental Sustainability</p> <p>The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. grey water tanks should also be part of new home construction. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.</p> <p>Overarching Vision: Economic Growth</p> <p>In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders &amp; installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.</p> <p>Berkhamsted &amp; Tring Developments</p> <p>I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.</p> <p>The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.</p> <p>The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.</p>

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

I do recognise the need for extra housing but am appalled by the proposal that so much of it should be sited on Green Belt land. This does not seem either necessary or proportionate. I do not think that the DLP takes enough consideration of the Chiltern AONB, the Chiltern Beechwoods Special Area of Conservation or the possibility of there being a national park in this area.

I was surprised to learn the number of additional dwellings required was taken from the ONS document written in 2014 rather than the one from 2018, where the number of new dwellings needed is set at 341 rather than 922. DBC appear to be over-providing.

DBC declared a climate emergency a year ago but do not seem to be taking this seriously. Much of the extra housing will be built at a distance from amenities and would require a large number of car journeys for shopping, school and amenity access. Traffic will be increased with resulting pollution and carbon expenditure. Even electric cars pollute and they are not yet in general use.

Can enough additional water be provided and the sewage treated? The Gade already suffers from too much extraction and recent summers have been dry. Our chalk streams are a rare and valuable asset.

With the likelihood that our shopping habits will be changed even after all lockdowns are over, surely there will be redundant premises in the local High Streets which could be converted into residential units or demolished to provide sites for more houses? There are many brownfield sites which should be used before any Green Belt land is taken.

I hope that you will take my comments into consideration.

I would like to see evidence that supports the stated number of houses needed and that the formula used to arrive at this number is correct.

For example, in Berkhamsted what is the current number of houses?

What is the proposed addition in the Plan as a %?

What is the evidence behind this increase % being needed?

Understand the actual requirement may be almost half of that proposed. Needs to be based on up-to-date statistics.

Need to publish details of any brown field sites not being utilised.

Need to explore/publish details of housing numbers that could be realised from conversion of commercial space.

Covid 19 is likely to mean commercial space will become available.

This is not considered in the Plan.

There is an opportunity, particularly in Hemel Hempstead, to use capacity available for homes in the town centre and make this part of a broad town regeneration project to bring life and soul to the centre (not build houses in fields on the outskirts so people have to travel in and out).

Above could mean that the green belt land is not needed and should not be unnecessarily released.

The plan seems to be more about releasing land that is easy to build on and more profitable for developers.

Once green belt is gone its gone and you/we have a duty of care and obligation to get this right for future generations.

No I strongly object to the council building more expensive houses we do not need on green belt land. Taylor Wimpey has in some cases reduced the prices of the new homes currently under construction at Bearroc Park Phase 2 which shows they are not needed in the first place. More overpriced home that are NOT affordable to the wider population which are miles out of town thus bringing in more vehicles to our congested streets is not the answer for our town.

The council cannot deliver the 'themes' it promises given the already unmanageable levels of traffic congestions, waterway & air pollution in the town already.

<b>Comment</b>	<p>Parliament has declared an Environmental and Climate Emergency (2019), there is pressure to deliver more from our farmland, the UK is putting pressure on other countries to preserve rainforest, there is growing recognition of the importance of green space for mental wellbeing etc yet Dacorum is proposing building on the Green Belt. How are these actions reconcilable?</p> <p>How many other market towns are being targeted with a 55% growth in this time period?</p> <p>Why is there so little emphasis on the rejuvenation of our town centres and brownfield sites? Is it that developers prefer large open sites where they can maximise profits as fast as possible.</p> <p>Affordable housing is essential with good communication links and easy access to town centres. This plan encourages high end, car centred housing, in urban sprawl developments on Green Belt.</p>

<b>Comment</b>	<p>The Plan states:  “2.18 Supporting the significant long-term growth at Hemel Garden Community - which as one of few flagship growth schemes supported by the County Council - will require prioritised funding. In addition, our other towns will also be experiencing significant growth and will also require investment in infrastructure.”</p> <p><i>Comment: The need to fund infrastructure in Hemel Hempstead is unquestioned but there is also a need (given the size of population increase) for major funding of infrastructure in Berkhamsted and Tring which should include sport and leisure facilities. S106 and CIL monies should therefore be allocated local to developments but also consolidated to contribute funding to development of major facilities and sporting hubs in all 3 towns.</i></p> <p>The Plan states:  “3.3 The Strategy has informed the early stages of developing the strategic objectives of the Local Plan. It guides how we can meet the challenges of future growth, and covers six over-arching themes:</p>

Theme 1: Building Dacorum's future with homes for everyone.

Theme 2: Generating a vibrant economy with opportunities for all.

**Theme 3: A happier, healthier and safer Dacorum.**

**Theme 4: Creating a clean, green and attractive Dacorum."**

*Comment: Sport has a key role to play in delivering on the two highlighted themes and therefore requires appropriate consideration and funding – which is conspicuously missing from the all elements of the and especially from the overall strategy.*

The Plan states:

"3.6 Hemel Hempstead will have grown significantly, and the Hemel Garden Communities programme will be delivering new homes, green spaces, green businesses, and community facilities and is a catalyst for transforming Hemel Hempstead and taking forward the legacy of the New Town."

*Comment: The green spaces need to include additional new playing space and sports facilities - particularly within the Hemel Garden Communities but also in developing and expanding existing sporting facilities across the Town to meet existing shortfalls and new demand.*

The Plan states:

"3.6 Berkhamsted will have grown and will have delivered a mix of market and affordable housing, new community facilities, including two primary schools and a secondary school, and a hierarchy of open spaces.

*Comment:*

*The need for additional playing space in Bekhamsted is as well documented as that in Tring. While the vision for Tring acknowledges this need by indicating that it will "have provided significant new open space and sports/leisure facilities", no such provision appears within the plan for Berkhamsted. What is more, the one site that could make such a provision (Bulbourne Cross) has not been selected for inclusion into the plan. Its rejection apparently for reasons of affecting views from AONB – something which could also be said of selected Tring sites. We believe the Bulbourne Cross site should be reconsidered and that new open space and sports/leisure facilities should be a strategic objective for Berkhamsted.*

The Plan states:

"3.6 Tring will have grown and will be an inclusive market town that meets the needs and aspirations of existing and new residents and visitors; ...have delivered a mix of market and affordable housing, new community facilities, a new business hub, two primary schools and a secondary school; have provided significant new open space and sports/leisure facilities to the east of the town"

*Comment:*

*More information is needed on what will be in these sports/leisure facilities, how they will respond to local need, how local delivery partners will be involved in planning and developing these facilities and the management and stewardship of them.*

The Plan states:

### 3.7 Strategic Objectives [include]

#### Supporting Community Health, Wellbeing and Cohesion

- To promote healthy and sustainable communities and a high quality of life.
- To provide for a full range of social, leisure and community facilities and services.
- To promote social inclusion and cohesiveness, embrace diversity and reduce inequalities.
- To enable and support active lifestyles through the provision of open space, sports and recreation facilities.

#### *Comment*

*There is already a shortage of appropriate quality sporting facilities for many sports and in most of the towns and key community areas within Dacorum. In many cases this is not due to lack of funds but lack of space to accommodate new facilities or expand existing ones. These current shortages are defined in the Playing Pitch Strategy & Action Plan (June 2019) and also in Indoor Sporting Facilities studies for the area. They are also clear from representations that we and other community sports bodies and clubs (such as the FA, Berkhamsted Raiders and Tring Sports Forum) have been making direct to DBC and HCC in recent years.*

*With such a significant increase in housing numbers and the associated increase in population, this undersupply will increase to a critical level. Therefore, a coordinated plan is needed to provide the necessary new playing spaces and other facilities that will be required – including where these can be located and when this can be facilitated, and possibly part funded by individual or consolidated developers/developments.*

*The Council's PPS identifies the projected increase in demand for grass pitches resulting from 17,425 additional dwellings to 2036 as requiring more than 50 new playing pitches and three AGPs in addition to the current shortfalls.*

*DSN believe that the new local plan must include allocation of potential sites for new sporting facilities – especially sporting hubs (see our attached representation overview). This should obviously be incorporated into the infrastructure plan, but we also believe it should be considered as part of the site allocations decision in the main Local Plan – especially, to ensure that sporting hubs and major multi-use/multi-sport facilities are allocated the space needed in conjunction with the sites for housing.*

***(NB Supporting Evidence -NPPF, MHCLG, Feb 2019, Paragraph 96 –***

*Planning and policies should provide communities with the facilities and spaces to meet their needs, including new open space, sport and recreation facilities. These should take into account any local strategies, plus any deficits or surpluses.*

*The provision of community facilities and services should be considered at the same time as when proposals for new homes and economic uses are developed.)*

*We consider it vital also to protect rights of way which need to be maintained or possibly diverted. This applies to footpaths and bridleways in particular, plus Restricted Byways and Byways Open to all Traffic. These are important where the barrier of the M1 already restricts and/or cuts the RoW network.*

*Any existing sporting sites/facilities that are displaced by new housing or economic development must be found new equivalent or improved/expanded sites as appropriate – e.g. Hemel Hempstead Riding Centre.*

*The Council needs to work with local sports clubs and local sporting organisations such as DSN to achieve the above strategic objectives and to ensure it can deliver the significant expansion of sporting infrastructure required to meet the increase in demand from the momentous growth in population. This will need to include exploring opportunities for major new multi-sports hubs in Hemel GC, Berkhamsted and Tring.*

<b>Comment</b>	I believe that the proposed number of houses to be built should be significantly lower than the target to reflect <b>actual demonstrable need</b> for housing. With the new emphasis on levelling up to the north, and on using brownfield and urban sites, there is no need to build on so much Green Belt land in the borough.

<b>Comment</b>	I do not agree with the vision and strategic objectives relating to Berkhamsted. The proposal to build some 2200 dwellings in Northchurch and Berkhamsted equates to an increase of about 25% and a staggering 30%+ growth in the urban footprint. No acknowledgement seems to have been made of the fact that Berkhamsted is located in a valley. In previous documents the Council said that "the open valley sides and ridgetop are especially sensitive to new building and development in these locations <b>will not be supported</b> " DBC are now promoting the land for removal from the Green Belt. The proposal to site new builds at the top of a valley some 1.5 miles from the town centre coupled with steep gradients will only serve to increase car journeys and will not promote low carbon emissions. Furthermore, it seems likely that there could be over 15,000 additional vehicular movements a day into a road structure limited by the valley and that is already congested. The plan in its current form will do nothing to promote either sustainability or a healthy environment. The Government has stated that the Green Belt should be afforded the highest protection. I can see no valid reason given to override this statement.

<b>Comment</b>	You have just rolled over and accepted more than a doubling of new homes vs the Core Strategy without any reasoning. We are not meant to build on Green Belt unless "exceptional circumstances". What is exceptional here? Has the council not read and understood the national planning policy?

<b>Comment</b>	<p>We are in the middle of a pandemic, which will have a fundamental, as yet unclear, long-term impact on the way, and where, people live and work. It strikes me as very odd to pushing on with this plan, when we are going to end up with unrecognisable town centers and different requirements in terms of shopping, leisure facilities and housing post COVID.</p> <p>As one example, many stores in Hemel Hempsted town centre won't reopen, including the large flagship Debenhams store, rather than building new homes on green belt, shouldn't we be looking at whether we can repurpose areas of our city centres which are currently used for shops, as housing?</p> <p>From the evidence I've seen, you have significantly over-estimated the number of new houses required, so I think you need to stop and look again at that. Also, from what I've read you are making token gestures towards climate change and sustainable transport, which will not adequately tackle these significant issues.</p> <p>Finally, as someone who works in digital technology, the user-interface of this feedback tool, is clunky and would be very difficult someone who is not tech savvy to navigate. I think you ought to give the public more time and more ways (when many of them are, rightly so, distracted by the many problems COVID has caused) to have their say.</p>

<b>Comment</b>	I do not believe in the Central Government requirements of circa 17k homes for Dacorum over the next 18 years and therefore think that this needs to be challenged. The areas as I understand it can support approx 11k from urban area building but with the rest coming from greenfield/green belt sites which is not acceptable and a rethink is required. Therefore a push back would seem in order. I dont think this is exceptional circumstances and green belt sites should be excluded

<b>Comment</b>	<p>This is a quick though out plan that is now not fit for perpose. I ask for more time, for the poeple of Hemel and Dacorum to be able to look more closely at this 'growth plan' as the recent pandimic has not given the majority of people the proper time and thought that is needed. Rather than have it pushed through quickly and underhandly.</p> <p>I would also point out that you look again at your sums of how many house are needed as the recent pandimc will have had an impact this 'planned future growth'. Also the amount of time that has passed since this plan first put together.</p> <p>I also point out that any rapid growth like that in the plan does not help with the health or happiness of the towns residents. It only pushes for over cowrding.</p> <p>Also is the planned growth for the community or the developers?</p>

**Introduction**

Great Gaddesden Parish Council strongly opposes the draft plan due to it being based on overstated and superceded housing demand figures, lack of detail on critical details such as infrastructure and sustainability, coupled with an unnecessary material expansion into the Green Belt, in direct contrast with the Government's stated aims and the views of the local community.

Specifically:

- the development of 5,800 houses on 17% on the border of the AONB and the associated increase in traffic both from this development and those in Berkhamsted and Tring represents an overwhelming and completely negative transformational change in the nature of the area, and will force a materially increased volume of traffic through existing chokepoints including multiple accident-prone single-vehicle passing places
- the majority of the proposed major developments cannot be described as "sustainable" given their distance from existing infrastructure and no plans of any substance to ensure improved and sustainable solutions
- critically, the sustainability analysis has an inherent bias and is misleadingly only based on land available for development rather than providing a benchmark against the ideal sites. There are demonstrably more optimal areas to develop that are immediately adjacent to existing sustainable transport infrastructure.
- neither the Infrastructure Development Plan nor the Transport Plan are complete and under the current process it will not be possible to comment in any meaningful way on the Plan without the benefit of these significant elements.
- the Borough is adopting a housing growth figure which is not consistent with the Government's express intent to protect Green Belt land. The Government's response to the local housing need proposals of 16th December 2020 stated "... *that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places*". Furthermore, in the responses to the 2017 consultation our community 95% of respondents didn't agree with the proposed approach to Green Belt

As such, Great Gaddesden Parish Council cannot support the flawed draft Local Plan and objects to its adoption.

**General**

We appreciate the fact that the consultation period was extended, although this should have been agreed at the outset rather than imposing a significant workload during a national lockdown and over the Christmas holidays, which self-evidently were always going to make it extremely difficult both to give the plan the attention it deserved and to undertake adequate public consultation.

However, we are still extremely concerned that the consultation has proceeded given that:

- shortly after publication the Government changed its guidance on the level of housing growth required by the Borough, a key driver of the plan, and it now appears that the Borough is adopting a housing growth figure which is not consistent with the Government's express intent to protect Green Belt land.

- it is very difficult to understand how the majority of the proposed major developments can be described as “sustainable” given their distance from existing infrastructure.

- neither the Infrastructure Development Plan nor the Transport Plan are complete and under the current process it will not be possible to comment in any meaningful way on the Plan without the benefit of these significant elements.

Great Gaddesden Parish Council has a particular interest in The Hemel Garden Community (HGC) proposal. The development of 5,800 houses on 17% of the parish’s land over the next 20+ years right up to the border of the AONB and the associated increase in traffic both from this development and those in Berkhamsted and Tring represents an overwhelming and completely negative transformational change in the nature of the area.

The Parish Council is concerned that:

- the proposals take insufficient account of previously identified urban capacity before building on the Green Belt.

- the sustainability analysis is misleadingly only based on land available for development rather than providing a benchmark against the ideal sites.

- the plan doesn’t include any commitment to invest in the infrastructure necessary for small villages and hamlets in the Borough to prosper.

- whilst protecting the small villages and hamlets from housing development, the Plan is silent on protecting them from increased traffic; indeed, it seems that the intention is to re-route traffic from Hemel Hempstead in particular through the small villages.

The Plan does not meet the needs of our community and its ambitions will undermine the quality of life of our residents. We urge the Council to suspend the consultation process, to consult with the Government to obtain clarity on the appropriate housing target, and to re-submit the Plan for a further Regulation 18 consultation once the housing target is finalised and other key elements of the plan are completed.

### **National Policy Reforms**

We sympathise with the problem of producing a plan against the background of proposed changes to the national policy framework, but given that uncertainty the Plan cannot afford to have any ambiguity about its relationship with that framework. For example, in the introduction to the main Plan document it states (1.8):

“Although it is unclear how the Government will respond to the consultation [regarding the white papers on Planning for the Future and Changes to the current planning system] we have already taken some steps to reflect some of the proposals. These included ... introducing the simplified zoning categories”.

But in the section dealing with National Policy reforms (14.8) there is no reference to the impact of zones, and in the Green Belt and Rural Area Topic Paper it states (s2.27):

“This [Planning] White Paper seeks to introduce a number of planning reforms to the planning system in England, please note these are only proposals to be aware of and they do not apply to this current Local Plan consultation that is taking place from November 2020 to February 2021”.

We assume that the main Plan document takes precedence and that the intent is to adopt the three zone approach outlined in the White Paper, but if this is the case we are concerned that:

- given the uncertainty around house targets (see below) there is no clarity about what might happen were the plan to be adopted but the housing target reduced, since our understanding of the white paper proposals are that once an area is defined as a growth zone in an adopted local plan there is in principle agreement for the location, use, and amount of development on a site.
- there is no clarity about what might happen to the growth zones identified in the Plan if the amount of windfall housing exceeds the 2,400 estimated in the sources of housing land supply. Given that we are already aware of two proposed developments totalling 1,500 houses (21/00171/SCE 400 houses along Leighton Buzzard Rd and 1,100 homes in the Bulbourne Cross development near Berkhamsted) which don't feature on land identified for growth in the Plan this appears to be highly likely.
- there is virtually no reference in the Plan to protection zones.

The decision by the Government to withdraw some of the proposals in the White Paper only months after it was published amply highlight the risks of building a plan on a consultation paper.

We believe that it is inappropriate to base the Plan around the three zone approach until this is a statutory requirement.

### **Use of Green Belt land**

The Plan calls for significant development on Green Belt land but is silent on the full extent of that development which has been estimated by CPRE at 746 hectares. The use of Green Belt land is contrary to the wishes of our community as was overwhelmingly expressed in the responses to the 2017 consultation where nearly 95% of respondents didn't agree with the proposed approach to Green Belt and Major Development sites. It is clear from Cllr Williams' letter of 30th November 2020 to the Secretary of State that the Borough Council recognises that the same concerns are likely to arise again from the current consultation.

Development on Green Belt land also runs counter to the Government's response to the local housing need proposals of 16th December 2020 in which it stated

"... that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places".

We also understand that one of the reasons that the Inspectors halted the Public Examination of the St Albans Local Plan was its over-reliance on a few very large strategic Green Belt allocations. Finally we see insufficient evidence that Dacorum has looked widely enough to meet its housing commitments from less sensitive, more sustainable, sites.

The National Planning Policy Framework requires that the demonstrable benefit of the proposed release of Green Belt land outweighs the adverse impact of building on it. We dispute the assumption in the Plan that this hurdle has been met.

### **Housing needs assessment**

We note that since publication of the Plan the Government has revised its method of housing needs calculation but we oppose its proposal to revert to using out of date data from 2014 which result in an increase in the target for housing needs in Dacorum (and Hertfordshire as a whole).

We cannot support using a housing needs methodology that is not based on up to date demographic and housing data, in this case the 2018 ONS data, and doesn't take sufficient account of Green Belt and AONB constraints; we fully support the request in Cllr William's letter of 30th November 2020 that greater weight be placed on these constraints.

We also note that on the 16th December 2020 the Minister stated that the Ministry's projected house building numbers are not a target which in the context of those remarks we understand to mean that more weight will be given to Green Belt constraints.

Given that the Government has withdrawn the housing needs methodology on which the Plan is based, that the revised methodology uses out of date data, and that the Government has stated that its projected building numbers are not a target, the Plan should be withdrawn until there is clarity regarding Dacorum's housing need assessment.

### **Transport and Movement**

We support the Plan objective (2.13) that "new development needs to be located in places which have excellent access to jobs, shops, services and can quickly and easily be reached by sustainable public transport and benefit from high quality walking and cycling infrastructure", but this is completely at odds with the proposed major development sites, particularly in North Hemel Hempstead.

We have particular concerns:

- that in practice the prime consideration in site selection appears to be land availability rather than appropriateness or sustainability (Site Selection Topic Paper 2.35).
- that the Council is still "continuing to develop the transport proposals that will be included within the Plan" (21.18), providing only limited evidence as to how sustainable public transport will be delivered.
- about the implications of the new transport corridor to the north of Hemel Hempstead (10.4 & 21.17) on traffic through Berkhamsted, Potten End and Great Gaddesden Parish (in particular Water End).
- that the need to develop sustainable transport options for rural settlements seems to exclude settlements not identified for growth in the Plan (21.16).

This is our only opportunity to have a meaningful input to the Plan, and the transport infrastructure to support a planned 25% increase in population is clearly key to understanding how the Plan can be sustainable. We cannot support a Plan without the details of the transport plans which underpin it.

### **Infrastructure**

Clearly when considering a proposed 25% increase in population the provision of adequate infrastructure is key, but there are only three pages about infrastructure development in the Plan (pp 49 – 52). The draft Infrastructure Development Plan (IDP) is available but will continue to be developed (10.5) and as a result it is difficult to know what reliance to place upon it. The Council itself recognises that:

“The IDP is also a key tool in the assessment of development viability, which the Council is continuing to develop to ensure that the required infrastructure can be delivered and development remains viable.” (10.5)

We are also concerned that, as with transport, improvements to the Borough’s digital network appear to be limited to new development (21.50) making it harder to sustain existing smaller villages.

This is our only opportunity to have meaningful input to the Plan. We cannot support a Plan without the details of the infrastructure development that will underpin it.

### **Natural Environment**

With the underlying chalk aquifer already assessed as being “over-abstracted” we have concerns over the ability of the water supply to be able to accommodate the needs of a 25% population expansion without impacting the natural environment.

### **Overarching Vision**

The main problem with the Vision is not what it says, but what it leaves unsaid; no-where in the Plan does it state that the Vision is to build on 746 ha of Green Belt land up to the edge of the AONB. To represent the Hemel Garden Communities programme involving a development of 5,800 new houses as “delivering new ... green spaces” (p23) when it involves building on 372ha of the Green Belt is quite simply a gross misrepresentation.

The Vision is also silent on the support to be provided to the surrounding small villages and hamlets. Improved digital connectivity and sustainable transport, in so far as it is possible to tell from the incomplete work in those areas, appear to be initiatives limited to the localities which will see housing development. The objective should be for all residents of Dacorum to benefit to ensure the sustainability of those smaller communities.

The Vision commits that smaller villages will be “protected from development” but is silent on the impact on those villages of increased traffic flows which are an integral part of the Plan. There should be a commitment to protect smaller villages from increased traffic flows.

The Plan does not meet the needs of our communities and its ambitions will undermine the quality of life of our residents both through the loss of open space and a failure to commit to invest.

It is not our Vision for the future of Dacorum.

<b>Comment</b>	The plan seems heavily dependent on new houses which will make the other objectives difficult to achieve. Building 1000's of new homes in the smaller Dacorum towns will change the character of Dacorum. Increasing the size of the communities will not help to improve the living conditions for current residents.

<b>Comment</b>	<p>Its a little 'motherhood and apple-pie'. Who could object? The issue is can you deliver it without overcrowding the small historic market town of Berkhamsted and will you provide the infrastructure to support the increase in traffic and the cycleways and pavements that allow children to safely walk or cycle to school? There is your challenge!</p> <p>You failed to improve the pavements from Berroc Park, Shootersway to Ashlyn School - the stretch near to the traffic lights at Kingshill Way are narrow and dangerous.</p> <p>The new traffic lights are dangerous for traffic turning right from Kings Road into Shootersway. They need adjusted to safely allow turning right without the risk of collision from traffic racing along Kinghill Way to beat the lights.</p>

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment**

The scale of the housing target for Dacorum (25% growth) seems disproportionate considering there is only a 9% population growth forecast by ONS in that time.

The plan's approach of prioritising development in Hemel Hempstead makes sense as this would make the most of the brownfield land and local services while reducing the impact on the green belt.

Within the plans, Tring is expected to take a substantially disproportionate portion of the new housing for Dacorum with a 55% increase. I strongly object that Tring is expected to play such a large role in the growth of housing in the borough, especially considering that much of this is proposed for green-belt land. If the housing was shared more proportionately across the borough then this would reduce the impact on green-belt land and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision for Tring delivers a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. There is not enough justification given for such a significant use of green-belt land or enough evidence given that the impacts will be mitigated. Any development in this site would dramatically change and, therefore, damage the green belt and Area of Outstanding Natural Beauty. I strongly believe that the housing actually needed within the area could be reasonably delivered within the current boundaries of Tring if a better mix of affordable housing was included (which is needed much more than non-affordable housing in this area).

Open spaces and sports facilities should, indeed, be included in any plans, but this should not be done at the detriment of the local green belt and countryside, especially the Area of Outstanding Natural Beauty. Consideration should be given to how these can be delivered in their own right instead of such facilities being packaged into a wider growth strategy that includes provision of inappropriate housing growth.

<b>Comment</b>	I believe the scale of growth is unsustainable and driven on demand signals pre covid. The sheer volume of new dwellings are disproportionate to the ability to invest in the required infrastructure, as all the available space (and then some) will be developed for housing.

<b>Comment</b>	Vision concentrates too heavily on just building houses on green belt land. With talk of expansion to the local infrastructure post the development of houses - the infrastructure should be in place first or near on complete i.e. larger parking at Stations or town centres, Tring Station is already over subscribed. Station Road from Tring or to aldbury needs improvement to reduce car use in the winter months it is not suitable for use when dark by either walkers or cyclists currently unsafe carbon free travel. New housing on brownfield sites should be prioritised to our local builders. Allow for the occupancy of these and develop the infrastructure along side. Housing is the easy part to make money and tick the box of growth in the short term but in the long term has a negative impact. There should be a stop/ hold on the number of houses until comparable infrastructure to support these homes i.e. jobs, schools, parking is expanded. The large scale use of green belt to just build houses cannot be allowed to take over and cannot be justified in our current post covid lives and climate change world. There has to be a further justification of the expansion (not just proposed plans and written words) but actual improvements in the wider community before houses can be built. I fear too many houses on the green belt land with local improvements running alongside will destroy the community. Morally the current plan is wrong!

<b>Comment</b>	<p>The Local plan has been written in accordance with current Govt guidance which dates from 2014. It fails to take into account the recommendations of the National Planning Policy Framework (NPPF) which expects Dacorum to use the most recent and up-to-date information which is from 2018. ONS projections based on 2018 data indicate an annual need for around 350 dwellings per annum. This is substantially fewer dwellings than the current plan proposes. DBC should challenge the proposed numbers which represent over -development and huge impact on AONB and are based on outdated (2014) housing projections.</p> <p>The result is 5,954 homes will be in "greenfield growth areas" known as Green Belt and most of it on the outskirts of Berkhamsted. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances, therefore I find the Council's proposals neither justifiable or sustainable.</p>

**The consultation process**

We appreciate the fact that the consultation period was extended, although this should have been agreed at the outset rather than imposing a significant workload during a national lockdown and over the Christmas holidays which self-evidently were always going to make it extremely difficult both to give the plan the attention it deserved and to undertake adequate public consultation.

However we are still extremely concerned that the consultation has proceeded given that:

-shortly after publication the Government changed its guidance on the level of housing growth required by the Borough, a key driver of the plan, and it now appears that the Borough is adopting a housing growth figure which is not consistent with the Government’s express intent to protect Green Belt land.

-it is very difficult to understand how the majority of the proposed major developments can be described as “sustainable” given their distance from existing infrastructure.

-neither the Infrastructure Development Plan nor the Transport Plan are complete and under the current process it will not be possible to comment in any meaningful way on the Plan without the benefit of these significant elements.

-many of our parishioners have yet to receive the Plan Summary.

Nettleden with Potten End Parish Council has a particular interest in the proposals which see traffic from the significantly expanded Berkhamsted and Tring routed to the M1 via a new link road running through The Hemel Garden Community but with no detail of how that traffic gets from the A41 to the start of the new road at the B440, given that the only available routes in the absence of new roads are either through the middle of Potten End or via an implausible route around three sides of Hemel Hempstead.

The Parish Council is also concerned that:

-The proposals take insufficient account of previously identified urban capacity before building on the Green Belt.

-The sustainability analysis is misleadingly only based on land available for development rather than providing a benchmark against the ideal sites.

-The plan doesn't include any commitment to invest in the infrastructure necessary for small villages and hamlets in the Borough to prosper.

-Whilst protecting the small villages and hamlets from housing development, the Plan is silent on protecting them from increased traffic; indeed it seems that the intention is to re-route traffic from Hemel Hempstead in particular through the small villages.

The Plan does not meet the needs of our community and its ambitions will undermine the quality of life of our residents. We urge the Council to suspend the consultation process, to consult with the Government to obtain clarity on the appropriate housing target, and to re-submit the Plan for a further Regulation 18 consultation once the housing target is finalised and other key elements of the plan are completed.

### **National Policy Reforms**

We sympathise with the problem of producing a plan against the background of proposed changes to the national policy framework, but given that uncertainty the Plan cannot afford to have any ambiguity about its relationship with that framework. For example, in the introduction to the main Plan document it states (1.8):

“Although it is unclear how the Government will respond to the consultation [regarding the white papers on Planning for the Future and Changes to the current planning system] we have already taken some steps to reflect some of the proposals. These included ... introducing the simplified zoning categories”.

But in the section dealing with National Policy reforms (14.8) there is no reference to the impact of zones, and in the Green Belt and Rural Area Topic Paper it states (s2.27):

“This [Planning] White Paper seeks to introduce a number of planning reforms to the planning system in England, please note these are only proposals to be aware of and they do not apply to this current Local Plan consultation that is taking place from November 2020 to February 2021”.

We assume that the main Plan document takes precedence and that the intent is to adopt the three zone approach outlined in the White Paper, but if this is the case we are concerned that:

- given the uncertainty around house targets (see below) there is no clarity about what might happen were the plan to be adopted but the housing target reduced, since our understanding of the white paper proposals are that once an area is defined as a growth zone in an adopted local plan there is in principle agreement for the location, use, and amount of development on a site.
- there is no clarity about what might happen to the growth zones identified in the Plan if the amount of windfall housing exceeds the 2,400 estimated in the sources of housing land supply. Given that we are already aware of two proposed developments totalling 1,500 houses (21/00171/SCE 400 houses along Leighton Buzzard Rd and 1,100 homes in the Bulbourne Cross development near Berkhamsted) which don't feature on land identified for growth in the Plan this appears to be highly likely.
- there is virtually no reference in the Plan to protection zones.

The decision by the Government to withdraw some of the proposals in the White Paper only months after it was published amply highlight the risks of building a plan on a consultation paper.

We believe that it is inappropriate to base the Plan around the three zone approach until this is a statutory requirement.

### **Use of Green Belt land**

The Plan calls for significant development on Green Belt land but is silent on the full extent of that development which has been estimated by CPRE at 746 hectares. The use of Green Belt land is contrary to the wishes of our community as was overwhelmingly expressed in the responses to the 2017 consultation where nearly 95% of respondents didn't agree with the proposed approach to Green Belt and Major Development sites. It is clear from Cllr Williams' letter of 30th November 2020 to the Secretary of State that the Borough Council recognises that the same concerns are likely to arise again from the current consultation.

Development on Green Belt land also runs counter to the Government's response to the local housing need proposals of 16th December 2020 in which it stated

*"... that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places".*

We also understand that one of the reasons that the Inspectors halted the Public Examination of the St Albans Local Plan was its over-reliance on a few very large strategic Green Belt allocations. Finally we see insufficient evidence that Dacorum has looked widely enough to meet its housing commitments from less sensitive, more sustainable, sites.

The National Planning Policy Framework requires that the demonstrable benefit of the proposed release of Green Belt land outweighs the adverse impact of building on it. We dispute the assumption in the Plan that this hurdle has been met.

### **Housing needs assessment**

We note that since publication of the Plan the Government has revised its method of housing needs calculation but we oppose its proposal to revert to using out of date data from 2014 which result in an increase in the target for housing needs in Dacorum (and Hertfordshire as a whole).

We cannot support using a housing needs methodology that is not based on up to date demographic and housing data, in this case the 2018 ONS data, and doesn't take sufficient account of Green Belt and AONB constraints; we fully support the request in Cllr William's letter of 30th November 2020 that greater weight be placed on these constraints.

We also note that on the 16th December 2020 the Minister stated that the Ministry's projected house building numbers are not a target which in the context of those remarks we understand to mean that more weight will be given to Green Belt constraints.

Given that the Government has withdrawn the housing needs methodology on which the Plan is based, that the revised methodology uses out of date data, and that the Government has stated that its projected building numbers are not a target, why has the Plan not been withdrawn until there is some clarity of what Dacorum's housing need is?

### **Transport and Movement**

We support the Plan objective (2.13) that "new development needs to be located in places which have excellent access to jobs, shops, services and can quickly and easily be reached by sustainable public transport and benefit from high quality walking and cycling infrastructure", but this is completely at odds with the proposed major development sites.

We have particular concerns:

- that in practice the prime consideration in site selection appears to be land availability rather than appropriateness or sustainability (Site Selection Topic Paper 2.35).
- that the Council is still "continuing to develop the transport proposals that will be included within the Plan" (21.18), providing only limited evidence as to how sustainable public transport will be delivered.
- about the implications of the new transport corridor to the north of Hemel Hempstead (10.4 & 21.17) on traffic through Berkhamsted, Potten End and Great Gaddesden Parish.
- that the need to develop sustainable transport options for rural settlements seems to exclude settlements not identified for growth in the Plan (21.16).

This is supposed to be our only opportunity to have a meaningful input to the Plan, and the transport infrastructure to support a planned 25% increase in population is clearly key to understanding how the Plan can be sustainable. We cannot support a Plan without access to the details of the transport plans which underpin it.

### **Infrastructure**

Clearly when considering a proposed 25% increase in population the provision of adequate infrastructure is key, but there are only three pages about infrastructure development in the Plan (pp 49 – 52). The draft Infrastructure Development Plan (IDP) is available but will continue to be developed (10.5) and as a result it is difficult to know what reliance to place upon it. The Council itself recognises that:

“The IDP is also a key tool in the assessment of development viability, which the Council is continuing to develop to ensure that the required infrastructure can be delivered and development remains viable.” (10.5)

We are also concerned that, as with transport, improvements to the Borough’s digital network appear to be limited to new development (21.50) making it harder to sustain existing smaller villages.

This is supposed to be our only opportunity to have meaningful input to the Plan. We cannot support a Plan without the details of the infrastructure development that will underpin it.

### **Natural Environment**

With the underlying chalk aquifer already assessed as being “over-abstracted” we have concerns over the ability of the water supply to be able to accommodate the needs of a 25% population expansion without impacting the natural environment.

### **Overarching Vision**

The main problem with the Vision is not what it says, but what it leaves unsaid; no-where in the Plan does it state that the Vision is to build on 746 ha of Green Belt land up to the edge of the AONB. To represent the Hemel Garden Communities programme involving a development of 5,800 new houses as “delivering new ... green spaces” (p23) when it involves building on 372ha of the Green Belt is quite simply a gross misrepresentation.

The Vision is also silent on the support to be provided to the surrounding small villages and hamlets. Improved digital connectivity and sustainable transport in so far as it is possible to tell from the incomplete work in those areas appear to be initiatives limited to the localities which will see housing development. The objective should be for all residents of Dacorum to benefit to ensure the sustainability of those smaller communities.

The Vision commits that smaller villages will be “protected from development” but is silent on the impact on those villages of increased traffic flows which are an integral part of the Plan. There should be a commitment to protect smaller villages from increased traffic flows.

The Plan does not meet the needs of our communities and its ambitions will undermine the quality of life of our residents both through the loss of open space and a failure to commit to invest.

It is not our Vision for the future of Dacorum.

<b>Comment</b>	<p>I think the vision focuses too heavily on theme 1 - providing homes with much less consideration given to 2-5 which are barely mentioned in the document. Where is the plan for a vibrant economy - it all seems to be focused on homes. Where are the new employment opportunities for future residents? Why are we eating into green belt land which people are enjoying considerably during the pandemic? How is building a huge volume of new homes going to create a cleaner, greener borough especially as hard to increase existing transport networks - particularly in somewhere like Berkhamsted. Where are the cycling paths?</p> <p>I think the pandemic may mean we will have different work and leisure patterns in the future - less commuting, more working from home, more local focus so there should be an urgent review of the entire local plan given our current situation.</p>

<b>Comment</b>	<p>If you take the Vision at face value it's probably one that most people would want. However the Plan doesn't describe how that vision would be achieved and concentrates almost exclusively on how many homes will be built and where they would be.</p> <p>The proposed number of new housing is unnecessarily high partly because the numbers are based on out of date figures.</p>

Growth in housing should be accompanied by growth in employment otherwise it becomes incompatible with the desire to reduce carbon emissions through reductions in personal vehicle journeys.

Berkhamsted has an increase of 2200 houses with no provision for increasing local employment. With most of the housing being build along the top most will not walk or cycle.

Development should be predominately concentrated around Hemel as the natural centre of local employment, transport hub, civic amenities etc

Growth proposed for Berko & Tring is out of proportion to their current size and do not take into account their geographical constraints.

Green Belt land should only be developed in exceptional circumstances and the case for exceptional circumstances has not been made.

I have several reasons for being opposed to this plan:

- Road congestion and safety particularly on Granville Road, Bell Lane and Darrs Lane.
- The safety of children travelling to and from school
- Increase in noise and air pollution directly impacting the health and well being of local residents
- Loss of habitat for wildlife in particular nesting owls and bats, in mature trees on the land.
- The housing numbers in the Local Plan across Dacorum, and therefore Berkhamsted are excessive and wrong. They are well and above the forecast housing need for the Borough as calculated by the ONS.

- The impact on West Berkhamsted is disproportionate , does not consider any recent major developments in the area (Bearroc) and severely impacts infrastructure (roads, schools, doctors surgeries)
- During my many years of living in Berkhamsted and walking in the area there have been several sink holes that have appeared on the propped site between Bell Lane and Darrs lane- this raises serious concerns for new build resident's safety and ability to obtain sufficient insurance.

<b>Comment</b>	<p>I can't agree with your vision and objectives, which, of course, sound ideal, but are fundamentally incompatible and undeliverable by your Plan.</p> <p>The Core Strategy in 2013 accepted the maintenance of the historic settlements of Berkhamsted and Northchurch as having 'strong valley and linear character and argued against building on the ridges of the valley. This commitment seems to have been abandoned but, in my view, should still inform your approach to development in this area.</p> <p>If implemented, Berkhamsted will have a 24% increase in houses (Northchurch 500 and Berkhamsted 1700), Tring will increase by 55% – this is quite a disproportionate burden for these market towns to take. They will lose their character and the development on this scale will damage their considerable contribution to the quality of life in Dacorum.</p> <p>I strongly object to your overstatement of housing need for Dacorum as a whole and the disproportionate burden for Berkhamsted, Northchurch and Tring.</p>

<b>Comment</b>	<p>The overarching vision refers to "open spaces", but unfortunately, they are often not always delivered within the true meaning. They may be publicly accessible, but are often surrounded by housing or commercial development (in part to fund their maintenance). Many people love the area because of the truly open areas of countryside. Whilst development is of course necessary, adding large swathes of development to the perimeters of our towns, distances many of those residents from the countryside. For example, the proposed developments to the north east of Tring or the north and east of Hemel Hempstead will materially change the character and environment of those areas.</p> <p>The proposed protection afforded to The Countryside and other small villages, whilst admirable, needs to be balanced with the impact elsewhere. Small pockets of development across all areas would surely offer an increase in diversity of provision and residents, thus supporting a more diverse and balanced economy.</p>

<b>Comment</b>	<p>Dacorum's Vision emphasises environmental sustainability, but fails to mention that the cost of delivering it is a 25% increase in houses and population and the <u>loss of 2,000 acres of Green Belt and open spaces</u> across the Borough. The Vision highlights the potential for Hemel Garden Communities to deliver "... green spaces ..." but fails to mention that this comes at the cost of over 900 acres of Green Belt land.</p> <p>Tell me that Dacorum's vision is that we're going to help meet justifiable housing need, save the planet, and increase public accessability but we need to use some green belt land in the process and I'm more likely to be convinced.</p>

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	It is a plan that is orientated primarily towards provision of housing, not one that really engages with the fundamental issues we are dealing with now or in the future. There is a lack of clarity about how towns' such as Tring will have been enhanced, other than being enlarged. There is a lack of recognition of the pressure these Towns are already under following years of infilling and underinvestment in amenities. This is evidenced by the cut and paste approach to the plans for Berkhamsted, Tring and Hemel

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to

the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

The current Covid-19 Pandemic is an exceptional issue that should be considered and translated into the planning for Dacorum in the short and medium term. There is an opportunity to promote local growth that improves welfare for local residents that are likely to travel less into London and the surrounding working areas. Adding significant numbers to the community will apply excessive stress to the local recreational welfare infrastructure that has seen massive increases this past year.

The opportunity to utilise "Brown Field" sites for residential use will undoubtedly increase and repurposing retail for to encourage working closer to home will have a fundamental change to the way most commuter type residents work. High density homes without having outdoor spaces close will encourage more traffic and congestion around the Ashridge Estate and other local open spaces that are not managed for high vehicle usage. Therefore, the use of some 850 hectares of Green Belt is inappropriate having regard to the proximity of areas allocated for housing to the Chilterns AONB. Dacorum BC should make use of exceptions to the target housing figures if meeting the target adversely impacts the Green Belt and the Chilterns AONB.

<b>Comment</b>	<p>I do not think that the vision has considered the impact of Covid or Brexit sufficiently.</p> <p>Brexit will impact on the extent of influx of expanding population.</p> <p>Whilst it is hard to assess at this early stage, Covid will more that likely change working practices radically in that less office space will be needed. This therefore will lead to an excess of underutilised brownfield sites which should be utilised before greenbelt.</p> <p>Dacorum should be placing greenbelt and its protection as a much higher priority before converting into residential housing. Once redesignated, it cannot be reclaimed. National Planning policy clearly sets out the rationale and reads "The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence."</p> <p>Dacorum clearly wishes to ignore National Planning policy.</p>

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt. Urban areas make best use of the existing infrastructure that is already in place, for example schools, shops and medical services. Further, urban centres provide better access to sustainable forms of transport thereby assisting with meeting our national climate change targets.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel

Hempstead with the remaining growth shared equally between the remaining settlements.

I believe the plans will have a very big detemental affect on the local communities, i live in Northchurch and it such a historical place and no consideration is being goven to tis. It will bring a lot more traffic thourgh the town and there is not the transport infrustructure in place.

Comment	I believe overall that the basis of the plan is both out of date (pre-COVID19 impacts) and flawed (based on previous Govt. guidelines). I feel that the growth proposed for Tring is totally disproportionate to both the existing town but also its' capacity to accommodate such a drastic increase in population. Whilst I can appreciate the need to provide more housing, I seriously doubt that the planned housing in Tring would be remotely affordable!

Comment	<p><b><u>Overarching Vision</u></b></p> <p>We have no comments on the 'Overarching Vision for Dacorum's Growth by 2038' which reads as an appropriate set of principles to guide development in Dacorum.</p> <p><b><u>Vision for Dacorum's Places</u></b></p> <p>With respect to the 'Vision for Dacorum's Places' this under-represents the role that Kings Langley can play in delivering sustainable growth. Kings Langley is grouped alongside Bovingdon and Markyate in the spatial strategy, neither of which have rail stations. Functionally, Kings Langley is 9 minutes on a direct train route into the principal settlement of Hemel Hempstead and this should be more appropriately reflected in the vision, aims and objectives for Kings Langley.</p> <p>As noted in the October 2017 Settlement Profiles from Travel to Work data, 15.7% of trips of people living in Kings Langley are made by public transport. This is materially higher than both Bovingdon and Markyate at circa 10%. Incidentally, the figure for Kings Langley is also higher than the figure for Tring.</p> <p>The distinction between Kings Langley and Bovingdon and Markyate is further highlighted in the Council's own evidence with Paragraph 2.30 of the Development Strategy Paper (2020) stating '<i>However, unlike Bovingdon and Markyate, it</i></p>

[referring to Kings Langley] *does have its own secondary school, and access to a mainline railway station and reasonable levels of local employment.*'

The attractiveness of Kings Langley as a location for employment is further highlighted in the Employment Land Review (October 2017) in which it is stated that total office stock in Kings Langley is 33,000 sqm, with EGi reporting that there is just 200 sqm currently available. The amount of employment floorspace in Kings Langley is significantly greater than that at Bovingdon or Markyate.

The Sustainability Appraisal November (2020) states '*Option Cii considers higher growth at the villages of Bovingdon and Kings Langley, building upon their strengths as having a larger range of local services and facilities when compared to Markyate, and also that Kings Langley has better access to public transport.*' Whilst this is acknowledged in the evidence it is not reflected in the approach to housing allocations in the Large Villages.

### **Strategic Objectives**

The first theme of the Strategic Objectives is to '*deliver the identified housing requirement between 2020 and 2038.*' The launch of the consultation in November 2020 pre-dates the Government's response to the proposed changes to the Standard Methodology (December 2020). The response from the Government confirms that the annual housing target for Dacorum should be 1,023pa. The Strategic Objectives as set out in the Draft Local Plan are based on the lower number consulted on (922pa) and thus will need to be increased to 1,023pa to respond to the outcome of the consultation.

Ensuring that the Strategic Objectives are based on the figure of the Standard Methodology is a key requirement of soundness in presenting a positively prepared approach to the Draft Local Plan. Paragraph 60 of the NPPF (2019) is clear that an alternative approach to determining the minimum number of homes needed should only be used in exceptional circumstances.

A further strand of the Strategic Objectives is to '*strengthen Hemel Hempstead's role as a thriving business centre.*' Whilst it is appropriate that Hemel Hempstead will absorb the highest amount of growth as Dacorum's principal settlement, in delivering the aim to strengthen Hemel Hempstead's role as a thriving business centre it is important that a range of housing is provided to retain and attract talent. Key amongst this is working professional families who, whilst needing to be located close to Hemel Hempstead, require a housing typology as opposed to flatted developments. Locations such as Hill Farm in Kings Langley, in being located in close proximity to existing schools, are well placed to provide housing to respond to this need and contribute to wider aims to strengthen Hemel Hempstead's role.

A final key strand of the Strategic Objectives is to '*To promote the use of renewable resources, reduce carbon emissions, protect natural resources and reduce waste.*' Arguably the most significant natural resource within Dacorum is the Chiltern Beechwoods Site of Special Scientific Interest (SSSI) and, specifically, Ashridge Commons and Woods SSSI.

Work undertaken as part of the Chiltern Beechwoods Topic Paper (2020) confirms that engagement with Natural England to date has confirmed that recreational pressure and air quality impacts are the greatest threat to the asset. Visitor surveys that have been undertaken at Ashridge Commons and Woods SSSI confirms '*approximately 19% of total visits, taking account of frequency of visits, were from Hemel Hempstead. 32% of total visits were from Berkhamsted, with 6% from Tring.*'

As set out in Paragraph 4.34 of the Topic Paper it is further stated that *‘National Trust expect these percentages to be a minimum estimation of the number of visitors from Dacorum, as it does not assess all of the 24 car parks they have on site, especially those located closer to the settlements of Northchurch and Berkhamsted. In these locations, there is an expectation that most visitors are from the local area who know these smaller, local car parks or the ‘quieter areas’ of the site.’*

From the above data it is clear that a significant amount of the recreational pressure arises from Hemel Hempstead, Berkhamsted and Tring, with Kings Langley located furthest away from the SSSI.

From the Development Strategy Paper (November 2020) it is noted:

*‘Following discussions with Natural England, they have identified ‘long term wear and tear issues on the site’ and agreed that likely significant effects could not be ruled out for recreational pressure or air quality on the Chilterns Beechwoods SAC. Therefore they advise that a precautionary approach should be adopted.’*

Paragraph 174(a) of the NPPF (2019) is clear that *‘to protect and enhance biodiversity and geodiversity, plans should: a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity’.*

With Ashridge Commons and Woods SSSI susceptible to recreational pressures as a result of housing development, it is a key consideration to ensure that the spatial strategy for the Draft Local Plan embeds this into its approach. A key question asked of Paragraph 32 of the NPPF (2019) is whether or not adverse impacts can be avoided and, if not, how they are mitigated. This is consistent with the approach being advocated by Natural England that a precautionary approach should be adopted.

In the preparation of a sound plan that is consistent with the NPPF, it is necessary for the spatial strategy to appropriately respond to relieving recreational pressure on the SSSI. Kings Langley is located as the settlement furthest away from the SSSI and does not appear in the visitor surveys as a major ‘starting point’ for trips made to the SSSI (see Page 106 of Chilterns Beechwood SAC – Summary of Evidence 2020).

The increase in housing in Kings Langley, on appropriate sites, is needed to ensure a sound approach to the spatial strategy in relieving the pressure generated from significant development sites in Tring and Berkhamsted. Such a position would have been needed irrespective of the change in the Standard Methodology consultation, but it is now further reinforced that the sites needed to ‘plug the gap’ should be focused in those areas a greatest distance from the SSSI.

The target of 17,000 houses is excessive compared to previous estimates for Dacorum. I believe the long term effects of the Covid 19 pandemic will lead to major changes in working, commuting and shopping habits which may well free up office and retail sites for housing within urban areas, reducing pressure on green belt and rural sites

<b>Comment</b>	<p>In light of the identified constraints on and existing problems relating to infrastructure, the objectives/overview give the impression of responding to (potentially outdated) Government requirements for housing rather than an ideal programme for Dacorum. The declared housing plans for, particularly Tring and Berkhamsted, the national guidance requirement to respect the the intrinsic character and sustainability of the local area.As a result, there are too many contradictions within the draft plan, which I hope after submissions by residents will be revised.</p>

<b>Comment</b>	Number of dwellings 'required' is highly contentious, increasing from 430 pa in the previous Local Plan to 922 pa in this; and in the context of the latest ONS projection of 350 pa in their latest assessment. It strikes me that the DBC figure is based on what might be achievable given no constraints such as green belt retention, infrastructure and enviromental.

<b>Comment</b>	<p>Dacorum Environmental Forum (DEF) welcomes the considerable effort put into to drafting a detailed plan, and applauds the emphasis given to combating climate change, enhancement of biodiversity and preserving the unique character of the countryside and the built environment. However, DEF has grave concerns about the general outline and details.</p> <p>While there are many positive features in the plan, particularly in regard to enhancing biodiversity, reducing carbon emissions, and preserving the visual amenities of the countryside, these are largely aspirational rather than mandatory, or fail to recommend the immediate adoption of current technology. In significant ways major proposals in the plan are directly contrary to these aspirations.</p> <p>For our full response see: The attached document if you are receiving this by E-mail The link below if you are viewing this online <a href="http://dacenvforum.org.uk/">http://dacenvforum.org.uk/</a> and look under "Consultations etc."</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p>

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<u>Incorrect Assumptions for Housing Provision</u> . Accepting that there is an undeniable need for more housing, in particular genuinely affordable housing, I have concerns regarding the enormous scale of proposed development of Dacorum. The Council appears not to have considered the National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB. The algorithm method for calculating housing need which has been used by the Council is not the correct means to calculate the housing needs of the Borough. The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has wrongly based its calculations on the outdated 2014 based ONS data which will result in a significant overestimate of housing needs and brings into question the soundness of any local plan which is based on them. The Council will be aware that on Wednesday 16 December the government published its

response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

- "More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places." and they went on to say "Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

Impact on Green Belt and Other Designated Land. The Council states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB". It is evident that in meeting the declared mission to provide at least 100% of the over-inflated housing need, the Council proposes that, as a necessity, development must, therefore, take place on Green Belt land or land that is specially designated for other purposes. 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty; these are for many people the prime reasons that they have chosen to live in this area. I remind the Council of the stance of our local Member of Parliament, Gagan Mohindra, on Green Belt land, which was included in an email response to me dated 17 November 2020. This appears to set out the Council's duty to plan for housing provision and protect our Green Belt and specially designated land:

- "I stood on a platform of protecting the Green Belt and will continue to fight that battle on a national level. I have previously written to Minister Rt Hon Chris Pincher at MHCLG about my concerns. At a local level, we must as a community come together and agree a way to sustainably ensure new homes are built for local residents. The only way to do this is through Dacorum Borough Council finalising its Local Plan as soon as possible".

<b>Comment</b>	Berkhamsted is busy enough without adding 2200 new homes. This is an outdated survey and does not take into the effects of Brexit and Covid. Destroying the precious green that makes this area so attractive would not only be an environmental disaster but a logistical one too, there is no way the trains could cope, they are busy enough during the rush hour without adding a minimum of 2200 new people using it. The high street is also very busy and although its suggested another Highstreet will be created it will almost certainly create an influx of people to Berkhamsted. Finally the A41 is very busy during peak times, how do you expect it to cope with 2200 new people driving up and down it?

<b>Comment</b>	<p>Please advise in what respects the Draft Local Plan takes into account the recent statement by the Housing Secretary:</p> <ol style="list-style-type: none"> <li>1 In what way will you ensure that a lasting change will be brought about in the buildings and places we build?</li> <li>2 How will you ensure that young people and those on low incomes will be able to have the security and dignity of a home of their own?</li> <li>3 Do you believe that the Local Plan will ensure that buildings and places should be beautiful - popular design and the ability for local people to reject what they consider ugly?</li> <li>4 Are you going to enable the community to come together and produce design codes and guides of the kind that inspired great development of previous generations?</li> <li>5 How will you ensure that builders wishing to build in our area will abide by these rules?</li> <li>6 Do you intend to seek the advice of Nicholas Boys Smith and the Office for Place, to assist in asking residents what they actually want their neighbourhoods to look like?</li> <li>7 Do you subscribe to the aim for new communities: 'beautiful, neighbourly, sustainable, with nature and open space around us and rooted in local character and identity'?</li> </ol> <p><b>“Extract:</b></p> <p><b><i>Home should be a place where people can belong</i></b></p> <p><i>Robert Jenrick</i>  <i>Saturday January 30 2021, 12.01am, The Times</i>  <i>The late historian Kenneth Clark said in his documentary Civilisation that the task of a housing secretary was not the words a speech or the policies, but the buildings built in his or her time in office. Like the proverbial trees planted in whose shade one may never sit, the consequences of decisions made today will not be seen for some time but are likely to endure for a long time.</i>  <i>As we work hard to keep the housing market open, protect the millions of jobs that depend on it and sustain the numbers of homes we’ve built in recent years — we built more homes than any year since 1987 and save for Covid-19 would have reached levels not seen since Harold Macmillan sat at my desk — we are also setting out to build better. We should aspire to pass on our heritage and our unique built environment, not depleted but enhanced. To do that we need to bring about a lasting change in the buildings and places we build.</i></p>

*In recent decades some development has acquired a bad name due to shoddy workmanship, at times outright unsafe, and the development of “anywhere” places, which have little relevance or connection to local character or identity. These were arguments made by the late Sir Roger Scruton and Nicholas Boys Smith on their seminal report to the government last year, entitled Living With Beauty.*

*Life under the constraints imposed by the pandemic has surely validated their position. “People do not want their built environment to be a fragment of anywhere,” Sir Roger said, “it must be a place to which they can belong, where they can put down their roots and be side-by-side with neighbours.”*

*That is what we are setting out to achieve. I appreciate that careful design, place and the natural environment is seen by some to be in unresolvable conflict with our other clear objective to build more homes, which will enable more young people and those on low incomes the security and dignity of a home of their own.*

*Housing policy contains many tensions but this one is not entirely intractable and we owe it to everyone to try to bring these two powerful forces together in greater harmony.*

*This is the thinking behind our response, published today, to the recommendations made in Sir Roger’s report and reflected in the change we are making to the planning system as a result.*

*For the first time since its modern incarnation in 1947 we are embedding the principle that buildings and places should be beautiful, by which we mean locally — popular design and the ability for local people to reject what they consider ugly.*

*Communities will be asked to come together and produce design codes and guides, of the kind that inspired the great development of previous generations, from Bath to Bournville. Builders wishing to build in their areas will need to abide by these rules; indeed, in time, will find it faster and simpler to get permission if they clearly do follow them in letter and spirit.*

*We want to establish a new team of evangelists for this approach, led by the redoubtable Nicholas Boys Smith, to help commute the length and breadth of England to create these codes, called the Office for Place. They will help local councils ask residents what they actually want their neighbourhoods to look like.*

*And we are setting out to reinvigorate the tradition of civic tree-planting we still see in the leafy streets of our Edwardian and Victorian suburbs and new towns like the Welwyn Garden City. Through planning policy, every new street should be lined with trees, ensuring ready access to nature, with all the advantages to health and wellbeing that provides, for everyone.*

*We want to build a better country post-Covid, one with more and better homes, as a matter of social justice; and one where new developments are also new communities: beautiful, neighbourly, sustainable, with nature and open space around us and rooted in local character and identity.”*

<b>Comment</b>	<p>While the overarching vision (Footnote 1: ‘overarching vision for Dacorum’s Growth by 2038’ p22: Draft Local Plan) articulates a positive view of the future, the first and third priorities (Footnote 2. Paragraph 3.5, p21: Draft Local Plan) are open-ended and need further qualification otherwise the strategy and policy statements that flow from the priorities risk causing deleterious impacts.</p> <p>The priorities should be updated as follows:</p> <ul style="list-style-type: none"> <li>• A clean safe and enjoyable environment that respects its historical character and safeguards nature</li> <li>• Building strong and vibrant communities</li> <li>• Ensuring economic growth and prosperity without damaging existing quality of life</li> <li>• Providing good quality, affordable homes, in particular for those most in need</li> <li>• Ensuring efficient, effective and modern service delivery</li> </ul> <p>The second point outlined in the Vision for Berkhamsted (Footnote 3. ‘The vision for dacorum’s places’ p23: Draft Local Plan) assumes the new neighbourhoods included within the proposed development to the south are delivered. Good practice would suggest that a strategy or a plan should not be included in a vision. Moreover, this consultation response recommends that one proposed site be removed from the south plan (see response to question 5). The words “to the south and the southwest of the town” should therefore be removed to avoid a presumption around how the vision should be delivered.</p> <p>I have no comments on the Strategic Objectives (Footnote 4. P25-26: Draft Local Plan)</p>

<b>Comment</b>	<p>It is difficult to decide where to start because the statement totally fails any reality check. The claim that 'The natural beauty of the Chiltern Hills and the varied character of the countryside will have been enhanced etc.' is simply not true when the intention is to concrete over a significant amount of Greenbelt?</p> <p>The vision is a sham as it pays no attention to the NPPF and makes no attempt to justify 'exceptional circumstances'. The sole intention is to build as many houses as possible and completely ignore the quality of life of current and future residents.</p>

<b>Comment</b>	<p>As a resident in Berkhamsted I believe this plan imposes a massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB. Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.</p> <p>The plans propose an over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. The Council has an obligation to protect the AONB and its environs.</p>

The council does not appear to have used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need of around half of that currently proposed in the plan. Therefore a large area of green belt land would be destroyed un-necessarily.

There do not appear to be evidence based carbon reduction targets mentioned and how the plan proposes to meet these.

The plan does not appear to address the need for improvements in infrastructure which such a large scale plan would need e.g. traffic congestion and already stretched healthcare provision.

Have brownfield sites been considered as an alternative, the government allows commercial and office space to be converted to residential, as well as adding additional storeys on top, without the need for planning permission. With recent changes brought about by Covid and Brexit these options should be looked at.

The Housing targets are WRONG.

**I refer to the Open Letter from Dacorum Liberal Democrats to Rt. Hon. Robert Jenrick *Minister for Housing, Communities & Local Government* dated 31st January 2021.**

I AGREE with the contents of this letter that state: *“it is perverse that the Ministry has chosen to apply the new algorithm to 2014 Office of National Statistics Data (ONS) data rather than the more recent 2018 ONS data. Not only is it illogical to use historic data, there is no consideration of the effects that Covid and Brexit have had on levels of housing need.”*

<b>Comment</b>	<p>While I do agree with council's overall vision of: good homes and jobs, excellent education and health, sustainable transport, protecting the environment and resource.</p> <p>The problem is also that the draft plan is about building many homes on Green Belt land that the Council should be protecting. The fact is that the Council has not challenged what they believe to be the Government's target of 16,596 new homes in the borough over the next 18 years. This represents an increase of 114% over the 2013 core strategy, the current plan. The result of this is that 5,954 homes would be built on Green Belt on the outskirts of Berkhamsted and Tring. By deciding to build on Green Belt the Council is ignoring the national Planning Policy and statements by Ministers</p>

including the PM that Green Belt should NOT be developed except in 'exceptional circumstances'. The Council's justification for 'exceptional circumstance' is meeting a government target which was never a hard number in the first place.

In the councils 'Overarching Vision for Dacorum's Growth by 2038' it is stated that "All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place." Berkhamsted is a small market town built on steep sides of a valley. The Green Belt land that would accommodate new houses are the last open spaces that remain within the town and if they go it would drastically change the town forever. It would seem the plan was designed by somebody with NO detailed understanding of the place at all

It is also stated that: "Growth will have been accompanied by supporting services and infrastructure which were delivered at the right time and benefited new and existing communities, particularly transportation, education and open spaces, to have created healthy and sustainable developments". The majority of the proposed new houses in Berkhamsted would be built on the top of steep hills and also a good distance from town. This would inevitably lead to an increase in traffic in the town as the majority of people will not walk to go shopping. How can this be sustainable when we should all be reducing emissions not creating new ones? How can building on Green belt in Berkhamsted be supporting open spaces when it is the exact opposite? How can any of the resulting extra traffic, noise and pollution from the new cars on the roads in Berkhamsted be of any benefit to the existing community?

It also states that: "Dacorum will have in place a network of cycle lanes and secure bike parks, that have encouraged greater levels of cycling and walking, while also having promoted the use of public and greener transport." Berkhamsted may benefit from new cycle lanes but as the new houses are mostly on top of very steep hills I cannot see them getting that much use. The train station in Berkhamsted is some distance from all the new proposed housing and would only seem to encourage more people to drive to the station rather than to do any walking.

It also states that: "An active lifestyle will have been encouraged and supported through the provision of open space, sport and recreation facilities. Opportunities for all people to increase their levels of physical activity will have been supported with improved provision of active travel." How can building on open space be seen as encouraging its use for an 'active lifestyle'? Currently footpaths cross the Green belt land which will be built on and these are 'open space'. Walking or running through a large housing development will not be in any kind of 'open space'. In Berkhamsted the new houses will also be some distance from the town and at the top of hills. This will not 'encourage and support' any active lifestyle but will encourage the use of many more cars.

<b>Comment</b>	There appears to have been zero thought put into the plan. How can Tring have 2,731 extra houses ! There is already a large development on the edge of the Town. The current infrastructure struggles to cope with the size of the town now. This will destroy a lovely market town.

<b>Comment</b>	<p>While I recognise the need for new homes, the scale of this developmnt and the fact it's on greenbelt land is unacceptable and unimaginative.</p> <p>The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>I don't approve of much of this local plan.</p> <p>Far too much emphasis on greenbelt land. Not enough brownfield land has been identified for development.</p> <p>The housing target is too high for the area and its associated population growth, amenities and roads and facilities.</p> <p>The Northchurch East of Darrs Lane and LockField developments should not be built and are ill conceived because of poor roads and infrastructure to cope with the traffic, the amenities are not even enough for current residents/community.</p> <p>Roads and parking is already maxed out.</p> <p>Wildlife corridors and habitats have already suffered because of recent housing developments, will suffer yet again and species will die out.</p> <p>Personally, Granville road is already congested and safety of residents is a real concern. Especially younger children walking to school.</p> <p>Bell Lane has ancient hedgerows and is a sunken lane. It is not sensible, nor logical to propose this road as a link to the East of Darrs Lane housing development. Its extremely concerning that there is a proposal for a school, on this land. Why not extend current school sites and locations to accommodate reasonable housing numbers which is more sustainable for Northchurch and Berkhamsted. Ashlyns school has adequate grounds to be extended. Northchurch children can still then walk safely to Ashlyns / local school without congestion and pollution impeding them and their health.</p> <p>Local heritage and AONB will be ruined and decimated if the East of Darrs lane development goes ahead.</p> <p>Can you not consider the Majestic wine and land at the end of Northbridge road for this scale of housing,, where there is already infrastructure in place (road that can cope with the volume of traffic). Land at the back of Tesco and Fitness First car park (we already have a multi story car park). Loxely road garages could be reclaimed and used for starter homes/ flats. End of Chaucer Close garages could be used . Unused office spaces or above shops for social housing and empty retirement homes.</p>

<b>Comment</b>	<p>I strongly disagree with the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, when there is little evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period.</p> <p>Already there are large volumes of housing available (a simple check on rightmove offers up 1,055 properties for sale of which a proportion are already sitting empty) and additionally I understand there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>The new local plan vision facilitates a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough as it represents a 55% growth (2,700 houses) in housing in Tring, which as a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead (which has a higher availability of brownfield sites) with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty, it also has significant impact on the community aspect of the town with little to no consideration given to infrastructure to cope with increased demand in the small high street. There is very little regard to preservation of the towns character as well and would ask that councillors reflect on whether they feel the loss of natural areas, biodiversity and historic town character is something that would be proud to say they approved to their own family and friends.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. The current schools in the area struggle to provide appropriate capacity and are over subscribed so to only justify additional educational facilities as a by-product of unjustified large scale growth to Tring will simply compound an existing problem where the need is not being met.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	Whilst I agree that we need more housing, jobs, education, transport and to protect the environment lam very concerned that the intensive building on mostly greenbelt land is the way to do this. There is an increase of over 114% over the 2013 core strategy.I thought greenbelt land shouldnot be built upon except in exceptional circumstances, I donot understand why the sudden dramatic increase almost exclusively centred around Berkhamsted and Tring.

<b>Comment</b>	<p>I have considerable concerns regarding NLP, summarised as follows:</p> <p><b>1 The plan fails to justify the huge loss of Green belt land</b>, in particular the outstanding vistas seen across the Gade Valley north of Hemel Hempstead.</p> <p>DBC appear to have cherry picked the guidelines of the NPPF, ignoring clauses that would allow a lower Housing Number. Christopher Pinchen MP (Housing Minister) in a letter to Cllr Andrew Williams has stated:</p> <ol style="list-style-type: none"> <li>1 <i>“Authorities should make a realistic assessment of the <b>number of homes their communities need</b> as the starting point in the process”</i> The latest ONS figures do not support the claim that 16596 homes are needed.</li> <li>2 <i>“10.3 Chapter 3 of the NPPF ... states that all policies: “should be underpinned <b>by relevant and up-to-date evidence</b>”</i>The up-to-date evidence from the ONS is that Dacorum’s community needs ~354 homes per annum, which even including the x1.4 cap requires only 496 homes pa. This is well within DBC’s own stated figures of being available from Non-Green Belt land.</li> <li>3 <i>“Once this has been established, planning to meet that need will require consideration of land availability and <b>relevant constraints such as Green Belt</b>”</i>. There is no conceivable justification that the land either side of the Gade Valley should not be constrained as an outstanding area of scenery within the green belt.</li> </ol> <p>It is concerning that the much lauded Garden Community Phase 2 earmarks a further 4000 homes on Green Belt land. This belittles DBC’s claim that only 1/3 of the proposed sites are on GB land, and would result in half the homes being built on Green Belt.</p> <p><b>2 DBC appears to be prepared allow even more development than the NLP proposes.</b></p> <p>Some development sites have already been granted planning permission for more homes than proposed in the plan, and others sites are being actively pursued by developers even though the sites are not in the NLP. The Public deserve to know where homes will not get planning permission, in addition to the site allocations in the NLP. I refer specifically to plans by Thakenham Homes, SE of Berkhamsted, and land north of Gadebridge, where an archaeological impact assessment has recently been conducted.</p> <p><b>3 The NLP does not have the support of the Elected Representatives.</b></p>

The DBC councillors are unanimously opposed to the criteria on which the housing needs are based, and Cllr Andrew Williams wrote to Robert Jenrick (Communities Secretary) to raise their concerns. Subsequently the Government's algorithm has been withdrawn. DBC should not be pursuing a policy which is opposed by its elected representatives, and for which the Government policy used to justify it has been withdrawn.

**4 Protection and enhancement of biodiversity and action to combat climate change are not rigorous or sufficiently date stamped to guarantee compliance by developers.**

While considerable emphasis is placed on sustainability, the wording is aspirational rather than mandatory. Biodiversity enhancement using offsets are extremely difficult to achieve and existing technical innovations to reduce carbon emissions could be implemented by dates earlier than specified.

**5 The NLP fails to factor in the “New Normal”**

With the post-Covid and post-Brexit “New Normal”, and the current demise of the retail shopping trade it is likely that the set of needs for which the NLP has been planned will not materialise. There does not appear to be any process to prevent the developers from ‘Cherry Picking’ the most controversial and damaging Greenfield sites, even if the prevailing economic situation then results in not all the sites being taken up.

**6 The NLP lacks any vision for the social and cultural development of the Borough.** The former Market Square and Bus station in Marlowes was designated as a ‘leisure quarter’, but the site appears to now be intended for housing and commercial development. This fails to deliver to the residents of Dacorum the leisure quarter that they were promised, or the Pavilion replacement that they were promised before that. This land, being publicly owned, should be used for **the direct benefit of the public.**

**7 The NLP is incomplete.**

There are references in the NLP to policies that have yet to be produced, and without these the public should not yet be consulted on the NLP.

Specifically:

<b>Comment</b>	<p>I am writing to express my strong opposition to the proposed local development plan for which you are now consulting local opinion, particularly with regard to Berkhamsted</p> <p>There are many submissions that have already stated that the formula used to calculate the total development requirement is flawed and therefore the whole plan needs to be revisited to make the outcome credible and proportionate. Berkhamsted lies in an ANOB and excessive development will inevitably have a detrimental impact on these special green belt surroundings and SSSIs we are fortunate to have in our area. Preservation of this environment is more important than ever with the demands placed on it. The Chiltern Society have expressed their opposition and I support their objections completely.</p> <p>HS2 is causing the most appalling environmental impact on the Chilterns, allegedly to allow faster transport between north and south and expand the ability to commute to much further afield. Adding an excessive level of commuter style housing to the Chilterns is contradictory and exacerbates the ongoing environmental damage.</p> <p>The consultation process has been based almost entirely online and therefore excludes sections of the community that do not use social media or who aren't members of the appropriate social media groups. The online exhibition doesn't have the information regarding housing architecture, expected cost or occupants. Will there be provision for first time buyers, social housing, sensitive design rather than developer led, bland, red brick, shoddily built commuter homes. Will it offer balanced changes to the local population or will there be another significant retirement development?</p> <p>Developers should be required to complete the brownfield sites already earmarked. The site near Billet Lane has been left with no material progress for so long and failure to complete development of the social resource of a supermarket and entry level housing sets a poor precedent for any similar proposals included in the development plan.</p> <p>There is also the local proposal to move the football club to a site near Bourne End and I disagree with this proposal completely. It is important for the club to stay in the heart of the town. Moving the facility towards Bourne End only furthers the creep of Bourne End and Northchurch losing their separate identities and it will be more likely the football club members to drive to the facility rather walk or cycle. The club itself is vehemently opposed to this move and I agree with their stance completely.</p> <p>It is important that you do not just ignore the voice of the local community having asked for their views in this consultation. Expert agencies such as CPRE, the Chiltern Society, the local Labour Party and Liberal Democrat parties do not support the plan. The local community do not support the plan. The figures used to devise the plan are flawed. Time to go back</p>

to the drawing board and incorporate the many views and pieces of information submitted to enhance, not smother this lovely market town.

The only issue I will base my voting decision for in the upcoming local elections is a party that will guarantee a revision of these plans. I feel so strongly about this, I have never complained to the council about anything before but I will not stand by and let this development plan continue without voicing my objections repeatedly until someone listens and respects local opinion.

Housing strategy is going against the fundamentals of the why the green belt was instigated. This spatial plan is the definition of urban sprawl and in some areas promoting the space to be used for linear development. Redbourn would effectively merge with Woodhall Farm and, Grovehill and Piccotts End.

Spatial plan has no heirachy of brown field sites or areas which can easily be encompassed for small in fill locations. Heavily reliant on combining existing settlements together via the green belt land already in place. Large areas of argicultural land will be lost forever with this change, land that is useful for growing crops to feed an ever growing population, as well as livelihoods and generations of land workers.

Housing requirement is large and the population increase could be upwards of a third. Does not seem to have enough commerical land set aside for this increase of work force. Plan does not allocate and detail enough land/space for amneties for the existing and future residents.

Spatial plan is reliant on London being prosperous and the being apart of the commuter belt. No provision on the spatial plans for enhancing of road networks, rail links or provision for low carbon transport.

<b>Comment</b>	<p>New Gospel Hall Trust (registered charity no 1159952) welcome and support the Overarching Vision, in particular the commitment to accompany proposed growth with supporting services and infrastructure and the recognition that this will benefit new and existing communities and create healthy and sustainable developments.</p> <p>The Trust also support the Health and Wellbeing section of the Vision.</p> <p>New Gospel Hall Trust are responsible for the provision and maintenance of Gospel Halls (places of worship) in Dacorum and adjoining local authority areas on behalf of the Plymouth Brethren Christian Church. The Trust have a current need to identify an additional site for a new place of worship and anticipate the need for a further site in the borough within the LP period to 2038. The Gospel Halls operated by the Trust are all dedicated to the worship of God, for prayers and for gospel preaching. The Trust do not sub-let their halls for other secular activities, including any social or recreational uses. The Trust is closely associated with and may wish to include storage facilities for the Rapid Relief Team which is the church charity dedicated to catering support of the emergency services and wider community needs during public emergencies such as flood events, together with support for homeless persons.</p>

<b>Comment</b>	The vision is contradictory. The amount of housing and development proposed is incompatible with aims for sustainavility of biodiveristy and protection of the green belt and adjoining AONB/ Special interest Beeches areas.

We need additional housing especially affordable but the housing targets are based on incorrect projections from 2014 rather than 2018. Using the latter would halve the number of houses required. In addition more creative use of brown field sites (and a full review of brown field opportunities is required). The pandemic has shown more people working from home and this may actually mean that more people want to live further beyond the London commuter belt in which Dacorum currently sits.

3.6 The vision is contradictory. It appears that building a huge number of houses relative to the existing population overrides all other factors mentioned. For example the vision to cherish the natural beauty of the environment is clearly not true when the proposals are to build houses on countryside.

The goal to reduce our contribution to climate change is also not compatible with building huge numbers of houses. Have the carbon emissions from construction, loss of countryside and the subsequent emissions from the new houses been taken into account? The best thing for climate change is to improve the houses we have and not build any more.

The vision for all areas includes the words 'will have grown significantly'. Why is this the vision? Do residents of these areas want their towns and villages to grow significantly? I certainly don't.

3.7 There are 7 Strategic Objectives. There might as well only be the first one, which is to deliver lots of additional homes, because this trumps all the other objectives.

Ask residents of Dacorum do we want to build thousands of new homes. I suspect the answer is 'no'.

<b>Comment</b>	<p>An enormous amount of work and dedication has gone into our Borough plans over many years. The latest one, the draft Local Plan, 2020-38, gives Dacorum residents an understanding of the affordable home building challenge.</p> <p>Dacorum Borough Council's (DBC) elected leaders state that one of the aims of the Plan: "Is protecting the health and well being of its residents."</p> <p>Unforeseen events have rapidly changed our every day life emphasizing the importance of health and sustainability. This consultation has given some residents an opportunity to flag up new issues that have emerged since the pandemic and the increasing climate crisis.</p> <p>The UN's Security Conference heard from one of the world's leading conservationists in February. Sir David Attenborough said: "No matter what we do now some of these (Climate Change) threats assuredly will become reality in a few short years."</p> <p>This draft Plan looks further than the next few years to 2038 and beyond with Phase 2.</p> <p>Whilst water security and supply is not a statutory requirement of DBC can we find out what new plans there are to increase water capture before we embark on increasing the number of residents here? The draft Plan's new housing figures would mean Dacorum's population would grow by over 30 per cent.</p> <p>With the amount of water abstraction, from rivers and chalk streams, already a major concern could water capture initiatives be solutions to help supplement current supplies in increasingly drier Summers? New builds are often constructed with water butts to capture rain. Could utility water bills include a website address to give advice on water butts? As well as storing rainwater research scientits have found a way of utilising them to allieviate flooding. When there is a local flood alert a timer releases the water in the drains before the storm starts.</p> <p>The Plan mentions providing a new park in Phase 1. Would this be an opportunity to link this large out door space to a new reservoir as well as new allotments schemes? And some development land could be used for temporary allotments until house building started.</p>

Could we have clarification of the Plan's commitment to new allotments? The Field's in Trust (FiT), Table 30, recommends benchmark provision and accessibility standards for Open Spaces. The recommendation for allotments is 0.25 hectares per 1000 of the population. How many allotments are there in Dacorum? When the New Town was built many of the allotments were removed. While new Dacorum allotments are likely to be smaller than the current plots they will offer outdoor exercise for a growing number of people who have found peace of mind growing plants.

Lastly could more Sustainable Drainage Systems (SuDS) be built to protect against flooding and safely supply stored rainwater to near by growing areas such as allotments?

<b>Comment</b>	<p>The plan requires the release of large tracts of Green Belt land but fails to fully make use of suitable brownfield sites and underutilised land in accordance with para 136 and 137 of the NPPF. Sites submitted to the council for inclusion on the brownfield register in 2017 have been ignored while Green Belt land has been transferred for housing development. The council has failed to prove its case that the "exceptional circumstances exist" for the transfer of such large areas of Green Belt land when it does not fully utilise available existing urban sites.</p>

<b>Comment</b>	<p>Numerous local groups have commented on this consultation including Berkhamsted Residents Action Group (BRAG), Berkhamsted Citizens Association, CPRE, Chiltern Society, Berkhamsted Town Council, Dacorum Green Party, Berkhamsted and Tring Labour Party to name a few. I agree with the stance taken by all of these groups. The fact that all these (and there will be others) are providing the same substantive message from the local population to you should demonstrate that these proposals do not have the support of the people. I do not propose to add to your reading burden by rehashing all of their points but I do make the following observations.</p> <p>There is no discernible overarching vision for our towns and villages in this document. Despite grandiose words such as "maintaining and enhancing the charm of our market towns" or "enhancing the natural landscape" or "reducing our carbon footprint" the reality is that this plan slavishly follows an unsubstantiated, unreasonable and unnecessary target for new house building and rams this building wherever they can be squeezed. Simply bolting 17,000 new homes onto the outer fringes of the three main towns in the borough with precious little thought to additional infrastructure, the narrowness of existing town centre access, the local topography and so forth does not amount to a Vision or a Strategy. It is simply coping in what you perceive to be the least harmful manner. But be in no doubt incorporating unnecessary new building on this scale despite your best efforts will be fundamentally damaging to the well being of our people, our environment and our heritage. In addition the imposed target is based upon out of date projections of the ONS - if 2018 data rather than 2014 data are used then the required target is approximately 1/3 of that in this plan. If that degree of change can occur over four years it demonstrates the flimsiness of the underlying premise.</p> <p>Even Cllr Williams wrote to the Secretary of State to protest at the arbitrary unreasonableness of the growth target imposed.</p>

<b>Comment</b>	<p>I think that too many new houses are being built. Too many expensive houses are being built in Berkhamsted and the towns infrastructure can not cope with the existing influx of new residents. It's very difficult to get doctors appointments or to park outside your home if you live near the centre of town.</p> <p>I also feel that this document is much too complicated and that the average person does not have enough spare time to read every section and comment on your loads of waffle. We are really interested in protecting our green belt and our environment. I understand some new homes need to be built but I think you plan does not follow the existing government policy.</p> <p>Also the Borough Vision – The Council's Vision is one i would sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>There is no evidence to support the target of 25% growth (16,596 houses) in Dacorum; the ONS has forecast just 9% population growth for the same period. I believe there is enough available non-green belt land to accommodate this growth, and green-belt/AONB land should certainly not be utilised unless there is no other option.</p> <p>I strongly disagree with the plan's disproportionate growth strategy for Tring - would see the town becoming 55% bigger. Compare this to Hemel Hempstead with plans for 23% growth, and the ability to use brownfield land, with local services able to facilitate such levels. Meanwhile, the contribution of Bovington, Kings Langley and Markyate will just be 13% growth. It's clear that the weight of the growth plans should be far more equitable between different settlements in Dacorum.</p> <p>The rise in housing will not be accompanied by a commensurate rise in jobs, meaning many new residents are likely to be commuters. It's clear that Tring's layout already pushes much of the town's traffic onto a few key arteries. With a population growth of 55%, these would only become more congested - and the plan fails to offer a vision of how to tackle that. While bicycles and pedestrians are to be encouraged, the station is too far from the current town to make this reasonably possible for many commuters.</p> <p>The 55% growth target for Tring would require a disproportionate green belt allocation to deliver the requisite houses. I strongly object to, and dispute, the proposition that Tring is required to "play a much greater role in delivering housing growth" within the borough. As a relatively new citizen of Dacorum myself, I believe Tring should be allowed to grow and develop for other new residents, but not at the expense of the Green Belt and AONB status that attracts people to the area in the first place. Housing can, and must, be delivered within the existing settlement boundaries. I do not believe the possibilities of developing in such a manner have been sufficiently examined.</p> <p>The plan claims to have "delivered a comprehensively planned new neighbourhood to the east of [Tring] in a way that takes account of sensitive views, landscape or protected environmental sites." How can this be if the plan intrudes into Green Belt land - and fails to justify the exceptional circumstances that justify such a thing?</p> <p>The vision of delivering open space and sports and leisure facilities is commendable, and should be encouraged - but it is self defeating to do that as part of a plan that detracts from the AONB which itself encourages residents to exercise and play sport.</p>

<b>Comment</b>	<p>I am opposed to the development of proposed site Tr01</p> <p>Whilst supporting the efforts of Dacorum to play its part in solving the national housing shortage, particularly for local young people who cannot afford houses, we strongly oppose the Dacorum local plan 2020 to 2038 as currently proposed.</p> <p>The number of new homes needed:</p> <p>... is based on outdated figures: the plan is based on Office of National Statistics data from 2014, the more recent predictions of 2018 more than halve the number of new homes needed in Dacorum, and even that data is from before Brexit and Covid so out of date.</p> <p>... the housing target for Hertfordshire is higher than the comparable counties of Surrey and Sussex (<a href="http://www.lichfield.uk">www.lichfield.uk</a>).</p> <p>... there must be a binding commitment for affordable homes in the plan. Too often developers have been allowed to wriggle out of this commitment. Tring is not suitable for this kind of increase in population:</p> <p>... there is no capacity for more footfall at the station, the car park gets full and the trains to London overcrowded (based on pre-covid numbers).</p> <p>... the High Street is unsuitable, as the main throughfare from east to west Tring the High Street is narrow and overcrowded for both traffic and pedestrians at peak times. The structure of the High Street has subsided with the current levels of traffic, this will only get worse.</p> <p>... under the current proposals Tring bears the brunt of new housing with more homes than other towns in Dacorum (percentage terms).</p> <p>... there are currently electric vehicle charge points in Forge car park and at Tesco, this is clearly insufficient for a town the size of Tring. Environment</p> <p>... the plan should allocate land for new allotments for the residents so they can grow their own fruit and vegetables.</p> <p>... the plan must commit to increase habitat for wildlife, including wildlife corridors and re-wilded areas to increase bio-diversity.</p> <p>... there should be recreational corridors built into the plan to promote cycling and walking in a safe environment, they should be wide with natural vegetation and not narrow alleyways.</p>

## Sustainability

... Building Standards, the plan uses the right words to describe sustainability standards, but offers no commitment to these. All new buildings should be designed to meet the most stringent standards and must be at least net zero carbon. Every home should include a parking space with electric charging, should not be reliant on fossil fuels for heating and should include solar PVs. There is no commitment to this in the Local Plan.

... Public Transport, the plan makes no promise to improve public transport to connect these homes, so people do not have to rely on cars on a road structure that in many cases cannot be widened.

## Summary

... Dacorum has declared a climate emergency, this plan should give the opportunity to put that into practice and create an inspirational environment where we can live and work together with nature. Instead the Local Plan is unimaginative and will become a developers dream of suburban sprawl, not something we will be proud of. If there is one thing that has become apparent in recent years, it is that we can't carry on as before and that we need to find a better way forward.

- A Clean, safe and enjoyable environment
- Building strong and vibrant communities
- Ensuring economic growth and prosperity
- Providing good quality affordable homes, in particular for those most in need
- Ensuring efficient, effective and modern service delivery

Where are the criteria for the above defined? Who has defined the criteria for the above?

**Overarching Vision for Dacorum's Growth by 2038, Environmental Sustainability, Economic Growth, Health and Wellbeing** all sounds fantastic but how is all that going to be achieved with a some one thousand homes a year being built in the borough. I'm sorry but I can't see it.

**The Countryside and other small villages** will:

- be protected from development; and
- have diversified further to support changing rural and agricultural practices.

But that doesn't include Green Belt?????

Landhold Capital considers that whilst overall the Vision and Strategic Objectives are generally adequate, the Council has failed to fully recognise the opportunity posed by this emerging Local Plan. This includes fully utilising the potential to deliver growth in the District, to meet current and projected housing needs and secure the delivery of infrastructure to support development.

With regards to the vision for Dacorum's Places, it is considered that the Council has not recognised the role that the three 'large villages' of Bovingdon, Kings Langley and Markyate could play in helping to meet the Borough's housing needs. It is noted that unlike Tring or Berkhamsted, the Council only recognises the delivery of affordable homes in its Vision for the large villages, rather than seeking a mix of market and affordable housing. However, the Council expects these settlements to strengthen their role in providing services and facilities to serve residents and adjacent rural communities, alongside securing additional and improved local community facilities. It is considered that in order to

achieve this, it will be necessary for significant market-led housing developments to be secured at these settlements in order to strengthen their role and secure those additional or improved local community facilities and other infrastructure as appropriate.

It is a concern to Landhold Capital that the Council in its objectives, is only seeking to 'deliver the identified housing requirement between 2020 and 2038', which is not considered to accord with the provisions of the National Planning Policy Framework which at Paragraph 11 requires strategic policies to as a minimum, provide for objectively assessed needs for housing and other uses; whilst Paragraph 35 establishes that in order to be 'sound' the plan's strategy must be positively prepared, and as a minimum seek to meet the area's objectively assessed needs. It is considered that the Council should modify the objectives accordingly to reference the need to at least deliver the identified housing requirement as a minimum.

The vision is contradictory. The amount of housing and development proposed is incompatible with aims within the vision for sustainability of biodiversity and protection of the green belt and adjoining AONB/ Special interest Beeches areas.

We need additional housing, especially affordable ones, but the housing targets are based on incorrect projections from 2014 rather than 2018. Using the latter would halve the number of houses required. In addition, more creative use of brown field sites (and a full review of brown field opportunities is required). The pandemic has shown more people working from home and this may actually mean that more people want to live even further beyond the London commuter belt in which Dacorum currently sits. Therefore the housing numbers need to be completely revisited

<b>Comment</b>	<p>The Objectives are laudable, however the amount of development seems to be based on unsound projections and undermine the stated objectives. For example:</p> <p><b>1. Developing Dacorums future with Homes for Everyone.</b> The quantity of housing is based on the governments algorithm to address national need NOT the need already identified for Dacorum. Berkhamsted has already increased the amount of housing in recent years at a much higher rate than Hemel Hempstead and is pretty much at capacity and should not have grow by a further 25%. The cost of land,and houses, particularly in the south Berkhamsted area, is beyond that of an ordinary young family on average income even if adjusted for 'affordability'. Development here would therefore not be of the right type, the right quantity or the right place.</p> <p><b>Vibrant Economy</b> There is not sufficient local employment for a much increased population. Allocating land that is currently used for business eg the Jewsons area and the British Film Archive area will further exacerbate this and does NOT contribute to this objective.</p> <p><b>Mitigating and Adapting to Climate Change:</b> The proposed development areas, particularly in the south Berkhamsted area are at the top of the hill and are not large enough to be supported by very local facilities. Therefore new residents are unlikely to walk or cycle to access shopping and services and will drive down to the already congested town centre. Pollution is already high in the Lower Kings Road area and this will make it worse.</p> <p><b>Conserving and Protecting the Natural Environment:</b></p> <p>Building on the Green Belt areas, without better justification than that provided by the Government targets will permanently change and damage the 'distinctive landscape quality' of the attractive market towns of Berkhamsted and Tring and will reduce and damage the networks of green infrastructure particularly of Berkhamsted and its surrounding areas of Outstanding Natural Beauty. Increased car journeys will further reduce air quality particularly in the town centres (see comments above)</p> <p><b>Ensuring an Attractive and Valued Built and Historic Environment</b> the Covid pandemic will result in significant changes to shopping and business practices that are likely to lead to significant opportunities to build on brown field sites. The contribution of 'windfall' sites is therefore underestimated in this plan.</p> <p><b>Promoting Sustainable Transport/Connectivity:</b> The proposals, particularly for Berkhamsted will not encourage sustainable travel due to the geographical hilly nature of he area and very limited highway improvements to facilitate walking and cycling. The existing rail routes are at capacity and would not cope with the resulting increases in commuter traffic and the bus services currently do not provide good services other than daytime weekdays and this is mainly only</p>

running along the valley routes, making bus travel unattractive for those living out of the valley eg in the proposed areas of development.

**Supporting Health Wellbeing Cohesion:** I repeat comments above relating to walking and cycling. Reduction of green areas and building on existing sports fields eg Haslam fields is in direct contradiction to this objective. The type of housing that is likely to be built in an area of Berkhamsted that commands high house prices is highly unlikely to contribute to reducing inequalities or to promote social inclusion. The recent development of Bearoc Park demonstrates this.

**Enabling the Delivery of Infrastructure** I see very little to support this, particularly in Berkhamsted and Northchurch. Bell Lane and Darrs Lane are narrow country lanes and will not be suitable for increased traffic. The Kings Road/Kingshill Way/Shootersway junction already struggles to cope with increased traffic levels and in spite of extensive highway engineering still is a difficult junction to negotiate.

**As we had not been circulated with the Proposal brochure and I have only been made aware of this consultation in the past couple of days I have not had time to provide a proper response or accumulate supporting evidence. Because of this I would like to add my support and refer you to evidence collected and presented by Berkhamsted Citizens Association, Berkhamsted Town Council, Berkhamsted Residents Action Group and the Campaign for the Protection of Rural England.**

<b>Comment</b>	This proposal seems to disregard the need to minimise the impact on the 60% of Dacorum that is Greenbelt and the 33% which is AONB. There will be a negative impact on the environment, infrastructure, climate change and Bio Diversity, causing massive harm to the Green Belt and AONB.

The sheer scale of the proposed housing development is too much for the area to cope with, housing need should be based on the most relevant and recent data, which is currently the 2018 based Office for National Statistics (ONS) projections.

The Council has based its calculations on the outdated 2014 data, resulting in a significant overestimation and bringing the plan into question.

The proposals in the plan for the infrastructure and employment growth are not sufficient for the dwellings proposed. Commuter towns require transport to make journeys out of the town to travel for work, the present road and rail networks will not sustain such an increase in population.

**Comment** However if you are planning on protecting the countryside and villages and on supporting conservation and the environment, there should be no major development in the w8ngrave longmarston cheddington area beyond the immediate airfield.

There has already been too much expansion of the villages and the infrastructure cannot support more.

<b>Comment</b>	Many of your aims are admirable, but the proposed development of housing in North and East Hemel will involve destroying scenic areas which are much appreciated by many locals and greatly benefit their physical and mental health. A report by CPRE says that there is enough space on brownfield land across England for the Government to meet its targets for new housing without building on the countryside. I would love to see Dacorum Borough Council petition the Government to protect the Green Belt and significantly reduce its demands for new housing in Dacorum in view of the high amount of particularly scenic areas in the borough.

<b>Comment</b>	The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in Berkhamsted. This will result in a massive increase in traffic/congestion, with poorer air quality.  DBC declared a climate emergency more than a year ago. Despite this, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency.

DBC are using an outdated Air Quality Action Plan from 2014-2018. Air quality has not improved since then, and recently, significantly, air pollution has been legally listed as a cause of death  
Nearly all development proposed will be on Greenbelt. – this is against Government policy.

You state that “the main thrust of the Local Plan is Central Government’s requirement to provide nearly 17,000 new houses in Dacorum by 2038.” However, the ONS 2018 based Household Projections for England (Table 428) indicates an increase of only 8,800 households in Dacorum between 2018 and 2038. Planning for 17,000 new houses therefore seems excessive. 60% of the proposed new housing, covering some 850 hectares would be on Green Belt land, some of which is also adjacent to or surrounded by the Chilterns AONB. Your summary document notes that “we are permitted to take land out of the Green Belt through our Local Plan in ‘exceptional circumstances’. We have established that these circumstances exist in Dacorum, as we cannot meet our growth needs on just previously developed land.” However, if Central Government have exaggerated the housing need so considerably, then surely much less development will be required?

Source: Household projections for England - Office for National Statistics

The Covid-19 Pandemic and its impact on commuting and shopping patterns may well result in previous retail and office sites within the urban areas becoming available for housing. The re-development of such brownfield sites should be prioritised over Green Belt and other rural areas.

<b>Comment</b>	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here.</p>

For all ages. And for all financial situations. I suspect you don't want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.

Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.

To summarise:

1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed.
2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area.
3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact.
4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).
5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.

These are fundamental flaws in the strategy underpinning the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.

These points are expanded below.

### **Incorrect Assumptions for Housing Provision**

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method

which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

### **Failure to Provide Adequate Supportive Infrastructure**

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

### **Impact on Green Belt and Other Designated Land**

The Local Plan states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB". This strategic principle is then violated by the declared mission to provide at least 100% of the Council's self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

<b>Comment</b>	<p>This level of development is unsustainable. We have already had an unacceptable level of development between the Cemetery and the Industrial Estate. The water supply which mainly comes from aquifers is already almost exhausted. The cycle paths and footpaths are poorly maintained, as are the roads and are inadequate for the the current population. The record of Dacorum caring for Tring infrastructure is already poor so how can we trust it to implement its promises of investment?</p> <p>Grove Road, Station Road, and in particular Cow Lane simply cannot safely take the level of traffic this plan will generate, neither can they be modified to do so.</p> <p>What seems to be little understood is that Tring is in fact a flood plane. Just concreting over the land to build the A41 caused a huge flood down Cow Lane and Station Road. If the land between Dunsley Farm and Cow lane is significantly developed the water run off is likely to again cause flooding as this land soaks up the water run off from the hills behind. The other piece of land under threat behind Grove Road is already very waterlogged in wet weather and I would guess any concreting over of the land between Cow Lane and Dunsley Farm is likely to cause the land behind Grove Road to flood. Has Dacorum actually done a proper assessment on the drainage of these two pieces of land? This land is also enourmously important to the wildlife of Tring partricularly our wild bird life.</p> <p>When we first moved to Station Road some 30years ago, the land behind us was designated AONB all the way to our rear boundary(now Damask Close). Without any proper consultation that I am aware of Dacorum quietly removed this designation. It is owned by Dacorum! For the moment I will say no more</p> <p>In reallity there are actually very few public green spaces that can be enjoyed by the public in Tring compared to say Aston Clinton Park. The land between Cow Lane and Dunsley Farm, <b>particularly as it is owned by Dacorum</b>, would be ideal to create such an amenity but once developed would lost. If one thing has been learned from the recent pandemic it is the value of Parks and open space within or near to residential areas. It is vital that this piece of land is not only protected from housing development but that it is planted and developed as an open recreational space that preserves its functions as flood protection, as a reservoir of wildlife and as an essential part of the character of Tring. I don't see this as incompatible with providing sporting and schooling facilities if properly planned.</p>

<b>Comment</b>	<p>Reading the draft plan feels as though I am looking at two different documents; one talks about environmental sustainability, the climate emergency, the natural resources and the special character of Dacorum, its towns and villages. The other seems to totally ignore all of these considerations and concentrate solely on housing and development, at the expense of any environmental or other considerations. There seems to be a lack of joined up thinking.</p> <p>The strategy's fine words about air quality, a low carbon future, health and wellbeing are totally ignored in favour of housing development. Development will inevitably mean additional car use, on roads of which are already overcrowded and where the hilly nature of the area mitigates against walking, cycling etc into town centres. The plan as proposed will destroy Green Belt land, destroy wildlife habitats and 'corridors', reduce air quality and take away some of the most beautiful parts of the borough currently used for walking and public enjoyment.</p> <p>The scale of development is breathtaking and would transform our borough for the worse; the market towns of Tring and Berkhamsted would be unrecognisable with an urban sprawl of new estates. The plans particularly affect these two towns with proposals that are completely out of scale.</p> <p>I would question the need for the amount of housing proposed. The figures imposed on Dacorum are based on false assumptions about the needs of the population. They are assumed to be targets which must be met, but my understanding is that the government has not said that these figures are 'targets'. I feel they should be challenged.</p> <p>This draft plan ignores the value and importance of maintaining the Green Belt, which I understand can only be used in 'exceptional circumstances'. No case has been made that our circumstances are exceptional. Huge swathes of existing Green Belt land will be developed through adopting this plan; once it is lost, it is lost forever and future generations will wonder what was the point of a Green Belt at all.</p> <p>Lastly I question the amount of research that has been done in Berkhamsted and Tring. The cynic in me wonders if someone took the Ordnance Survey map of the area, and thought the best and most simple approach would be to 'fill in' the green parts of Berkhamsted within the area bordered the A41 and the railway with housing, without understanding anything about the town or its context.</p> <p>In conclusion, I feel the plan is neither justifiable nor sustainable. It does not create a sustainable and manageable growth strategy for the area, with environmental considerations interwoven throughout. This has not been done and is a dereliction of duty by Dacorum BC.</p>

<b>Comment</b>	The vision is good but HH should be a greater centre for all business, employment and retailing activities. The other towns and villages need to be preserved as close to their current existence as possible. This is due to the special place in the Borough. Urban dwellers need to be able to rely on the green space for leisure activities whether they be active or simply shopping. Losing these would condemn these locations into simply an extension of urban sprawl.

**Comment** This plan seems to mostly be about how many houses are to be built and where they will be located not so much about building a better Dacorum with jobs, environment etc. The council decided to accept the central governments requirement to build houses over the next 18 years without any challenge. The numbers quoted are completely unrealistic. Increasing the town of Hemel exponentially with no regard for local need or taking into regard the overall needs or character of the town. Most of the planning for houses in Hemel is on greenfield growth areas (known commonly as Green Belt). The council have ignored national planning policy contained in the NPPF and statements by ministers inc,using the PM that green belt land should not be developed except in 'exceptional circumstances' have also been ignored when developing this plan. The council does not explain why they have chosen to make this plan and what they deem to be the 'exceptional circumstances' in this case. The councils plan is not justifiable or sustainable and I object to it.DBC should revert to the core strategy vision statement. Going ahead with the plan as is will ruin Hemel as a town sitting in green belt with easy access to countryside for all

<b>Comment</b>	<p>I do not agree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth of 24% in dwellings and an enormous increase of 31% in the urban footprint will totally swamp the town of Berkhamsted and the Parish of Northchurch. The vast majority of the land designated in the plans is located within sensitive ridge top locations in Green Belt, at a distance of 3-4km from the town at the top of a steep hill.</p> <p>An increase in high-carbon forms of travel is inevitable with c15400 projected car movements daily - since the suggestion that residents will cycle and walk up this hill (especially with shopping or children) is ludicrous. Berkhamsted doesn't have the road infrastructure to cope, nor is there the ability to provide it given the historic built nature of the town. The plan being promoted can only be detrimental to both the Environmental Sustainability and Health and Wellbeing visions.</p> <p>I was present when DBC vociferously supported their 2013 Core Strategy vision of <i>"maintaining the strong valley and linear character of the settlement"</i> and strongly asserted to the Planning Inspector that <i>"The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported"</i>.</p> <p>DBC has performed a volte-face and is now promoting the land for removal from Green Belt. Their suggestion that development can now be built <i>"in a way that takes account of sensitive views and landscape"</i> was previously dismissed by them as undeliverable. They have ignored national Planning Policy contained in the NPPF and statements by Ministers including the Prime Minister that Green Belt should not be developed except in 'exceptional circumstances'. I support the arguments submitted by BRAG objecting to Green Belt development and will not repeat them here. The numbers are NOT targets and the Green Belt should be protected - just as DBC pledged to do in 2013.</p> <p>The arguments DBC employed earlier to reject the plans from developers to develop this same land as neither justifiable or sustainable have now been disregarded. DBC has totally shifted from their position of recognising and protecting the unique and historic assets of the two market towns (Berkhamsted and Tring) and their environments, to a position that makes no attempt to protect valuable assets of the Borough including large swathes of Green Belt. Rather than repeating those arguments at length here, I refer you to the statements made by DBC themselves in rejecting these plans in the 2013 Core Strategy.</p> <p>I believe that the arguments made by DBC in favour of the 2013 vision remain sound and no justification or explanation has been given – or can be given - to overturn the strongly made arguments that DBC made to the Planning Inspector.</p> <p>The 2013 Core Strategy Settlement Hierarchy states "Hemel Hempstead will be the focus for housing development within the Borough", while recognising that the Market Towns are "Areas of Limited Opportunity" and "The general approach in these locations will be to support development that enables the population to remain stable, unless a small element</p>

of growth is required to support local community needs.” This Settlement Hierarchy was ratified by the Core Strategy Inspector who concluded that “the Council’s approach of focussing growth on Hemel Hempstead is justified.” The Inspector pointed to “the sustainability credentials” of Hemel and contrasted that to the Market Towns where “The level of services and facilities is lower than at Hemel”, while also confirming that “it must be remembered that many of these settlements are more constrained than Hemel Hempstead, for example by the Chilterns AONB (which should be afforded the highest status of protection) and therefore more weight should be attached to securing sustainable growth in the Borough’s main town.”

The current Garden Communities project would provide the housing numbers needed and would align with the settlement heirarchy supported by DBC in 2013. All of the housing identified in this project should be included in the current plan not held in abeyance whilst the Green Belt is permanently destroyed.

The 2013 vison should be re-instated.

The Vision does not take into account Planning Policy - specifically with regard to Green Belt and AONB restrictions.

It is not clear why the number of houses are is justifiable.

The current infrastructure is inadequate and the Vision does not provide solutions to this or future development

Societal changes that have been accelerated by the pandemic will release brownfield sites (from retail and office space) which has not been properly accounted for.

<b>Comment</b>	<p>Question 1: Do you think the overarching vision, the vision for Dacorum's places and the strategic objectives are right for the Borough? - NO</p> <p>I would like to see evidence that supports the stated number of houses needed and that the formula used to arrive at this number is correct.</p>

For example, in Berkhamsted what is the current number of houses?  
 What is the proposed addition in the Plan as a %?  
 What is the evidence behind this increase % being needed?  
 Understand the actual requirement may be almost half of that proposed. Needs to be based on up-to-date statistics.  
 Need to publish details of any brown field sites not being utilised.  
 Need to explore/publish details of housing numbers that could be realised from conversion of commercial space.  
 Covid 19 is likely to mean commercial space will become available.  
 This is not considered in the Plan.

There is an opportunity, particularly in Hemel Hempstead, to use capacity available for homes in the town centre and make this part of a broad town regeneration project to bring life and soul to the centre (not build houses in fields on the outskirts so people have to travel in and out).  
 Above could mean that the green belt land is not needed and should not be unnecessarily released.  
 The plan seems to be more about releasing land that is easy to build on and more profitable for developers.  
 Once green belt is gone its gone and you/we have a duty of care and obligation to get this right for future generations.  
 Please save our green belt land and put back more wild areas.

<b>Comment</b>	The vision undermines some underlying rules of the use of green belt land. If the plan is allowed to go ahead in its current form this allows a dangerous precedent for future green belt use. There are many areas that could be redeveloped and brown field sites that are better suited to the development of the houses proposed. Green belt can never be replaced one use and removes access to green space for the community while creating further congestion to an already over congested area.

sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment**

We strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan and we believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

We agree with the plan's approach to prioritise housing growth in Hemel Hempstead as this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth and minimising any potential impacts upon important Green Belt.

The new local plan vision provides for a hugely disproportionate growth strategy for housing within Tring (55% growth) and fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate.

We object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is

a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst needs and aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

We strongly object to the claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

We absolutely welcome the requirement to provide a mix of market and affordable housing together with new community, recreational facilities and economic growth within the area. We are certain such planning can and should be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that most residents of Tring strongly object to. Such wide scale growth to Tring has not been sufficiently justified.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth

The vision is contradictory. The amount of housing and development proposed is incompatible with aims within the vision for sustainability of biodiversity and protection of the green belt and adjoining AONB/ Special interest Beeches areas.

We need additional housing, especially affordable ones, but the housing targets are based on incorrect projections from 2014 rather than 2018. Using the latter would halve the number of houses required. In addition, more creative use of brown field sites (and a full review of brown field opportunities is required). The pandemic has shown more people working from home and this may actually mean that more people want to live even further beyond the London commuter belt in which Dacorum currently sits. Therefore, the housing numbers need to be completely revisited.

They are based on absurd projections of population growth out of all proportion to the needs of the individual towns and villages. They show little understanding of the Borough and constitute a tick-box exercise taking no account of the

traditions and character of this unique area. Development on the scale envisaged is inconsistent with any objective to conserve and enhance what we have, and will damage it.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. Climate Change Emergency

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimizing carbon emissions during any construction. The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

Overarching Vision: Environmental Sustainability

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only use electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

### Overarching Vision: Economic Growth

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

### Berkhamsted & Tring Developments

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum. The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns. The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity. To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

### Comment

Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596

new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

The Theme wordings sound good, but do not match the plan details.

As a Berkhamsted resident, I know that the resulting plan has issues in the following ways

Theme 1: Building Dacorum's future with homes for everyone

We in Dacorum cannot be expected to provide future homes for "everyone". What we want is the right homes for our own residents and their families. Building large scale mainly detached housing estates on the outskirts of Berkhamsted on currently heavily utilised Green Belt Land will simply lower the quality of life for current residents and lead to an influx of new families from London outflow. A better way of wording this theme would be:

"Theme 1: Building the homes required by Dacorum's future generations"

Theme 3: "A happier, healthier and safer Dacorum"

The theme sounds good but simply is not adhered to in the current plan. The large estates planned for the outskirts of Berkhamsted will effectively remove the opportunity to walk directly to green belt land around Berkhamsted for exercise for current Berkhamsted residents. At present,, hundreds, perhaps even thousands are taking this opportunity EVERY DAY. Removal of this freedom will not make us happier. It will not make us healthier. And the increased traffic on the current relatively quiet, residential and school roads such as Hilltop, Swing Gate Lane, Upper Hall Park, etc. will certainly not make us, or our children, safer.

Theme 4: Creating a clean, green and attractive Dacorum

Again, the theme is good, but the plan is in complete opposition to this aim. Removal of green belt land to produce housing estates cannot be considered clean. Providing new housing outside the current town bounds will result in more road traffic and road journeys into town increasing pollution and cannot be considered clean. Expanding Berkhamsted into adjacent valleys, and on to the top of the Chiltern Hills cannot be considered attractive. A clean, green and attractive Dacorum will be achieved by sympathetic brownfield development, not by building sprawling housing estates across the Chilterns

<b>Comment</b>	<p>Why are we growing Dacorum to this extent? My understanding is that water supply in this area is already struggling to meet demand. My understanding is that we are due to run out of water in 20 years - have you not spoken to the water companies?</p> <p>Are you sure this is all really necessary? I thought this government was all about levelling up? Developing the North of England. This part of England seems very developed to me.</p>

Given the pandemic, is this not a very strange time to be deciding what the next 18 years of development is going to look like? Surely we need to see what happens economically once we are through the pandemic? Surely this is NOT the time to be making firm and long lasting decisions about this level of development.

YES we need to plan for climate change, but building lots of new, privately owned houses is no way to do that.

<b>Comment</b>	The amount of housing outlined in the vision seems excessive, doesn't take into account the potential for brownfield development, social housing or supporting infrastructure.

Overall, plan needs revisiting to align with a post pandemic world with relevant infrastructure in particular public transport, highway connections, traffic volumes & schooling.

**Introduction & Context**

Prior to responding to each specific question within this public consultation, it is appropriate to provide some brief background context as to the reasons why it is appropriate for The Berkhamsted Schools Group (BSG) to be engaging with this process.

The BSG is the largest education provider within the Dacorum Borough Council (DBC) area and the largest employer within Berkhamsted. An Oxford Economics, independent schools 2018 economic impact report showed, that at that time the BSG employed 530 local people directly but also supported over 1000 jobs via its activities. The local contribution to GDP was then in excess of £27m and it generated a total saving of over £12m for UK taxpayers as a result of attendance at the BSG rather than taking up a free UK state school place.

The BSG plays a key role in delivering not just excellent quality local education provision but also makes a significant direct investment into the wider infrastructure, which benefits the whole local community. The most recent example of this was the coach and car drop off interchange at Kings Road Berkhamsted which has significantly alleviated local road congestion, enhanced health and safety and encouraged more sustainable travel. The BSG is committed to a masterplan of further investment.

Unlike other landowners, capital receipts generated from any of the BSG's assets, are reinvested back into the community for education; sport; health; well-being and transport infrastructure.

BSG owns land at Haslam Field (site reference BK03) and land at Haresfoot (site reference Cy04), both sites have been proposed as allocations in the DBC draft plan. The draft local plan proposes BK03 as a housing allocation with the existing sports pitches on the front part of the site being relocated to a significantly enhanced playing fields provision at site Cy04.

BSG has engaged openly and positively with DBC and other stakeholders throughout the local plan review process and will continue to do so. A comprehensive submission was previously made to the Issues and Options Consultation in 2017. This included a detailed supporting planning justification statement; a BSG justification document and an Equivalent Quality Assessment of the current sports facility compared to those proposed, prepared by specialist consultants. This demonstrated the substantial enhancement in sports provision that would flow from this project and was supported by Sport England.

It is relevant to state that the general ethos and approach of the BSG is to “support” DBC and to “respond” to their growth strategy.

BSG will play its part to help deliver on local education and wider community infrastructure improvements that flow from the final level of growth that is adopted by DBC.

**Do you think the overarching vision, the vision for Dacorum’s places and the strategic objectives are right for the Borough?**

The BSG supports DBC in their policy “Overarching Vision for Dacorum's Growth by 2038”. The BSG commends the principle that growth is delivered in a sustainable way, which links homes, jobs, infrastructure, education, health and wellbeing. The BSG will play its part in helping to assist this delivery by continuing to invest to improve its already excellent education offering and to implement continued infrastructure investment to the benefit of the wider community. The relocation of the Haslam Field playing pitches (site BK03) to a significantly enhanced sports offering at Haresfoot (site Cy04) will significantly improve health and wellbeing.

The BSG also supports DBC’s “Vision for Dacorum’s places”. In particular it supports the fact that Berkhamsted, being the second largest town in the Borough, can support growth linked to sustainable improvements and infrastructure investment.

The BSG agrees with all the “Identified strategic objectives” below, and there is a synergy with many of the BSG’s own values:

- Delivering Dacorum’s future with homes for everyone
- Generating a vibrant economy with opportunities for all
- Mitigating and adapting to climate change
- Conserving and protecting the natural environment
- Ensuring an attractive and valued built and historic environment
- Promoting and facilitating sustainable transport and connectivity
- Supporting community health, wellbeing and cohesion
- Enabling the delivery of infrastructure

<b>Comment</b>	<p>I don't agree with some aspects of your vision and the aspects that I do agree with, I don't trust you (and the developers) to deliver. You're wrapping up as attractive loss of green belt, by calling the new housing estates 'garden communities'. We all know this will not be the case. They will have small gardens and there will be no compensation for loss of the greenbelt and wildlife. Where I live I often hear owls at night; I won't once the green belt near where I live has been built on and what will happen to these owls? Whilst there are brownfield sites; no green belt or green fields should be built on and then only if the need for that type of housing can be fully justified. You say that we will not be able to meet the needs for employment. There really should be enough employment for people who can't afford to commute. You say that we won't have all the infrastructure that we need. Therefore, why have more housing here and not local to where the infrastructure will be? I presume included in the lack of infrastructure is a General Hospital with A&amp;E. It is essential that if we are to have more housing, we have to have local facilities including a decent hospital with an A&amp;E. This could be a hospital on land that is located near where the boroughs of Dacorum, St Albans, Three Rivers and Watford meet. It is unreasonable to increase the population without a local hospital. Your vision says that housing projects will be carefully thought out. Is this really going to happen? I live near one of the green belt sites that have been listed in the local plan and already developers have put a leaflet through the door with a plan of what they want to build and including some misinformation to make the project (money making scheme) more attractive than it is.</p> <p>With Brexit and the pandemic how do we know how many houses and what type will be needed? Will we need more care homes when new strains of the virus may reduce life expectancy? Most of the current care homes in Dacorum have vacancies. We do need more good quality, affordable social housing, rather than houses that are unaffordable for most people, despite being labelled as 'affordable'. Young people are already struggling to afford properties and have to pay high rents. I don't agree with people who buy the new houses subsidising the local infrastructure; as this just makes the properties even more unaffordable for the average young person. The Marchmont fields have been earmarked for housing for several years now. As no homes have been built, it does make me question whether there is really a need for new</p>

homes; or whether new homes are just not being built because not enough people can afford them. Who will decide what developer will build on a site? Many developers have their own agenda (making as much profit as possible and not necessarily building the best value for money houses). Developers will want to build on the land options that will provide them with the most profit; and not necessarily where the houses are most needed or will be most affordable. You say that you want town centres to be 'vibrant'. Where I live in Bovingdon the village centre is very congested. Why make it more so? There is nothing included in the leaflet from a developer, who wants to build 150 properties on green belt that has been earmarked in the plan; that will make the village centre less congested; although it will make it more congested. Your plan says that there will be 'additional and improved local community facilities'. In Bovingdon there is an area earmarked for a new school (and that the old school land will be used to reduce congestion on the high street). However, even the parish councillors are saying that a new school will not be built, on the land earmarked, certainly within the timeframe to 2038. It just feels that whatever is said in your vision; much of it will not materialise in practice; or be a very watered down version of your vision. For example, the new community facilities at the Manor Estate were not built, despite being promised to sugar coat the new development there.

In your vision you want 'high quality walking and cycling infrastructure'. How is this going to be provided? Why are homes being planned for Bovingdon (for example), without any plan to have a safe walking and cycling route to the train station, which is only two miles away?

There is not enough emphasis in your vision about building on brownfield sites. These should be built on first.

How in your vision will you keep property affordable for future generations?

<b>Comment</b>	<p>The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in Berkhamsted. This will result in a massive increase in traffic/congestion, with poorer air quality.</p> <p>DBC declared a climate emergency more than a year ago. Despite this, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency.</p> <p>DBC are using an outdated Air Quality Action Plan from 2014-2018. Air quality has not improved since then, and recently, significantly, air pollution has been legally listed as a cause of death</p> <p>Nearly all development proposed will be on Greenbelt. – this is against Government policy.</p>

<b>Comment</b>	<p>I find the level of information and jargon here overwhelming and depressing. Dacorum having 'built on its strengths and the opportunities to deliver balanced communities'. This is a fancy way of saying we are going to pave over the green space because we can.</p> <p>The overarching vision is terrible. You acknowledge a climate emergency, so you intend to resolve it by building on Darorums green belt. You are completely at odds with yourself. I strongly object to your lack of thought here. How is destroying the environment helping? I find it upsetting you can reference health and wellbeing - how is increasing pollution (which comes with more cars and more infrastructure) helping wellbeing. Particularly when lots of your proposed sites are not within easy walking distance of amenities, therefore encouraging people to drive and not walk, both increasing pollution and obesity related health issues.</p> <p>If you were actually thinking about the future maybe you would be looking to inovate and reuse land that is in disrepair to address some housing.</p> <p>Also, with the pandemic and increase in remote working there is less demand for commuter town development so here you are creating too much housing.</p> <p>I agree Hemel needs to be reinvigorated but this plan has not asked the people of Hemel why they moved there, or why they choose to stay there if they grew up there, in order to understand how to improve and continue to attract people.</p> <p>Consulting people during a pandemic is, I'm sorry, ridiculous.</p> <p>You will only get responses from people online, meaning you immediately cut out a significant portion of people.</p> <p>Most people with children are severely stretched and have no time to dedicate themselves to reviewing the masses of documents.</p> <p>You should reconsult when you can actually go and speak to people. This is really poor and I will be complaining to my MP.</p> <p>Your plans for Berkhamsted do not plan for sensitive views. They destroy current views. You will be ruining mine and my neighbours lives by your plans. I will never be able to let my children play in the quiet secure area in front of my house at the weekend because you plan to put 90 dwellings behind my house accessing using a road that is currently closed at the weekend. How can you do this? This will ruin my children, one of whom has respiratory issues. Do you not think of the individuals when you decide to expand across half of the county?</p>

With Berkhamsted, where do you propose any amenities will come from? The nearest school in the South (Greenway) is massively oversubscribed (it is a 6 minute walk from my house and yet my child did not get in). Meaning that she was assigned to the next school with capacity (Victoria) which is an 18 minute walk. The road down to the school is always heaving with cars when I walk my child to school and no doubt putting significant further dwellings in the south will only add to this congestion, therefore further polluting the town, destroying any animal habitats left and making the walk to school more dangerous.

It is laughable that I am having to consider driving my daughter to avoid the constant fumes on the hill. I am unsurprised when I see parents doing this, as this is a no win situation.

Describing Tring as growing is an understatement. You are suggesting to increase the size by a third. How will it be supported by schools, GP and other amenities. Again you should stop and reconsult because Tring residents need the ability to actually have this presented to them coherently so you can gain their views on this.

I would suggest you reconsider the proposal and think about alternatives, consulting with people after lockdown, when people have time to properly respond and when it is safe to do so. I suggest you think about creating Bulbourne Cross instead as this looks far more environmentally sustainable and thought out.

<b>Comment</b>	The vision and strategy as written are not right for Berkhamsted. The planned new housing will have a significant negative impact on the town, overwhelming the existing infrastructure. Particularly the development along Shootersway cannot be sustained with the existing roads, with only two decent roads into town, one single track and two country lanes. Access to shops, schools and doctors will be difficult. Getting to the new schools planned will require driving as will getting into town, new residents will not walk from shootersway. This will ruin the Greenbelt and make the town a significantly less

pleasant and inclusive place to live. other than a new car part, it is not possible to improve transport in central Berkhamsted and given it's location in a valley, cycling route to the Shootersway area are not likely to be popular.  
The justification for this size of development or the development of Greenbelt land is not there and growth of Berkhamsted on this scale is unsustainable.

<p>* <b>Yes</b></p> <p>* <b>No</b></p>	
<p><b>Comment</b></p>	<p>Building homes for all. Yes, it is appreciated that there is a need for new homes, but so many? The average house price is over £400,000 in this area. What proportion of the homes are going to be sold for considerably (say 50%, which is probably what the average youngster can afford) less than this? Where are all the people coming from who are going to fill these houses? Where are they going to work? Where are the doctors coming from to provide health care? Where are the teachers coming from to provide the education for the huge influx of people? How many more cars are there going to be on the road polluting the environment and contributing to the poor air quality and climate change.</p> <p>This year we have seen a huge problem with flooding both in Tring and the surrounding villages, how can building so many new homes help alleviate this. The fields where the proposed houses are going have been deep in water over the last few weeks. Where is this water going to run off to? How can this make the environment greener with hundreds more cars giving off fumes on our already over crowded roads.</p> <p>A vibrant economy is going to require places for people to work. We chose to live in Tring because it's a beautiful market town full of history. It is vibrant and there are already many opportunities, not least of which is to enjoy the beautiful countryside which, if your plan goes ahead, is going to be swallowed up by bricks and concrete.</p> <p>How is this making happier, healthier safer place to live? No space to thrive, thousands more people living on top of each other, fighting for local services.</p> <p>We don't want to see more shops and shopping malls. All those small businesses who have worked so hard to keep going over the coming months will be challenged further.</p> <p>It looks like we will be losing some of our beautiful historic buildings. Whilst none of us like change, we don't want our town to become another featureless town the size of a small city.</p> <p>This proposal will completely change the whole nature of the town and what makes it such a special place to live.. It will have a detrimental effect on the surrounding villages, increasing traffic and causing yet more damage to the small roads which are already in a bad state of disrepair.</p> <p>This needs to stop before it completely ruins our wonderful corner of Hertfordshire.</p>

<b>Comment</b>	<p>3.6 The objectives are mutually exclusive. It is not possible to protect the environment while building on green belt land and massively expanding Tring, Berkhamsted and Hemel Hempstead.</p> <p>Tring station is outside Tring and it idealistic and unrealistic to think that people will cycle to the station. 2,000 new homes will mean a massive increase in cars driving to the station, emitting exhaust fumes and contributing to greenhouse gas emissions. Dacorum has failed to provide an adequate cycle path to the station (the road floods and cyclists get drenched with spray when it rains) and I see no reason to think that they can do better in future.</p> <p>The previous commitment to maintaining the linear valley character of Berkhamsted has been dropped and protection for the green belt ridge areas abandoned. This is a retrograde step.</p> <p>No account has been taken of the current use of green belt land for recreation, especially walking. The plan removes local areas used for exercise, potentially forcing people into using cars or other environmentally damaging transport to access the countryside for exercise.</p> <p>The plan will result in a massive increase in car movement in the areas where new housing is proposed - principally Hemel Hempstead, Berkhamsted and Tring. The market towns of Berkhamsted and Tring do not have the infrastructure to deal with this nor the possibility of improved infrastructure, so the result will be increased congestion and, in consequence, increased carbon emissions. There are geographical constraints in these areas which have not been considered in the plan.</p> <p>There is no explanation of why the far more reasonable 2013 Core Strategy has been so drastically altered.</p>

<b>Comment</b>	<ol style="list-style-type: none"> <li>1. Far too many dwellings are scheduled for Tring. The number is disproportionate to the size and nature of Tring. It is clearly not appropriate or well thought out to put such a high proportion of Dacorum's dwellings target into one small town which has such limited viable space and such Protected site status.</li> <li>2. The proposed new areas of building are approximately as large as the existing areas. This does not apply anywhere else in the Dacorum plan area. It will swamp the town and change its character irreversibly.</li> </ol>

3. The proportion of affordable housing is too high. The nature of this "affordability" will constitute social engineering of an unacceptable type and proportion.
4. The development locations proposed are in the wrong place. Squeezing everything into the areas between existing built up areas and the canal and across to the A4251 destroys the "we live in the country" nature of the town and decimates the "what a pleasant place to live" aspect of the town entrance along the road from Berkhamsted.
5. They destroy the "pleasant country walks" currently starting from the edge of the built up areas and along Station Road as the way to to the station. The views from these walks will be replaced by buildings and housing estates.
6. The declared intention to encourage walking and cycling will be set back rather than enhanced. Change the pleasant walk to the station into a long walk through a built up area and you will increase the use of vehicles for this purpose.
7. The roads and junctions on the east side of town are already overloaded and problematic and space is not available to improve this. Putting so much extra traffic on them will make the situation a much worse.
8. Development as smaller sites should be found elsewhere in Tring where there is space for properly designed and well laid out development preferably which already have the basic access to the A41 for transport to both Berkhamsted and Aylesbury and with existing vehicular and personal routes to Tring Station. Areas on the west side of Tring are also in line with the main cross-town roads to the High Street and the recreational aspects of the. Conservation area and Tring Park. Such journeys would logically be made by walking or cycling.
9. Housing developments on the east side will result in much more vehicular traffic across the towns residential areas and will cause even more congestion at the entrance to and in the high street heavily discouraging use of the shops and services there.
10. We have studied carefully the comments made by Tring Town Council with regard to the unsuitability of the green belt areas selected and their effect on the AONB and the Beech Area SAC. We agree completely and can only imagine that the green belt areas east of Tring have been selected without proper research or deliberation and with no demonstration of proper supporting proposals. Such proposals must surely be ruled against at Judicial Review and would be the subject of long and expensive litigation. The people of Tring feel so strongly about this that they would join together to fund such legal actions.

<b>Comment</b>	<p>The aspiration for Tring fails to acknowledge its current inclusivity that meets current needs and expectations. Growth will be neither achievable nor sustainable unless present infrastructure is significantly improved. Further, the objective of development in the green belt contradicts the assertion of desired sustainability. Open space - green belt in particular - currently exists. To assert new open space will be provided is clearly unachievable because of planned development on existing open space. There are currently, and for the foreseeable future, brown field sites available for development. These should be prioritised over existing open spaces.</p> <p>Dacorum has significantly exceeded new build targets. There is no case made for future development of the magnitude intended.</p>

<b>Comment</b>	Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council’s proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p>I agree with much of the plan however, as a resident of Berkhamsted, I find the vision for Berkhamsted to be short-sighted and limited and plans to fill inland on the outskirts ill-considered. Have councillors walked close to the bypass at the tops at which housing is planned? - Have traffic volumes been measured?</p> <p>What are the plans to improve utilities and infrastructure to support this housing increase or will increase the population without developing infrastructure and community resources again! - On balance my preference is for the Bulbourne Cross development as the developers have given more consideration to the needs of a growing community of Berkhamsted and seriously considered environmental concerns, building better quality properties suited to protecting the environment whilst improving necessary community resources</p> <p>I would like to see less housing development but understand the need to build more accommodation in Dacorum. I would rather DBC to maximise the use of brownfield sites and improvements to some existing ageing housing stock, including social housing stock across the Borough.</p> <p>I would like to be confident that DBC will hold contractors to account and planning proposals rejected should they try to short cut any environmental sustainability/requirements and have concerns that the current plans are not adequate to allow DBC to evidence its commitment to reduce global warming</p> <p>I would like to see a better commitment to encouraging cycling including more provision of cycle lanes for local commuters to reduce the need to use cars and better public transport to outlying villages</p>

I am not clear what plans DBC has to develop waste management sites that are accessible for all with good recycling stores on site, such as Buckinghamshire's site on the A41 - we should not be required to climb steps to deposit waste at our local sites - I agree that the priority should be to focus on prevention first and look forward to seeing a better waste management strategy in Dacorum

I would like to see facilities for youth sports teams improved in Berkhamsted including Raiders - availability of playing fields and recreation areas is already too limited in areas of Berkhamsted

I would like to have had more time to consider these plans and to be able to visit a consultation site rather than having to read this document online to be able to clearly see the planning maps as those provided in the booklet are unreadable

Finally, if I lived in Ebbens Road, Apsley, I would be very concerned re plans for any further housing development, which is already a dangerous road to negotiate in a car!

Most notably for me, the vision doesn't even recognise the village of Northchurch, despite it's own Strategic Objective to "Promote distinctiveness of each of Dacorum's towns and villages", whilst proposing developments that would fundamentally impact it. Northchurch is a special place with environmental and historical uniqueness as hightlight by the Berkhamsted Mayor, Garrick Stevens, in his response to the Local Plan and the Northchurch Parish Council's response to the Local Plan.

The proposed development East of Darr's Lane (BK06) would be catastrophic and irreversible, fundamentally changing the character of the village of Northchurch in which I have chosen to live and raise a family. It would constitute an urban

sprawl which would diminish Northchurch's status as a village completely and the unnecessary loss of important historical and geographical Green Belt land.

We chose to live in Northchurch due to its proximity to open countryside and surrounding open spaces and are able to access Berkhamsted town centre by bike, via the tow path. There is a strong community in the village which we have come to value deeply and participate in with other residents, the church and the school.

The proposed developments would change everything for me and my family: Loss of community; Loss of village character; Loss of open and space. All of these would have a devastating impact on our mental health and wellbeing.

In an era (especially post COVID) of mental and physically well-being being vital through neighbourly and community relationships and connections to the environment, increased and unestablished population rise through housing and development will permanently damage this essential life line.

Obviously the ambitious goals to achieve a great local economy, that is clean, green, healthy, well connected etc. are what everyone wants for their local area and for the country as a whole. However, I think the size of expansion of is too much and it is difficult to reconcile how we can achieve themes 3 and 4 by building on so much of the green field areas.

Most importantly I wonder if it's realistic to proceed based on the evidence gathering to date given the significant interposing event of the Covid Pandemic. Will so much housing really be required in this area? With more people working remotely for all or part of the week there are already signs to suggest that people are looking to other areas of the country, rather than the continued requirement of being within a relatively short commute to London.

<b>Comment</b>	I cannot support this; it sounds lovely on paper, but the new housing proposals are absolutely not 'in sustainable locations'. Such vast numbers of houses will not 'help reduce the Borough's contribution to climate change' and with so much green belt land built over I don't think we can say that 'the countryside will have been actively managed', it will have been destroyed by being concreted over!

<b>Comment</b>	The data available to the planners is no longer valid. The huge social and economic changes brought about by Covid 19 have rendered the starting assumptions hopelessly optimistic. The consultation period should have been extended. The proposed burden of new building in Berkhamsted, Northchurch and Tring would completely alter the nature of these settlements. The need for new housing on this scale has been greatly overestimated in the context of the above changes.

<b>Comment</b>	I object to the fundamental strategy of this plan to provide 16,899 new dwellings in dacorum with approx 10,000 on Green Belt land. This is entirely at odds with the overarching vision to create environmentally sustainable growth. These figures are wrong and need to be challenged, they are far too high  The impact this quantity of development on existing green fields will have on the environemnt and infrasturcture will be devastating and will result in extreme traffic congestion, water supply issues loss of wildlife, increased pollution, increased light pollution and will not conserve the local environment but destroy it.  Building on vast swathes of open green belt land will have a disatrious impact on the natural beauty of the area, in particular, the CAONB. The views of this distinctive landscape will be ruined for future generations and should be preserved. The proposed developments merges Berkhamsted and Northchurch thus destroying these distinctive individual settlements. The Green Belt land in between these settlements currently preserves these historic settlements.

<b>Comment</b>	This plan for extensive housebuilding in the region is completely inconsistent with environmental sustainability and is self-evidently driven by economic factors. It will result in the destruction of the character of the area, degradation of the environment, and pays no serious attention to likely future problems caused by climate change, e.g. water shortages.

<b>Comment</b>	Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of

Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

The draft Dacorum vision and strategic objectives fail to show:

- how to meet the desperate need for more affordable and social housing for our young people, as well as the teachers, NHS staff and carers, and other workers we need to live and work in this community;
- how to ease the pressure on Berkhamsted and Northchurch's creaking infrastructure (public transport, cycling and walking, roads, parking, schools and playgrounds, GPs, sewers, water and utilities) from recent housing developments, let alone the demands of further housing development;
- how the impact of the pandemic on future demand for commercial and residential property will change the balance of land use in town centres;
- how further housing development out of town centres is consistent with the stated aim to protect and enhance the environment, the countryside and the opportunities for recreation that local people love about where we live;
- how the community can be guaranteed that new housing will be developed sustainably meeting the highest environmental standards; or
- how development will avoid associated traffic worsening congestion, air pollution and road safety in Berkhamsted, Northchurch and Tring.

<b>Comment</b>	Your proposals for Tring and for a huge development at Long Marston will do irreparable damage to these areas of Dacorum and are a disproportionate response to government requirements. In relation to your proposal to include a huge development outside Long Marston in the Plan, I particularly challenge your statements that "All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.", that you will have been able to "facilitate[d] a significant increase in sustainable travel modes" - at Long Marston car transport would be the only viable transport option, and "the varied character of the countryside will have been enhanced, and continued to be admired and cherished" - at Long Marston you will have destroyed its particular quiet, rural character and negatively impacted on its historic environment. In addition, the development would have a negative impact on the nearby Chiltern AONB

<b>Comment</b>	<p>The plan was written prior to the vast changes caused by the COVID pandemic. This has altered the way that we live and work, and looks to continue to change the way businesses operate going forward.</p> <p>I would recommennd that this plan is re-submitted with these lifestyle changes reflected in its content.</p> <p>Tring and Berkhamsted are mistakenly lumped together as Market Towns. They are in fact very different in character. Berkhamsted is a vibrant and affluent commuter town, whilst Tring is a destination of choice for visitors; offering a wealth of cafe's and restaurants to feed the visitor. Tring has a large number of independent shops which, during the past 12 months of restrictions, have largely made the town self-sufficient. This diversity of small retail outlets should be encouraged because that is what gives the town it's unique character.</p> <p>I am concerned that th eincursions into the greenbelt on the edge of the area of outstanding natural beauty around Tring will spoil the views both into and out of the town which currently enjoys being contained within a hollow, and does not impact the panorama of the surrounding landscape.</p> <p>New woodlands are no replacement for the biodiverse historic hedgerows and woods. You state that Dacorum's vision is to protect the landscape and biodiversity - this is at odds with the intention to re-classify greenbelt for development. A net gain in biodiversity is not the same as preserving and managing the current landscape.</p> <p>Cycle lanes are only as good as the quality and safety of the surface. As a cyclist myself I am concerned that they are put as an afterthought, sharing space with pedestrians. The assumption that all short journeys will be by sustainable means (walking or cycling) is a misguided assumption in this and age where households own multiple cars.</p>

I must emphasise that the definition of Tring as a market town is an outdated view. To retain the distinct character of Tring, any development that adds to the size of the town will impact the feel of the town. It is already seeing the visual impact of the Roman Park development on the western approach to the town.

The planned growth for Tring is out of proportion with the current size of the town, and will severely impact the ambience and feel of the community. The large development planned for the east of the town will not come without a visual impact, and despite all the good words about walking and cycling, the vast majority of the proposed new inhabitants in what will be an exclusive development of large houses, will not be inclined to ditch their cars in order to visit the town centre.

The need for a business hub should be questioned in the emerging era of working from home becoming the norm

<b>Comment</b>	<p>I think the plans actually constitute overbuilding in the area - with too little emphasis on infrastructure to support this. Plus its a decimation of the green belt that makes this area pleasant to live in.</p> <p>I believe we need more affordable housing (and supported house rentals for families- not all flats as seem to be being built at the moment) but do not think this plan will provide this.</p> <p>I do not believe such overbuilding will provide needed affordable housing or affordable rental opportunities for local residents - it is more likely to attract people from London or other areas and potentially increase house prices.</p> <p>Also - while understanding the need to address climate change - enough parking is never allowed for in these new developments - which does not discourage people from having cars (which is the aim) but causes parking issues on all surrounding roads and areas - electric or otherwise people will still own cars and need somewhere to park them.</p> <p>Also making the area overcrowded will adversely affect the quality of life for current residents with services, roads, trains etc becoming busier and overstretched.</p>

<b>Comment</b>	<p>A disappointing Borough Vision to 2038 for the following reasons.</p> <p>The Borough Council knows the Local Plan has been written in accordance with current Government guidance which dates from 2014. It fails to take into account the recommendations of the National Planning Policy Framework (NPPF) which expects Dacorum to use latest information which is from 2018. ONS projections based on 2018 data indicate an annual need for around 350 dwellings per annum in Berkhamsted. This is substantially fewer dwellings than the current plan proposes. DBC should challenge the proposed numbers which represent over -development and huge impact on AONB and are based on outdated (2014) housing projections.</p> <p>The current Borough proposal is for 5,954 homes which will be in "greenfield growth areas" known as Green Belt and most of it on the outskirts of Berkhamsted. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances, therefore the Council's proposals neither justifiable or sustainable.</p> <p>When I read the Themes underpinning the Strategy I fail to see how such a massive expansion could ever be justified as helping ensure a 'happier, healthier and safe dacorum' or 'Creating a clean, green and attractive Dacorum' for example!</p> <p>I also consider the consultation portal as the principle mechanism to submit responses as difficult and obtuse to navigate, whether by design or otherwise. For example the header question in some sections was asking if you had a comment whereas others asked if you agreed with the DBC findings. It needed careful review to avoid mistakes. Most residents will also not quote specific paragraphs from the Local Plan when responding, though the objections and points being made will be loud and clear. I hope this will not invalidate their submissions.</p>

<b>Comment</b>	<p>The vision is contradictory. The amount of housing and development proposed is incompatible with aims within the vision for sustainability of biodiversity and protection of the green belt and adjoining AONB/ Special interest Beeches areas.</p> <p>We need additional housing, especially affordable ones, but the housing targets are based on incorrect projections from 2014 rather than 2018. Using the latter would halve the number of houses required. In addition, more creative use of brown field sites (and a full review of brown field opportunities is required). The pandemic has shown more people working from home and this may actually mean that more people want to live even further beyond the London commuter belt in which Dacorum currently sits. Therefore, the housing numbers need to be completely revisited.</p>

<b>Comment</b>	<p>The strategic objectives are admirable, but the detail of the plan fails to meet and often contradicts the stated objectives with many areas vague, unambitious and unimaginative.</p> <p>Mitigating and adapting to climate changes - but only vague indications of 'encouraging' low carbon etc. Need to see references to the council's own carbon neutral commitment and mandates on for example inclusion of renewable energy.</p> <p>Conserving and protecting natural environment – in Tring you are proposing to build on the green belt and offering very little detail of how you will even attempt to mitigate this!! Development on the green belt should be the absolute last option, and if it is to be done then it deserves ambitious and well thought through targets for mitigation. The plan offers only vague suggestions of wildlife corridors which won't even come close to replacing what will be lost. You mention retaining trees in development sites, but it is in fact the hedgerows and grasslands which hold much of the biodiversity. I support Tring in Transition's Tring Fields' proposal of creating developments within existing field boundaries to retain hedgerows and create smaller scale developments with the distinct character the plan claims to be aiming to create.</p> <p>Attractive and valued built and historic environment – I see little evidence of this in the proposals for Tring. The phrase 'local distinctiveness' is repeated throughout the plan with little reference to what this even means for Tring. It is a market town with a vibrant range of independent high street shops and cafes, it is wholly out of character to place a medium to large supermarket adjacent to the town centre!</p>

**Comment**

The Council's Vision is highly laudable in terms of vision and strategic objectives - a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected.

However, the plan appears to largely focus on building new homes and where they are to be located. There is little underpinning rationale to suggest that the increase in total dwellings is sensible or even sustainable.

For Tring specifically, where I live, there is a proposed increase of 2,700+ new houses increasing the size of Tring by 55%. Most of this housing will destroy much of Tring's surroundings and Green Belt - uprooting ancient hedgerows and trees and negatively impacting the quality of our countryside, wildlife and environment. I also understand that the focus on building on Green Belt is counter to national Planning Policy and the government's position that Green Belt should only be developed in exceptional circumstances. The Council makes no effort to explain what the exceptional circumstances are in Dacorum and this needs further explanation before any approval can be given.

Furthermore, in Section 1.30 'Working with Others', the importance of cross-boundary matters is noted. However there is little evidence of this being applied in my local area. Tring is bounded on two sides by Buckinghamshire whose plans have a direct and significant bearing on employment, traffic, local land use, etc. There appears to be no reference to Aylesbury Vale District Council or Buckinghamshire, and few to local villages in that county, contrary to NPPF para 35c. For example the planned development of RAF Halton is proposing c1000 new homes and is only 4-5 miles from Tring. This is a concern that may have led to potentially flawed conclusions on matters ranging from employment to the siting of additional retail.

The proposed growth requires a more robust stance in my opinion to ensure that the plan does not adversely impact the environment and climate, for example by referencing DBC's Climate Emergency Declaration and zero carbon target of 2030. Also, the proposed growth suggests substantial additional traffic with over an additional 3-4000 cars to the locale plus the necessary lorries and delivery vehicles associated with such a growth.

In Section 2.12 'Vibrancy of Town Centre' there is little consideration to how to retain the local personality of towns. Tring has a very "market town" distinctiveness and there is no opportunity or plan to maintain / enhance this within the proposals especially given the need to support a larger local population. As suggested by others there are over 20 references to the importance of local distinctiveness in the Plan, e.g., page 22: *'All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.'* I strongly support this position but, as mentioned above, am concerned that there are no references to what makes Tring distinctive, or to a process by which that will be agreed and at what stage it will become binding within the plan.

I strongly feel that this needs to be formally addressed. Placed at an important ancient crossroads, Tring's market heritage is deeply rooted, it has a track record of many 'firsts' including clean water supply, land set aside for public amenity and nature conservation and water and wind-based energy generation and is also located in the midst of more SSSIs and officially designated natural beauty than other locations in Dacorum.

Can we please have some specific local questions addressed to help understand what the plan means for our local places? E.G

- How will the viability of Tring as a market town be maintained with such an increased population and associated pressure on a town centre that will have to accommodate more traffic?
- How can sensitive views and landscape be maintained?.
- How will green spaces be re-purposed for the community to enjoy? For example,
  - There is no joined-up cycle and footpath plan for Tring and there are gaps where this extends beyond residential or connecting streets.
  - There is no suggestion of any "re-wilding" to compensate for the loss of local green spaces

<b>Comment</b>	In reality the borough plan is only about how many homes will be built and where they will be located.

The council has accepted what they believe to be a central government requirement for the number of homes to be built in the borough without any challenge of resistance. The numbers represent an increase of 114% over the 2013 Core Strategy and will result in a very large number of homes being built on what the Council terms "greenfield growth areas", which is essentially Green Belt land, mostly on the outskirts of Berkhamsted and Tring. The Council has ignored national planning policy contained in the NPPF and statements by Ministers and the Prime Minister, that the Green Belt should not be developed except in "exceptional circumstances". The Council does not explain what the exceptional circumstances are in this case. The Council's proposals are not justifiable or sustainable.

The plan will ruin the character of our market towns and villages and result in the loss of Green Belt to development forever.

<b>Comment</b>	Far too much building in Hemel Hempstead. Would result in loss of important green belt and busier city type feel to town with infrastructure that cannot cope as well as more overcrowding and crime.  This many extra dwellings cannot be justified in the town.  There would not be enough extra parks or sports fields to cope with influx of new residents.

<b>Comment</b>	<p>The overall vision is one of continual growth, urbanisation, and concentration. I do not believe that this is the correct way for Dacorum to develop when it has such valuable assets as the Chiltern AONB within its boundaries.</p> <p>In addition, while there is national guidance for housing numbers within regions these are under review and for Dacorum will likely mean a reduction in necessary housing. The plan must be altered to reflect that by perhaps having options for different levels of need.</p> <p>In particular the vision of directing large scale growth at Tring is fundamentally wrong. A substantial proportion of the growth proposed is in Green belt areas that fundamentally affects the setting of the AONB, something that planning guidance does not support. This will materially alter the enjoyment of people visiting the AONB and other tourist/recreational areas around Tring, as the feelings of "ruralness" and "remoteness" will be lost forever.</p> <p>The growth around Tring goes against your statement in Conserving and Protecting the Environment "To conserve and enhance the landscape and scenic beauty of the Countryside and the Chilterns Area of Outstanding Natural Beauty."</p> <p>If such large-scale growth in the borough is needed, then use of existing brown field sites away from the AONB to create new communities and support the larger villages is preferable.</p> <p>No consideration has been given to the very large growth of Aylesbury/Aston Clinton and the way this affects Tring. Aylesbury is closer to Tring than Hemel Hempstead. This growth will also affect Dacorum in various ways A41 traffic Visitor traffic to outdoor leisure areas around and in the AONB and places such as the Tring Reservoirs and Grand Union canal.</p>

<b>Comment</b>	<p>While having to work to Government guidelines is an externally imposed constraint, much of the language is based on assumptions that what is planned is actually as wonderfully creative and good for local communities as it is claimed to be. The argument that expanding Berkhamsted and Tring and smaller communities is 'a good thing' is not reconcilable with the effect that is likely to be produced in the real world. That is to say that a quite predictable increased influx of people from other areas (not locals seeking affordable housing) will defeat the object of benefitting local people. What is the basis for arguing that local people will be the main beneficiaries? It sounds more like a pious hope.</p> <p>Also, what about parking provision in town centres, school places, medical and dental care and - especially - hospital capacity? What about the character of these communities, already strained by ribbon development towards hemel hempstead and towards Aston Clinton. Is larger going to preserve character? No it's not.</p> <p>On the question of employment and job creation, the plan needs to be revised at some point to take into account the effect of COVID-19 on working practices, in particular a propensity or necessity to work from home. Is there not already an argument to be made that people are and will increasingly choose where they live based on criteria which have less to do with proximity to their place of work and more to do with life style? The idea of fostering mixed economies with business parks, light industry and infrastructure to support a larger work-from-home population is a complex one and this plan does not show evidence of that kind of thinking. It reflects rather, build more, expand more and that's a good thing.</p>

<b>Comment</b>	<p>The number of homes needed is based on out of date and old data. The irreversible destruction of important green belt land should be a very important matter and consulted on using the very best available data to ensure the correct decisions are made.</p> <p>Reference is made to "affordable homes" but nowhere in the document is there a plan as to how this can be achieved. Homes within Dacorum are currently well above average and there needs to be a clear strategy as to how social housing and genuinely affordable homes can be delivered, and not just yet another development of homes that aren't affordable.</p>

<b>Comment</b>	The Government has said that the figure of 922 dwellings per year is a starting point, not a target, and that councils should know if things like Green Belt mean that the number cannot be reached. On 16/12/2020, the Government published a response to the recent white paper consultations; regarding the Green Belt, it states 'We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.' Therefore, it is clear that Green Belt should not be sacrificed for housing.

<b>Comment</b>	<p>The Report shows a <b>Strategy</b> that is centred on six <b>Key Themes</b> – of which four are commented upon below:</p> <p><b><i>Theme1: Building Dacorum’s future with homes for everyone</i></b></p> <p>What does “<b><i>homes for everyone</i></b>” mean one wonders? Without proper caveats this Theme is meaningless. Dacorum’s future should not be about building more and more homes on its valuable and attractive green spaces.</p> <p><b><i>Theme 3: A happier, healthier and safer Dacorum</i></b></p> <p>Building hundreds of houses on the Dunsley and Cow Lane Farms will make very many residents and visitors less happy, less healthy and less safe.</p> <p><b><i>Theme 4: Creating a clean, green, attractive Dacorum</i></b></p> <p>Developing Tr01 will increase pollution, destroy a much-cherished green gateway to the historic market town of Tring and will irreparably damage the Town’s landscape and attractiveness.</p> <p><b><i>Theme 5: On-track for a better transport network</i></b></p> <p>Adoption of proposal Tr01 would inflict considerable harm to the local traffic network. Channelling high levels of additional traffic along Cow Lane, the London Road and the A2451 cannot in any way be construed as “<b><i>on-track for a better transport network</i></b>”.</p> <p>The farms are owned by Hertfordshire CC and it is understood that the farmers’ tenancy agreements are due to expire shortly - presumably HCC are assuming that the site is going to be approved for development. In view of the site’s current ownership, development may be viewed as being relatively straightforward for local government to deliver upon. Decisions regarding sites for development, however, must not be dictated by convenience. Sites have to be identified as being eminently suitable and the case for development of every potential location must be justified on proper planning principles, not based upon opportunism and expediency.</p>

It is difficult to understand why this site is continually earmarked for development when over the years countless residents of the Town have consistently and vehemently objected to it on the grounds that it is wholly unsuitable, completely lacking in merit and thoroughly ill-considered.

This area is, in very many ways, of particular importance to Tring and this is a clear reason why the Tr01 proposal should be removed from the Dacorum list of potential development sites.

The objectives of the Council are, on the whole, commendable. The reality in the form of the proposal to build upon the Dunsley and Cow Lane Farms is wholly irreconcilable in countless ways with such intentions.

<b>Comment</b>	<p>The vision is contradictory. The amount of housing and development proposed is incompatible with aims within the vision for sustainability of biodiversity and protection of the green belt and adjoining AONB/ Special interest Beeches areas.</p> <p>We need additional housing, especially affordable ones, but the housing targets are based on incorrect projections from 2014 rather than 2018. Using the latter would halve the number of houses required. In addition, more creative use of brown field sites (and a full review of brown field opportunities is required). The pandemic has shown more people working from home and this may actually mean that more people want to live even further beyond the London commuter belt in which Dacorum currently sits. Therefore, the housing numbers need to be completely revisited.</p>

<b>Comment</b>	<p>The Local Plan runs counter to Themes 1, 3. 4 and 5.</p> <p>Building over large swathes of green belt land is not respecting our high quality countryside and would undermine the natural beauty of the area with a negative impact on the wildlife and preservation of the Chilterns Beechwood SAC</p>

The listed developments in Northchurch run counter to Dacorum Climate Change Strategy and would increase reliance on vehicles, carbon emission and, pollution. The steep hill sides are unsuitable to cycling as a means of transport and there are poor public transport links with the nearest railway station 40 minutes brisk walk away

My comments relate to Berkhamsted. I have lived in Berkhamsted and Northchurch since 1975 and have seen a steady increase in traffic through and within the town, despite the provision of a bypass in 1993. There are just two uninterrupted two-way roads entering and leaving the town, the High Street and King's Road, and where these meet in the town centre the three-way lights with pedestrian phase are a frequent cause of congestion. All other exit routes are single-track or restricted by railway or canal bridges, and in many cases, the free flow of traffic is further constrained by parked vehicles.

At peak times the traffic situation is dire, with many motorists using rat-runs through residential areas in an attempt to avoid queues. I would suggest that traffic in the town is already nearing saturation point, and the idea of increasing the population as set out in the Dacorum Local Plan is likely to make the situation intolerable.

While an increased use of public transport might provide some relief, I suggest that in practice few people could be persuaded to use bus services. Berkhamsted is of course well-served by the railway, but most journeys made are to London and destinations further afield. People are deterred from using trains to travel to nearby towns on the route as their stations are a long way from town centres, eg Tring, Hemel Hempstead and Watford.

In all, I believe that the proposed scale of development will make the town an unpleasant place to live for many people, with congestion on the roads, intolerable demands on services beyond available resources, and the loss of so much irreplaceable green belt. Is that what we want?

<b>Comment</b>	<p>In sufficient consideration has been given to the need for open spaces. Tring Park is the major open space in Tring and has suffered greatly in the current conditions with significant erosion of paths. The use of Tring Park has led to much fly parking and damage to verges particularly on Hastoe Land and Oddy Hill. In the wider context the use of Ashrige Estate is suffering more greatly from erosion and fly parking. This erosion and fly parking can only get worse with the large increase in the population of Tring</p> <p>The addition to the population of a small community can only be done slowly if one is hoping not to change the character of the community, but the plan is envisaging an increase of in the order of 50% in one go. The siting of an additional secondary school so close to the present secondary school is a recipe for disruption. I remember when I was at school there was a great deal of rivalry between secondary schools so close together.</p>

<p>* <b>Yes</b></p> <p>* <b>No</b></p>	
<p><b>Comment</b></p>	<p>The Dacorum Local Plan (to 2038) does not sufficiently consider the government’s Ten Point Plan for a Green Industrial Revolution (Nov 2020), or the government’s Cycling and Walking Investment Strategy (April 2017) – and may consequently leave the council vulnerable to legal action.</p> <p>Specifically, the tokenistic references in the Plan regarding contributions to “off-site enhancements to the local road network” do not clearly delineate plans for traffic calming measures and segregated cycle lanes/footpaths, which would reduce air pollution and increase the viability of walking and cycling for short journeys in Berkhamsted.</p> <p>West Berkhamsted currently has an average of 1.48 motor vehicles per household, in 2,401 households. According to the plan, the proposed development in the West Berkhamsted area will create 1,860 households – which will lead to 2,753 additional motor vehicles on Berkhamsted roads, with next-to no commitment to sustainable local travel provision for the thousands of families in the town.</p> <p>Most of the additional motor vehicles will frequently use Shootersway and Kings Road for commuting and town centre access. The junction of these two roads has already seen a deterioration in air quality since the opening of Bearroc Park and the multistorey car park. The air quality at the junction of the high street and Kings Road has also degraded in the same period. Both junctions are a thoroughfare for school children as they make their way to local primary and secondary schools – currently with negligible infrastructure to support them.</p> <p>The current version of the plan does not adequately address four of its own objectives: ‘Mitigating and adapting to climate change’, ‘Conserving and protecting the natural environment’, ‘Promoting and facilitating sustainable transport and connectivity’ and ‘Supporting community health, wellbeing and cohesion’. If these points are not addressed, then the council may endure protracted legal proceedings.</p> <p>As a Berkhamsted resident and a strong advocate of sustainable transport for short journeys, I will not stand idly by as the ability of this and future generations to move safely around their home town is compromised.</p>

<b>Comment</b>	The vision as set out is laudable - plenty of jobs, good education and health facilities, sustainable transport, environmental protection. However the only detailed focus of this plan seems to be where 16,596 homes are to be built. There is no explanation of where this number has come from, or why it should be accepted as the target number. It is an enormous increase on the figure set out in the 2013 Core Strategy and results in a proposal to build 5,954 houses on Green Belt land. The document recognises that the Green Belt should only be developed "in exceptional circumstances" but there is absolutely no explanation of what these exceptional circumstances are and why the Council believes this Borough should ride roughshod over the national planning guidelines. I believe that there is no justification for ploughing up the Green Belt and the plans as put forward are totally unsustainable.

<b>Comment</b>	The vision in general terms are reasonable but I do not see the overall proposal will meet the vision or achieve the green objectives. The sentence "Dacorum will have taken full advantage of its strategic M1 - M25 - A41 location." says it all. The plans to grow Tring and Berkhamsted with lack of local employment is not green, will lead to more pressure on roads and infrastructure and is not a sustainable plan. The volume of home building along the A41 corridor from Hemel Hemsptead to Aylesbury is unsustainable and over dependent on road traffic with insufficient local employment.

<b>Comment</b>	The pandemic means the plan needs to be more flexible and reviewed in all aspects including the number of homes we need but taking into account that working patterns have changed for many and working from home has become a sensible and workable option for many people and employers. Affordable homes need to be truly affordable for local young people who want to stay local to their families/support networks/employment and young families and those on low incomes. With the pandemic more people have lost jobs or have taken lower paid jobs. Housing needs should be reconsidered in the light of this and also take into account the change in working patterns and have appropriate space to enable and encourage working from home.  The plan, particularly around housing needs should be reconsidered due to changes brought about by the pandemic.

<b>Comment</b>	<p>I am opposed to the Dacorum Local Plan.</p> <p>I am particularly opposed to the huge size and scope of the proposed development in Tring.</p> <p>Tring bears the brunt of this plan. When you translate the plan into what is being proposed it leads to a 55 per cent population growth for Tring.</p> <p>The population growth for Dacorum is nine per cent. Hemel Hempstead and Berkhamsted have plans for 20 per cent, other smaller towns that are more like Tring get 10 per cent growth. Why does Tring have to have that size of growth? I object to this unjust and unnecessary allocation of housing.</p> <p>The plan will involve an incursion into Green Belt land within the Chilterns Area of Outstanding Natural Beauty. It will annihilate farms. The habitats of our local wildlife will be destroyed, in turn destroying our wildlife. These will be lost resources for future generations for ever. Residents of Tring, including walkers, joggers and families will be deprived of these much loved amenities and their mental and physical well-being will suffer. There are no suitable local alternatives. I do not believe these are “exceptional circumstances” and do not support such an exaggerated and detrimental growth.</p> <p>Tring does not have the capacity for such growth in a relatively short time and infrastructure has not been considered. It will create what will amount to a whole new town around the outskirts of the current town, the inhabitants of which will expect to share many of the existing amenities of Tring.</p> <p>Traffic increase, due to these developments, will cause air pollution, congestion and do serious harm to Tring's inhabitants.</p> <p>During the Coronavirus pandemic, the efficient and successful use of technology has facilitated significant changes in our way of working. It has been widely reported that increased home working has led to the freeing up and reduction in</p>

use of office space. Looking forward, this is likely to become an increasing work mode choice for many due to the advantages for businesses, employers, employees and also the protection of the environment.

A lot of developments have recently been and are being carried out in and around Tring. The primary purpose of these developments is to serve developers, shareholders and wealthy Londoners and the house prices will reflect this. A more cost effective and environmentally friendly proposal would be to repurpose empty London offices to provide affordable housing.

In Tring, due to the pandemic and to the increasing use of online commerce, there are now several unoccupied retail premises. These could also be reassigned for provision of affordable housing.

In the current situation, rather than pushing ahead with this development plan, it would be prudent to wait until the country has recovered from the pandemic when development proposals can be reassessed in light of changed circumstances, reformed working practices and the changing needs of people. This would also enable a review of alternative options, particularly as the current development plan is on such a large scale.

The government has promised to 'level up' the economy, living standards and life chances across the country. The government has announced a review of the rules for deciding which public investments go ahead, with the intention of increasing the share going to areas outside of London and the southeast of England. There is also the Northern Powerhouse, the proposal launched to boost growth in the north of England.

There is a countrywide necessity to invest in the North to get the North of the country out of poverty and deliver on the Government's levelling up promise.

The Dacorum Local Plan needs to be put on hold. In addition it will then need to be reviewed in order to bring it in line with updated facts and changed national circumstances. It will need to be brought into the more realistic and fairer realms of actual, not perceived or wished-for regional needs.

<b>Comment</b>	The plan for Tring is flawed and should be based on infill sites in Tring itself and not a strip development along Station Road between Tring Town centre and Tring Station . Loss of green belt , an area of outstanding beauty and need for affordable housing in the town centre not on green field sites. Also it would ruin the charm and history of Tring itself with development that would attract only commuters and not local jobs and the town itself .

<b>Comment</b>	<p>The need for additional housing is higher than it needs to be - over double the amount in the previous plan is simply too much for Dacorum to cope with, especially in terms of having no local hospital, impact on schools and already over used transport infrastructure.</p> <p>In addition, despite all the promises, I do not believe that the local authority will provide anywhere near the number of realistically affordable houses required to get young local people onto the housing ladder and also to reduce the very substantial local authority housing list.</p> <p>The vision states that a full range of community facilities will have been made available - this is hard to believe, given that a Tory Council demolished the Pavilion 19 years ago and has not seen fit to replace it since.</p> <p>The vision states the desire to make Dacorum 'a great tourism destination' but this local authority has resisted all proposals to even create a local museum in the borough.</p> <p>There should be no development on green belt land if at all possible and if it has to happen, needs to be fully justified and be able to fit into the location.</p> <p>Any assistance to developing or improving Hemel Town Centre should ensure this includes the Old Town area, which should be promoted as a niche retail area.</p> <p>The number of house proposed for Hemel is simply too high, especially given these are restricted to only a few areas - see above comments about the lack of a hospital etc.</p> <p>A proposal for 2,400 house approved as 'windfall' developments is ridiculously high.</p> <p>Approximately 35% of the proposed housing is anticipated to come from 'greenfield' sites - this is a poor vision to have, given peoples needs for such sites in their existing state.</p> <p>What are the 200 homes included as part of the Grovehill Neighbourhood Plan? To my knowledge, the plan does not actually propose any new housing.</p> <p>Why is there a need for the plan to actualy propose 300 more houses than is required?</p> <p>There is no need whatsoever for a new supermarket on the Market Square site in Hemel - this is where a new theatre should be developed. Nor is there a need for another supermarket at Jarman Park - that is simply ludicrous.</p>

<b>Comment</b>	<p>I feel all this building over big stretches of our Green Belt does not fit in with Dacorum's aim to respect our high quality countryside and would be detrimental on the natural beauty of the area. it would be terrible for the wildlife and certainly not help in the preservation of the Chilterns Beechwood SAC</p> <p>it all goes against the Dacorum Climate Change Strategy - here in Northchurch all these new people would have to rely on cars and that would mean a bigger carbon footprint and even more pollution - the opposite of the council's strategic aims. We are a long way from Berkhamsted train station and older residents like me have to rely on a bus into town.</p>

<b>Comment</b>	<p>I appreciate that you as a borough are dictated to by central government around growth etc and as a Borough surely it is better to communicate this vision and seek support and understanding from the actual residents and families that will grow. However, I really believe that this consultation process has been shielded and one could be cynical as to the reason why. To get better support and feedback to this or any other plan you need to engage and make the process much more transparent and accessible.</p> <p>For example,</p>

- 1 as much as I have tried to encourage people to partake in this consultation via social media, I bet you do not have very many responses. Most people didn't know what I was talking about.
- 2 I saw only reminders from two local councillors, I have never seen any communication and public involvement from any of the others which frankly is abysmal considering they are being paid.
- 3 The process to log on and register is quite difficult for some people.
- 4 I have just read the whole document and information prior to comment and to be honest ...I found it hard work most people would give up at the trying to register point.

Am I cynical to think that actually you do not want any responses, good or bad ?

There could be more interactivity on social media asking for responses , local councillors should be made to submit quarterly reports that they have canvasses their local residents to gain feedback good or bad.

Borough has to understand that most people do not operate at the business level as those who compile the strategies and reports, you cannot expect them to comment on things that they cannot fully understand

I have really struggled to read and understand this, but I know what I want to say to make Hemel Hempstead a wonderful visionary place to live without turning it into a concrete, traffic polluted, neglected town, where building homes and collecting rates is just about profit and nothing else.

I am not alone, there are so many people in Hemel who think it is a great place to live and will also support that continuing, but it has to be balanced for the existing residents and some of the proposals do not take into account it will make existing problems worse.. Mainly around new developments around existing homes and not providing adequate parking to an already problematic ongoing issue.

Please invest into a communications strategy that utilises platforms that most residents would actually use and get the councillors to ensure that their ward residents have regular communication and encourage community adhesion.

<b>Comment</b>	<p>Whilst there may be a need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the scale of proposed development. The Council may have failed to take account of National Planning Policy Framework (NPPF) which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB. In terms of proposed housing numbers, it's 9,995 on land currently in the Green Belt, plus 1,665 on four ex-Green Belt sites. Green Belt is what makes Dacorum Dacorum, and it is being given away cheaply in my opinion, which will destroy the livability of the borough.</p>

<b>Comment</b>	<p>—No - building more houses within the London commuter belt will not reduce house prices for local people looking for their first home — it will just attract more commuters moving out from London.</p> <p>—Developer led housing will not provide more social housing for those on the waiting list. It will just benefit developers.</p> <p>— We need a properly thought out housing strategy that provides the right type of houses, in the right places, for local people.</p> <p>Anything to uses greenbelt land instead of brownfield or previously built on areas will spoil what makes Dacorum wonderful to live in.</p>

<b>Comment</b>	I feel the scale of the developments like this in the East of England add to overcrowding, put pressure on infrastructure and contribute to eroding the quality of life of existing residents. I believe the Government should adopt a more considered nationwide housing and industry development strategy by creating new towns in the North.

<b>Comment</b>	<p>I object to the Dacorum Local Plan.</p> <p>I particularly object to the huge size and scope of the proposed development in Tring.</p> <p>Tring bears the brunt of this plan. When you translate the plan into what is being proposed it leads to a 55 per cent population growth for Tring.</p> <p>The population growth for Dacorum is nine per cent. Hemel Hempstead and Berkhamsted have plans for 20 per cent, other smaller towns that are more like Tring get 10 per cent growth. Why does Tring have to have that size of growth? I object to this unjust and unnecessary allocation of housing.</p> <p>The plan will involve an incursion into Green Belt land within the Chilterns Area of Outstanding Natural Beauty. It will annihilate farms. The habitats of our local wildlife will be destroyed, in turn destroying our wildlife. These will be lost resources for future generations for ever. Residents of Tring, including walkers, joggers and families will be deprived of these much loved amenities and their mental and physical well-being will suffer. There are no suitable local alternatives. I do not believe these are “exceptional circumstances” and do not support such an exaggerated and detrimental growth.</p> <p>Tring does not have the capacity for such growth in a relatively short time and infrastructure has not been considered. It will create what will amount to a whole new town around the outskirts of the current town, the inhabitants of which will expect to share many of the existing amenities of Tring.</p> <p>Traffic increase, due to these developments, will cause air pollution, congestion and do serious harm to Tring's inhabitants.</p> <p>During the Coronavirus pandemic, the efficient and successful use of technology has facilitated significant changes in our way of working. It has been widely reported that increased home working has led to the freeing up and reduction in use of office space. Looking forward, this is likely to become an increasing work mode choice for many due to the advantages for businesses, employers, employees and also the protection of the environment.</p> <p>A lot of developments have recently been and are being carried out in and around Tring. The primary purpose of these developments is to serve developers, shareholders and wealthy Londoners and the house prices will reflect this. A more cost effective and environmentally friendly proposal would be to repurpose empty London offices to provide affordable housing.</p> <p>In Tring, due to the pandemic and to the increasing use of online commerce, there are now several unoccupied retail premises. These could also be reassigned for provision of affordable housing.</p>

In the current situation, rather than pushing ahead with this development plan, it would be prudent to wait until the country has recovered from the pandemic when development proposals can be reassessed in light of changed circumstances, reformed working practices and the changing needs of people. This would also enable a review of alternative options, particularly as the current development plan is on such a large scale.

The government has promised to 'level up' the economy, living standards and life chances across the country. The government has announced a review of the rules for deciding which public investments go ahead, with the intention of increasing the share going to areas outside of London and the southeast of England. There is also the Northern Powerhouse, the proposal launched to boost growth in the north of England.

There is a countrywide necessity to invest in the North to get the North of the country out of poverty and deliver on the Government's levelling up promise.

The Dacorum Local Plan needs to be put on hold. In addition it will then need to be reviewed in order to bring it in line with updated facts and changed national circumstances. It will need to be brought into the more realistic and fairer realms of actual, not perceived or wished-for regional needs.

<b>Comment</b>	As a resident of Tring: The sentiments expressed for Dacorum are sound - if not necessarily followed through <i>explicitly</i> in the Plan - however it is disappointing that DBC appear unable or unwilling to use their legitimate power and available evidence to push back on the proposed dwelling numbers. Give the considerable constraints of Green Belt (much more so than of our neighbours) and the location of large parts of the Borough that will flank a proposed National Park it is surprising that Green Belt land has been given up without

any real apparent push-back. The increase in housing numbers are not realistic. Attempting to accommodate them will significantly damage the well-being of the existing residents and have an enormously negative and irreversible impact on our surrounding countryside.

It is also a surprise that there is NO mention of Buckinghamshire in the Plan (ref Section 1.3 "Working with Others"). This is especially a worry for Tring (bounded by Bucks on both sides) which has an economy much influenced by the villages (in particular to the North). Nearby developments in Bucks and are closer to Tring than even Berkhamstead and yet there is no evidence this has been taken into account - this has resulted in flawed assumptions about industrial growth, infrastructure and even schooling.

### **Comments on Overarching Vision**

Environmental Sustainability is the first major heading – rightly so for the 21st century. This theme is expanded upon elsewhere throughout the plan (starting at section 2.2) however, I feel an opportunity is being missed to take a more robust stand, for example by referencing DBC's Climate Emergency Declaration and zero carbon target of 2030. Other authorities, for example, have already mandated inclusion of solar energy capture in new builds, community renewable energy schemes, tough building standards and more. Given that we are planning for a mid-21st-century environment I believe Dacorum should also take a more robust and explicit approach.

My greatest concern lies with the statement (in the overarching vision section) that states:

- "have delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape and protected environmental sites"

The site proposals for Tr03 are among the least well thought out proposals in the entire plan. The controversial "Bulbourne Crossing" is better worked through by an order of magnitude. There are flaws in the presented evidence about infrastructure and traffic (which incorrectly states only Brooke Street to be a traffic Hot Spot...and fails to mention the weekend bottlenecks at Station Rd/London Rd and Cow lane/London Rd), in the proposals about the required "Link Road" (which can only become a east of Tring Bypass), and numerous other issues (such as the Sustainability report noting there is no flood risk....which is entirely counter to local knowledge, actual photographic evidence, the existence of a nationally strategic pipeline (which is not even mentioned) and more....it all feels like a develop statement and NOT what residents would expect and hope for from an impartial and professional planning entity.

In the comments below we give considerable evidence to indicate that the proposals for Tring are *not compliant with the Plan's own stated strategic objectives* – even if dwelling growth numbers are significantly reduced.

We acknowledge that (as per section 1.12, Page 6) we are not reviewing a final Plan, nonetheless there are many points that must be addressed in those sections that are more advanced in their evolution:

- This section notes the importance of cross-boundary matters. For Tring, bounded on *two* sides by Buckinghamshire, the plans of that county have a significant bearing on employment, traffic, local land use etc. In the Plan, we can find no reference to Aylesbury Vale District Council or Buckinghamshire, and few to local villages in that county, contrary to NPPF para This is a concern and may have led to what we feel are flawed conclusions on matters ranging from employment to the siting of additional retail (see detailed response to later questions).

- It should be explicit here (and reflected in all other relevant sections) how the Plan will meet new Environmental Sustainability challenges formalised during the latter part of 2020, including the revised Sustainable Hertfordshire Strategy (and associated targets) and the priorities defined by the Hertfordshire Climate Change and Sustainability Partnership (HCCSP). These go far beyond references to this topic on page 22
- *‘A central thread of the Local Plan is to plan for a low-carbon future in which carbon emissions and other greenhouse gases are reduced.’* This is a welcome statement; however, we feel an opportunity is being missed to take a more robust stand, for example by referencing DBC’s Climate Emergency Declaration and zero carbon target of 2030. Other authorities, for example, have already mandated inclusion of solar energy capture (thermal or PV) in new builds, community renewable energy schemes, tough building standards and Given that we are planning for a mid-21st-century environment we believe Dacorum should also take a more robust and mandated approach.
- *‘We do not believe [there will be] a significant requirement for new [Retail] floorspace over the lifetime of the Plan.’* We broadly agree with this, especially given the higher percentage of empty retail space in Tring High Street compared to (at least ) Berkhamstead – however, Tring has long retained a market feel and there are opportunities to make changes to support a much larger, vibrant, ‘destination’ market space (see also our comments on Delivery Strategy)
- We strongly support this intention – and would like to see more instances of this aspect of the strategy made explicit elsewhere in the plan
- There are over 20 references to the importance of local distinctiveness in the Plan, e.g., page 22: *‘All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.’* We strongly support this position but are concerned that there are no references to what makes Tring distinctive, or to a process by which that will be agreed and at what stage it will become binding on this Local Plan

We strongly feel that this needs to be formally addressed. Placed at an important ancient crossroads, Tring’s market heritage is deeply rooted, it has a track record of many ‘firsts’ including clean water supply, land set aside for public amenity and nature conservation and water and wind-based energy generation and is also located in the midst of more SSSIs and officially designated natural beauty than other locations in Dacorum.

See our more detailed comments on this point in our response to Question 9: ‘Do you have other comments on the plan?’.

- At such a high level it is difficult to comment. It would be good to see a version of this with five or six explicit and detailed bullet points on the key means to achieve this, reflecting local For example:
  - How will the viability of Tring as a market town be maintained with such an increased population and associated pressure on a town centre that will have to accommodate more traffic?
  - How can sensitive views and landscape be maintained? (See later comments – Q9 – on this).
  - There is not yet a joined-up cycle and footpath plan for Tring and there are gaps where this extends beyond residential or connecting streets

<b>Comment</b>	Dacorum needs services and infrastructure, our hospital services are shrinking while our population ages and increases, and this plan does not deliver solutions. This plan does not include the road widening, overpasses and public transport that would prevent higher air pollution. As a public transport user, we need direct buses from Adeyfield to the train station and preferably a nearby line of rail, what we do not need is traffic jams which as well as being frustrating cause poisonous levels of air for small children, dogs and drivers. Trees in the Chilterns will not save us from cancer over in Adeyfield and Bennetts End and Leverstock Green.

<b>Comment</b>	I wasn't aware of this plan until my mother told me about it today. I live in Grovehill and haven't had any leaflet drops about this plan. So I haven't time to read and comment on the plan fully. I am not happy that you are getting rid of beautiful countryside and replacing it with houses. How can you build on greenbelt? How is this allowed? Grovehill is high density and what makes it a nice place to live is all the countryside on our doorstep. With the new developments it is going to become more like an inner-city area. Who is going to be able to afford to live there anyway? I'm a homeowner and would not be able to afford to move to a more expensive property (the ones that are still for sale at Upper Bourne End are over £500,000 and there are other new homes in Dacorum on infills are even more expensive). Wages are stagnant and with taxes, either income or more hidden, likely to rise to pay for the pandemic who will be able to buy the houses that are not 'affordable'? I have been working from home during the pandemic and am likely to be able to at least do some of my work from home after the pandemic. Therefore, a move away from Dacorum to somewhere cheaper (for example Bedfordshire) and less built up would make more sense, than buying what is likely to be an overpriced new home in Dacorum. It is affordable homes that are needed for people that have been unable to save due to high rents. I'm not sure where your evidence is that sufficient numbers of people will want to and be able to afford to live on the new estates in the full market value homes; including those above Grovehill and Woodhall Farm. I hope that homes do not get built

on the greenbelt and only if there is a genuine need after brownfield sites have been built on first. The greenbelt was there for a reason. I suggest you see how quickly the homes get sold at Marchmont Fields, before this plan is finalised and the go ahead to build on any more greenfield sites is given. This will test whether there is a sufficient market in the area for new homes.

If the plan is as successful as you expect I don't believe that the hospital and the roads will be able to cope. Hemel already gets congested and I'm not convinced that the planned measures to reduce this will be sufficient. We have already lost our A&E. How can you be planning to increase the local population by the amount you are; without Dacorum having an easily accessible A&E.

The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected.

The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p>In principle, I agree with the objectives outlines in 3.3.</p> <p>However, the plan in current form focusses on the areas for additional housing with little substantiation of and of the themes. There is ano annalysis of the employment to be created (theme 2), there is nothing other than principle on transport (theme 5) and without adequate detailed planning of solutions for education provision, healthcare provision,</p>

rail transport improvement, sports facility provision, I cannot see how the plan can deliver "a happier, healthier and safer Dacorum (Theme 3). The reclassification of existing Green belt land into "greenfield growth areas" is detrimental to some existing residents enjoyment of Dacorum, and a threat to the environmental habitats we are currently able to enjoy. The current proposed increase in dwellings imposed on Dacorum exceeds that which can be done without destroying existing greenbelt land. The proposed 16,600 homes is a c.25% increase in existing dwellings, and in excess of the 2013 plan. I do not believe there are "exceptional circumstances" as defined by the NPPF for this destruction of existing greenbelt.

I am not quite sure you will still be able to call Tring a 'Market Town' when it will be experiencing 55% growth. I also wonder why no extra doctors, dentists, or healthcare settings are being included in the plan.

The current surgery in Tring (Rothschild's surgery) is overwhelmed with very long waiting times for appointments. It is often a struggle to see a doctor, even for emergency appointments. How do you expect this surgery to cope with the demand of 55% more households moving to this area? Also, the roads are already extremely busy, with standstill traffic. The main car park in the centre is full most days and many houses do not have driveways or areas they can park their vehicles. How will the roads cope with the added demand? I do not think all of these issues have fully been thought through. By adding housing, you need to be adding doctors, dentists, opticians, pharmacies, car parks and more. A lot of this isn't even mentioned in the plan.

Also, you claim to be protecting the countryside, yet a lot of the housing developments will be on green belt land and natural wildlife sites? If you want to protect the climate, these developments need to be stopped. Surely they can be moved to brownfield sites? Or develop office buildings and shops which may not be in use after the pandemic.

<b>Comment</b>	<p>I endorse the response of the chiltern countryside group</p> <p>The plan builds on green belt land. There is no clear plan about how the loss of this land will be mitigated or how biodiversity will be upheld. there is no plans for making the borough greener. for better public transport links. the infrastructure will not cope. There is no mention of this. the schools are already oversubscribed in Berkhamsted. When you link up the entire plan the nature of two beautiful market towns are changed forever and almost become one mass conurbation. The houses built should reflect need and should be affordable, the numbers of houses needed in the area does not justify decimating green belt land,</p>

<b>Comment</b>	I live in Berkhamsted and the vision laid out gives no details of any additional sporting facilities to meet the needs of the additional housing development that has been laid out. There is already a significant shortage of sports pitches, and specifically youth football pitches, and this will be exacerbated by the new proposed developments.

<b>Comment</b>	The Vision will not conserve and protect the natural environment when 2000 acres of green belt and open spaces will be lost. With over 1m people estimated to have left the UK in the past 12 months (half a million from Europe), the change in working practices, high street sustainability challenges, the councils strategy needs to adapt. Not that it appeared wrong in 2019, but it is outdated in 2021 - even though aspects were reviewed in 2020 due to covid.

<b>Comment</b>	<p>Whilst the vision appears to be there in the writing health and wellbeing will be so detrimentally effected by buiding on greenbelt land that this cannot be compensated by adding extra leisure facilities. Greenbelt was put in place for everyones well being as was to be protected from development at all costs but a very larhe proprtion of this growth is on greenbelt land which is totally unacceptable</p> <p>The plan does include the building of cycle paths and lanes which is very good news but Dacorum lags behind the rest of Hertfordshires major towns so vastly that these new routes will not even takes up the the current level of places such as Stevenage and Welwyn and most of the cycle paths are not going to link up the different areas so travelling around the borough safely by bike will still be extremely difficuly and will therefore not encourage the use of bikes.</p>

<b>Comment</b>	<p>Impacts on Tring will not be sustainable.</p> <p>The developments especially those to the East of town will not protect environmental sites, the loss of countryside into a building site is not sustainable the loss of the many hedgerows and impact on the canal will affect the local wildlife.</p>

The town of Tring cannot cope with the new housing demands. The road network is already under pressure it will be made considerably worse by allowing further development. The roads in and around the town are already in poor condition, e.g. Station road, all the additional construction vehicles will make this even worse. The high street keeps being dug up, already three times this year! This diverts traffic up and around Silk Mill Way a residential area, with extreme developments this will only get worse.

Although the plans propose new school places, these are not assured. The recent development to the west of town was supposed to add new services - none seems to be forthcoming, what happens to a new primary school? There are currently not enough school places in Tring, my children could not get a place in Tring and have to travel daily to the surrounding villages, new developments will only make this worse!

Before any new houses are built the infrastructure must be put in place first.

The only secondary school in Tring is already vast, I have taught in schools for 20 years from my experience this already massive school, over 1700 students will only get bigger with new developments thus

Despite many positive features in the plan, many are aspirational only and fail to take into account the most recent technology (in respect of building for climate change conditions) or policies (Agriculture Act 2020 and Covid 19 regulations for open space).

The most glaring problem is there is a mismatch between aspiration and regulation, such that the public expect more planning control than local councils can operate on their behalf.

<b>Comment</b>	It is not possible to hold a proper consultation with the residents in this borough about this huge topic online, with no meetings held in our towns to discuss them. The volume of information on this site is admirable, but takes hours to read and process - and to be honest, I need to be able to see it being discussed properly in public by those who know more about it to really decide what I think about it. We must therefore pause the deadline for this review, until such time as we can get together and hear it being debated properly. It won't be long now, only a couple of months, so it is worth waiting to ensure that the folks living in our towns get a fair say on what happens to them.

<b>Comment</b>	Needs statement on diversity e.g. 'stronger, vibrant and diverse communities' Throughout the document there is little reference to disability. With advancement in medicine the population of disabled youngsters is growing. They are often marginalised and don't have the same access to community facilities, parks, local woodlands that their peers do. They

don't have access to specialist play facilities that will keep them safe and as a result they and their families can feel isolated from their own community. They and their families need to be represented.

Need more focus on managing existing small woodland areas - e.g. The Common Kings Langley – this can be achieved through providing expertise and engaging local volunteers. Protecting and enhancing the environment and building communities in line with the whole vision. Link up with organisations such as the Wildlife Trust.

Important to keep the character of key villages while balancing the needs for affordable housing to allow younger residents buy their first homes. Importance of protecting conservation areas historic villages such as Kings Langley.

Importance of incorporating wildlife areas into new housing developments, space housing, use of trees, meadow areas etc. soften the building works.

Town centres - develop community hubs, outdoor theatres, markets, local business, seating and accessible play areas. A range of festivals and celebrations -christmas markets, small scale pop up beer festivals, harvest festival celebrate local produce.

Essential to manage parking and volumn of traffic, has been overlooked in the past and caused significnat problems, also impacting on the character of the area. Impact of traffic on main roads such as Hempsted Road from accumulation of traffic due to building across Dacorum.

The overarching vision focuses on growth in a time of global pandemic and an environmental crisis. Growth is defined by increased housing and population as a response to government policy, (which has since been questioned), rather than quality of life. Hemel suffers incredible inequality with a dying high street, with berkhamsted and Tring both market towns within the green belt where additional housing will destroy both the green belt, but also place undue pressure on existing infrastructure. Hemel should be the focus to address inequality within the population.

<b>Comment</b>	The plans do seem to match the vision. This vision is laudable but the plans will change Berkhamsted into a faceless satellite of London and it will lose its current character of a traditional market town that the Vision purports to enhance. Additionally the new developments will destroy the views that the Vision intends to maintain. For example the fine views across the Vally from berkhamsted Common will be lost as the fields and patches of woods will become a housing estate

<b>Comment</b>	<p>The Council's Vision's high-level statements and intent have all the components that you would expect, but is completely inconsistent to the draft plan which follows it. The building on Green-Belt land, the number of dwellings you are looking to build and the under-pinning data that the Council is using to calculate the number of dwellings needs to be challenged. Given the Council represents the people of Dacorum - it is clear the Core Strategy previously outlined is more appropriate.</p> <p>The vision refers to plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that the draft Plan has way too many new homes will be built, many of which will be on the green-belt - something which the council and its members have consistently said it will not do. The Council has decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922 dwellings per annum, without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan.</p> <p>They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement</p>

<b>Comment</b>	The Draft Local Plan as stands would increase the urban footprint by 31% and the number of daily car movements by 15,400. 77% of this would be on Green Belt or green fields land. This will destroy 850 hectares of precious green belt. On top of this there is not sufficient plans to support this growth in terms of infrastructure.

<b>Comment</b>	<p>Specifically with regards the Berkhamsted development.</p> <p>The previous plan stated that Berkhamsted was not suitable for further development, yet this latest plan suggests adding 2000 houses. It's very clear that the current plans would add to already congested roads, increase pollution levels, put pressure on water supplies and wastewater systems and vastly increase surface run-off in an area already prone to flooding.</p> <p>The infrastructure needed is also not in place – where will all of these extra children go to secondary school? There is just one state secondary school in Berkhamsted, which is already at capacity. There is no provision for this in the plan.</p> <p>There also seems to be no consideration of how important green space is to existing residents and biodiversity in the area. Building on green areas removes the very reason people have chosen to live here.</p>

<b>Comment</b>	There will not be anywhere near sufficient social housing to support those people on Dacorum's housing list. The so-called affordable housing is nowhere near affordable for low income families.  I wished I could believe that the Natural Environment would be preserved and protected but having read through all the relevant documents, I can see no policies that would guarantee this and it is my belief that the size of the planned urban expansion would in fact do considerable harm to the Natural Environment.

<b>Comment</b>	<p>I feel the scale of the development proposed in Berkhamsted is counter to Themes 3, 4 and 5:</p> <ul style="list-style-type: none"> <li>• Theme 3: <i>A happier, healthier and safer Dacorum.</i></li> <li>• Theme 4: <i>Creating a clean, green and attractive Dacorum.</i></li> <li>• Theme 5: <i>On-track for a better transport network.</i></li> </ul> <p>The local strategic plan intends for a 25% increase in housing for Northchurch and Berkhamsted, with the majority to be built on existing Green Belt. This scale of development will change the character of Berkhamsted forever, transforming it from historic market town to feel like any other large bustling over-populated urban area in the South East. This cannot possibly create a happier environment and cannot make Berkhamsted cleaner and greener either (in fact the opposite). Nor will it make it safer. Already people are driving in large numbers down Shootesway to bypass the High Street, often travelling at well in excess of the 30mph limit. Adding over 800 homes along Shootersway and KingsHill Way will only add to this danger. Which leads to Theme 5. Berkhamsted streets are already at/beyond capacity for both congestion levels and parking. They cannot take any more traffic. Furthermore, the High Street already has unsafe pollution levels on light wind days (exacerbated because Berkhamsted is in a valley) and this also can only get worse with 25% increase in housing.</p>

<b>Comment</b>	I think the plans involve the creation of too many housing units without enough infrastructure. For example, in Tring, a large number of houses will be built, yet the main mitigation of increased car usage to Tring Station (the car park of which is already full) is to improve the cycle lane. Given the report acknowledges Tring station is a particular challenge, why build so many houses with virtually no significant improvement in infrastructure?

<b>Comment</b>	<p>Tring Tornadoes Junior Sports Club (Tornadoes), is currently celebrating its 50th Anniversary year.</p> <p>Over the past 50 years, Tornadoes has grown from an initial 14 young boys at the first football session one Sunday morning on the field at Dundale Primary School, to today, a multi-sports (Football, Futsal &amp; Netball), multi-venue (Cow Lane, Pound Meadow, Mortimer Hill, Dundale Primary School, Grove Road Primary School, Tring School &amp; Tring Corinthians) club for circa 650 playing members aged 5 to 18 years old.</p> <p>As a consequence of our junior playing membership, we enjoy the support of an adult non-playing membership of circa 1,300 parents / guardians. Our club is operated entirely through Volunteers and in our current 2020/21 season there are circa 125 people involved in the running of our club and charitable organisation.</p> <p>As well as holding the England Netball Bronze Cap, Tornadoes has just recently been awarded Development Club Status by The Football Association, endorsing that we are an extremely well run club at both size and scale.</p> <p>Tornadoes Aim / Purpose for now 50 years has been:</p> <p>"to help and educate boys and girls through their leisure-time activities, so to develop their physical, mental and spiritual capacities that they may grow to maturity as individuals and members of society and that their conditions of life may be improved."</p> <p>Our responses to the DBC Local Plan 2020-2038 is set out below.</p> <p>Tornadoes Vision is that "Sport in general and junior sport in particular will continue to be a fundamental part of the fabric of the local community in Tring &amp; the surrounding villages and that Tring Tornadoes JSC will be the at the heart of sport for young people in the town now and forever".</p> <p>We note at 3.5 p21, the overarching vision for Dacorum adopted in 2020 "<i>working in partnership to create a borough which enables communities to thrive and prosper</i>". As a club Tornadoes embraces partnership &amp; collaboration and, as a registered charity, is ideally placed to be a Community Stewardship Management Partner to DBC in the future.</p> <p>We note at p23 The DBC Vision for Tring:</p> <p><i>Tring will have grown and will:</i></p> <ul style="list-style-type: none"> <li>• <i>be an inclusive market town that meets the needs and aspirations of existing and new residents and visitors;</i></li> <li>• <i>have delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape and protected environmental sites;</i></li> </ul>

- *have provided significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town;*
- *have delivered a mix of market and affordable housing, new community facilities, a new business hub, two primary schools and a secondary school;*
- *have provided significant new open space and sports/leisure facilities to the east of the town; and have benefited from further investment in transport infrastructure with active and attractive transport links within the town including new and improved pedestrian and cycle links to the town centre and Tring Station.*

Tornadoes expects the DBC Vision for Tring to be focused on delivering improvements in the town that meet the current and future needs of the existing population and to sustain all of the existing "green gateways" around the town, whilst massively increasing the amount of available playing space available to the existing, well established and very popular community clubs, in order that they may expand their activities and thus contribute further to the health, wellbeing and fabric of the local community that they serve.

At the centre of the future vision for Tring, DBC should be embracing the longstanding wishes of the towns sporting community that Tring Sports Forum (TSF) has lobbied tirelessly for over 15 years now, to create a substantial expansion of the sporting facilities for the clubs based adjacent to the Cow Lane Farm part of Dunsley Farm Tr01. The circa 18 hectares is shown below:

The TSF lobbying across Tring Town, Dacorum Borough and Herts County Council has always championed the case for Tornadoes to be the primary beneficiary of new football playing space. The Cow Lane Farm part of Dunsley Farm Tr01 is required to meet our current playing space shortfall and the playing space increases in demand that will arise from the LA5 build currently underway. This shortfall is well documented and evidenced in the DBC Playing Pitch Strategy and Action Plan June 2019 and the DBC Local Football Facilities Plan 2020.

Tornadoes though is a multi-sports club and as such, requires new and different types of playing facilities and, so, if there is to be substantial housing growth, then we, as an existing multi-location sports operator, would embrace a DBS Vision for sport in Tring that creates a series of sports hubs across the expanded town.

The formula from Sport England that provides a recommended benchmark guideline of 1.6 hectares of outdoor playing space per 1,000 population suggests that 2,730 new houses should produce (using the 2.5 multiplier) net new playing space of 8 hectares. If that net new sports provision is to be part of Tr03, then Tornadoes preference would be for the new sports / community hub to be situated at the Station Road end of Tr03, in close proximity to the existing sports hub and the to be created hub in Tr01.

As the main thrust of the Local Plan consultation is centred on housing numbers and types, Tornadoes deliberations are centred on how the DBC Vision for Tring will satisfy the needs of our young people.

Our current U18 Age Group will be 35 in 2038 and our current U6 Age Group will be 22.

So, given DBC haven't asked them what they want their town to look like in 17 years' time, or how they want it to evolve and develop between now and then, we highlight, on their behalf, that the DBC Vision for Tring should have our young people as the primary consideration for anything proposed in the town. That then means DBC should prioritise this above all else and irrespective of any future housing development:

- *have provided by the end of 2021 significant new open space and sports/leisure facilities to the south and east of the town; and have benefited from further investment in transport infrastructure with active and attractive transport links within the town including new and improved pedestrian and cycle links to and from the town centre, LA5, Cow Lane, all of the schools and Tring Station.*

Adding in circa 7,000 more people to the population in Tring brings with it a substantial increase in young people over the Plan period. Projecting that half the increase is young people and say 25% of them join Tornados, then our club would, at a minimum, double in size.

On behalf of the young people we are responsible for, Tornados contributes as follows:

- On p25 *Delivering Dacorum's Future with Homes for Everyone*
  - **To increase the number of new and truly affordable homes, explicitly to enable all the young people of Tring who want to, to be able to afford to buy a house in their own town when they grow up.**
- On p26 *Supporting Community Health, Wellbeing and Cohesion*
  - **To enable and support active lifestyles through the provision of open space, sports and recreation facilities, at a scale that meets (and ideally exceeds) the forecasted increase in required capacity before new houses are built.**

Within the Strategic Objectives, it is also imperative that DBC makes the necessary improvements and enhancements to the existing sports and recreation facilities ahead of any new homes being built, starting with Pound Meadow.

<b>Comment</b>	<p>The vision is entirely unsuitable. The number of houses proposed is not in line with the latest figures. This whole plan is based on out of date information. DBC is fully aware of this, yet the proposal in the this current state is still being put forward. Why?</p> <p>DBC recognise the climate emergency on one hand, but when it suits them is happy to propose the construction of numerous unnecessary homes.</p> <p>Central government proclaims that the green belt should only be built on in exceptional circumstances yet here are plans to ravage numerous parcels of green belt based on out of date figures.</p> <p>The world and our community is a very different place since Covid, and to go by a plan developed pre covid would be disasterous. lifestyles, business practice and much more has changed. We will likely find ourselves will huge areas of un used office spaces which could be converted to residential.</p> <p>The addition of all these unnecessary homes which will not address the shortage of affordable houseing will merely attract people from London to move to the borough.</p>

<b>Comment</b>	The proposed growth is far too much for the town. Possibilities for improvement to the existing transport networks to allow for said growth are incredibly limited by lack of space in the historic market towns and the location of proposed developments at the top of hills and along ridges. Moreover, it is green belt land and the character and beauty of the towns will be decimated to meet a target that is not ratified and has not been challenged. It is preposterous to make such devastating changes while we are living in unprecedented and unpredictable times due to COVID-19.

<b>Comment</b>	<p>The introduction to this plan (1.29) talks about how green belt and AONB landscape are significant constraints to development. It seems that this plan and its vision and objectives are, in their entirety, missing the point. We are hugely lucky to live in such a beautiful part of the world. We should not view this beauty as a constraint, but something to be cherished and protected. It is under threat from the climate emergency, which this plan acknowledges, but it is hard to view this plan as anything but another brick in the wall of human destruction of the natural world.</p> <p>The council has a duty to protect the environment and character of the Dacorum, as well as to meet central government objectives. It should be seeking to protect the area from over-development, not encouraging it - which the total numbers of proposed new dwellings and consequences on infrastructure and transport will ultimately result in.</p> <p>While some housing will be required, it makes sense to include the bulk of this in Hemel Hempstead where possible, to encourage positive development of the town and support a town centre which - despite recent regenerative projects - feels like it is failing, particularly in its retail dimension. The proposals to Tring and Berkhamsted in particular promise to sandwich housing next to the noisy A41 (Berkhamsted) and wholesale environmental destruction and rampant overdevelopment (Tring). These are towns where the historic size and physical dimensions of the built environment in their town centres mean that there is a maximum population they can realistically support without becoming overcrowded, Berkhamsted is already at its limits and these proposals would take Tring far in excess of them.</p> <p>Furthermore, to be committing to specific development targets in the middle of a pandemic which is undoubtedly going to have lasting consequences on the use of land and space seems inadvisable. It is clear that the nature and extend of required office space is going to be forever changed, and this plan does not allow for this. It may be possible that former office sites will contribute to housing development targets for example. To be committing to these targets when legislative changes to planning and housing provision are imminent, and when other authorities have paused their plans, also seems highly questionable, and I cannot see a convincing case for this presented anywhere in the plan or associated documentation.</p> <p>The introduction acknowledges that Dacorum does not exist in isolation from other local authorities (1.30), but why then is no mention made of the significant expansion of residential housing surrounding Aylesbury, or the proposed development of RAF Halton? The plan ought to consider the development context of the areas surrounding Dacorum, as this should inform the spatial hierarchy of which it is part. If it is proposed to increase development in Hemel, and the sizeable expansion is say Aylesbury is taken into account, is it then appropriate to continue infilling the small er towns in between in Tring and Berkhamsted.</p> <p>While this plan's overarching vision contains some admirable objectives, it is hard not to read it as a developer's charter and one that does not give specific consideration to the people who most deserve it, the local residents of the Borough.</p>

<b>Comment</b>	<p>Tring Tornadoes Junior Sports Club (Tornadoes), is currently celebrating its 50th Anniversary year.</p> <p>Over the past 50 years, Tornadoes has grown from an initial 14 young boys at the first football session one Sunday morning on the field at Dundale Primary School, to today, a multi-sports (Football, Futsal &amp; Netball), multi-venue (Cow Lane, Pound Meadow, Mortimer Hill, Dundale Primary School, Grove Road Primary School, Tring School &amp; Tring Corinthians) club for circa 650 playing members aged 5 to 18 years old.</p> <p>As a consequence of our junior playing membership, we enjoy the support of an adult non-playing membership of circa 1,300 parents / guardians. Our club is operated entirely through Volunteers and in our current 2020/21 season there are circa 125 people involved in the running of our club and charitable organisation.</p> <p>As well as holding the England Netball Bronze Cap, Tornadoes has just recently been awarded Development Club Status by The Football Association, endorsing that we are an extremely well run club at both size and scale.</p> <p>Tornadoes Aim / Purpose for now 50 years has been:</p> <p>"to help and educate boys and girls through their leisure-time activities, so to develop their physical, mental and spiritual capacities that they may grow to maturity as individuals and members of society and that their conditions of life may be improved."</p> <p>Our responses to the DBC Local Plan 2020-2038 is set out below.</p> <p>Tornadoes Vision is that "Sport in general and junior sport in particular will continue to be a fundamental part of the fabric of the local community in Tring &amp; the surrounding villages and that Tring Tornadoes JSC will be the at the heart of sport for young people in the town now and forever".</p> <p>We note at 3.5 p21, the overarching vision for Dacorum adopted in 2020 "<i>working in partnership to create a borough which enables communities to thrive and prosper</i>". As a club Tornadoes embraces partnership &amp; collaboration and, as a registered charity, is ideally placed to be a Community Stewardship Management Partner to DBC in the future.</p> <p>We note at p23 The DBC Vision for Tring:</p> <p><i>Tring will have grown and will:</i></p>

- *be an inclusive market town that meets the needs and aspirations of existing and new residents and visitors;*
- *have delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape and protected environmental sites;*
- *have provided significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town;*
- *have delivered a mix of market and affordable housing, new community facilities, a new business hub, two primary schools and a secondary school;*
- *have provided significant new open space and sports/leisure facilities to the east of the town; and have benefited from further investment in transport infrastructure with active and attractive transport links within the town including new and improved pedestrian and cycle links to the town centre and Tring Station.*

Tornadoes expects the DBC Vision for Tring to be focused on delivering improvements in the town that meet the current and future needs of the existing population and to sustain all of the existing "green gateways" around the town, whilst massively increasing the amount of available playing space available to the existing, well established and very popular community clubs, in order that they may expand their activities and thus contribute further to the health, wellbeing and fabric of the local community that they serve.

At the centre of the future vision for Tring, DBC should be embracing the longstanding wishes of the towns sporting community that Tring Sports Forum (TSF) has lobbied tirelessly for over 15 years now, to create a substantial expansion of the sporting facilities for the clubs based adjacent to the Cow Lane Farm part of Dunsley Farm Tr01. The circa 18 hectares is shown below:

The TSF lobbying across Tring Town, Dacorum Borough and Herts County Council has always championed the case for Tornadoes to be the primary beneficiary of new football playing space. The Cow Lane Farm part of Dunsley Farm Tr01 is required to meet our current playing space shortfall and the playing space increases in demand that will arise from the LA5 build currently underway. This shortfall is well documented and evidenced in the DBC Playing Pitch Strategy and Action Plan June 2019 and the DBC Local Football Facilities Plan 2020.

Tornadoes though is a multi-sports club and as such, requires new and different types of playing facilities and, so, if there is to be substantial housing growth, then we, as an existing multi-location sports operator, would embrace a DBS Vision for sport in Tring that creates a series of sports hubs across the expanded town.

The formula from Sport England that provides a recommended benchmark guideline of 1.6 hectares of outdoor playing space per 1,000 population suggests that 2,730 new houses should produce (using the 2.5 multiplier) net new playing space of 8 hectares. If that net new sports provision is to be part of Tr03, then Tornadoes preference would be for the new sports / community hub to be situated at the Station Road end of Tr03, in close proximity to the existing sports hub and the to be created hub in Tr01.

As the main thrust of the Local Plan consultation is centred on housing numbers and types, Tornadoes deliberations are centred on how the DBC Vision for Tring will satisfy the needs of our young people.

Our current U18 Age Group will be 35 in 2038 and our current U6 Age Group will be 22.

So, given DBC haven't asked them what they want their town to look like in 17 years' time, or how they want it to evolve and develop between now and then, we highlight, on their behalf, that the DBC Vision for Tring should have our young people as the primary consideration for anything proposed in the town. That then means DBC should prioritise this above all else and irrespective of any future housing development:

- *have provided by the end of 2021 significant new open space and sports/leisure facilities to the south and east of the town; and have benefited from further investment in transport infrastructure with active and attractive transport links within the town including new and improved pedestrian and cycle links to and from the town centre, LA5, Cow Lane, all of the schools and Tring Station.*

Adding in circa 7,000 more people to the population in Tring brings with it a substantial increase in young people over the Plan period. Projecting that half the increase is young people and say 25% of them join Tornadoes, then our club would, at a minimum, double in size.

On behalf of the young people we are responsible for, Tornadoes contributes as follows:

- On p25 *Delivering Dacorum's Future with Homes for Everyone*
  - **To increase the number of new and truly affordable homes, explicitly to enable all the young people of Tring who want to, to be able to afford to buy a house in their own town when they grow up.**
- On p26 *Supporting Community Health, Wellbeing and Cohesion*
  - **To enable and support active lifestyles through the provision of open space, sports and recreation facilities, at a scale that meets (and ideally exceeds) the forecasted increase in required capacity before new houses are built.**

Within the Strategic Objectives, it is also imperative that DBC makes the necessary improvements and enhancements to the existing sports and recreation facilities ahead of any new homes being built, starting with Pound Meadow.

<b>Comment</b>	There is no legitimate basis for Dacorum's development target which is based on 2014 ONS housing estimates rather than the more recent 2018 estimates. Huge increases in planned housing in areas such as Berkhamsted and especially Tring (55% increase) are disproportionate and will destroy the unique character of these market towns. There is inadequate infrastructure (schools, GPs, transport) already in Tring and development on the scale proposed is completely unsustainable. Finally but not any less importantly, this proposal would destroy vast areas of countryside in the Chilterns Area of Outstanding Natural Beauty. Any bureaucrat/political hack who supports this scheme clearly has not spent any meaningful time in this area and will pay a high price at the ballot box.

<b>Comment</b>	There is no justification for, or evidence supplied for the exceptional circumstances required for building on huge tracts of green belt. We have no idea of what lays ahead in a post-COVID world, and the data used to plan building such a huge volume of additional housing, with the associated strain on local infrastructure and character of the surround countryside is old; we should take a breath, re-examine the needs and if necessary, plan a strategy based on new data, and real evidence. We simply don't know how many new houses we'll really need. Businesses all over the world are reassessing their planning in this way - there's no reason why we should not be doing the same.

<b>Comment</b>	<p>Over-provision of housing based on inaccurate and superseded data I believe the council's vision is flawed as it is based on out of date ONS data which has led to a significant over-estimate of Dacorum's housing needs.</p> <p>The predicted levels of growth and hence yearly targets for associated housing development are too high. Climate Emergency Issues Dacorum Borough Council has declared a climate emergency and indicated that this should be a central pillar in any future plans for the borough. This local plan vision as published prioritises economic growth and greenfield land development over considerations for the climate emergency. It has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Protecting Green Belt land &amp; Conserving and enhancing the natural environment The plan should guarantee the protection of existing natural habitats, the plan has not given sufficient weight to these sections of guidance in the National Planning Policy Framework (NPPF)</p>

<b>Comment</b>	<p>1. The vision and strategy remains based on the social and economic assumptions of the last decade.</p> <p>2. In particular the disproportionately heavy residential development proposed for Tring &amp; Berkhamsted (but especially for Tring) is not based on local growth or even on any rational criterion, but seems to depend on attracting people out from London to the 2 towns where there is insufficient local employment, thus intensifying London-based commuting along an already overcrowded railway.</p> <p>3. Insufficient attention appears to have been given to encouraging cheap, reliable and frequent bus travel (once upon a time both HCC and DBC contributed significantly to this objective) nor to a modernised and effective taxi service that gives drivers a decent living and the customers affordable and safe beske transport.</p> <p>4. No account has been taken of Brexit which has now resulted a significant outflow of temporary residents back to Eastern Europe.</p> <p>5. Similarly the likely shift of economic activity away from London and the East Coast towards ports in the south, the west and to Scotland.</p> <p>6. The attention given to mitigating climate change by actions the council could take e.g. (a) encouraging every school (normally surrounded by playing fields) to obtain background heating from ground source heat pumps (b) installing more PV panels on more roofs (c) moving to all-electric vehicles for all uses. (d) upgrading IT connectivity to enable greater electronic interaction for residents outside Hemel Hempstead at local offices thus obviating physical trips to The Forum.</p>

<b>Comment</b>	I will leave the specifics to others who are better resourced to respond to the Local Plan in depth. My comments are more general and relate to what I see as the plan's long-term impacts on the borough, even beyond 2038.

I am not exaggerating when I say the consultation document left me feeling as if I had just read the opening chapter of a dystopian novel. The proposals made for chilling reading in terms of what they mean for the borough's countryside, ecology and wildlife. Strip away the green packaging and old-style growth policies are laid bare that are unsustainable and clearly incompatible with the council's declared aims ... to "include all available measures to cut carbon emissions and reduce the impact on the environment," "protect species and priority habitats" and "provide a 10% net gain of biodiversity".

The challenge for local politicians is to balance economic growth with the need to protect the natural environment. Their dilemma is that the two demands are contradictory and cannot be reconciled. And in this conflict of opposing interests it is the natural world that comes off second best every time, as I have seen played out repeatedly during 71 years living and working in the borough. My childhood was filled with the sights and sounds of nature; squadrons of swifts screaming down country lanes, nightingales singing in the bluebell woods where I played, barn owls on silent wings quartering wildflower meadows rich in butterflies and bees, the drumming of woodpeckers, the lofty song of the skylark and always the iconic sound of spring, the cuckoo. Now, almost one-fifth of species found in Hertfordshire are threatened with extinction while 76 species have vanished from the county altogether, according to Herts and Middlesex Wildlife Trust's latest State of Nature report.

Where our countryside has been degraded it can be made more welcoming for wildlife, but where it is lost to development and infrastructure delivery it is lost forever. Modern housing is laid out in ever-higher densities that provide scant opportunities for nature to take hold at a time when traditional garden refuges are increasingly coming under threat from pressures to lift restrictions on backland infilling. At the rate of growth proposed, the borough's countryside will be reduced to pockets of parkland prioritised to meet the leisure needs of an ever-burgeoning human population to the exclusion of diverse natural environments.

As for reducing carbon emissions, I can find nothing in the Local Plan to support this ambition in terms of meeting national climate targets of net zero by 2050. Local plans need to set out how emissions will be radically reduced in line with carbon budgets by providing a CO2 reduction pathway specific to their area. They also need to explain how carbon budgets will be regularly and effectively monitored. Dacorum council acknowledges that however low the energy performance requirements within the Plan development is still likely to "generate unavoidable carbon emissions" which will need to be offset in order for the borough to become net zero carbon. Offsetting proposals include increasing the area of habitats that fix and store CO2, including planting trees and woodland. However, to be effective vast tracts of land will be required, not only to compensate for emissions arising from the provision of new developments but also for the resulting loss of 850 hectares of natural carbon sink sites within the green belt, the wider countryside and urban areas. This will inflict a double blow on efforts to meet climate targets.

Habitat creation and rewilding will be crucial to reversing biodiversity decline, but woodland can be problematic in terms of their impact on greenhouse gases. While housing and commercial buildings can spring up in a matter of months, it can take 40 years before a tree reaches maturity and is able to lock away significant amounts of carbon. Plus, natural ecosystems have evolved to look after themselves while manmade habitats require ongoing management and protection. I cannot say I have a great deal of confidence that this will be provided, or that these sites will not eventually suffer the same fate now facing swathes of the green belt. Taking all the above and other factors into consideration, I see only the

borough's greenhouse gas emissions rising above current levels into the distant future, at a time when scientist warn that the planet has already crossed a series of climate tipping points.

Yes, if ever there was a case of local politicians being 'damned if they do, damned if they don't' it is encapsulated in the Dacorum growth strategy to 2038. But that is not to let them off the hook. We have reached the Rubicon in terms of the amount of new development the borough can absorb without having catastrophic implications for the environment and therefore for the wellbeing of us all. In this respect, Dacorum can be viewed as a microcosm of what is happening across the county, the UK and indeed the entire planet. We are all culpable for contributing to the environmental challenges the world faces today, but as our leaders and lawmakers politicians at all levels carry a special responsibility. That is to collectively achieve important goals individuals cannot achieve on their own. In this respect, they have let us down woefully by their failure to heed warnings echoed across the decades about the dire consequences of humankind's exploitive activities on the Earth and its finite resources.

Even now, at this defining moment for the survival of all life on the planet, I am not sure politicians have got their heads around the full scale of the emergency. Only rarely has the issue that has hitherto dared not speak its name tripped off the lips of other than a few environmentalists and academics ... human population growth. Yet the consumption demands of an ever-expanding global population (currently 7.8 billion, estimated to reach 11 billion by 2050) are increasingly viewed by 'those in the know' as the core cause of the environmental challenges that now confront us.

Dacorum's population is projected to reach 177,000 by mid-2041 (Herts Insight). However, the housing levels set out in the borough's growth strategy suggest that the actual figure will be significantly higher by then. Until politicians acknowledge that indefinite population growth is physically impossible on land that is finite, I cannot have confidence in their stewardship of our green spaces or in their commitment to any outcomes from the crunch UN Cop 26 talks the UK will be hosting later this year.

<b>Comment</b>	The overall number of new dwellings for Dacorum seems vastly excessive given the shift in working patterns that have occurred during the COVID-19 pandemic. Dacorum has a significant population of London commuters who have been

working from home for almost a year. Many of those will continue to work from home either full time or part time. Shifts to remote working mean that the typical 'move out of London' to Berkhamsted, Tring etc, (as well as other local dormitory towns outside of Dacorum) will decrease as being in commuting distance of London is much less of a priority. I do not see that this shift has been addressed anywhere.

**Comment** The plan in so far as it impacts Berkhamsted is ill thought out. Destroys precious woodland and open land and does not provide for enough infrastructure to support the additional homes e.g. schools; provision of GP's. The High Street is already unable to cope with the volume of traffic and there is nothing in the plans to improve this. On the contrary, it will become far worse.

<b>Comment</b>	<p>The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council</p>

makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

## Comment

Whilst the Council's Vision is highly commendable in terms of vision and strategic objectives the plan itself appears to largely focus on building new homes and where they are to be located. There is little underpinning rationale to suggest that the increase in total dwellings is sensible or even sustainable.

For Tring specifically, where I live, there is a proposed increase of 2,700+ new houses increasing the size of Tring by 55%. Most of this housing will destroy much of Tring's surroundings and Green Belt - uprooting ancient hedgerows and trees and negatively impacting the quality of our countryside, wildlife and environment. I also understand that the focus on building on Green Belt is counter to national Planning Policy and the government's position that Green Belt should only be developed in exceptional circumstances. The Council makes no effort to explain what the exceptional circumstances are in Dacorum and this needs further explanation before any approval can be given.

There is little evidence of Section 1.30 'Working with Others' being applied in my local area. Tring is bounded on two sides by Buckinghamshire whose plans have a direct and significant bearing on employment, traffic, local land use, etc. There appears to be no reference to Aylesbury Vale District Council or Buckinghamshire, and few to local villages in that county, contrary to NPPF para 35c. For example, the planned development of RAF Halton is proposing c1000 new homes and is only 4-5 miles from Tring. This is a concern that may have led to potentially flawed conclusions on matters ranging from employment to the siting of additional retail.

The proposed growth requires a more robust stance in my opinion to ensure that the plan does not adversely impact the environment and climate, for example by referencing DBC's Climate Emergency Declaration and zero carbon target of 2030. Also, the proposed growth suggests substantial additional traffic with over an additional 3-4000 cars to the locale plus the necessary lorries and delivery vehicles associated with such a growth.

In Section 2.12 'Vibrancy of Town Centre' there is little consideration to how to retain the local personality of towns. Tring has a very "market town" distinctiveness and there is no opportunity or plan to maintain / enhance this within the proposals especially given the need to support a larger local population. As suggested by others there are over 20 references to the importance of local distinctiveness in the Plan, e.g., page 22: *'All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.'* I strongly support this position but, as mentioned above, am concerned that there are no references to what makes Tring distinctive, or to a process by which that will be agreed and at what stage it will become binding within the plan.

I strongly feel that this needs to be formally addressed. Placed at an important ancient crossroads, Tring's market heritage is deeply rooted, it has a track record of many 'firsts' including clean water supply, land set aside for public amenity and nature conservation and water and wind-based energy generation and is also located in the midst of more SSSIs and officially designated natural beauty than other locations in Dacorum.

Can we please have some specific local questions addressed to help understand what the plan means for our local places? E.G

- There is no joined-up cycle and footpath plan for Tring and there are gaps where this extends beyond residential or connecting streets.
- There is no suggestion of any "re-wilding" to compensate for the loss of local green spaces

- How will the viability of Tring as a market town be maintained with such an increased population and associated pressure on a town centre that will have to accommodate more traffic?
- How can sensitive views and landscape be maintained?.
- How will green spaces be re-purposed for the community to enjoy? For example,

PE41 “Haslam Playing Fields” – Shooters Way.

10 SA Objective – This site would certainly discourage walking for normal everyday use such as going shopping – with small children pushing prams – heavy shopping and at the other end of the spectrum – where walking such gradients are not conducive to health either.

Policy SP20 BK07 P307 Lockfield Northchurch

Will you be losing the current facilities of the special needs people and the allotments? I hope you can incorporate this in your new plan, of housing and the garden centre. Sound proofing of all properties in the area regarding the neatness of the rail line, no doubt would maybe (trees/hedging) be appreciated by all.

Berkhamsted Homes P224 23.107 BK11 Billet Lane (Jewsons) SP20 P228.

This company – is a vital part of the community for the Berkhamsted area – needs keeping – As you are going to construct all these properties they are the perfect people to assist in this. I feel that this is the perfect site not far from the high street, within easy walking distance to the town/Northchurch to travel to Northbridge road (if it was to move). It is extremely difficult as it's up an extremely steep incline – because of the canal bridge. This area is okay if you have transport but not if otherwise (walking).

Map 39 – keep the front section for Jewsons there would still be room for housing at the rear. There is still room at the side if Jewsons in previous wood site.

Growth area BK12, P313 Civic Centre

Map 40

Where will the police station be located?

If you keep the front façade will it still be used by the council for current facilities?

Where will this all be placed?

This all needs to be located in the centre of town, visible to all, easy to find.

P22 Overarching vision for Dacorum's Growth by 2038.

At the moment, in my view – bungalows do not meet current requirements, there is much to be improved. As one gets older the front garden size is not so required, where as another couple of rooms internally would be better appreciated, giving space for all sort of things – dining room - craft room – visitors – office – library – or any other reason – keep fit etc.,

These improvements would be financially viable than building from scratch, even if you had to give up the right to buy to transfer to something like this with a larger footprint (to keep council stock) you would have people queueing up to vacate their larger properties to move to somewhere like this, more suitable, especially being on one level, as well as a smaller garden to maintain (as they have built over it).

When the current bungalows were built, people had different expectations in life - to build more bungalows but with two bedrooms as normal would be a step forward an improvement to the health and wellbeing of their occupants. Also to enlarge the current one bedroom flats into two bedrooms build out another 8ft so the Juliette balconies living room becomes a communal work/extra bedroom space as there is plenty of unused greenery in the remaining = car space.

I feel the proposal will overwhelm the town and stretch the already struggling infrastructure.

I understand that the proposed scale of development is based on out of date ONS data, and newer ONS statistics suggest a requirement which is about half the size.

The impact on the environment does not seem to have been fully taken into account. Lack of adequate infrastructure provision.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “ play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “ delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate</p> <p>Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

—No - building more houses within the London commuter belt will not reduce house prices for local people looking for their first home — it will just attract more commuters moving out from London. The idea that increasing housing supply will reduce prices, is unrealistic when demand for housing is generated by the increasing investment value of housing stock.

—Developer led housing will not provide more social housing for those on the waiting list. It will mainly benefit developers.

— We need a properly thought out housing strategy that provides the right type of houses, in the right places, for local people. There is seems to be little evidence of any strategy, other than a laissez-faire release of green belt land to meet local housing need.

<b>Comment</b>	<p>Section (3) Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is simply too high for Dacorum. The figure of 922dpa is more houses than are currently allocated to be built in Hull, Plymouth, Reading and Wolverhampton, all of which are large cities, not historic market towns such as Berkhamsted, or villages surrounded by AONB such as Bovingdon and Markyate, as proposed in the Dacorum plan.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p> <p>In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85% of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account and not ignored or we will lose precious rural, Green Belt and AONB land forever.</p> <p>In addition, the strategy fails to take into account the combined impacts of the Covid 19 Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.</p> <p>The Council’s proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<p><b>Comment</b></p>	<p>While the overarching vision and objectives given seem useful, I do not agree with the vision for Tring. The proposal for increased housing in Tring and use of Green Belt land appears to directly go against the principles of a) conserving and protecting the natural environment, b) mitigating and adapting to climate change and c) promoting the distinctiveness of towns and villages, and d) protecting and enhancing Dacorums distinctive historic environment.</p> <p>The housing allocation set for Dacorum is unreasonably high. The Local Plan proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.</p> <p>The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. The plan does not therefore demonstrate evidence for objectively assessed need.</p> <p>Within the overall housing plans within Dacorum, the proposed number of houses suggested for Tring are highly disproportionate representing a 55% increase in housing (2700 houses).</p> <p>This assessment of housing need then places a significant risk to the heritage of the area, protected landscapes and Green Belt.</p> <p>Any new development on sites to the east of Tring intrinsically would fail to take account of sensitive views, landscape and protected environmental sites. The governments own advice says that ‘meeting housing need is never a reason to cause unacceptable harm to such places’. No evidence to justify unquestionable damage to Green Belt and AONB is given.</p> <p>There is an overarching aim within the Local Plan of ensuring developments protect and enhance the distinctiveness and historical importance of towns and villages. This seems completely at odds with the proposed plans for Tring in particular, where bolted on developments are likely to significantly detract from the distinctiveness of a small historic market town surrounded by AONB, Green Belt and SSSI’s. It is likely to detract significantly from the enjoyment, health and well being of current and future residents.</p> <p>The idea that existing residents and visitors to Tring would gain greater benefit from larger and larger developments are not justified in the plan or any supporting evidence. I strongly disagree with this proposition.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.</p> <p>Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built</p>

infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>Section (3)  Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in ‘exceptional circumstances’. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council’s proposals are neither justifiable or sustainable and this is the core of my opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	1/ Do you think the overarching vision and strategic objectives are right for the Borough? No - the focus is on multiple developer led building of an excessive number of houses and does not look to build and maintain sustainable communities. In particular there is inadequate affordable housing targeted to the average wage for the area and social housing. There is inadequate consideration of the environment, zero carbon and considerations for

climate change. There is inadequate/no strategic consideration of primary care, hospital provision, public transport or transport arteries both road and rail.

<b>Comment</b>	<p>Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p>

In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!

In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.

The Council's proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.

**Comment**

We, Amy Cooper and Andrew Cooper, strongly disagree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is obviously too much for the town. With circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, this equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt.

<b>Comment</b>	<p>No I do not. I think the numbers of houses being proposed in market towns is far too high, this will change the face of in particular Berkhamsted, Northchurch and Tring completely, for the worse. I believe that the housing numbers being used by DBC are incorrect – the need is being overstated. To increase small market towns by as much as you’re proposing is not right – the South West Herts Local Housing Needs Assessment Final Report - September 2020 a study by G.L. Hearn and covers neighbouring councils such as St.Albans as well as Dacorum, says on page 5: “Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth.”. As the CPRE say, this plan would cause ‘irreparable harm to the environment’. Why would we do this???</p> <p>I do not dismiss the need for housing, but people need houses they can afford, not what the council and/or developers deem to be ‘affordable’, and I do not believe this will be the case with this plan. Building executive homes only draws people in from London and doesn’t help local people. For example, I haven’t seen any evidence that the new homes at Bearoc Park have enabled young Berkhamsted families / couples / singles to buy their first home – because they are huge, executive, and prohibitively expensive. SO this doesn’t help the people of Dacorum, whom you serve.</p>

I believe the plan doesn't make the most of recent changes due to the pandemic – I don't believe that retail and office spaces / sites have been investigated enough, to see if they could be changed to housing. With the huge reduction in the need for offices etc due to home working, I would think this would be sensible.

Why do I have to register to make a response ?

Is this a bureaucracy wall to prevent comment? Is it comment suppression ?

Here are my comments anyway. Please register me and ad my comments to my registration.

**General comments.**

Developments like this make the South East ever more overcrowded and unhappy place to live.

The government should follow a strategic plan of building new housing and industry in the north.

A new town could easily be built in Yorkshire around the east coast main line and M1/A1 near Selby where communications and land are plentiful.

I think it is wrong to try to add so much development on to the town so quickly. Services and transport will inevitably become over stretched and the quality of everything suffers.

There seems to be no measure of the quality of life impact on residents . High densities like these lead to social problems like crime and health problems both physical and mental.

**Specific Comments**

Rather than bolt industrial zones on to urban areas creating a sprawl, site these on existing suitable spaces in the wider countryside such as farm yards and other existing agricultural buildings. Match the rural architectural style and add landscaping.

Relocate the proposed industrial area beside the A41 . A 414 Two Water Road junction . This is on a hill top and will be an eyesore right across the town. Plus these fields are adjacent to the Boxmoor trust SSSI , they are wildlife rich and the development will impact massively on wildlife there. They should remain as managed meadow or incorporated into the Boxmoor Trust land as a Nature reserve zone on the urban edge.

Targets for affordable sustainable low carbon houses to apply to all developments

Consideration to be made to any development to fit in to existing urban scale building height and townscape.

Commit to re wilding of surrounding areas on a scale to the green land lost in order to balance loss of wildlife habitats.

Create targets for tree densities and hedgerow lengths within the Dacorum urban boundaries to protect mental health of Dacorum people and wildlife habitat.

Create a target for a minimum distance to green space from each doorstep. Say 200m

Make a definition of what constitutes green space based on area of land, fraction planted and variety of planting done

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. <b>Comment</b>	<p>This area is protected by greenbelt. Many residents have chosen to live here based on the small town nature and countryside. In recent years we have already seen a huge increase in new build housing. increasing the population changes the nature and character of the town, and for long time residents, compromises our enjoyment of our homelife.</p> <p>The town's infrastructure is creaking, the traffic on the high street and high traffic areas such as Charles street is untenable (outside lockdown of course). If I get into my car on a weekday during rush hour, I'm sat stationary outside my house for a long time. It is often quicker to walk down the high street than drive. The air quality is significantly impacted in the town centre and residential areas as a result.</p> <p>if I ever need to collect my children from school at 4.30pm, it takes 20 mins to drive back down the high street to get home. Yet it only takes 6 mins to do that drive normally.</p> <p>More traffic will make the high street - one of the main attractions for many - considerably less pleasant. Building on the outskirts will mean new residents will need to drive into town.</p> <p>The logistics of managing traffic in the town are limited by the canal, river and railway. The secondary school is already oversubscribed.</p> <p>I'm not at all confident in the data that has been used to determine housing targets.</p>

<b>Comment</b>	<p>In this document I am replying personally as a resident of Tring, and will draw on a combination of my own responses to the Draft Local Plan, as well as endorsing and using some responses from Tring in Transition, The Grove Fields Residents Association, CPRE and Dacorum Green Party.</p> <p>The overarching vision and strategic objectives seem positive and useful but do not match the proposed actions or level of detail within the document. I find that the words used (e.g. 'to protect and enhance natural beauty and varied character of the countryside' or to 'provide environmentally sustainable growth' ) are just words which are not supported in the actual development plan.</p> <p>For example, the proposal for increased housing in Tring and use of Green Belt land appears to directly go against the principles of a) conserving and protecting the natural environment, b) mitigating and adapting to climate change and c) promoting the distinctiveness of towns and villages, and d) protecting and enhancing Dacorum's distinctive historic environment.</p>

The housing allocation set for Dacorum is unreasonably high. The Local Plan proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. The plan does not therefore demonstrate evidence for objectively assessed need.

Elements of the vision, regarding protecting the environment, and sustainable development, I am in broad agreement with. Which is why I find the nature of the plans, specifically for Tring, so absolutely disgraceful. To be irrevocably destroying huge swathes of Green Belt land is totally unacceptable from an environmental stand point. Not only that, but in destroying this Green Belt land, the proposals will also permanently alter the nature of Tring as a small market town - the Tring that we know will be dead. Population doubled? On Green Belt land? Putting a medium/large size supermarket in the Forge Road car park? This is almost unbelievable, and in years to come, with the climate crisis and sustainability only growing in prominence, these proposals will seem more and more egregious and poorly thought out.

<b>Comment</b>	<p>I do not.</p> <p>The removal of Green Belt protection around Berkhamsted and Tring is appalling. Shame on you. You are wanting to make Berkhamsted into another ugly Hemel Hempstead with no regard for its historical importance, character and natural surroundings. You do not have the best interests of Berkhamsted's residents at heart, nor of Berkhamsted's countryside. The Government has stated clear support for the Green Belt - why has DBC decided that it is of no importance to them? The residents of Berkhamsted and many other places have appreciated the countryside like never before during this last year - how can you remove it from people because you refuse to regenerate town centres. There will be many buildings left empty in town centres as businesses leave - focus on those.</p>

<b>Comment</b>	<p>The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The</p>

Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.

Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable. In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!

In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.

The Council's proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p><b>2.3 et seq Housing Growth</b></p> <p>The entire Plan is founded on a misconceived driver for housing expansion. Whilst no one is against a level of growth to provide for the Borough citizens, the determinate of the housing need is a reliance on a failed algorithm driving numbers of new houses said to be required from the 400/500 per year currently being delivered to around 1000 per year. The algorithm is explicitly based on the 2014 ONS data, not the more recent 2018 ONS projections; in any event all this data and projections will be overtaken by the figures flowing from the March 2021 Census which by definition will be the most up to date and comprehensive. Once the true numbers are available the Plan should be amended to reflect the real state of affairs.</p>

The entire Plan was drafted before and obviously barely cognisant of the emerging and permanent impacts of the Covid 19 pandemic - see 2.26. These impacts include a retreat from traditional shopping outlets and the increased acceptance of working from home and the reduction in commuting needs. There is a sound argument for pausing the Plan whilst these emerging impacts settle and fundamentally reappraising the way forward. If retail retreats, then land near the centres of the Borough's towns will be under-utilised and become viable for residential development. The retreat from a "five day commute" will place less pressure on the Borough to accommodate those fleeing from London but seeking quick daily access back for work – if the number of journeys per week is curtailed, a longer commute becomes acceptable and the London refugee pressure spreads over a wider area.

It has also to be said that even as currently drafted, the Local Plan pays only lip service to responding to the climate emergency (a unanimously endorsed goal of the Borough Council) and increased abstraction of water from the chalk aquifer to service a growing population. It also pointedly ignores the decision of the West Herts Hospitals NHS Trust to deliver the main component of the Borough's acute hospital needs from its site at Watford. Neither does it recognise, let alone respect, the high proportion of land within the Borough that is Green Belt or AONB and makes Dacorum a fine place to live..

<b>Comment</b>	<p>Harrow Estates plc (Harrow) supports the over-arching vision of the plan which sees the borough building on its strengths and opportunities to deliver balanced communities with the homes, jobs and supporting infrastructure required; ensuring that Dacorum remains an attractive and desirable home for residents and businesses. This requires careful balancing of a wide range of issues and challenges to, inter alia:</p> <ul style="list-style-type: none"> <li>- deliver a step change in housing growth to meet the target number*, type and location of new homes required in the borough; ensuring that the right type of housing is provided in the right location, and at the right time to meet the changing housing needs of all members of the borough's communities.</li> <li>- address the effects of climate change and embrace the opportunity that new development offers to deliver significant and meaningful measures to combat the effects of the climate change emergency.</li> <li>- encourage new residential uses to help sustain and enhance the borough's town centres over the longer term.</li> <li>- support a modal shift towards more sustainable travel modes that facilitate the increased use of public transport, cycles and movement on foot and support for low / non-carbon vehicles</li> </ul>

- integrate the provision of new infrastructure alongside development
- minimise the impacts of growth on the natural environment, in particular the Chilterns Beechwoods SAC by ensuring that new development links to existing green networks, and creates new and varied green spaces, promoting opportunities for biodiversity and nature conservation.

\*Harrow notes that the Growth Plan has been prepared on the basis of a housing target of 922 dwellings / annum which was the figure available at the time of publication. The housing target has subsequently been increased to 1022 dwellings / annum presenting further challenges for the plan to ensure that the borough's housing needs are met (see also response to Question 8).

Harrow agrees that it is important, and in accordance with national planning policy, to plan for development in the most sustainable locations, ensuring that the needs of all of the borough's residents are met. Accordingly, the company supports the council's strategy to ensure that each of the larger settlements, including Tring which is described in the plan as "one of the most sustainable settlements in the borough" (paragraph 23.138), should play a greater role in delivering balanced growth to meet the development needs of Dacorum (paragraph 2.24) and the key priorities identified through the Corporate Plan (paragraph 3.5).

The Council's own significant body of evidence demonstrates that the development required cannot all be met within the existing urban area and that expansion of the main settlements is required to deliver the Vision and Strategic Objectives; this is entirely in accordance with national guidance at paragraph 72 of NPPF. Accordingly, Harrow strongly supports the specific vision for Tring, in particular the aim to deliver a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape and protected environmental sites (paragraph 23.140). Harrow's support is further articulated in a Vision Document accompanying these representations which includes an illustrative masterplan showing how the development of a new garden suburb east of Tring ('Marshcroft') can provide a sustainable expansion of the town that:

- integrates with Tring to meet the needs and aspirations of existing and future residents and businesses of the town
- delivers high quality homes, community, transport, social and well-being infrastructure as part of an integrated and comprehensive development set within an extensive green and blue infrastructure network
- creates opportunities for travel by non-car modes, including improved links from the town to Tring Station
- provides an extensive open space network, uniquely including Suitable Alternative Natural Green Space (SANGS) to mitigate the recreational impacts of the development, bio-diversity net gain, and compensatory improvements to land retained with the Green Belt.

<b>Comment</b>	<p><u>Transport</u>. The county council would welcome more detail, explanation and recognition that a move towards sustainable transport is the approach the Local Planning Authority (LPA) supports to mitigate the impact of growth (along with many other factors). The plan should clearly set out the view and ambition of the LPA at an early stage and follow through with that in terms of broad and specific</p> <p>Throughout the whole plan, HCC would welcome a review of the phrasing and approach when discussing transport, as the draft plan creates a general assumption that private vehicle trips are the only modes being</p> <p><b>Climate Change Emergency (paragraph 2.2)</b></p> <p><u>Lead Local Flood Authority</u>. more flooding is highlighted as a consequence of more extreme weather events which are predicted to occur as part of climate It is also highlighted that planned growth offers real opportunities to deliver significant and meaningful measures to combat the effects of the climate change emergency this needs to be reflected more strongly throughout the document. It is noted that adaptation to climate change and management of flooding are included as points in the summary tables on pages 25.</p> <p><b>Transport and Movement (paragraph 2.13)</b></p> <p><u>Transport</u>. With regard to the peak period congestion problems that are mentioned within this paragraph it is not just car ownership, but continuing high car use, especially for short trips, that result in the problems that the borough (and all of Herts/UK) face in transport A main reason for this is prioritising, designing and planning for private cars for the last sixty years with minimal walking, cycling or public transport consideration. The new plan must seek to assist HCC in rebalancing the provision of the highway network, so it is efficient, accessible and attractive to make those short journeys by sustainable means.</p> <p>The references to passenger transport, walking and cycling is the first real introduction to transport in the draft plan and it is felt that the LPA should clearly set out its position on how transport needs to develop over the planned period. HCC's view is that to maintain the level of mobility required for the borough is a significant modal shift to sustainable transport</p> <p><b>Paragraph 2.14</b></p> <p><u>Transport</u>. It is suggested that the following wording is amended, to ensure that all new development includes high quality connections for walking, cycling and public transport services:</p>

*“Our residents have told us of their concerns over the ability of the roads to accommodate high levels of housing growth and to tackle climate change we need to significantly reduce harmful emissions and particulates from transport and at the same time greatly improve local air quality. Therefore, new development will need to be located in places which have excellent access to jobs, shops, services, can quickly and easily be reached by sustainable public transport and benefit from high quality connections for walking, and cycling infrastructure and passenger transport services and have sustainable transport as a demonstrable aspect of their design.”*

The phrasing within paragraph the remainder of 2.14 should also be reviewed, if this is in the context of what is known to support the uptake of sustainable modes when considering routes, it should therefore highlight that direct, safe and accessible for the entirety of the journey is emphasised. Journey length should be considered as a separate point in the design of new development, which should provide shops/services/amenities locally to reduce the need to

### **Paragraph 2.15**

Transport. The development of detailed Sustainable Transport Plans is welcomed, although a timeframe for this work should clearly be stated, as real change will be needed before the end of the plan period and measures to begin this will be required in the short term. New developments also provide an opportunity to start delivering low carbon transport g. electric vehicle charging points being included as standard, opportunities for car clubs with EVs and bike share schemes with electric bikes.

### **Paragraph 2.16**

Transport. The text within this paragraph may simply push the delivery of sustainable transport measures further away. The traditional approach of predict and provide for transport will no longer work in supporting growth in the borough, we now must actively decide which transport modes best meet the needs of communities and allow sustainable trips to be real options, not relying on each resident of the borough to own a car to travel. There is a requirement for Dacorum to commit to act to address and deliver behavioural change with regard to transport movements (please see comments in the IDP section of our response for our overall position).

There is a requirement for the LPA to commit to act to address and deliver behavioural The sustainable transport plans should also include measures such as promotion, marketing and travel planning initiatives to help change the current ‘car first’ mindset.

### **Covid-19 Recovery**

Public Health. It should be noted that the county council has seen a significant change in emphasis on the role of places and their contribution to their impact on health coming out of the COVID19 pandemic, particularly around health inequalities, access to quality open space, active travel and housing design Therefore, it is felt that this section of the draft plan could be even more explicit on the crucial role of planning as the borough moves into recovery from the pandemic.

The graphic on p.20 whilst referencing some health evidence, could be more robust by identifying some of the key challenges for the borough that good planning and development of great places can address (e.g. obesity, preventable early deaths and health inequalities). All of this information is available online via either the Public Health Outcomes Framework (which has recently been updated) or the Herts Health Evidence More local health evidence here would link

well into: 'Theme 3: A happier, healthier and safer Dacorum' on p.21 and would also provide the rationale for the health and wellbeing text in the overarching vision for the borough.

### **SECTION 3: BOROUGH VISION TO 2038**

#### **Overarching Vision for Dacorum's Growth by 2038**

Public Health. The county council supports references to, and the inclusion of health and wellbeing within the overall vision for the However, the plan needs to mention health inequalities, as this is a challenge for the borough. For example, there will be a significant difference in health outcomes between the communities in Hemel Hempstead and Berkhamsted. Mentioning this in the plan's vision, will provide the 'golden thread' from the vision and strategic outcomes desired to link into and support the later policy for Health Impact Assessment.

#### **Environmental Sustainability**

Transport. This section of the plan's vision is supported and the inclusion of 'active travel' is also welcomed when describing walking and cycling. The county council would also support an explanation of this being for all trips, be that for work, leisure, shopping etc. This aligns with the health and wellbeing section of the It is considered that the LPA should also be committing at this stage to deliver these measures and approach through their own assets and opportunities.

The statement: "...by having facilitated a significant increase in sustainable travel modes..." is supported, although a fundamental shift away from car trips to sustainable modes is needed, known as positive modal shift. LTP4 fundamentally prioritises reducing the need to travel, be that from a home, new development or whole settlement, by designing and providing services, facilities and destinations in the right place to achieve internalisation and maximising development opportunities in those locations which already have services and facilities. The inclusion of 'Active Travel' within the vision is welcomed.

The third paragraph should be re-worded as follows:

*"Sustainable transport will be a real option as public transport has become more reliable, rapid, flexible, convenient and widely used. Places are better connected, and there are greater opportunities to walk and cycle.*

*Dacorum will have in place a network of cycle lanes and secure bike parks, that have encouraged greater levels of cycling and walking, while also having promoted the use of public and greener transport. Green infrastructure should also be provided, in order to provide cycling and walking routes that would align to Hemel Garden Community aspirations."*

#### **The Vision for Dacorum's Places-Hemel Hempstead**

Transport. The county council would like to see priority given to sustainable transport improvements in Hemel Hempstead such as walking, cycling and public transport to provide connections within and surrounding Hemel Hempstead which will create the potential for a significant modal shift away from private car use towards these sustainable modes of transport. The text should be amended accordingly to reflect

In relation to new link roads connecting the existing highway network, HCC would like to see consideration given first to opportunities to maximise sustainable modes of transport and then determine the residual impact of vehicular traffic on

the surrounding highway network using traffic modelling to see if additional highway capacity is required. More details on this will be available once the Hemel Garden Communities transport strategy (Stage 2) has been

*The sixth bullet point therefore needs to be updated accordingly to reflect this as follows:*

*have had significant transport improvements across the town including new sustainable transport corridors linking key destinations across the town, along with improvements to enable the introduction of a potential east west Mass Rapid Transit system with new link roads connecting the existing highway network and making provision for alternative routes linking key destinations across the town;*

#### **The Vision for Dacorum's Places-Berkhamsted**

Transport. The county council welcomes the inclusion of transport in the vision for Berkhamsted. However, there should also be a recognition of the need to improve sustainable transport links to adjoining towns such as Tring and Hemel Hempstead.

#### **The Vision for Dacorum's Places-Tring**

Transport. The county council welcomes the inclusion of transport in the vision for Tring. However, it is suggested an improvement in sustainable transport links to adjoining towns (Aylesbury, Berkhamsted and Hemel) should be mentioned and the following text should be added at the end of the third bullet point:

*have provided significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town and to the railway station;*

#### **The Vision for Dacorum's Places-Bovingdon, Kings Langley and Markyate**

Transport. The county council will welcome the inclusion of sustainable transport improvements in these villages vision, notably walking and cycling within each settlement, but also the sustainable connectivity to adjacent

#### **The Vision for Dacorum's Places-The Countryside and other small villages**

Transport. The county council will welcome the inclusion here that the countryside will support intra settlement sustainable travel through the use of existing and new public highway, rights of way and green

<b>Comment</b>	<p>The Strategic Planning team have put together a thorough plan, which had to take into account the competing needs of a growing population and climate change. However, due to our rapidly changing society it would appear that these needs have been misprioritised.</p> <p>The vision for the borough currently includes plans for a larger number of new dwellings than is actually likely to be required. This is in part because of the shortage of affordable housing across the country, the government solution for which is to 'build, build, build'. Whilst I do not consider that housing affordability can be tackled by simply oversupplying housing, particularly by releasing large areas to developers in the commuter belt. In any case, without legislation to encourage it, developers will simply not provide any oversupply of housing which could affect their profits. At present, there are around 1 million homes with planning permission which have yet to be built across the country.</p> <p>The latest data suggests that only 355 new homes will be needed in Dacorum per year over the next ten years, which even with the uplift from the standard method gives half what is proposed in the plan. The false need figure of 922 dwellings per year forms the basis of the entire plan. I am concerned that the result will be a lot more executive housing to tempt people out of London, but not sufficient social or genuinely affordable homes. If, as is suspected, these homes are not required, we will find ourselves in a situation where developers with planning permission do not want to build</p>

every home. The developers will instead build only the most lucrative properties, and this will lead to our green belt being built upon, and our brown field locations left unrenewed. It will also further add to the inequality between north and south, with homes within commuting distance to London selling for significantly higher prices than the same homes elsewhere. The result will be that homes will be built on London commuter belt green belt in preference to elsewhere, with the rest of the country falling behind.

On top of this the carbon impact of removing land from greenbelt has not been considered, and given the net zero targets of the council (2030) and the UK government (2050) this is a major factor which needs to be calculated in ascertaining how to get to net zero.

Overall Approach

The Chiltern Society is an environmental charity with 7000 members, which seeks to protect the landscape and biodiversity of the Chilterns, including the Chilterns Area of Outstanding Natural Beauty (AONB) and part of the London Green Belt. Part of the Society's remit is to input to the planning system in relation to planning policy and local planning applications. This response has been prepared by the Society's Planning Officer with detailed input from our Planning Field Officers working in Dacorum Borough.

We have been working with other local organisations in an alliance called 'One Voice' to agree a shared approach to opposing the Dacorum Local Plan. We have agreed, and now endorse, the following 3 statements in relation to the Emerging Strategy for Growth as a whole -

"We the Chiltern Society, Chiltern Countryside Group, Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens and Tring in Transition as the 'One Voice' alliance, oppose the 'Dacorum Local Plan - Emerging Strategy for Growth' because:

1. Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of how Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction.
2. The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes.
3. A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

While not members of the Alliance, the Chilterns Conservation Board and CPRE Hertfordshire are working closely as advisors to the One Voice alliance."

<b>Comment</b>	The Society held an online consultation event on 14th January 2021 to gauge the views of members and other partner organisations concerning the Local Plan. There was a broad consensus that the Plan was not a suitable Plan to steer the future of Dacorum as it proposed too much development and insufficient environmental safeguards.  We would like to make some general comments here, as well as specific comments on sections of the Plan.

## General Comments

The Society objects to the strategy proposed in the Plan as it proposes an excessive number of new houses across the Borough and presents a significant threat to the Green Belt and the setting of the Chilterns AONB.

The issuing of the Plan is totally premature given the current health crisis, giving rise to limited public consultation. Previous Plans involved public exhibitions and leaflet drops to ALL households in the Borough. This consultation relies on the internet. Not every household has access to the internet which disenfranchises a large section of the population which is clearly undemocratic.

DBC gives little consideration to the effect of this massive amount of development on the existing settlements which will suffer from increase in traffic, loss of open space and pressure on facilities. Infrastructure within the Borough (eg roads, education, health care etc.) is already under considerable pressure from the existing population and increasing it by around 30% will put further excessive pressure on these. Whilst developers may be required to contribute towards infrastructure, this may not be sufficient to meet the needs of this vastly increased population and concentrates benefits on the new developments. It's all about development with little attention paid to its effects and little on mitigating the damage.

There are already outside pressures on the infrastructure such as the proposed expansion of Luton and Heathrow airports with the consequential increase in traffic, noise, pollution, the loss of Hemel Hospital with Watford being difficult to access at times and struggling to cope at present (even pre Covid), massive expansion of Aylesbury which will impact on availability of facilities, especially health and education, for those in the west of the Borough and the expansion of St Albans with possible development adjacent to Dacorum's boundary.

It is also dependent on the release of vast tracts of Green Belt land. The three main towns in the Borough are surrounded by Green Belt the loss of which will be detrimental to not only the residents of the towns but by others working and visiting the area. The reason people want to live in Dacorum is not just its proximity to London and its facilities, but because of its setting in the countryside.

We recognise that development, especially housing, is needed. However, the current plan proposes 15,658 additional dwellings based on flawed and outdated calculations of housing need. The Government is currently revisiting the numbers and distribution of housing numbers and therefore the Plan should be suspended until such decisions are made. As submitted the Plan is NOT SOUND. The Council appears to be intent on providing at least 100% of their self-assessed figures regardless of the impact. Revised figures may have a material impact on the requirements for the Borough requiring less development and consequently the release of large tracts of Green Belt can be avoided. The Council should be arguing against these numbers and not just 'roll over' and accept them. This may not be what the Council wants to do as it may fear the loss of substantial income!

There are 59,938 households in the borough at present, with 16,899 new ones planned in just 17 years. That's a 28% increase in a Borough that is highly constrained by Green Belt and AONB. It is unclear from the Plan whether the Council will be taking into account the recent Government announcements to revise their housing targets, preferably downwards, to protect rural areas in the south east, as reported by the BBC on 16th December 2020. Initial indications that we are getting are that the number may actually increase further. This goes against Government announcements about 'levelling

up' and encouraging more development in cities in the north of England. This does not make any sense in a Borough as constrained as Dacorum.

Looking at the population statistics of 155000, an increase of nearly 52000 based on 17500 new dwellings means a population uplift of around 30%. Most of this build will be on green belt and in close proximity to the Chilterns AONB.

There is already substantial build agreed and with the proposed numbers the Borough will become urban rather than rural in nature. As most of this new build is on Green Belt, any requirement to replace Green Belt will use up the rural area and maybe the AONB.

The Plan is outdated in approach and assessment. It should start with an integrated approach including climate change, biodiversity, protection of the environment and the well-being of existing and new residents. This Plan prioritises economic growth and greenfield development at all costs.

Covid-19 has changed the face of how we work, shop, play and travel. Have those responsible for the plan thought how they will take this into account, and when they will amend these plans accordingly? Because of COVID-19 the AONB has seen a sharp rise in visits by people seeking open space and outdoor amenity, and colleagues have heard complaints from friends and neighbours trying to access both Ashridge and Wendover Woods about the sheer volume of cars and people making it impossible to visit and park.

Access to open land is clearly a health issue. The Government and the Mayor of London publicly support the protection of the Green Belt, described as 'London's lung'. The current health crisis has emphasised the importance of open space for health and recreation. The popularity of the area has been seen in recent months with the influx of visitors seeking fresh air and recreation during the pandemic. Given more normal times this would have been a boost for the local economy and will do so again when other facilities become available again. This income will be lost with the land developed. The beautiful, green and tranquil open landscape with its historic field patterns and ancient woodlands cannot be adequately replaced by the so called 'Suitable Alternative Natural Greenspaces' (SANGS) ie. manufactured open space. Why build on natural open space merely to replace some (only very limited) man-made green space. The wildlife will disappear as their habitat is destroyed.

Due to the pandemic, the collapse of the retail sector, and the new situation of many people working from home, there will be a glut of commercial properties which can be converted into residences. This is already being planned by John Lewis.

The devastation of the Green Belt around Tring, Berkhamsted and Hemel Hempstead, abutting the Chilterns Area of Outstanding Natural Beauty (AONB), is significant, in reality it is unclear what the Council will do to mitigate this. Regardless of previous actions the region's biodiversity has suffered as much if not more than any other non-metropolitan region of the UK, and indeed possibly the whole of Western Europe.

The Green Belt around the three main towns currently fulfils the 5 functions of the Green Belt. These functions have not become unnecessary and the general presumption against development in the Green Belt as set out in the NPPF is still relevant. The Council has ignored para 11 (6) which allows local authorities to restrict the scale of development due to other planning constraints including impact on the Green Belt and AONB. No exceptional circumstances have been

demonstrated to justify such a vast loss - their desire to meet their calculation of housing numbers is NOT an exceptional circumstance.

One third of the countryside area in Dacorum is Chilterns AONB - surely a lot more emphasis must be made on its importance and protection. No mention is made of the possibility of the CAONB becoming a National Park - has Dacorum heard of the Glover Report or the Government's 'Ten Point Plan for a Green Industrial Revolution', which include the creation of new National Parks? Again, an indication of a poor Plan!

As well as the obvious environmental impact, there will be physical and visual impacts on the AONB. Once the additional local residents and their vehicles are added to this then there will be serious management issues for the AONB, which as we are well aware is not a National Park, although the Chiltern Society hopes that designation may happen in future. What guarantees can the Council and government give that this unique landscape will be protected and maintained for the future?

Most of the build will be to the north and east of Hemel Hempstead (11688), Berkhamsted (2230) and Tring (2730). Most of the areas are in Green Belt and close to the AONB, and the impact on these towns needs to be considered. Little recognition seems to have been taken of the topography, we are basically talking about a series of valleys and therefore any development on the slopes is going to have a visual impact for many miles.

We note that the Government's February 2021 consultation on changes to the National Planning Policy Framework is proposing to add a specific reference to the impact on the settings of AONBs into the existing AONB paragraph 172.

The landscape and visual impact of the proposed housing developments is likely to be significant around the urban areas of Hemel Hempstead, Berkhamsted and Tring.

A new link road is proposed east to west in north Hemel, so traffic issues and noise, visual impact etc. are inevitable. The whole character of the Borough will be changed, the small market town of Tring is expected to absorb what is a 20% increase in residents, bolting a new "village" onto it.

Berkhamsted is a historic and larger market town with a proposed increase of around 30% on top of the big Bearroc phase 1 and 2 developments generating over 200 new houses, and already creating traffic issues along Durrants Lane and Shootersway. A 2 bed semi costs in excess of £450k, hardly affordable housing.

This has become a very desirable commuter town over the last few years, but will this still be the case after Covid with numbers moving out of London and a lot less commuting/more home working? What effect will all this have?

Whilst there are commendable targets for the Council to be carbon neutral by 2030 (not the region, just the Council), and an aim for a biodiversity net gain of 10%, we are not convinced the Plan would do enough to combat either Climate Change or Biodiversity loss.

We would like to see the Council supporting the Society's Manifesto for Chilterns Wildlife (<https://chilternsociety.org.uk/chiltern-manifesto/>) and proposals for a 'Wild Belt' in the Tring and Wendover area to support this. If development is to be allowed, then strategic biodiversity enhancements and net gain must be incorporated and managed in the long term.

We are already exceeding the environmental boundaries our region can cope with and see nothing real in this plan to change that. We need to know what is being done differently to ensure a real biodiversity net gain, and to combat climate change other than the 'business as normal' plan that this appears to be. The time to act on this is now.

### Specific Comments

2.1 - Opportunities and Challenges for Growth – This needs to include a reference to habitat loss and making a significant contribution to habitat recovery.

2.2 - Climate Change Emergency – The Council needs to commit to improving the resilience of the local environment to climate change.

2.19 – 2.20 - The Natural Environment section needs to stress the national importance of the Chilterns, including it potentially being designated as a National Park following the Glover Review 2019.

The Plan should also commit to a step change in the restoration, enhancement and creation of wildlife habitats across the Borough to reverse biodiversity decline, whilst ensuring the local environment is resilient to climate change.

The loss of agricultural land is particularly relevant given that having left the EU the government is promoting home grown food. The excessive loss of large tracts of good quality agricultural land is contrary to this aim.

There is no indication how it is intended to reduce local carbon emissions in order to meet the national climate obligations of zero by 2050. Planting a few trees is not enough.

The Plan treats the three main towns in the same way - just build around the edges. This takes development further away from facilities further exacerbating the use of cars which undermines sustainability and the effect on climate change. No regard is taken of the topography of Hemel Hempstead and Berkhamsted lying within the valley floors. Thus, any development at the edges is on the ridges and not only will this have severe visual impact on the surrounding countryside which is within the CAONB but makes journeys to the facilities more difficult and does not encourage walking/cycling.

2.24 – This section needs to include a clear statement about protection of the Green Belt and the Chilterns AONB. Commitment to protect the wider countryside 'as far as possible' does not give this matter the priority it deserves. Habitat loss across the country has been accelerating in recent years and the Council must commit to work with local and national environmental organisations to set some ambitious targets for large scale improvements and not overseeing a managed decline over the plan period.

Whilst the proposed developments are not actually in the CAONB, the effect of them will have a devastating effect on the CAONB. The Green Belt and the AONB are intrinsically interwoven, thus diminishing the Green Belt which diminishes the AONB. The introduction of significant and abrupt changes to landscape character (especially where the land is currently of similar character to the AONB) will be detrimental to the whole landscape character, loss of biodiversity, impacts on character and appearance of rural roads and lanes, increase in air and water pollution and of course a detrimental effect on the existing settlements and inhabitants. Very large developments like those proposed will have an impact even if they are some distance from the actual AONB boundary. There will be severe effects on views out of the AONB and views of the AONB. There will be a loss of tranquillity from lighting, noise, traffic movements.

3.3 – The six over-arching themes need to sound much more ambitious. In particular Theme 4 lacks any ambition to make real improvements to the landscapes and biodiversity of the Borough. Clean, green and attractive areas are important, but there should be an ambition to encourage landscape-scale conservation and reconnect wildlife habitats across the Borough and linking into adjacent districts.

Overarching Vision – The Chiltern Society is disappointed with this vision. It appears to advocate ‘more of the same’ rather than setting out a new vision for the area. With significant changes to priorities and attitudes arising as a result of Covid-19, climate change, biodiversity loss and sustainable transport, there is a need for a much more ambitious vision. The proposed level of housing is excessive, in our opinion, but if it is to go ahead the Plan needs to include equally ambitious proposals in these other key areas. There need to be specific strong commitments to maintaining and enhancing the Green Belt and the Chilterns AONB (or National Park) in the long term to maximise their benefits to the local environment and enhancing people’s lives. It is not acceptable to simply allow major housing development and create urban green space to compensate for the loss of open countryside. The Plan must maximise biodiversity net gain and should consider Nature Recovery Networks to act as focal points for significant wildlife enhancements.

In relation to the Chilterns Beechwoods SAC, no impact should be permitted as a result of new development. It is not acceptable to allow impacts and then seek to mitigate them. The vision needs to be more definitive and not take an ‘as far as possible’ approach to protecting the local environment.

The Vision for Dacorum’s Places – As for the overarching vision, these sections could be presented in a more inspiring way. They come across as a ‘business as usual’ list of aspirations without presenting any significant changes of approach. It would be clearer to have a succinct vision statement for each settlement, which could then be supported by a number of bullet points. It is essential that the reader can gain an immediate idea of the long-term vision for each settlement without necessarily having to read through all the bullet points.

Each of the local visions need to include clear aspirations for protecting and enhancing the local environment, including designated landscapes and significant biodiversity net gain, including nature recovery networks. It is not sufficient to ‘take into account’ sensitive views, landscapes and protected environmental sites. These need to be protected and enhanced through the creation of buffer zones and establishing habitat links between isolated wildlife sites. It needs to be a positive vision for the future.

Strategic Objectives – We support the proposed objectives for Conserving and Protecting the Natural Environment. The Council could, however, go further, as suggested above, and take a more proactive approach to habitats creation and enhancement. The Society’s Manifesto for Chilterns Wildlife seeks to take a strategic approach across the Chilterns and could be incorporated into the objectives for the Local Plan. <https://chilternsociety.org.uk/chiltern-manifesto/> The conservation of the internationally important chalk streams, woodlands and grasslands are key parts of this.

<b>Comment</b>	<p>Please note my objections to the Hemel local plan, especially the development proposed next to grove hill which will ruin lively hoods of local farmers and destroy footpaths and bridle paths which are essential to locals happiness and the environment</p> <p>I do not agree that 16,000 houses should be in the plan and you should be using the latest figures which would halve that number to around 8,000 houses at a maximum.</p> <p>This pandemic has shown how important our local green spaces are and that our green belt land must be protected.</p> <p>I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p> <p>Green belt land helps protect the shape, size and character of towns and villages and prevents them merging into one another.</p> <p>Your plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.</p> <p>Your plan does little to address the improvements on infrastructure that will be needed to support that many new houses.</p> <p>I have heard we don't have enough water to supply all the extra houses. It is a fact that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment &amp; Rural Communities Act 2006.</p>

<b>Comment</b>	<p>I am horrified by the proposals which go against all established national regulations for building on green belt. I concur with the response of both BRAG and Berkhamsted Citizens Association who have responded with detailed challenges to the assumptions DBC make in the draft plan. I strongly disagree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is not sustainable and will destroy special areas of biodiversity which should be protected. . With c. 500 dwellings planned in Northchurch Parish and around 1700 in Berkhamsted, this equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint, most of which is located within sensitive ridge top locations in Green Belt. 2 We note that the 2013 Core Strategy vision of "maintaining the strong valley and linear character of the settlement" has now been ignored. Where previously the Council asserted that "The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported" (and put this argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built "in a way that takes account of sensitive views and landscape". The plan removes green belt areas that have become and are becoming increasingly popular walking/rambling routes and provide easy access to the wider countryside. Removing these areas will further increase the need to travel for recreational walking/hiking/running purposes.</p>

<b>Comment</b>	<p>I am writing to object to the New Dacorum Local Plan.</p> <p>As a local Markyate resident I am deeply concerned and troubled by the expansion plans and the detrimental and long term damaging effect it will have on our precious green belt areas and environment. The development of housing on brown sites I understand is needed, but to continually ebb away and destroy green belt areas, which both local communities and visitors from outside the area cherish, value and need, is totally unacceptable and immoral.</p>

<b>Comment</b>	The following is my response to the draft local plan. As a resident of Berkhamsted, I am concerned about drastic and irreversible changes to the character, amenity and health of the local area should this plan be adopted. I believe the issues are with the objectives of the plan rather than the individual sites, so I would ask that my comments are taken into consideration for each and every proposed development.

<b>Comment</b>	SECTION 3: BOROUGH VSION  The Council's vision in this area presents, at first glance, a wonderful picture of how life could be for everyone, with a multitude of good homes, transport links, jobs and all in a well-managed environment with respect to carbon emissions and pollution.  Actually the plan appears to be far more about fitting in a full quota of new houses and where they will be built. The Council have plans to build 16,596 homes over the next 18 years. This is 114% over the 2013 Core Strategy. Some of these houses are intended to be built on Green Belt land on the edges of Berkhamsted and Tring. I do not understand why we now have a plan to build more houses than the 2013 Core Strategy requested, AND on Green Belt land. My understanding is that Green Belt land should only be built on in 'exceptional circumstances'. I have seen no evidence or explanation of these 'exceptional circumstances'.

<b>Comment</b>	<p>Section (3) Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p> <p>In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!</p> <p>In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.</p> <p>The Council’s proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>NO</p> <p>Specifically, I do not agree with 'The Vision for Dacorum's Places' relating to Berkhamsted or Tring. The proposed growth is simply too much for the towns – with circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, it equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint, most of which is located in Green Belt. I am concerned that the 2013 Core Strategy vision of “maintaining the strong valley and linear character of the settlement” has been dropped from the new Local Plan. Where previously the Council asserted that “The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported” (and put this argument strongly to the Planning Inspector), DBC now promotes the land for removal from Green Belt and suggests that development can now be built “in a way that takes account of sensitive views and landscape”. I strongly disagree with this premise and believe the 2013 vision should be re-instated.</p> <p>I note and agree with BRAG's analysis of the Government's clear support for the protection of the Green Belt. This set of policies is completely contravened by DBC's statements. The Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, therefore I do not understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified” that the number of houses proposed is not sustainable. Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town's historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.</p> <p>Why cannot Dacorum stand up for what is in the best interests of the residents of the Borough and their quality of life?</p> <p>What BRAG says about Hemel Hempstead is particularly worrying because it implies that DBC is losing an opportunity to regenerate and develop Hemel Hempstead while, at the same time, ruining the environs of Berkhamsted, and Tring by extensive building on the outskirts - far from transport, schools, shops and services.</p>

<b>Comment</b>	<p>Question 1: Do you think the overarching vision, the vision for Dacorum's places and the strategic objectives are right for the Borough?</p> <p>No I do not think the Plan is right for the Borough</p> <p>Latest data suggests housing target should be 400 - 500 dwellings per year, but Dacorum target is 1000 per year. This cannot be justified.</p> <p>Release of Green Belt, which is meant to prevent towns coalescing, would be irreversible.</p> <p>I am concerned about the Station Gateway development. A shopping centre there could take business away from the town centre, which I'd like to see thriving.</p> <p>I feel it is reprehensible that the Plan suggests flats there to a height of 8 storeys. On a previous survey I, along with other residents, indicated that a height of 4 storeys was the reasonable maximum that is acceptable. This is to ensure any building is in keeping with the adjacent Moor which is a beautiful natural asset.</p>

<b>Comment</b>	Climate Change Emergency

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

#### Overarching Vision: Environmental Sustainability

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

#### Overarching Vision: Economic Growth

In addition to the Enviro-Tech aspirations in the plan we wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

#### Berkhamsted & Tring Developments

We welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.</p> <p>Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built</p>

infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>Section (3) Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p> <p>In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!</p>

In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.

The Council's proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p>

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

<b>Comment</b>	NO - the overarching vision, the vision for Dacorum's places and the strategic objectives are NOT right for the Borough . Some parts of the plan are good BUT irreversible destruction of Green Belt is abhorrent: sacrifice of 18 areas / 850 hectares within the borough that are within the Green Belt. Our green space within Hertfordshire will be lost forever. The borough is renowned for the quality and importance of its landscape and this will be ruined. People and therefore economy will NOT want to move here when the attraction has always been the rural nature of the environment.

<b>Comment</b>	<p>My concerns regarding the building of new homes in South Berkhamsted are as follows:</p> <p>Borough Vision – The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p><u>Section (3) Borough Vision</u> – I completely agree with The Council’s Vision and the strategic objectives set. However I dont agree that the number of houses or their location supports the Council's laudable aims. Building 16,596 homes over the next 18yrs will destroy the nature of the market towns of Berkhamsted and Tring and does not support the important and sensible development of Hemel Hempstead as an important economic area well located in the South East. The detailed work carried out by the Council in the development of the earlier Core Strategy has not simply been properly updated taking into account local need and to support to the Governments need to create additional housing but has been destroyed by the blind acceptance to accept the Governments new targets requiring a 114% increase over the current plan. Much of this development will be in Green Belt areas that the Prime Minister has already said should not be developed except in EXCEPTIONAL CIRCUMSTANCES. What are these exceptional circumstances? Particularly when Berkhamsted has already has considerable increases in housing over the past 10 yrs (over that in Hemel Hempstead) and that an imaginative and large Garden Community development is being planned in Hemel, together with St Albans District Council in an area well located that could better support Councils aims and objectives.</p>

<b>Comment</b>	I do not think that the target number of houses proposed for Dacorum in the Plan can be justified. There is a discrepancy between the 25% growth in housing proposed and the 9% forecast in population growth.  The 55% housing growth proposed for Tring is excessive. It would entail the release of Green Belt land.  Building on sites TR02 and TR03 East of Tring would severely impact on the Chilterns AONB. The open grassland at the foot of the Chilterns contributes to the beauty of the landscape. Such a large development would irreversibly damage

this landscape, the environment and the character of Tring and its immediate environs. Its scale is totally unsuitable to the area.

I recognise that there are difficulties in increasing housing in Hemel Hempstead, particularly "pinch points" at the railway station, but as the largest town in the borough, Hemel Hempstead is better suited to take more housing. It also can provide more brownfield sites and jobs.

The Plan has not evidenced the necessary "exceptional circumstances" required for the release of Green Belt land.

Whilst some growth in Tring will be necessary, there is no evidence to show how this could be achieved in different ways e.g. by using sites within the town's current boundaries.

**Comment**

This question is about the content of Chapters 2 and 3 of the Draft Plan in which these matters of principle are set out, but it is asked in the context of Chapter 1, which is not the subject of any of the Council's questions, but is fundamental to how the process of this Plan's preparation should proceed.

**Chapter 1** sets out the Council's 'Strategy for Growth' based on stated pre-determined considerations, which should have been the first focus of the current consultation, because they have not been properly consulted on hitherto, and yet are treated in the Draft Plan as if they have already been decided.

The Chapter emphasizes a series of Dacorum Borough Council (DBC ) corporate plans, 'agreements' and 'joint studies' with other public bodies and councils, treating their content as definitive, thereby limiting the scope of the Local Plan, proposing specific projects for development, and setting out courses of action as if they are already commitments which cannot be changed or properly considered in the light of current circumstances by the residents of Dacorum and other interested parties.

Hence while paragraphs 1.30 and 1.32 refer to being 'informed' by agreements with other authorities that the Council has 'engaged' with, these cannot pre-determine the Plan's strategy, which must emerge from the current consultation. Such 'agreements' and background studies over wider areas have clearly been on a selective basis as they have resulted in a list (paragraph 1.33) of ten 'Strategic Planning Matters' to be addressed by the Plan which do not even mention the words 'Green Belt', which is the single most important strategic planning provision in Dacorum and its neighbours for over 60 years, and which is still central to national planning policy.

This fundamental omission is strange, as protection of some important environmental designations with similar status in national policy is listed. Possibly it would look strange to be stating the importance of protecting the Green Belt when an item that is listed is the 'delivery of' (not the 'consideration of the acceptability of') Hemel Garden Communities (HGC), is presented in the list as if it has to be included in the Plan despite the scale of impact on the Green Belt. The list also includes meeting the needs of Watford, again as if this has already been decided whatever the consequences, and without the evidence for it being tested.

Sustainable development means delivering an environment to the next generation in an equal or better state than the one inherited and it is by no means certain that this Strategy will deliver that objective.

The text continues with 'statements of fact' rather than proposals, that the Plan will meet all its housing need as defined by national government formulae (paragraph 1.37) releasing additional Green Belt around Hemel as part of the HGC scheme for even longer term needs, and proceeds to announce (paragraph 1.41) that a new, wider plan for South West Hertfordshire, covering Dacorum, 'will come into force in 2023'.

CPRE Hertfordshire urges DBC to reconsider its strategy in the light of the responses to this consultation and, as stated in paragraph 1.48, the outcomes from the government Planning White Paper consultations and legislative changes, before deciding how to proceed not only with this Local Plan, but also with Plans and projects being proposed for the wider area of SW Herts.

<b>Comment</b>	<b>Chapter 2</b> begins (paragraphs 2.1 and 2.3) with further pre-determined statements about 'managing a step-change in housing' when such a change has yet to be shown to be necessary in Dacorum, and CPRE Hertfordshire does not agree with this assumption and the absence of any qualifying reference to protection of designated and other countryside. The assertion that the level of housing growth is 'required by Government' is untrue and therefore misleading for those participating in the consultation, because national policy specifically states that setting a housing requirement must be a balancing exercise between need and other policies and constraints (NPPF paragraph 11 and footnote 6).

<b>Comment</b>	The Economic prosperity section asserts, without evidence from the current post Brexit and Covid context that there is a need to plan for significantly more employment floorspace, and that St Albans will take some of this increase. Both assertions need to be reconsidered before the Plan is prepared, as will the proposal to 'safeguard' other employment areas (paragraphs 2.7 and 2.9), now that the St Albans Plan has been withdrawn, and government policy and regulations seek to make better use of land and premises for housing in particular, through re-use, regeneration and redevelopment.

<b>Comment</b>	The Infrastructure section (paragraph 2.18) wrongly pre-judges the scale and location of development of 'Hemel Garden Communities', based on the Council's 'Infrastructure Delivery Plan' (IDP) a non-statutory document that has not been subject to Strategic Environmental Assessment or the development plan process, and cannot therefore determine what should be included in the statutory Local Plan. The IDP should therefore eventually reflect the result of the Local Plan process, not the other way round.

<b>Comment</b>	Paragraph 2.19 in the Natural Environment section is particularly disappointing, because the five stated elements said to reduce the impacts of growth, are nothing more than the existing basic requirements that all development should satisfy before being permitted, including legal commitments. Nothing is set out as part of the vision or strategy on the prevention of harm from individual proposals or the plan as a whole, in line with the well worded following paragraph 2.20.

<b>Comment</b>	CPRE Hertfordshire is particularly concerned about the 'managing change' section. Paragraph 2.21 seeks to pre-determine that housing growth WILL signal significant changes to the Borough's towns and villages. Surely the potential implications of such profound changes must be addressed in the light of the current consultation and context, so that there is consensus on what changes are acceptable and tested through the examination of the Plan that is finally submitted by the Council. Declaring in paragraph 2.23 that there is evidence that Dacorum cannot meet all its housing and employment need without using greenfield Green Belt land, is just not true because any such evidence was based on completely different

data, economic and social circumstances, and national policy context, than exist now. The Council needs to reconsider both the facts of the current circumstances and how it chooses to address these through the Plan.

Para 2.24 lists the main elements of the Strategy and notes “protecting the character of the wider countryside and value of protected /important sites as far as possible (such as important landscapes, heritage and biodiversity and avoidance of areas at high risk of flooding”. This is incorrect and misleading. “As far as possible” is not an option and this statement sums up the whole attitude of the Strategy.

Sustainable development should be about delivering an environment for the next generation in an equal or better state than the one inherited. “As far as possible” not only does not achieve that objective, it is also contrary to national policy regarding protected sites and designated areas

The Council should be defending rigorously the natural capital of the Borough area, not adopting a strategic approach which allows that capital to survive only when left behind by its unjustified growth agenda. Mitigation and adapting to climate change is not sufficiently central to the vision and strategic objectives. There is no mention of the legal requirement for all sectors of the economy to reach net zero carbon by 2050, including those overseen by local authorities. Policies such as SP10 which proposes net zero carbon development only from 2030 jeopardises the aim of reaching net zero by 2050.

Consequently, the main 'strategy elements' set out in paragraph 2.24 must be reconsidered. To start with, the Green Belt is not even mentioned at all as one of the six elements and the relative scale and function of the various settlements has already been established over decades and centuries. A compelling case would have to be made by the Council to change this, and to promote the growth of villages that are currently consciously constrained as part of national, as well as local Green Belt policy.

<b>Comment</b>	The Covid recovery section in paragraph 2.28 focusses entirely on economic recovery in five of the nine proposed actions, with no reference at all to social or environmental recovery, or the climate change crisis and three of the others are solely principles, not actions, and must be reconsidered by the Council.

<b>Comment</b>	The graphic presentation of 'background information' on pages 19 and 20 is out of date and factually misleading, for example 'around 16,500 new homes 2020 - 2038' is contrary to more up to date information available to the Council last year, and failing to mention both the existence of the internationally important Chilterns Beechwoods Special Area of Conservation, the impending critical shortage of water supply, and the fact that there is no national health hospital commensurate with Dacorum's population.

<b>Comment</b>	<p><b>Chapter 3</b> proposes a 'Borough Vision to 2038', but this is based in two Dacorum Council internal plans and strategies, that have not been tested through the Planning process, and the erroneous statement in paragraph 3.2 that it (the vision) 'sets out how we will make the growth that the Local Plan is required to deliver...', when the Council must be aware that there is no such 'requirement.' It is for the Council to determine the scale of development through the formal local plan process, of which the current consultation is at an early stage, and subject to at least one further phase of consultation.</p> <p>CPRE Hertfordshire is concerned that there will be many residents and other stakeholders in Dacorum who are not familiar with the planning process, who will not understand that no definitive decisions on the scale and location of future development in the Borough have yet been taken, and that they are at liberty to contribute to that decision making process. Hence it is wrong for paragraph 3.5 to state that 'the priorities have been set by our councillors, taking into account "the vision" and what is most important to the Borough's residents'.</p> <p>This consultation is the first opportunity for priorities to be considered by the community, and they should be reconsidered in response to the consultation. None of the five priorities set by the councillors, and listed in paragraph 3.6, make any mention of the countryside, the Green Belt, biodiversity or climate change, and this is a major oversight.</p> <p>CPRE Hertfordshire accordingly urges the Council to reconsider the proposed wording of its 'overarching vision for growth by 2038', particularly to amend the statements about 'growth' at Hemel Garden Communities, Berkhamsted and Tring, and associated road building, avoiding, not mitigating, adverse impacts on the Chilterns Beechwoods SAC, all in the context of protecting the Green Belt and the AONB in particular.</p>

<b>Comment</b>	<p>The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p> <p>In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!</p> <p>In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.</p> <p>The Council's proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p>

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support the proposed new houses. Shops built in previous housing development have remained empty. More houses but no addition retail is difficult to understand. Village school is at capacity and places at secondary school of choice hard to achieve.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I am emailing to express my serious worries and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, notably the huge proposed development in the countryside and the impact this will have on the community and the environment.

There'll be a enormous detrimental impact :

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community

- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

—No - building more houses within the London commuter belt will not reduce house prices for local people looking for their first home — it will just attract more commuters moving out from London.

—Developer led housing will not provide more social housing for those on the waiting list. It will just benefit developers.

— We need a properly thought out housing strategy that provides the right type of houses, in the right places, for local people.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.</p>

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

Marshcroft lane towards the canal is a very popular walking route for residents and others visiting the local area. This area should not be considered for development. The wildlife should be protected. During lockdown, this walking route has been invaluable to residents, providing a route to view the wildlife and our local countryside, whilst also benefiting our wellbeing. The protection of wildlife in this area and the countryside views provided from Marshcroft Lane are invaluable and should not be lost. The benefits it provides need to be maintained now and for future generations. It attracts visitors and walkers into the area - linking Tring to Aldbury and onto the Ridgeway.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

Tring Museum currently housed in Market Square is on the edge of a proposed development site. It is a building of historical importance in Tring and attracts visitors - it makes no sense that this small building is proposed for redevelopment.

**Comment**

I have lived in the borough all my life and it saddens me greatly that Dacorum Borough Council, who have a good local reputation, particularly for social housing and waste disposal, should produce a Vision for 2038 which is so totally out of keeping with the area and so destructive to the environment.

I therefore wish to record my objections to the proposals on the Emerging Strategy for Growth document, with particular regard to Tring.

I am concerned by the overall lack of concrete detail in so many areas and the repetitive, unenforceable reliance on the appointed contractor to deliver. For example, page 179,22.21 'Developers should engage with the Clinical Commissioning Group', 22.57 'Developers will be expected to provide or make a contribution to community facilities' -nothing is mandatory.

On page 153 The Design Outcome and Principles should 'reinforce local character' and on page 14 in the Joint Strategic Plan 'new homes and developments will acknowledge local character'. Is there a plan for Tring Town Council to approve the exterior design of these proposed new homes? Indeed is the local council involved at all: have they had any input to this Plan and if not, why not? Covid 19 restrictions must not be used as an excuse to prevent public involvement-all progression must be halted until public meetings can take place.

Another major element of the Plan is cited in the Delivery Strategy 23.146, to include 'new and improved sustainable transport links to Tring Station, the town centre and surrounding neighbourhoods'. A lovely idea, but who is paying for this-the town centre service is vital to those who use it but has very few customers and is already heavily subsidised by HCC. Further use of public money for this project is not justified and to expect it to be self supporting is totally unrealistic.

Practical healthcare-not 'wellbeing'- is already a major concern in the town, with a heavy reliance on Buckinghamshire for medical services not available locally. Further development will only exacerbate this situation and DBC would do well to push for local clinics to be reinstated in Berkhamsted and Tring.

But the outstanding fallout from this Plan is the damage to the environment. Once again the responsibility is being passed to the developers; on page 119 18.21 'Developers must check for the presence of protected species'. This is not acceptable. Developers have a vested interest to not find any protected species-any they find will cost them time and money. This check must be carried out by an independent body.

It is of great concern that the borough contains three chalk streams, an internationally rare habitat, which are officially deemed to be in poor condition, a national disgrace. If DBC is not able to manage an area of international importance there is little hope of them caring about or for any other environment in the borough.

The Plan is indefensible in its current format and needs a complete revision. The proposed number of dwellings is now out of date with the revised figures from central government, and there are no benchmarks by which to measure the success or failure of any aspect of the plan, including the Overarching Vision. One statement however is absolutely correct; page 178 22.12 says 'The Plan has a (measurable?) effect on physical and mental health'. I have lived in Tring all my life and I have never read anything so distressing; it does a great disservice to both DBC and the residents of the borough.

<b>Comment</b>	<p>Borough Vision</p> <p>We do not support the Borough Vision. Notably, the proposed growth for Berkhamsted is too big for the town with over 2,200 houses proposed in Berkhamsted and Northchurch, increasing the number of dwellings in the town by almost a quarter. What's more, many of these are located on greenfield green belt locations. What are the exceptional circumstances which make it necessary to build on this green belt land? Why have the 2014 ONS housing estimates been used as baseline, rather than the updated and more relevant 2018 estimates? Growth of this size is not justified, neither is it sustainable - adding congestion to an already busy and congested town, with no additional jobs to support the increased population, or satisfactory infrastructure. It appears that the council have just bowed down to government requests for housing that does not take into account housing development and densities achieved since 2013.</p>

Section (3)

Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in “greenfield growth areas” which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in ‘exceptional circumstances’. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council’s proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p>I vehemently dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacor um for the same period.</p> <p>I believe there is enough non green belt land identified within the Dacorum Local Plan to provide 5, 950 houses.</p>

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

However, i believe that the new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth)

This fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period. There is only a 13% growth referred to in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough –

a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Heme l Hempstead with the remaining growth shared equally between the remaining settlements.

This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

I believe that the delivery of a sustainable level of new development should be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p>

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

—A#1: No I dont. Building more houses within the London commuter belt will not reduce house prices for local people looking for their first home — it will just attract more commuters moving out from London and the houses are generally very pricy so only 'wealthy' people can afford them.  
Also, developer led housing will not provide more social housing for those on the waiting list. It will just benefit developers. We should take time to have a housing strategy that provides the right type of houses, in the right places, for local people.

<b>Comment</b>	<p>Borough Vision – The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of</p>

Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

The current version of the plan does not adequately address four of its own objectives: 'Mitigating and adapting to climate change', 'Conserving and protecting the natural environment', 'Promoting and facilitating sustainable transport and connectivity' and 'Supporting community health, wellbeing and cohesion'. If these points are not addressed, then the council may endure protracted legal proceedings.

<b>Comment</b>	NO - the overarching vision, the vision for Dacorum's places and the strategic objectives are NOT right for the Borough . Some parts of the plan are good BUT irreversible destruction of Green Belt is abhorrent: sacrifice of 18 areas / 850 hectares within the borough that are within the Green Belt. Our green space within Hertfordshire will be lost forever. The borough is renowned for the quality and importance of its landscape and this will be ruined. People and therefore economy will NOT want to move here when the attraction has always been the rural nature of the environment.

<b>Comment</b>	A) I was generally supportive of the 2013 Core Strategy and can support the aspirations of the Borough Vision. This means that I am broadly in agreement with the reasons why some changes are needed.  B) However, I feel that the implementation proposed in the Draft Local Plan does not adequately reflect the Borough's vision. In particular, it falls far short of meeting aspirations for sustainability and quality of life, particularly with the growing emphasis on issues including climate change and management of water assets. The Draft Local Plan therefore does not have my support for how our community should develop.

**Over-provision of housing based on inaccurate and superseded data**

I believe the council's vision is flawed as it is based on out of date ONS data which has led to a significant over-estimate of Dacorum's housing needs. Please see my comments for Question 7. Put simply, the predicted levels of growth and hence yearly targets for associated housing development are too high.

**Climate Emergency Issues**

Dacorum Borough Council has declared a climate emergency and indicated that this should be a central pillar in any future plans for the borough. This local plan vision as published prioritises economic growth and greenfield land development over considerations for the climate emergency. It has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

**Protecting Green Belt land & Conserving and enhancing the natural environment**

The plan should guarantee the protection of existing natural habitats, the plan has not given sufficient weight to these sections of guidance in the National Planning Policy Framework (NPPF)

**Berkhamsted & Tring Developments**

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

We would like to object to 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is obviously too much for the town. With circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, this equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint, most of which is located within sensitive ridge top locations in Green Belt.

We note that the 2013 Core Strategy vision of "maintaining the strong valley and linear character of the settlement" has now been emphatically dumped. Where previously the Council asserted that "The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported" (and put this argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built "in a way that takes account of sensitive views and landscape". The plan removes green belt areas that have become and are becoming increasingly popular walking/rambling routes and provide easy access to the wider countryside. Removing these areas will further increase the need to travel for recreational walking/hiking/running purposes. Over the pandemic residents have much valued and appreciated the immediate and wider countryside.

<b>Comment</b>	I object to the plans to increase the plan to increase the size of Decorum housing by such a large number of houses, in particular Tring increaseing the number of housing by 55% taking up much needed farm land and where are this number of people going to work? There is not enough Doctors or schools ect for this number of people.  I do appreciate that more housing is needed but it should not increase by this percentage in any area.

The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable. In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!</p> <p>In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.</p> <p>The Council's proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>I am raising profound objections to the Dacorum Borough Council Local Plan 2020 - 2038.</p> <p>If it comes to fruition then I can see the joy of living in such a beautiful area of the country being completely destroyed. The Plan seems detached from the age we are living through.</p> <p>It makes scant allowance for the environmental collapse that threatens to change our lives forever. It uses outdated housing projections, takes no account of geography, is not sustainable, doesn't properly consider pollution and even proposes development on Greenbelt land.</p> <p>May I suggest this is the time to reject business as usual which we know is fast destroying our planet and our children's life chances. This is the time for the council to radically reappraise the purpose of such planning and to prioritise our irreplaceable environment over income generation and house-building directed by government. There is an opportunity to develop a better vision, more in keeping with the times we are living through.</p> <p>Thank you for considering this argument.</p>

<b>Comment</b>	<p>We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. The Local Plan is aspirational but lacks firm quantifiable commitments. We have the knowledge and technology to make good affordable zero carbon sustainable homes. The Local Plan must prioritise this. Currently the Local Plan fails to demonstrate a pathway to local carbon reductions. The plan is unambitious and does not commit to any level of sustainability in its sustainability goals. The proposed plan has clearly prioritized economic growth over considerations for the climate emergency. Several local authorities in England (e.g., Greater Cambridge, Reading and Liverpool City) have developed integrated local plans that take account of climate change, biodiversity, well-being and social inclusion. There is no evidence in the proposed local plan of such an approach.</p> <p>We must build better certified sustainable net zero homes in Dacorum and make firm sustainable commitments in the Local Plan.</p> <p>The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. We are calling for the buildings to be externally certified to sustainable standards. Every part of the building process must be net zero (including scope 3). The new homes must also have sustainability designed into them. For example; every property with a parking space should have an electric vehicle charger built into it. Every property should have a dual aspect to allow for natural ventilation. The new homes must incorporate solar PVs and other sustainable sources where appropriate. No combustion heater should be in any home and each home should collect rain water collection for toilets. The homes must have top class insulation. These standards should be in the Local Plan and all developers must commit to these standards.</p> <p>The homes must be affordable. Building sustainable housing does not mean it becomes unaffordable. We welcome the commitment to genuinely affordable housing to be included in developments but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing. We call for the 40% minimum affordable homes objective to be enforced across the Borough.</p> <p>Dacorum Green Party supports the need for a local plan and accepts the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest</p> <p>ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.</p>

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements).

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

<p><b>Comment</b></p>	<p>The Vision and Objectives provide a framework for the compilation of the plan. However the Draft Plan as it stands is totally inadequate when measured against its own Vision and Objectives.</p> <p>With the development proposed for my particular area I would strongly urge the comments made by Tring in Transition to be acted upon and incorporated into the proposals.</p> <p>As a general observation I would point out that there is a wealth of Government policy and guidance documents which are available to which the Draft Local Plan pays lip service but is not reflected in the proposals. Dacorum's housing requirement is based on inaccurate forecasting at a national level (RTPI 2/10/20) together with an excessive demand by the local authority for additional development on top of the erroneous Government requirement. Dacorum has a large amount of land that is of high environmental quality, already subject to excessive pressure from the existing population. This high biodiversity interest together with the topography and the local landscape character of winding lanes that meander through much of the area clearly illustrates that the proposals in the draft plan display a lack of understanding of the adverse, irreversible impacts that would result if the proposals were to be implemented.</p> <p>A failure to comply with legislation and policy will make it likely that the document will be referred to the newly formed Office for Environmental Protection (OEP). The OEP will be able to receive and investigate complaints on alleged serious breaches of environmental law by public authorities and take legal action as a last resort.</p> <p>Through adopting an inflated figure for the Borough's development requirement the plan must, by definition, fail to provide the necessary solutions to many of the other questions posed in this consultation.</p> <p>The effects of climate change and the impacts from increasing human pressure on the environment are such that a local plan needs to be based on standards of excellence, delivering truly sustainable growth fit for purpose. It needs to address Net Environmental Gain (NEG) on Green Belt land in a way that ensures its delivery. There is no evidence that the draft plan has given due consideration to these requirements.</p>

<b>Comment</b>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

<b>Comment</b>	

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	The numbers are wrong. DBC overstate the housing need. Brexit, the pandemic and the net export of well over a million people from the UK add to an already tenuous case for more dwellings, for instance South West Herts Local Housing

Needs Assessment Final Report - September 2020 (PDF 2MB), a study by G.L. Hearn and covers neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."

There is therefore no extraordinary reason or need for Green Belt to be encroached and these plans should be stopped immediately

The plan is over 18 years, this seems excessive when the future is uncertain. DBC would do better to develop the short term plan it is required to do focussing on builds outside of Green Belt and with an aim to rejuvenate town centres

Dacorum planning does not seem to know the areas very well for instance Northchurch is not West Berkhamsted. It is a village in its own right, it predates Berkhamsted and as a village its semi rural character and stunning views should not be violated by the proposed builds on Greenbelt, particular BK06 and BK07

<b>Comment</b>	<p>I believe that the current Coronavirus pandemic has made the future very uncertain and that it would be best to wait to see how things turn out before committing to building more homes in what has been considered a prime commuter area due to its proximity to London.</p> <p>I suspect that more people are going to be able to work from home and that large offices in the city will no longer be needed. It is my belief that in future there will not be such a massive need for homes in the already crowded SE of England.</p>

<b>Comment</b>	<p>I accept the general opportunities and challenges of growth.</p> <p>However I strongly object to the consideration taht Tring is required to 'play a much greater role in delivering housing growth' within the borough, as such growth is proposed to be delivered by way of disproportionate Green Belt allocation.</p> <p>The vision for Tring seeks to have 'delivered a acomprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape and protected environbmental sites'. I strongly object to this on the basis that planned new neighbourhood cannot be justified through evidence, nor is it possible to restrospectively take account of the impact on its landscape and protected sites once development has commenced, due to the hard any erosion of land to the East of Tring would have on its Green Belt and AONB setting.</p>

<b>Comment</b>	The strategy of expanding Berkhamsted and particularly Tring is out of proportion and pays no regard to their status as small market towns with limited infrastructure and job opportunity. It can only lead to increased commuting to the surrounding metropolises of London, Milton Keynes, Luton and Watford contrary to climate change objectives and it would be achieved at the expense of our natural environment

<b>Comment</b>	<p>Specifically, I do not agree with ‘The Vision for Dacorum’s Places’ relating to Berkhamsted or Tring. The proposed growth is simply too much for the towns – with circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, it equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint, most of which is located in Green Belt. I am concerned that the 2013 Core Strategy vision of “maintaining the strong valley and linear character of the settlement” has been dropped from the new Local Plan. Where previously the Council asserted that “The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported” (and put this argument strongly to the Planning Inspector), DBC now promotes the land for removal from Green Belt and suggests that development can now be built “in a way that takes account of sensitive views and landscape”. I strongly disagree with this premise and believe the 2013 vision should be re-instated.</p> <p>I note and agree with BRAG’s analysis of the Government’s clear support for the protection of the Green Belt. This set of policies is completely contravened by DCB’s statements. The Government has made it clear the numbers are NOT</p>

targets and Green Belt should be afforded the highest protection, therefore I do not understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified” that the number of houses proposed is not sustainable. Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.

Why cannot Dacorum stand up for what is in the best interests of the residents of the Borough and their quality of life? What BRAG says about Hemel Hempstead is particularly worrying because it implies that DBC is losing an opportunity to regenerate and develop Hemel Hempstead while ruining the environs of Berkhamsted, and Tring by extensive building on the outskirts far from transport, schools, shops and services.

- Green Belt land should only be developed in exceptional circumstances and that case has not been made, especially as alternative Brownfield sites are available
- The calculation of the number of houses required to be built is flawed as out of date ONS figures have been used resulting in the amount of additional housing proposed being unnecessarily high
- Growth in housing should be accompanied by growth in employment to reduce unnecessary personal journeys to and from work/the railway station which could be better achieved by building new houses in Hemel Hempstead, rather than Berkhamsted and Tring, where there is a natural centre of local employment, infrastructure, transport hub, civic amenities etc
- Berkhamsted with proposed additional housing of 2200 has no capacity for increased local employment and the number of houses is out of proportion to its current size. The impact on local infrastructure will be significant especially the road systems, where the High Street and London Road are already very congested at peak times, especially during early morning and late afternoon.

<b>Comment</b>	<p>This consultation seems to be taking advantage of COVID disruption to push through highly controversial local developments. The consultation has been extremely poorly advertised and the inability to leave one's house makes any kind of organised objection far more difficult. The council seems to be taking advantage of the lockdown nature of local residents and at the very least should delay this consultation until all lockdown restrictions have been eased to ensure appropriate evaluation.</p> <p>The proposed number of houses to be built on green belt land seems totally disproportionate to the size of local communities.</p> <p>It was my understanding that under the UK government's housing development proposals greenbelt land was only to be considered under 'exceptional circumstance'. The council has done nothing to explain why the proposed developments have exceptional elements which justify them.</p> <p>The land chosen for the development especially BK01 seems to be based solely on maximising the value of housing stock built i.e. it is a developer-led profit maximising agenda rather than adequately considering other local stakeholders.</p>

<b>Comment</b>	<p>Sorry I was unable to complete my full submission via the requested portal as I couldn't find the correct sections to add my comments when I returned to the document after a break. I was only able to add comments to sections 3 and 4 so I am sending my remaining comments via email.</p> <p>In general I am unhappy by the whole process. We all would like a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Neutral and the environment and natural resources protected. However this draft Plan is about how many new homes can be built and where they should be located. The Council should have tried harder to reduce the new housing in Dacorum. The majority of new homes in Berkhamsted and Tring are purchased by rich people moving into the area rather than for existing Dacorum residents, who can't afford the inflated prices.</p>

<b>Comment</b>	<b>Climate Change Emergency</b>

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>I strongly disagree with the scale of the target for housing in Dacorum suggested by this Local Plan - a 25% growth (16,596 houses) in housing, yet there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses. I support the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing. This would make the most efficient use of brownfield land, local services, and would facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision suggests a totally disproportionate growth strategy for housing within Tring (55% growth). This fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements. I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements.</p> <p>Whilst I accept the aspirations of existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty. I object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.</p> <p>Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.</p> <p>I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.</p> <p>The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.</p>

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	For the attention of Council Members:

I have only this evening been made aware of a Draft Local Plan which relates to the building of many thousands of homes on hundreds of hectares of Green Belt land in Dacorum BC. I have never received or seen sight of the above Local Plan and I assume there may be many other such residents. How was the Plan distributed and/or publicised?

In addition, I understand that I have until 11.59pm today to make my voice heard before the consultation closes, a difficult task without sight of said Plan. I find it disingenuous of the Council to set a deadline for this consultation in such unprecedented times we find ourselves in, namely in the depth of a pandemic and substantial lockdown.

Instinctively, I oppose the destruction of our precious and beautiful Green Belt land which is so important, both physically and mentally, for the residents of the borough as well as vital for our beleaguered wildlife whose habitats are alarmingly becoming increasingly degraded or disappearing altogether!

I would urge the Council to give all local residents access to this Plan so that they can add their opinions to this important consultation, the outcome of which is of vital importance to us all.

Section (3)

Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be

in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core

Strategy vision statement. (4)

- Green Belt land should only be developed in exceptional circumstances and that case has not been made, especially as alternative Brownfield sites are available
- The calculation of the number of houses required to be built is flawed as out of date ONS figures have been used resulting in the amount of additional housing proposed being unnecessarily high
- Growth in housing should be accompanied by growth in employment to reduce unnecessary personal journeys to and from work/the railway station which could be better achieved by building new houses in Hemel Hempstead, rather than Berkhamsted and Tring, where there is a natural centre of local employment, infrastructure, transport hub, civic amenities etc
- Berkhamsted with proposed additional housing of 2200 has no capacity for increased local employment and the number of houses is out of proportion to its current size. The impact on local infrastructure will be significant especially the road systems, where the High Street and London Road are already very congested at peak times, especially during early morning and late afternoon.

<b>Comment</b>	<p>I am writing to express my responses to the request for feedback on the New Dacorum Local Plan Emerging Strategy as set out on the Dacorum planning development website. I have very limited time, and therefore am focussing my responses on three specific areas - Section 3, 4 and 5 of the plan.</p> <p>I oppose this strategy - as outlined below.</p> <p><b>Section (3) Borough Vision Do you think the overarching vision, the vision for Dacorum’s places and the strategic objectives are right for the Borough?</b></p> <p>My response:</p> <p>NO</p> <p>This plan as offered seems to offer few, if any improvements to the borough and will cause significant detriment to Berkhamsted. The proposed growth offers a 24% increase in dwellings and a 31% growth of the urban footprint mostly in sensitive ridge top locations in Green Belt - but offers no significant vision for the future employment, education, health or wellbeing of the town's residents.</p> <p>The vision to provide “significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town” sounds great. However, the policy suggestions do not fit in with this vision at all.</p> <p>I don't see how building lots of out of town homes on top of very steep hills fits in with that vision. Instead it will only serve to promote unsustainable high-carbon forms of travel rather than walking and cycling.</p>

Instead, the plan offers more traffic, more congestion, more pollution and more climate-damaging carbon emissions. It removes areas that have become and are becoming increasingly popular walking/rambling routes and the easy access to the wider countryside that has been so critical for the health and wellbeing of local residents during the pandemic.

The increased number of car movements within the expanded urban area will be circa 15,400 per day. Berkhamsted's roads are already hugely congested (in non pandemic times).

How can this be a futuristic, low-carbon vision for the town? It's a vision at odds with the current climate emergency. It's a vision that ignores Berkhamsted's current grave road infrastructure issues. It's a vision that pays callous disregard to the needs of existing residents. It is not a vision that promotes a sustainable, low-carbon future for our children and their children.

New developments need to be close to existing transport hubs. New developments need to make more use of existing brownfield sites, not expanded areas of greenfield sites. New developments should not encroach on dwindling areas of green belt alongside areas of natural beauty.

The plans are too extensive for a town of this size. The infrastructure would not support this and essential facilities such as a Hospital and Theatre have disappeared from the town with no hope of replacement.

Vital areas of Green Spaces and Green Belt would be lost forever and the character of the town would be destroyed.

Dacorum BC Draft Local Plan sets out a vision which is totally out of all proportion to the needs of the residents of the Borough. It is a vision based on a growth forecast which has no basis of reality, particularly following the Covid Pandemic. The housing targets are a fictitious number conjured from a centralised government dictat which has no bearing of the actual housing need of the Borough.

Housing needs would fall into three catagories 1. Socila Housing. 2. Starter Homes for first time buyers, and 3. Retirement Accomodation for the elderly.

The Local Plan fails to spcify specific targets in these three categories which means the Borough will be at the mercy of private house builders wanting to build for profit rather than social need.

The housing targets are likely to be fulfilled by building on Green Belt land which I am totally against. There is a significant amount of brownfield sites in and around Hemel Hempstead that the Council has allowed to stand idle for many years, the Lucas sites in Maylands Avenue fro example, and should be targeted.

The amount of land required to build the housing numbers will decimate the green belt and create environmental issue which don't exist today. This at a time when The UK Government has committed to new Climate change policies to protect the environment.

There appears to be no account being taken of the Covid crisis and the economic development fallout resulting from it. The Retail Sector is being fundamentally challenged and there is no doubt large swathes of retail properties will become redundant, we've already seen Debenhams close and many others will follow suit. In addition to this there are likely to be large numbers of office blocks becoming redundant with the upsurge in home working. Many of the units on Maylands Avenue will fall into this category. Surely a Plan stretching to 2038 should be taking these factors into account?

The roads in and around the Borough are too often bulging with traffic which is an issue in every main town and village in the Borough. Adding thousands of more houses will only worsen this for residents. This isn't solving a problem, it's creating new and adding to existing issues.

There is also an increasing issue with boundary developments with adjacent boroughs. Three Rivers District Council is targeting huge housing numbers right on the boundary with Kings Langley which will add greatly to the local issue. If further development is encouraged Kings Langley will be over-run. There should be a combined strategic Plan that works with Three Rivers and St Albans and Watford BCs.

Over-provision of housing is based on inaccurate and superseded data

I believe the council's vision is fundamentally flawed as it is based on out of date ONS data which has led to a significant over-estimate of Dacorum's housing needs.

The predicted levels of growth and hence, annual targets for associated housing development are too high.

Protecting Green Belt land & Conserving and Enhancing the Natural Environment

The plan should guarantee the protection of existing natural habitats. The plan has not given sufficient weight to these sections of guidance in the National Planning Policy Framework (NPPF) Berkhamsted & Tring Developments.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

Climate Emergency Issues

Dacorum Borough Council has declared a climate emergency and indicated that this should be a central pillar in any future plans for the borough. This local plan vision as published prioritises economic growth and greenfield land development over considerations for the

climate emergency. It has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

DBC overstates the housing need.

Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.

Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."

There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.

A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.

Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.

DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.

<b>Comment</b>	<p>In response to the draft local plan entitled ‘<i>Dacorum Local Plan 2020-2038 Emergency Strategy for Growth Consultation</i>’ I would like to register my objections as follows:</p> <p><b>1) Do you think the overarching vision and strategic objectives are right for the Borough?</b></p> <p>A properly thought through housing strategy should be at the forefront of any development proposals. I don’t believe that this is currently the case and hence my <u>objection to the plan</u>. We need the right type of houses in the right places for local residents. Developer lead housing will not be in the interests of the local residents, rather to the benefit of the developers. It is doubtful whether it will provide any social housing for those on the waiting list. Furthermore, building more houses within the London commuter belt will not reduce house prices for local people looking for their first home - rather attract more commuters moving out from London.</p>

<b>Comment</b>	<p>Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built</p>

in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This</p>

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>The development proposes to increase the size of Tring by 55% with inadequate consideration on appropriate infrastructure such as school places, childcare, doctors, parking, sports and recreation facilities and utilities. Furthermore, there has been a poor level of consideration for developing brownfield sites and a deliberate focus on developing green belt land such as Grove Fields, sandwiched as it is up against two beautiful swathes of biodiverse AONB. Where is the environmental and green rationale here?</p> <p>Proposed development across Dacorum displays similar contempt for environmental concerns and NPPF Planning Policy requiring green belt development take place only under exceptional circumstances. The proposed development has a deliberate focus on building over biodiverse AONB, green belt and ancient woodland. There is far too little consideration given to sustainability. In Berkhamsted as in Tring, infrastructure considerations are far too low. Already congested on road and rail, it seems completely implausible that Berkhamsted can cope with such an enormous population, traffic and utilities addition as the one proposed.</p> <p>The plan is incompetent, environmentally crass and will certainly result in a dramatic reduction in quality of life for the majority of Dacorum residents, both present and future. It seems inconceivable that a taxation funded project so many years in the making should have delivered so widely off the mark. But is anyone really listening?</p> <p>Please stop this road crash before it happens.</p>

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I would call for fewer houses to be built on green belt land and for the Local Plan to have the climate emergency fully integrated into its targets and objectives. I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan, as recommended by national planning guidance. This draft Local Plan fails to demonstrate a pathway to local zero carbon or enhancements to biodiversity. The plan is unambitious and does not commit to any level of sustainability in its sustainability targets. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. I have been a resident of this area since 1957, The proposed development at Long Marston of a new settlement of over 3000 homes is completely inappropriate for a number of reasons..

- 1 The area is a known flood plain & the new homes will be a significant risk of flooding unless very extensive flood risk mitigation risks are implemented. As a young teenager I use to visit the fields in the wet season to gather wild mushrooms growing in the wet environment.
- 2 The road infrastructure around the proposes site is already overloaded and without the construction of major new access roads with consequent environmental impact the site will be unsustainable because of the consequent traffic movements. Whilst fossil fuel cars can be expected to be reduced it is forecast that electric vehicles will take their place and these will need new infrastructure.
- 3 There is no reference to the impact on the nearby wildlife sites at Wilstone Reservoir and Startops Reservoir and the consequence of the resultant additional traffic and visitors

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	Dacorum has a large amount of land that is of high environmental quality, already subject to excessive pressure from the existing population. This high biodiversity interest together with the topography and the local landscape character of winding lanes that meander through much of the area clearly illustrates that the proposals in the draft plan display a lack of understanding of the adverse, irreversible impacts that would result if the proposals were to be implemented.

<b>Comment</b>	<p>I believe there are too many large houses planned in both Berkhamsted and Tring. Berkhamsted doesn't have the infrastructure to cope with the intended additional 2200 homes. There is no capacity for new road layouts. There is mention of additional cycle lanes. People living that far from the centre of the town will not cycle they will drive causing congestion in the narrow victorian roads.</p> <p>Parking in the centre of town is extremely difficult. Even with teh new multi-storey car park people look for free parking first.</p>

<b>Comment</b>	I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses)

population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I would call for fewer houses to be built on green belt land and for the Local Plan to have the climate emergency fully integrated into its targets and objectives. I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock, which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan, as recommended by national planning guidance. This draft Local Plan fails to demonstrate a pathway to local zero carbon or enhancements to biodiversity. The plan is unambitious and does not commit to any level of sustainability in its sustainability targets. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

There is a total conflict between the plan to provide a 25% increase in housing resulting in the loss of 2000 acres of green belt and the vision to enhance environmental sustainability with new green spaces. It is ludicrous to imagine both can be achieved. Any green spaces included in the planned developments will just be token gestures due to the density of development planned.

<b>Comment</b>	<p>The plan does not have a section for Northchurch which is a separate village and parish. Northchurch has been included as part of Berkhamsted.</p> <p>The plan will destroy the areas of green belt which separate Northchurch from Berkhamsted and preserve its separate rural identity. Northchurch will be merged into Berkhamsted. The purpose of these areas of green belt was specifically identified in DBC's Emerging Core Strategy of 2017.</p> <p>The population of Northchurch will be doubled and it will cease to be a rural village and lose its historic identity.</p> <p>The plan refers to Northchurch as an urban area. Note that HCC declined traffic calming measures for Northchurch High Street because it is a rural village.</p>

The plan is flawed because it is based on housing targets derived from the out of date housing projections (922) from 2014. The plan should be based on the newer 2018 projections which are far lower (430).

In discussions with other residents of Northchurch I have not met anyone who thinks the plan is right in any way.

The sites between Darrs Lane and Bell Lane and south of Shootersway are adjacent to the Chilterns AONB whose character will be affected.

I support the submissions of the Chiltern Countryside Group (CCG) and the Grove Fields Residents Association (GFRA) on this question.

Recognising that growth and change can be beneficial if approached in the most appropriate way for the individual location, I find the Local Plan fails to deliver both this and the DBC's vision statement ( p5 of the Summary). I find the LP contradictory in its identification and selection of large Green Belt sites for development and its vision for existing and future communities and the environment within the Borough.

This revised LP appears to have completely ignored the critical issues identified by CCG & others in 2017, in particular:

- setting figures which DBC identify (LP. 7.7) as 'ambitious' for perceived housing demand within the Borough; housing provision should be based upon need, rather than speculative demand
- release of Green Belt for development without substantive factual reasons demonstrating the 'exceptional circumstances' as required by the National Planning Policy Framework
- reliance on possible Government intentions, rather than statutory obligations. Indeed, the new LP continues to ignore recent strengthening in publicly announced Government policy (December 2020) on urban re-generation, particularly in the North & the Midlands and the need to protect Green Belt.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - as the main town of the Borough, which has greater existing and potential capacity to support such growth and requisite infrastructure, coupled with better connectivity. It is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth). DBC has failed to make proper robust assessment of brownfield sites within the boundaries for the existing settlements of Tring and Berkhamsted, which it is required to do by Government, before proposing release and development of Green Belt outside present urban perimeters.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring. I do not accept that any delivery and 'mitigation' of a 'comprehensively planned new neighbourhood to the East of the town' could ever 'take into account sensitive views, landscape and protected environmental land'. It is not possible to reconcile construction of an entirely new neighbourhood of 2000 plus houses, with associated schools, shops, roads etc... with the destruction of natural, green open spaces of high quality agricultural land designated as Green Belt and affording key settings for the AONB.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the

existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and well-being of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

It is accepted as essential for health, well-being and quality of life that green, open spaces are incorporated into the built environment. We welcome creation of these within the urban setting where they are most appropriate, rather than as replacement of existing high-quality green landscapes and publicly accessible countryside. The urban environment of Hemel Hempstead would benefit from these, whereas the smaller settlements of Berkhamsted, Tring and the villages would lose the quality of green countryside and access which they already enjoy.

The value of the Chilterns AONB and the Chilterns Beech Woods has not been adequately upheld in significance both to the Borough's residents and to the many visitors for whom they afford essential respite from urban living. The impact of Green Belt development upon the setting of the Chilterns AONB has been minimised.

I believe this Local Plan to be developer led. As such it not only fails to fulfil the vision of DBC but also fails to future-proof the intrinsic character and sustainability of the Borough for its present and future residents.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “ play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “ delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>I disagree with the proposed Vision and Strategic objectives because, despite warm words to the contrary, the proposals place economic growth above all other considerations. This is contrary to National Planning Policy Framework (NPPF) para. 8 which requires Local Plans to give equal weight to</p> <ul style="list-style-type: none"> <li>• economic growth including infrastructure,</li> <li>• social objectives including open spaces and a variety of community services, and</li> <li>• environmental objectives including protecting and enhancing the natural environment, improving biodiversity, minimising waste and pollution, and mitigating and adapting to climate change including moving to a low carbon</li> </ul> <p>The proposed Vision and Strategic objectives give short shrift in particular to the required environmental objectives. The new Local Plan for Dacorum must prioritise protection of the Green Belt, care of the environment, and addressing the Climate Emergency above all else.</p> <p>Dacorum is largely rural with a high quality natural environment and many areas of special designation. Page 19 of the consultation document confirms that 85% of the borough is rural, 60% is Green Belt, and one third of the countryside is within the Chilterns Area of Outstanding Natural Beauty (AONB). Additionally, much of the Chilterns Beechwoods Special Areas of Conservation (SAC) lie in Dacorum, as do three chalk rivers. These facts should form the foundation of any new Local Plan for the borough. The protection and stewardship of these environmental assets is essential.</p> <p>Para. 1.33 of the consultation document lists the key strategic planning matters considered by the Council. There is no mention of the Green Belt, the wider countryside, the environment, nor of the Climate Emergency.</p>

Instead, the proposals amount to a massive building programme. Taken together, the proposals would result in the loss of 850 hectares of green space of which 746 hectares are Green Belt. The result would mean huge areas of car-dependent urban sprawl, changing forever the character of the historic market towns of Berkhamsted and Tring. The Council attempts to justify this by claiming it must meet a central government housing target of 922 dwellings per annum derived from a flawed algorithm and out-dated housing projections. This is illogical and unsound. The Council must take into account the following:

- 1 The most recent 2018 ONS-based housing projections indicate that Dacorum's housing need is around 350 dwellings per annum. Applying the government's "standard method" for calculating housing need would still only produce a housing need figure of 536 dwellings per annum.
- 1 The Council states in its topic papers that 'windfall' housing delivery has averaged 306 dwellings per annum from 2006-2019, and over the past three years from 2017-2019 'windfall' housing delivery has averaged 322 dwellings per annum. Taking into account the impact of the pandemic and of recently expanded permitted development rights it is reasonable to assume further increases in office and retail conversions to residential use, and an even higher 'windfall' housing delivery rate. This rate of housing delivery makes development on Green Belt land unnecessary.
- 1 The NPPF makes clear (para. 11) that sustainable development means meeting housing needs unless policies in the NPPF that protect areas or assets of particular importance provide a strong reason for restricting the scale of development. The NPPF goes on to list the Green Belt, AONBs and SACs among such areas and assets.

Taking these points together, the Council is proposing to utilise out-dated data to justify over-development whilst ignoring the impact of the pandemic and permitted development rights on 'windfall' housing delivery. At the same time, the proposals fail to protect the Green Belt, the Chilterns AONB, the Chilterns Beechwoods SAC, the wider environment and fail to address the Climate Emergency.

<b>Comment</b>	<p>Over-Provision of housing based on inaccurate and superseded data</p> <p>The vision is based on outdated information and as such, exceeds the requirement of housing for the Borough.</p> <p>Climate Emergency Issues</p> <p>By using outdated information, the estimates for housing development are far too high and the use of greenfield land, has a major impact on the environment for the Borough. Put simply, too many houses (that aren't required) will destroy greenfield areas and the subsequent health benefits of such undeveloped lands that are integral to a town the size of Berkhamsted. It will also impact on wildlife in these natural habitats and increase the carbon footprint of the town in a time, when this should be a priority to reduce.</p>

<b>Comment</b>	<p><u><i>Vision for Dacorum's Places – Page 23/24</i></u></p> <p>We consider the vision for Dacorum in respect of strategic housing to be inappropriate considering the extent of housing need in the area and the housing delivery issues over the past few years. The vision severely limits development in smaller villages in the Rural Areas. These settlements are the least constrained in the Borough, being located wholly outside the London Metropolitan Green Belt and Chilterns AONB. Such designations wash over the majority of the local authority area but excludes a number of smaller villages.</p> <p>The current strategy will require the release of significant amounts of land from the Green Belt and this is evident in the allocated sites on the accompanying Proposed Policies Map. We therefore consider the stated vision to be a missed opportunity in delivering a greater proportion of development to the less constrained areas of the Borough.</p>

Whilst modest increases in housing and supporting services are inevitable, large scale developments all over the borough will significantly reduce the quality of life for many people who have not chosen to live in an even more congested part of the country. Improvements to the infrastructure of the town centre such as Hemel Hempstead, use of brown field sites and development of run down areas are to be encouraged and that is how towns naturally evolve. But to radically increase the population of semi rural areas by imposing out of character and densely built estates will have long term detrimental effects on the borough as a whole. Whilst there may be some "protected" villages in principle - these will still be hugely impacted by the increase in demand for services and the increase in traffic surrounding those villages - on an already congested road network.

<b>Comment</b>	<p>Introduction, Para. 1.30-1.38: Working with others.</p> <p>We support progress on the draft Local Plan and recognise the joint working that has been taking place between Dacorum and Three Rivers. It is important to consider and address the cross-boundary issues arising from growth in Dacorum and Three Rivers as both authorities progress their Local Plans; paragraph 1.33 recognises a number of these issues impacting the two authorities, including the potential for unmet housing need arising from Watford, requests from neighbouring authorities to deliver unmet needs, strategic transport issues (on A Roads and Motorways), infrastructure capacity and the need to protect the Chilterns AONB. In terms of meeting unmet needs, TRDC and DBC are in similar positions; Three Rivers is heavily constrained by Green Belt and has its own extremely high housing target to meet. As explained in a letter from TRDC dated May 2020, there is a very significant shortfall between the potential housing capacity of Three Rivers' previously developed land and the level of identified need and a clear deficit of land required to meet employment needs over the plan period, and therefore Three Rivers is unable to assist in accommodating any growth shortfall identified in Dacorum. It is however recognised that Dacorum is planning to meet its own objectively assessed need for housing and that St. Albans City and District Council can assist in providing 84,000sqm of office floorspace and 80,000 sqm of industrial floorspace towards DBC's employment needs. It is noted from ongoing duty to cooperate discussions that whilst the specific district-level floorspace figures identified in the Economic Study Update may not be met in individual authority areas, employment needs are expected to be met across the FEMA; it is important that the SW Herts authorities continue to discuss employment needs across the FEMA as the Councils' Local Plans progress and to regularly update calculations in light of any new employment commitments that may come forward.</p>

<b>Comment</b>	<p>The current vision and strategic objectives of the Local Plan, particularly the housing aspect and the concomitant impact on Green Belt land, are objectionable in their own right, but have become even more so due to the historic events of the past year, namely Brexit and Covid.</p> <p>The impact of both the pandemic and leaving the EU cannot be overstated in terms of how they change the use and requirements of our towns and villages and, more importantly, their open spaces. The long term impact of these two dramatic events on housing need (presumably much reduced due to the dramatic fall in immigration), demand for locally produced food (good in terms of reducing our reliability on imports and also on reducing our CO2 emissions), empty office space (which is unlikely to be required any time soon and so could be re-purposed for housing) and the desire for natural green open spaces, critically undermines the evidence base upon which the Plan has been devised. Whilst the Council is clearly keen to sign off the Local Plan and the Borough's residents are entitled to know what the future holds for their area in terms of development, surely events such as these, with the far-reaching effects they have already brought about, need to be included within the planning and may even enable difficult decisions (such as the allocation of Green Belt land to development) to be overturned.</p>

<b>Comment</b>	DBC overstates the housing need.

Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.

Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase

the number of homes they plan for to support local economic growth."

There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.

A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.

Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.

DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.

<b>Comment</b>	<p><b>Climate Change Emergency</b></p> <p>The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.</p> <p>The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.</p> <p>The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home</p>

electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>It would be a very good thing for the Borough if this vision could be achieved.</p> <p>However, to do this some policies will need major changes , such as allowing Tring in particular but all settlements to retain "their separate and distinctive identities" and the natural beauty of the Chilterns AONB to at least be preserved, even if the vision of enhancing the AONB proves impossible.</p> <p>DM27 is in keeping with the vision but meeting its requirements would rule out the 3 major Tring sites. In fact even a modest development in any of these areas would affect the setting of the AONB and ought to be refused planning permission under DM27 2 a), c) and f)</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to play a much greater role in delivering housing growth within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>Vision and strategic objectives are generally OK but the size and nature of delivery are unsupportable.</p> <p>We understand that there is a requirement across the land for new housing and believe Dacorum can take part in that. However, development must be in sustainable locations, be committed to high standards of design and contain significant provision of smaller and affordable housing - this area suffers from new housing being large 4 - 5 bed homes and expensive which is exactly what it doesn't need to promote sustainable growth and and keep the town alive.</p> <p>The requirement to make sure the character of the countryside is enhanced, admired and cherished is a good one but it appears to be at the cost of large swathes of Green Belt and particularly in Tring which seems to have a disproportionate allocation of development and disproportionately on Green Belt also affecting the Area of Outstanding Natural Beauty.</p> <p>The idea that you can deliver "a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites" is a complete nonsense because it's all Green Belt land and by definition will NOT be protected because it will be built on!</p>

<b>Comment</b>	<p>The vision seems contradictory and confused:</p> <ul style="list-style-type: none"> <li>• refers to same areas being Green Belt but implies urban eg Northchurch</li> <li>• policy on village protection and then ignores it in respect of Northchurch</li> <li>• DBC wants to build on Green Belt but intent on enabling more green space</li> <li>• provides a mitigation argument but then offers them out of area</li> </ul>

- recognises that Dacorum is characterised by its Green Belt but no evidence of liaising with its more highly developed neighbouring authorities to help
- ignores one of its own referenced reports that building plans do not need to be increased to support economic growth: South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), a study by G.L. Hearn and covers neighbouring councils such as Albans as well as Dacorum, page 5.

in February 2020 it was identified that there was a housing backlog with there being more than a million homes with planning permission that had not been built. DBC should reset their plans, leave green belt alone and resolve these issues first. The plan would benefit being over a far shorter period to allow the effects of Brexit and the current pandemic to bed down and to see if the 1+ million people who have left the UK return.

**Comments on the New Dacorum Local Plan 2020-2038**

Dacorum Borough Council (“DBC”) has invited its residents to submit comments on the New Dacorum Local Plan 2020-2038 (“the Local Plan”).

I am writing to say that I am very concerned about the proposals set out in the Local Plan, particularly the excessive housing development planned for North Hemel (Phase 1).

The amount of housing required seems to be completely out of proportion to local requirements and according to the countryside charity CPRE (Campaign to Protect Rural England) Hertfordshire the plan has been calculated on outdated data from 2014.

The continued concentration of house building in the South East also seems to be at odds with the current Government's expressed desire to "level up".

I have seen nothing in the Local Plan that convinces me that there are "exceptional circumstances" that justify building on green belt land and a nationally important area of natural beauty.

The River Gade is a chalk stream, a globally rare and vulnerable habitat. As the Herts and Middlesex Wildlife Trust says: "Chalk streams are the UK's equivalent to tropical rainforests. They support a huge variety of rare and vulnerable wildlife. Some of our most iconic and well-loved species like the Water Vole, Wild Brown Trout and Mayflies, depend solely on these rivers to survive in Hertfordshire."

The upper section of the High Gade Valley lies in the Chilterns Area of Outstanding Natural Beauty ("Chilterns AONB") and is protected. However, it is extremely important that the section of the Gade Valley, which lies between the Chilterns AONB and north Hemel Hempstead, is also protected for future generations.

DBC, itself, has identified this as an important local habitat to conserve and strengthen. The 2004 DBC paper "Landscape Character Assessment of the High Gade Valley", recommends the following policies (amongst others) in relation to this area:

- restrict further built development within the valley and develop a strategy for mitigating existing
- resist development that could lower the water table within river valleys and affect wetland
- promote the expansion of woodland ... and hedgerow

It seems that, not only is DBC now proposing to build 1,550 houses in this area, but it also plans to turn part of this beautiful habitat into a recycling and refuse depot.

The amount of new housing will put immense pressure on local infrastructure, especially water supply. Over-abstraction of water is a significant threat to chalk streams and the surrounding environment. As noted above, this risk factor was identified by DBC in 2004.

DBC is drafting an Infrastructure Development Plan to explain how the increased demand for water will be met and also how the other pressures on local infrastructure will be met. However, it seems that the answers are not currently available. It cannot be right that the Local Plan should be approved, without solutions to such fundamental issues having been identified.

George Eustice, the Environment Secretary has expressed Central Government's concern to "front-load ecological considerations in the planning development process". As, he said on 20 July 2020: "This Government's pledge is not only to stem the tide of loss, but to turn it around - to leave the environment in a better state than we found it."

I would like to see DBC do more to put this Government pledge into action and to protect our environment. An important step towards this would be to withdraw the proposed Local Plan for North Hemel.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses)

population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way

that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring. Furthermore, such extensive development on green belt land which borders the AONB will impact the habitats and wildlife which currently inhabit this area. One example being the butterfly habitats

located just inside the AONB beside TR2 and TR3. Building work and the traffic, noise and associated disruption alone could cause irreparable damage to these habitats before we take into account the significant encroachment that the new housing and businesses will make.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built

infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<p><b>Comment</b></p>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

<b>Comment</b>	<p>This is very disappointing and unimaginative, merely advocating 'more of the same' rather than setting out a NEW vision for the area. The so called 'overarching vision' is based purely on vast amounts of development with scant regard to effects of the development on existing settlements and residents and the effect on the character and setting of the Chilterns Area of Outstanding Natural Beauty.</p> <p>The Plan is unsuitable as it proposes excessive development with insufficient environmental safeguards. Little is said about mitigating the excessive loss of Green Belt land, how it will increase biodiversity and how it will meet National and Hertfordshire's goals for climate change.</p> <p>It fails to take into account the Government's reconsideration of housing numbers and the effect of Covid 19 on how people live and work.</p> <p>It is premature and unsound and is full of vague and meaningless statements such as 'as far as possible', 'take into account' etc. These mean nothing and merely shows little commitment to a robust protection of the countryside and the existing settlements and residents.</p>

<b>Comment</b>	<p>No I do not think the over-arching vision contained in the plan is the right for the Borough. I believe the plan severely over-estimates the number of houses required, as it is based on out of date ONS data, and as a result is planning to increase the size of these small towns to such an extent without giving enough thought to the impact of these developments on local infrastructure, environmental issues and on local residents.</p> <p>The plan does not protect the greenbelt areas surrounding the towns (especially Berkhamsted) and destroys existing natural habitats. Dacorum Borough Council has declared a climate emergency and indicated this should be a central pillar in any future plans of the borough - I do not see how removing significant areas of greenbelt land can be inline with this policy.</p> <p>The proposal in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these small historic market towns.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This</p>

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p><b>Climate Change Emergency</b></p> <p>The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.</p> <p>The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.</p> <p>The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.</p> <p>In addition to the Enviro-Tech aspirations in the plan we wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders &amp; installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.</p>

<b>Comment</b>	<p>Many of the objectives mentioned here are not carried through in the Plan.  A few points:  Re 2.2: Climate Change Strategy – very little of substance in the plan to address climate change.  Re 2.3: Housing Growth: Growth has been prioritised over numerous environmental obligations and considerations. The Plan places too much emphasis on aspirational growth strategies and partnerships which have not been subject to public consultation.  Re 2.23: “some development of greenfield sites, including sites within the Green Belt” is a massive understatement. About three quarters of the proposed new housing is in the Green Belt.  Re 2.24 – re market towns Berkhamsted and Tring: These cannot play such a major role as proposed in the Plan.  Re 2.24 – re protecting the character of the wider countryside ....:  This is definitely not being done in the Plan.</p>

<b>Comment</b>	I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.

This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.

The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

<b>Comment</b>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

<b>Comment</b>	I feel that the overarching vision is the right one for Dacorum, however the scale in which this is being proposed is far too big. Especially for a smaller market towns like Tring. Development of areas is of course necessary, but needs to be done sympathetically, both in terms of environmental aspects and protecting Green Belt, and in terms of keeping the feel and functionality of the town in terms of having the right number of people for its size and infrastructure.

<b>Comment</b>	Thank you for the opportunity to respond to this consultation.

Thank you for the opportunity to respond to this consultation.

Thank you for the opportunity to respond to this consultation.

We support the closer collaboration with the authorities in South West Hertfordshire and in particular the preparation of a Joint Strategic Plan. We also welcome a coordinated approach to growth and development with St. Albans City and District at Hemel Hempstead.

In terms of demographic projections, please note that the GLA uses alternative population and household projections that have consistent outputs for all local authorities in England. They are available on the London Datastore: <https://data.london.gov.uk/demography/population-and-household-projections/>

We continue to be open to exploring strategic collaboration opportunities across the Wider South East. The Borough is located within the Strategic Infrastructure Priority 'Midlands and West Coast Mainline (London – Luton – Bedford / Milton Keynes)' (see Policy SD3 and Figure 2.15). This has been endorsed by the Wider South East partnership, and the Council may wish to reflect on its strategic opportunities in the emerging Local Plan.

Please note that the new London Plan will be formally published on 2 March 2021. The latest information are available on our website: <https://www.london.gov.uk/what-we-do/planning/london-plan/new-london-plan/what-new-london-plan>.

<b>Comment</b>	<p>Hello my name is [XX]; I live in Tring and my address is [XX] and I would like the council to consider the following points as I object to the council vision plans:</p> <p>Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Sneutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in ‘exceptional circumstances’. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council’s proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>The following representations are submitted on behalf of the Stanbridge Family and Bloor Homes Ltd (who combined are referred to herein as “BHL”) who welcome the preparation of the Dacorum Borough Local Plan Review (LPR) and support the intention to positively plan for sustainable development and growth in the District over the plan period. The specific comments in relation to the Emerging Strategy for Growth (ESFG) reflect BHL’s land interests in the wider Hemel Garden Community area and the relevant matters highlighted in relation to the delivery of that significant opportunity as summarised below.</p> <p><b>CONTEXT AND BOROUGH VISION TO 2038</b></p> <p>BHL notes DBC’s recognition that the ongoing LPR “<i>gives us the chance to grasp opportunities and build for the future.</i>” Indeed, the positive approach taken to “<i>responding to, planning for, and managing change</i>” accords with both the central tenets of the National Planning Policy Framework (NPPF) and the Government’s intentions to accelerate the delivery of housing.</p> <p>The NPPF states that the purpose of the planning system is to contribute to the achievement of sustainable development, which has interdependent economic, social and environmental objectives (paragraphs 7 and 8). At the NPPF’s heart, therefore, is a presumption in favour of sustainable development (paragraph 10) that requires Local Plans to “<i>positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change</i>” (paragraph 11).</p> <p>In that context, BHL strongly supports the intention for DBC to meet as much of the Borough’s objectively assessed needs as possible (paragraph 1.37), which requires the Council to significantly increase the supply of land in the Borough. That being said, however, BHL questions the quantum of the Borough’s minimum objectively assessed needs, as outlined below.</p> <p>Furthermore, BHL supports the recognition by DBC that a step change in housing delivery is necessary, given that the proposed housing requirement is more than double the requirement within the previous Core Strategy. To achieve that, paragraph 4.4 sets out the strategy for guiding development at this level, which specifically “<i>focuses growth in and around the most sustainable settlements in the Borough, principally Hemel Hempstead, Berkhamsted and Tring through utilising urban land as well as through <u>extensions to each settlement.</u></i>”</p> <p>This broad approach to the spatial distribution of growth is supported by BHL and is underpinned by an evidence base that highlights the suitability of land to the north of Hemel Hempstead for large-scale development. As such, BHL supports the decision to “<i>release additional land from the Green Belt around Hemel Hempstead</i>”, both to meet the Borough’s</p>

development needs and to support the unique and transformational opportunity presented by the Hemel Garden Communities programme.

Furthermore, BHL supports the recognition by DBC that a step change in housing delivery is necessary, given that the proposed housing requirement is more than double the requirement within the previous Core Strategy. To achieve that, paragraph 4.4 sets out the strategy for guiding development at this level, which specifically “*focuses growth in and around the most sustainable settlements in the Borough, principally Hemel Hempstead, Berkhamsted and Tring through utilising urban land as well as through extensions to each settlement.*”

This broad approach to the spatial distribution of growth is supported by BHL and is underpinned by an evidence base that highlights the suitability of land to the north of Hemel Hempstead for large-scale development. As such, BHL supports the decision to “*release additional land from the Green Belt around Hemel Hempstead*”, both to meet the Borough’s development needs and to support the unique and transformational opportunity presented by the Hemel Garden Communities programme.

<b>Comment</b>	<p>I am writing to object to the local plan developments on the following grounds.</p> <p>I do not agree that 16,000 houses should be in the plan you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>This pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p> <p>The green belt land such as Rectory Farm helps protect the shape, size and character of towns and villages like Kings Langley and prevents them merging into one another.</p>

The plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

Your plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses.

We don't have enough water to supply all the extra houses. It is a fact that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

Please reconsider this local plan and do not decimate the beautiful villages we have here.

Borough Vision – The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected.

The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position, the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither

justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

<b>Yes / No</b> * Yes * No	No
<b>Comment</b>	<p><b>Absolutely Not.</b></p> <ul style="list-style-type: none"> <li>• <b>General</b></li> </ul> <p>The Water End and Upper Gade Valley Conservation Society is an organisation set up some 30 years ago by naturalist the late Gordon Beningfield to promote conservation in the Upper Gade Valley and which is a unique area of outstanding natural beauty.</p> <p>The proposed developments to the North West of Hemel Hempstead border the hamlet of Water End which is in the ANOB. The Society is therefore primarily concerned with the effect of this part of the development but it is concerned by the impact all the developments will have on this area.</p> <ul style="list-style-type: none"> <li>• <b>Use of Green Belt Land</b></li> </ul> <p>The Society objects most strongly to the widespread use of green belt land for building as is proposed in the Plan. Furthermore much of the development in the northwest of Hemel Hempstead and which borders the ANOB is arable farmland. This land has been farmed for generations and there is no way our community should be losing this agricultural input to the economy. There is on this land, a well established eco structure for both flora and fauna and which is linked to that in the neighbouring Upper Gade Valley. The wild life that is there now would have to move elsewhere. The taking out of this farm land would lead to greater transport movements of food and hence impact unfavourably on climate change.</p> <ul style="list-style-type: none"> <li>• <b>Transport &amp; Infrastructure</b></li> </ul> <p>The Plan inadequately assesses the impact of transport through the Upper Gade Valley resulting from the proposed developments. The B440 Road has been the subject of extensive studies over the years because of the volume of traffic it carries and its suitability for the modern day traffic. A weight restriction has recently been imposed on the bridge at Water End and that has had an impact on the volume of HGV's using it. The Society believes that this scale of development will lead to a much heavier use of this artery and which will have a significant impact on the sustainability of the AONB.</p>

Both the bridges in Water End are Grade II listed, a fact not considered by the planners. Most of the properties bordering the B440 in Water End are Grade 11 listed.

- **Natural Environment**

Running through the middle of the Valley to the North West of Hemel Hempstead is a river and a highway. They follow the natural features of the land

The River Gade is a natural chalk stream river of which there are relatively few in the whole of the UK. The Conservation Society believes it is essential that this part of our heritage is not damaged, yet alone lost. In our view the proposed developments will have a devastating effect on the Valley as a result of overuse, overextraction and pollution. One cannot bring in this number of persons permanently into such an area without a significant impact.

These proposals go directly against what eminent naturalists such as Sir David Attenborough are warning against. There has to be a balance between humans and nature and the impact of this Plan goes totally against it.

Paragraphs 2.1 and 2.2

DBLP recognise that these two paragraphs set out the fundamental conflict that the Plan has to address, in that a climate change emergency has been declared at the same time the Borough faces a requirement to accommodate 1,023 dwellings per annum as part of the Government's revisions to the Standard Method. Central to the climate emergency is the Council's Climate Change Strategy and DBLP recognise the role of the Local Plan plays in delivering the aims set out in that Strategy. In so doing, DBLP wish to ensure that the Council's focus on meeting its housing requirements are not sacrificed in order for Climate Change Strategy to be met. The Local Plan's Development Strategy offers a very real opportunity for sustainable patterns of development to be promoted, whilst meeting housing needs.

Paragraphs 2.3 to 2.5

DBLP support the recognition in these paragraphs that the Borough is delivering a significant step change in the overall housing growth. The the previous iteration of the Local Plan was proof finding for circa. 576 dwellings per annum whereas the Standard Method now requires 1,023 dwellings per annum. In addressing this need, DBLP equally welcome the Plan's recognition that high average house prices in the Borough has made the ability for people to buy market housing increasingly difficult.

Managing this chance – paragraphs 2.21 to 2.25

DBLP support the recognition that there is a need to accommodate growth in the Borough across the lifetime of the Plan, and in particular, there is a requirement to develop in the Green Belt. It is considered that there are exceptional circumstances (as required by paragraphs 136 to 138 of the Framework) to release land from the Green Belt for housing development and this will be explored later in this Statement.

Borough Vision to 2038

DBLP support the overarching Vision for the Borough as set out on Page 22 of the document. However, the Vision for housing development should be further reinforced by making reference (either in the first or second paragraphs) to meeting the requirements of the Standard Method, so it is beyond doubt that this Plan is making a positive statement and commitment to deliver the housing required as by Standard Method.

Turning to the Vision for Markyate on Page 24, there is a need to recognise that market housing will equally be provided in Markyate as well as affordable homes. It is recommended that the Vision is adjusted accordingly to make reference to both open market and affordable homes (first bullet point).

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses)

population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I would call for fewer houses to be built on green belt land and for the Local Plan to have the climate emergency fully integrated into its targets and objectives. I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan, as recommended by national planning guidance. This draft Local Plan fails to demonstrate a pathway to local zero carbon or enhancements to biodiversity. The plan is unambitious and does not commit to any level of sustainability in its sustainability targets. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	West Hertfordshire Hospitals NHS Trust supports the overarching vision, vision for Dacorum's places and the strategic objectives contained within the Emerging Strategy for Growth, including the promotion of healthy and sustainable communities which is consistent with paragraph 20 of the NPPF. Noting that the vision for Hemel Hempstead includes the provision of "new health care facilities and other community and residential uses on the regenerated hospital site", the Trust confirms its intention to continue to provide acute healthcare services from the Hemel Hempstead Hospital site as a fundamental part of its strategy for the future provision of acute services to the population of West Hertfordshire. The strategy also recognises that the redevelopment of the current site provides the opportunity to release surplus land, potentially for residential development.

<b>Comment</b>	DBC overstates the housing need.

Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.

Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."

There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.

A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.

Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.

DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.

Whereas the Borough needs to grow organically, this strategy or 'vision' seems to expect a more rapid growth in the Borough than has ever been seen before. It copies the same mistakes of the past of building to provide jobs for builders, profit for developers, taxes for the government and depletion of green spaces without much real consideration for the residents of the Borough.

This consultation has not considered the comments made in the past.

**Comment** The Local Plan needs to be updated after the unprecedented COVID19 pandemic. The Local Plan proposals put forward were written either before or during the first 10 months of the pandemic and now need to be reviewed in line with how our community has had to adapt. An updated Plan should then be put out to consultation which truly reflects what is required going forward. Asking the community to comment on a Plan which is clearly out of date and as I understand it, under Regulation 18 this is the only time that local residents will be allowed to have any say on their own environment.

I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to

build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring as well as over development in the town centre.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

Building in the centre of town would be a mistake and cause overcrowding and traffic chaos in our historic streets as well as increased pollution levels.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

1 The Plan Context & Challenges  
Consultation point VIS

No comment directly relating to sport & leisure matters.

### 1 Borough Vision to 2038

3.1 – 3.5 TSF consider the text of both plans to 2025 and 2050 to be admirable, but challenging. By working together with the various Local Authorities and other stakeholders on the Masterplan preparation for Tring, it believes that a better solution than that proposed here to obtain the themes mentioned in both plans, will be achieved. It should not be forgotten that over 15 years TSF have carried-out a number of surveys of the local population and have prepared various draft plans in conjunction for discussion purposes, so have a very real understanding of what will be acceptable to the residents in general and to organisations equally as intent as TSF to ensure that all future development is environmentally acceptable.

3.6 'The Vision for Dacorum's Places – Tring' promotes the sports/leisure facilities proposed to the 'east of the town.' Without going into the details here but later in the document, we believe that for many reasons the main sports hub area should be a combination of the two existing sports hubs, (i.e. The Pendley Sports Centre & the Tring Park Cricket Club/Tennis/Hockey Clubs area,) linking the two with further playing fields in the north of the proposed Dunsley Farm site. Should a 55% increase or similar in the number of new homes in Tring as currently planned be adopted, then it is accepted that further land will need to be allocated, but the importance of the existing sports clubs to Tring should be emphasised.

There are obvious reasons why the Tring Anglers (and the Tring Canoe Club) also need access to water, river or reservoir, with adequate parking provision.

Referring toTring matters only, we feel that too much lip-service is being paid to the major landowners. Many elements of the proposed Plan are poorly sited for the reasons given and others relating to the CAONB, as described by others.

<b>Comment</b>	<p>Reference the proposed Local Plan -</p> <p>I disagree with these proposals for the Local Plan and the housing numbers proposed.</p> <p>To build even more houses in Berkhamsted and especially along Shootersway and Kingshill Way will be disastrous!</p> <p>The local water supply to Berkhamsted is already on a knife edge with the existing number of dwellings - so how are you going to supply all this additional water for another 2,000 plus houses in Berkhamsted??</p> <p>These housing numbers in the Local Plan for Dacorum and therefore Berkhamsted are excessive and totally wrong.</p> <p>The impact on the infrastructure, increased pollution, increased congestion in Berkhamsted which is already gridlocked at peak traffic flow times and will therefore continue to give major road safety concerns.</p> <p>What consideration has been given to the impact on the local ecology and the well being of existing local residents - the plans would indicate that the answer is none .</p>

Therefore I totally disagree with the Dacorum Local Plan 2020 to 2038 and the Key Developments in Berkhamsted.

**Comment** The overall number of houses at 16,899 (para 7.7 table 2) is substantially in excess of ONS projections 2018. Whilst the MHCLG PPG Guidance requires the use of 2014 projections, it is profoundly disappointing that DBC does not appear to have robustly challenged this.

Policy SP 2. The housing requirement for Tring (at least 2,700) is grossly unfair being 16% of the total for DBC when Tring's population is less than 8% of Dacorum population. This seems to be developer led based on land available to east of Tring, but there is no meaningful assessment at all on the impact on, inter alia, resulting traffic congestion in Tring as a consequence of such growth with the number of cars likely to increase by around 5,000 (based on current car ownership levels), parking provision, the fact that Tring station car park is already full to capacity by 8 am (before Covid pandemic and likely again from end of 2021), parking problems even before this building at local attractions eg Tring reservoirs & Tring Park etc.

Section 1.30 "Working with Others" (Page 9)

This section notes the importance of cross-boundary matters. However there appears to be no reference to any discussion with Aylesbury Vale District Council or Buckinghamshire County Council, despite Tring being bounded on two sides by Buckinghamshire. This inevitably results in flawed elements in the Plan especially as regards employment/warehousing space. This is contrary to NPPF para 35c.

“Local Distinctiveness”

Whilst I agree the importance of local distinctiveness mentioned numerous times in the Plan e.g., page 22 “All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place”, I am very concerned that there is no clear vision or road-map of how this will be achieved, nor the extent to which local communities will be involved in developing this (as opposed to being kept out of the loop until plans are drawn up by consultants employed by DBC)

**Vision**

1 **The Emerging Strategy does not deliver its own vision**, in two key respects:

- The entire approach is antithetical to the stated aim that *“The natural beauty of the Chiltern Hills and the varied character of the countryside will have been enhanced”* (specific comments and evidence are set out below);

The principles (LP5.2) include inter alia *“Minimising and managing the requirement for development on Green Belt land / impact on AONB”*. There is no evidence that the Emerging Strategy attempts significantly to do this: there are only platitudes (see specific comments below).

<b>Comment</b>	<p>Proposed number of houses excessive for the Borough.</p> <p>Tring has less than 8% of the population of Dacorum, yet has been allocated more than 16% of the proposed new homes, most of which - nearly 80%, will have to be built on Green Belt land, adjacent to the Chilterns Area of Outstanding Natural Beauty.</p>

This proposal to increase Tring housing stock by over half, building on its beautiful green spaces, will have a devastating effect on Tring. Why was this option chosen, ahead of the other options, one of which was to distribute the proposed development evenly throughout the Borough?

<b>Comment</b>	<p>I think the number of homes planned is too many especially as there is a prodominant bias for using Green Belt Land. Communities are being over run and swamped with new housing without major improvements in the existing infrastucture to cope with the new residents or thought to old historical settlements. The total number of houses year on year is too high and does not address local housing needs for housing suitable for retired, both couples and single, single care leavers, those with Learning disabilities who need support, to mention just a few. I also think that any housing built should be as sustainable as possible, include solar, rain water harvesting and economic heating systems.</p> <p>While encouraging sustainable travel is a must, it should also be recognised that for many public transport will not work for many reasons. Any new developments need to have realistic parking so that it does not cause chaos both in the development and the surrounding area. Major modes of long range transport like the railway should have adequate parking and safe cycle storage. Tricks like providing a cycle park as pary of a development that is then scavenged back into the development as a dwelling once complete should not be granted, Cycle paths need to be fit for purpose and traffic slowed on our urban roads to 20mph to allow safe cycling and walking.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p>

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth

I recognise the need for more housing in the Borough but feel that the proposed developments in Tring which are my particular area of concern as I am a long term resident are far too large and would destroy the character of this lovely market town.

<b>Comment</b>	<p>I don't think the vision is right for the Borough and disagree with the strategy objectives. Building on Greenbelt Land goes against National Planning policy and statements by Ministers including the Prime Minister</p> <p>The current plans for expansion are far too severe with far too many houses planned. The infrastructure in the town doesn't support this growth.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate</p> <p>Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	The basis of the strategy is housing. For this, the document uses a planning algorithm provided by government in 2014 as a guide only, to be adapted by local circumstances. However this guidance was updated in 2018 and the government requires the plan to be based on the latest guidance. The government also states that this algorithm is to be developed

by the local authority to suit the local situations and protect any areas of greenbelt, AONB, SAC's etc. Presently the plan makes no attempt to do this.

The strategy should develop the area to the benefit of the local community and the environment whilst meeting government guidelines. If the strategy used the latest guidance and supported the local environment, it would be based on a housing provision at least half that proposed. This is such a vast difference as to make the strategy details as published based on the wrong premise, and therefore not accurate.

The council's starting point should be the housing need (which I understand is around 380 dba) and job opportunities to support this, which would be more in line with the current plan.

They also are expected by the government, and presumably the inspector and residents, to protect the environment, The work put into the plan so far should not influence the decision making process, so in my view the vision and the plan need revision, including strong arguments to protect the greenbelt, AONBs, SACs and the character of the area.

I strongly disagree with the scale of the target for housing in Dacorum suggested by this Local Plan - a 25% growth (16,596 houses) in housing, yet there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses. I support the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing. This would make the most efficient use of brownfield land, local services, and would facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision suggests a totally disproportionate growth strategy for housing within Tring (55% growth). This fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements. I strongly object to the proposal that Tring is required

to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements.

Whilst I accept the aspirations of existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty. I object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	I DO NOT think DBC's overarching vision and strategic objectives are right for the borough.  Just a general comment in that bearing in mind, the Government's method of calculating housing need has been discredited, the number of dwellings required within Dacorum should reduce, hence some sections within this document need re-writing for accuracy.

<b>Comment</b>	<b>Climate Change Emergency</b>  The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

**Overarching Vision: Environmental Sustainability**

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

**Overarching Vision: Economic Growth**

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

**1 General Comments**

Overall, SADC is generally supportive of the DBC Reg 18 Local Plan at this stage. The detailed comments provided below relate primarily to how SADC's Local Plan position is reflected. SADC hopes these are useful in preparing for the next stages in DBC's Local Plan development.

## 2 SADC Local Plan Update

SADC withdrew our submitted draft Local Plan on 23 November 2020 and has recently embarked on a new draft Local Plan. This is currently at very early stages in its production and no decisions have yet been taken on the content of the new draft Local Plan. Some of the evidence base is also being updated. We are seeking to move forward as quickly as reasonably possible with our new draft Local Plan. We look forward to working with you to assist DBC in accurately reflecting SADC's Local Plan position in your own Plan, as you update it, in due course.

<b>Comment</b>	<p>Personally I feel this proposal seems to disregard the need to minimise the impact on the 60% of Dacorum that is Greenbelt and the 33% which is AONB. There will be a negative impact on the environment, infrastructure, climate change and Bio Diversity, causing massive harm to the Green Belt and AONB.</p> <p>The scale of the proposed housing development is too much for the area to cope with, housing need should be based on the most relevant and recent data, which is currently the 2018 based Office for National Statistics (ONS) projections.</p> <p>The Council has based its calculations on the outdated 2014 data, resulting in a significant overestimation and bringing the plan into question.</p> <p>The proposals in the plan for the infrastructure and employment growth are not sufficient for the dwellings proposed.</p> <p>Commuter towns require transport to make journeys out of the town to travel for work, the present road and rail networks will not sustain such an increase in population.</p>

<b>Comment</b>	Too many new houses and too much town crowding. The town is overcrowded as it is. The kind of accompanying infrastructure required to solve the situation is greater than is being proposed and would in any case be too radical a transformation of a medium sized town nestling within the Chilterns.

Your vision states that "Berkhamsted will have grown and will...have delivered comprehensively planned new neighbourhoods to the south and southwest of the town in a way that takes account of sensitive views and landscape".

The growth that you are planning is grossly excessive, and takes far too little account of landscape, with its takeover of Green Belt areas causing very significant environmental harm. It takes insufficient account of the potential of brownfield sites. It disregards the impact that overcrowding the area will have on the lives of the people of Berkhamsted.

<b>Comment</b>	<p>All 'vision' statements are inevitably framed with positive language around well-meaning, if platitudinous, sentiments. The 'Overarching Vision for Dacorum's Growth by 2038' is no different with grand statements claiming improvements will be achieved relating to Environmental Sustainability, Economic Growth and Health and Wellbeing.</p> <p>However, much of the plan under consultation works directly against those aspirations, particularly for the two historic market towns of <b>Berkhamsted</b> and <b>Tring</b> and the area between Old Hemel, Piccots End and Potten End.</p>

<b>Comment</b>	<p>We strongly disagree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is obviously too much for the town. With circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, this equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt.</p> <p>We note that the 2013 Core Strategy vision of <i>"maintaining the strong valley and linear character of the settlement"</i> has now been emphatically dumped. Where previously the Council asserted that <i>"The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported"</i> (and put this</p>

argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built *“in a way that takes account of sensitive views and landscape”*.

The plan removes green belt areas that have become and are becoming increasingly popular walking/rambling routes and provide easy access to the wider countryside. Removing these areas will further increase the need to travel for recreational walking/hiking/running purposes. Over the pandemic residents have not flocked to the likes of Velvet Lawn to do laps of a sports’ field, but rather the immediate and wider countryside which is greatly valued by our residents. It’s loss will inevitably lead to an increase in mental health problems as evidenced by research. It has been found that green space protects against mood disorders, depression, neurotic behaviour, and stress-related issues.. The effect of green space is also dose-dependent, meaning those who have longer exposures to green space have greater mental health benefits.

We are conscious that the preparation of the Draft Plan by the Borough’s Officers has been a mammoth task over many years. We commend their work which has drafted a coherent Plan that updates the multiplicity of documents that comprise the Policies set out by the Adopted Core Strategy of 2013. However.

Much that follows in this response and our replies to the questions posed will be very much at odds with the Draft Plan’s intention that the Borough should meet the directive on the ‘target’ number of dwellings determined by the Ministry of Housing Communities and Local Government.

The subsequent comments serve to alight on the numbers designated [SP2] 16,596 dwellings (viz 922 pa) over the Plan period 2020 – 2038. We remain unconvinced that this number (nor the 1023 pa) should be adopted for the Plan Period

given that ONS projections based on 2018 data indicates the annual need is around 350 dwellings pa. Moreover, this contrasts with the current Adopted Plan (Core Strategy 2013 – 2036) that settled on 430 pa.

Starting from a premise that is suspect and therefore contentious, the overarching Vision is thus undermined or at least questionable; the prospective high build rate will adversely impact the principal urban centers and especially the unwarranted loss of swathes of Green Belt, including around Berkhamsted/Northchurch/Tring, that are designated in the Draft Local Plan as 'Growth Areas'.

Further discussion on the matter is set out in Q 7

This section relates to proposals set for Berkhamsted and Northchurch [considered in the Draft Local Plan as West Berkhamsted]: over the planned period 2200 dwellings are scheduled [SP2- 3b] of which around 500 are in Northchurch Parish and 1700 in Berkhamsted. This equates to a substantial increase in the number of dwellings in Berkhamsted/Northchurch of around 24% - over the 18-year Plan period and where most of the designated sites are currently in the Green Belt at some distance (3 – 4 km) from the town centre and station at the top of steep valley sides. We cannot see how new housing developments at this distance (and difference in elevation) from main services infrastructure can be considered as “sustainable”.

As recognised in Para 23.119 [Page 225] the Town experiences a high level of congestion:

The following paragraph says: “there are few opportunities for new road capacity in the town”. As a town set in a valley with only one main crossing the county’s engineers comment the traffic lights already operate at over capacity. This results in residents choosing to avoid the main roads in the town centre or travelling to shop elsewhere.

The Draft Plan continues:

The referenced ‘Berkhamsted and Tring Sustainable Transport Strategy’ [Para 23.122] is nothing of the sort, mapping as it does junction enhancements at relatively minor side roads and crossings within the urban area and new/widened footpaths along Shootersway. In the absence of a well- considered Strategic Transport Plan that addresses the critical issues, and its inclusion in the Infrastructure Development Plan, We do not support this Draft Plan to accommodate the Sites designated.

The last sentence is an aspiration without a foundation to support it: The Plan offers no substantive detail that necessary strategic infrastructure or sustainable transport options, to provide access to the town centre and station, from the proposed development sites, other than by car, have been planned for.

The referenced ‘Berkhamsted and Tring Sustainable Transport Strategy’ [Para 23.122] is nothing of the sort, mapping as it does junction enhancements at relatively minor side roads and crossings within the urban area and new/widened footpaths along Shootersway. In the absence of a well- considered Strategic Transport Plan that addresses the critical issues, and its inclusion in the Infrastructure Development Plan, We do not support this Draft Plan to accommodate the Sites designated.

<b>Comment</b>	Natural England advises that the Plan's vision and emerging development strategy should address impacts on and opportunities for the natural environment and set out the environmental ambition for the plan area. The plan should take a strategic approach to the protection and enhancement of the natural environment, including providing a net gain for biodiversity, considering opportunities to enhance and improve connectivity. Where relevant there should be linkages with the Biodiversity Action Plan, Local Nature Partnership, Area of Outstanding Natural Beauty Management Plans, Rightsof Way Improvement Plans and Green Infrastructure Strategies, Nature Recovery Network.

**Comment**

My thanks go to the officers and many others who have contributed to the Draft Local Plan. It constitutes a massive body of work covering very many diverse areas and aims to bring together many competing and conflicting priorities at a time of great upheaval in the way we live due to the pandemic; the future of our London-based financial services industry, international trading relationships and manufacturing capacity due to Brexit. Regenerating, building and sustaining our communities for the future, whilst mindful of the climate emergency we face, is paramount.

The number of houses the borough is required to deliver per annum under the current methodology (whether it be the 922 stated in the Draft Local Plan or the adjusted figure of 1023 announced on 16 December 2020) is far in excess of that needed to meet our local housing need (355). The most recent figure from MHCLG gives 1023 dwellings per annum as a minimum for the borough and bases its algorithm on 2014 ONS population data. The Borough should use the most recent data available for the plan process, ie the 2018 ONS population data.

The Plan takes no account of government policy to 'level up' across the country and for the reuse of city and town retail and office space following the pandemic. These factors should lead to the Borough having a lower housing figure.

The key demand for housing in the borough is for social housing and housing suitable to accommodate the predicted 60% increase in the over

65-year-old age group. The Plan allows for social housing build at around 70 dwellings per annum. This falls far below the required number, estimated to at 611pa. The number of people currently on the housing register is around 7000.

The calculated Urban Capacity of the Borough (TRL Interim Sustainability Appraisal Report Nov 2020) equates to a level of development of about 600 dwellings per annum or 10,440 dwellings over the plan period. When other commitments and a windfall allowance is made for the rural area outside of the six main settlements, the total capacity is 10,954. This would meet our local need as determined by 2018 population figures. But even if it is necessary to achieve the higher figures set by the government's algorithms, this could be done using the Urban Capacity and by developing a far smaller proportion of Green Belt than the estimated 850 ha currently proposed. The plan does not demonstrate 'exceptional circumstances' for the release of Green Belt.

In proposing the release of so much Green Belt land, the Plan fails to meet two of the borough's key strategic objects: mitigating and adapting to climate change; and conserving and protecting the natural environment.

The projected increases in the number of new homes in Berkhamsted and Tring during the plan-period leave both historic market towns overwhelmed and short of vital infrastructure. There is a huge risk of damaging the historic context of the towns and their respective settings, irrevocably.

The huge 212 ha HH01 site north of Hemel Hempstead also damages the setting of the Area of Outstanding Natural Beauty on both sides of the Gade valley whilst releasing a large amount of Green Belt land for 1550 homes and therefore yielding a low density of housing (7dph). This contrasts with the adjoining site, HH02, which will deliver over 4000 homes across the 161 ha site (25dph). The site, HH01, could be significantly reduced in size and still accommodate the homes proposed in the Plan; more clearly merge with and relate to HH02 in terms of density of housing, and reduce the burden on the Green Belt.

The smaller villages with shops and schools are more sustainable than the Plan allows for and could be further developed to allow for organic growth. The Plan is limiting for villages and threatens the viability of local shops and schools, with the latter populated by children being driven out from the towns to fill places.

The Plan makes clear the shortfalls in employment land across the Borough. There are longer term plans to bring land forward in conjunction with St Albans District Council at Maylands but opportunities in Tring and Berkhamsted are limited and constrained by the Green Belt. Changes to working patterns and the location of jobs previously based in London, will affect those areas the Borough that have historically had a commuter population. Planning for employment need to go hand in hand with planning for homes.

Housing densities vary significantly across the Borough and within settlements. Hemel Hempstead sites such as HH2, HH22 have a density of 20 dph; whereas Bk01 has a proposed density of 28 dph and similarly Tr02 has a proposed density of 27 dph and Tr03, East of Tring, has a housing density of 13 dph. To avoid excessive Green Belt releases, these figures should be tested thoroughly. For example: in the case of Bk10, Hanburys, the stated number of homes is 40, whereas planning permission has already been granted for over 120 homes.

<b>Comment</b>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

<b>Comment</b>	No definitely I do not think they are right. An increase of 25% in housing is far too much for the borough. Your objectives will mean a huge loss of green belt and open spaces. Completely changing what is now a pleasant place to live into an overcrowded under provisioned sprawl.

Comment	The Local Plan's 922 houses a year is beyond the 355 houses a year the latest Office of National Statistics identifies as Dacorum's Housing need. The plan is not, therefore, based on evidence. Also, too few of the houses proposed will provide the social or truly affordable houses needed to meet the needs of the 7,000 people on Dacorum's housing list.

Comment	<p>I am sorry, but no, I do not.</p> <p>The vision for these numbers cannot be realised without irrevocable damage to the Borough's residents' health, wellbeing and cohesion, through permanent loss of greenbelt, an overwhelming increase in population, depletion of natural resources, and a failure to reduce Dacorum's demand for CO2-producing goods, consumables and services – simply as a product of increased population.</p> <p>While the core objectives are correct, I think that in re-directing the Plan, these need to be put into a purposeful structure of priority, as some objectives clearly constrain others.</p> <p>There are EIGHT Core Objectives, given equal status, but I argue first that these are not objectives (not least since they are not quantified or specified), rather they seem to be “values”.</p> <p>Second, I argue these values would be better expressed in service to residents of the Borough. When expressed – or argued – as a primary objective (supporting health, wellbeing and cohesion) plus three constraining/shaping objectives, and a set of four “balanced” factors, these would, more clearly and usefully, set out the proper rationale of the ESfG as the Emerging Strategy for <b>Community</b> Growth (ESfCG).</p>

Community health, wellbeing and cohesion (1) must be paramount. 150,000 people who know Dacorum and call it home. 120,000 people, only a fraction of whom have been reached by this consultation. 30,000 children who will become adults during the period covered. 7,000 people are on the Housing Register, many need to work locally, and all should be supported to feel involved and proud of their neighbourhoods and Borough.

We face a Climate Emergency (2) and as the plan says, we must “conserve the natural environment” (3) – these are clear, unavoidable constraints on growth, with consequences if they are ignored. We know we do not have enough groundwater, so the early years must be particularly constrained by this factor. The ESfG glosses over this point presently, with no clear action plan, making the whole Strategy inert. We need “sustainable transport and connectivity” (4), to address the Climate Emergency.

The remaining objectives are thus constrained; inevitably these factors will compete with each other, within the envelope set by my primary objectives, and must be managed in balance:

We clearly choose to have an “attractive and valued built and historic environment” (5), and this must be, can be, in equilibrium with an “an economy which is distinctive, providing opportunities for residents to work and build thriving businesses in the Borough” (6).

“Delivering Dacorum’s future with homes for everyone” (7) is particularly constrained by the context of values/objectives (1) (2) (3) and (4), and must reference the generational opportunity to address the pressing need for social housing as a development priority.

I accept that a part of the function of housing development has previously been to help **fund** infrastructure (8), but this too must be planned in the context of values/objectives (1) (2) (3) and (4).

THE 922/1023 NUMBERS ARE NONSENSE AND ARE TOO UNCERTAIN FOR THIS PLAN TO BE CO-PRODUCED BY RESIDENTS

Government is committed to an increase in homebuilding and has set out a series of confusing formulae for allocating targets.

In an attempt to make housing more affordable across the Country, Government set a target of building 300,000 new homes per year. Other parties also used this figure at the 2019 General Election. The Johnson Government has envisaged that this be achieved through setting local housing targets at a national level, using the ‘standard method’. The standard method is an algorithm which increases the housing target above Office For National Statistics (‘ONS’) projections for areas where the housing is unaffordable.

This approach assumes that increasing housing stock above housing demand will result in a reduction in house prices. Whilst this may appear to be an economics-literate approach, it inevitably results in increased housing target figures for areas in the London commuter belt and in the South of the country as a whole, because of the huge reservoir of buying-power able to be tapped by moving out of London. London is not great value for a large proportion of people working and living there, and so it is a well-trodden path to move out of London into commuter belt towns when you want to buy a home, or start a family.

On the face of it, the growth trajectory percentages are dramatic and challenging for place-makers to manage.

Much of the work done on the local plan was carried out before COVID-19 and the consideration of changes in lifestyle as a result of the pandemic and arising from it have not been included in arriving at this plan for how Dacorum will grow and change over the next 18 years. This is a major flaw in the plan, and it is vital that this is rectified.

The Emerging Local Plan provides paradoxically for too many homes overall, and insufficient social housing. The number of homes calculated by the Standard method has changed during the course of the consultation,

Initially, the Standard method that required a 2.6 fold increase in our housing numbers from the Objectively Assessed projections from the ONS 2018. This meant that our projection of 355 dwellings per year was increased to 922. The algorithm which caused this unrealistic uplift was widely criticized and has been abandoned.

While it is positive that the original algorithm for the Standard Method has been readopted, which limits the increase to 1.4 times the ONS figure, it is not clear why out of date figures (2014) from the ONS are required to be used, when there are more recent projections 2018. The result of this is that our housing target figure has increased to 1023, and this is both completely out of step with the actual need for new homes in Dacorum, AND a target so large that it risks large amounts of countryside, the amalgamation of our distinct settlements and fundamentally flies in the face of national climate change commitments.

Even leaving aside the nonsensical use of 2014 figures when 2018 figures are available, there seems to be a conflict between “objectively-assessed need” (which is itself confused between the assessment of affordable housing need, the unique characteristics of Dacorum and the NPPF disposition towards growth) and local sustainable capacity and place-making.

We know that there is a Climate Emergency; our planet is heating up, weather is becoming more extreme, populations are growing (increasingly this is because lives are longer and we must manage the cost of typically much longer periods of retirement). We see the uncertain implications of the Covid pandemic, artificial intelligence and the psychological implications of online communications.

As a Councillor at Dacorum I recognise that there will be conflicting priorities among residents. We may have lived here all our lives and remember how things were, or plan to live here for the next 18 years during which this plan is delivered, perhaps even longer, for the remainder of our lives!

We may have even more children of Hemel parents, themselves struggling to afford to live in Dacorum.

We may have had opportunities and capital gains from rising property values.

We know that there are 7,000 people on the Housing Register, who are in need of housing.

We may have pride and affection or ambition for our town or village to either continue being something, or to develop (whether or not development needs to result in growth).

We have work to do, to improve Dacorum, to respond to the Climate Emergency and to use our collective contribution to the UK economy to improve our health, our wellbeing and our sense of being part of a cohesive community, at each level, street, neighbourhood, district, County, Region, Country, and on this one planet we have to share with all living things, for our own self-interest.

In line with the structured objectives/values (as described above) the ESfG must challenge MHCLG numbers which use 2014 Office of National Statistics data on housing need, rather than the more recent 2018 ONS data.

If the Local Plan truly is driven by evidence of housing 'need', why does the ESfG not already establish a higher percentage requirement for "Affordable" housing and quantify an action plan to significantly increase the numbers of homes available at Social Rent levels? This aspect of housing cannot be left to a market mechanism where the developer funds social housing. Alongside other sources of funding, Dacorum must itself invest, both for a financial return and to house local people.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p>

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment** The Plan undeniably has some very positive intensions and aspirations. The issue is one of trust – will the Council stick to the Plan in the face of pressure from greedy developers and demands from central Government’s knee-jerk policy making? Such trust has to be earned and the Council’s acceptance of absurdly high housing targets is not a good start.

<b>Comment</b>	<p>Over-provision of housing based on inaccurate and superseded data - this dates from 2014 and not the most upto date date in 2018.</p> <p>I believe the council's vision is flawed as it is based on out of date ONS data which has led to a significant over-estimate of Dacorum's housing needs. Please see my comments for Question 7. Put simply, the predicted levels of growth and hence yearly targets for associated housing development are too high.</p> <p>Borough Vision – The Council's Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon Neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. This is an increase of 492dpa or 114% over the 2013 Core Strategy, the current plan. They have assessed how many homes can be built in urban areas-10,954 and asked landowners and developers where the rest can go. The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of</p>

Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.

#### Climate Emergency Issues

Dacorum Borough Council has declared a climate emergency and indicated that this should be a central pillar in any future plans for the borough. This local plan vision as published prioritises economic growth and greenfield land development over considerations for the climate emergency. It has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

#### Protecting Green Belt land & Conserving and enhancing the natural environment

The plan should guarantee the protection of existing natural habitats, the plan has not given sufficient weight to these sections of guidance in the National Planning Policy Framework (NPPF) Berkhamsted & Tring Developments

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

In regards to Berkhamsted, and the proposal to build 2,236 houses over the next 18 years , this will increase the population of the town in the region of 30%. This figure is ridiculous and I do not think has been thought through, bearing in mind the current demand on the town infrastructure and access into the town. By increasing the population by this amount the towns services, schools and infrastructure will not be able to cope with this amount of growth and in reality it will ruin the town.

DBC should retain the Core Strategy Settlement Hierarchy as the revamped one fails to protect the historic character and setting of Berkhamsted by facilitating a 24% increase in dwellings and 31% increase in urban footprint through the release of Green Belt.

<b>Yes / No</b> * Yes * No	No
<b>Comment</b>	Notwithstanding the joint representation from the Town & Parish Councils on the fundamental flaw in the Local plan in that the housing need is not supported with the latest information and there should be no development in the Green Belt, there are issues specific to Markyate where the vision fails.  There is nothing to envisage meeting the needs of older people in the village.

The Plan may suggest it will maintain commercial enterprise and employment opportunities in the village, but this is not met with anything in the vision.

The plan identifies the risk of flooding in the proposals for Markyate, but ignores the protection which should be there as the land is in the Green belt.

The vision of convenient access between jobs, homes and facilities, minimising the impact of traffic and reducing the overall need to travel by car does not include any vision of how to achieve this for Markyate. Nowhere does the A5/A5183 appear as major route, yet Markyate straddles it.

While sharing the planning process with other Hertfordshire regions, no liaison with Mid Bedfordshire or Luton Borough Councils is recorded yet these are the immediate neighbours to Markyate and will need to help to deliver any vision of improving passenger transport to be reliable, integrated and accessible.

While professing to a vision of conserving and enhancing the landscape and scenic beauty of the Countryside and the Chilterns Area of Outstanding Natural Beauty this would seem to be of less concern than targeting growth. The vision of promoting the distinctiveness of each of Dacorum's towns and villages does not take account of development under the previous plan and the impact that has already happened. This includes the adverse impact on the character of Markyate and on the increase in carbon emissions locally.

The vision of enabling the Delivery of Infrastructure is not supported within the Plan; certainly Markyate has no infrastructure in place to meet any further development.

Whilst the visions are laudable for the borough, towns and villages, the expectations of their delivery are woefully inept. The Plan is based upon Sustainable Development which I support; so how is this to be delivered?

Regarding the Natural Environment, 2.19 recognises the combined effects of climate change, population growth and development needs will increase pressure on the natural environment. Dacorum has a particularly sensitive environment in Dacorum, (including the Chilterns

AONB) and the presence of the Chilterns Beechwoods SAC, and other hills, river valleys such as the Gade, Bulbourne and Chess. The plan states the impacts of growth will be reduced

through:

the prudent use of natural resources; encouraging renewable energy production; the effective recycling of waste; the sustainable design of new development; careful land management.

The issue is how can these be achieved, and what evidence is presented that it can?

In terms of landscape and biodiversity, land management is fundamental but a local plan cannot control this - it is not development. Nothing else in the plan supports the means to achieve this despite the outcome claims of growth and consequently this environmental element of SD cannot be delivered, at least not without further evidence or strategies to enable this. Nowhere is the role of farming, local food production, markets and support for these mentioned, yet it is farming which has shaped the natural environment, affected it but is also required to restore it and underpin its proper stewardship. This is a wholly 'urbancentric' vision of the environment which fails to recognise, let alone understand, let alone support, these important relationships. This element is wholly missing from the plan; consequently, SD cannot be achieved under the auspices of this plan.

Tring is proposed to be maintained as a Market Town, but the proposals are to build on its bespoke Market Site! Development that 'takes account protected environmental sites' is achieved by building on one! A 55% increase in a town surrounded by national and internationally valuable and fragile ecological sites already suffering from disturbance and damage by visitor pressure is wholly unsustainable without any evidence that these issues can be addressed. Claims to protect and enhance Dacorum's biological diversity are unsubstantiated; delivery of net gain is predicated on development, and required management capacities thus far ignored by the plan; it is therefore unachievable.

How is the landscape and scenic beauty of the AONB to be conserved and enhanced? No evidence.

<b>Comment</b>	Generally, okay.

Some elements (e.g. increasing growth) seem stuck in the 20th Century. Theme 2 in particular is not clear on how a 'vibrant economy' is measured. This was obviously very different in the 20th century and we need to use Doughnut Economics if we are to thrive in the 21st. We cannot improve on our social foundation without paying attention to the ecological ceiling and with more than 60% of the Borough being rural land, there is massive (apparently being missed) to integrate the Country into (what appears to be exclusively) Town planning.

Dacorum does not need additional housing. Desire for people to live in an area is not the same as a need for housing. Green Belt should not be sacrificed for the housing or employment development. The investment should be made strategically in areas where it is desperately required to boost economies and employment, and the housing that would accompany it, the deprived areas of the country. Increasing housing and everything that goes with it will simply continue to increase housing costs in Dacorum as employment and new housing attract ever increasing demand from more deprived areas. It simply exaggerates the differentials between wealthy boroughs like Dacorum and poor, deprived areas of the country, effectively worsening poverty overall whilst destroying Green Belt.

The vision is flawed. Development should be constrained within urban parts of the borough. The investment in a perceived housing need should be invested where it is needed to even up opportunity, wealth and infrastructure throughout the country.

<b>Comment</b>	The balance of the location of new development across decorum is skewed. Far too much greenbelt land would be given up. Developer preference for locations seem to dominate over what is actually required in each location. The existing individual character of smaller towns look to have been sacrificed to this end. Even if this was put aside, the plans to mitigate the impact on areas suggested for major development, for example better transport links, schooling and other infrastructure appear merely aspiration and and lack any detail.

<b>Comment</b>	<p>At least 2,200 new homes in Berkhamsted is a massive over-estimation of the town's needs. To have an influx of around 8,000 people when we have a population of 20,000 is irresponsible. I have a huge concern from an environmental position with the plans to build on Greenbelt land on the outskirts of the town.</p>

I believe the council's vision is based on out of date ONS data, which leads to a significant over-estimation of Dacorum's housing needs.

Protection of Greenbelt and conserving the natural environment should be guaranteed by the council; I don't believe enough considerations have been given to this sections.

**Climate Change Emergency**

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas ("GHG") emissions.

**Overarching Vision: Environmental Sustainability**

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

### **Overarching Vision: Economic Growth**

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

### **Berkhamsted & Tring Developments**

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>I fail to see why we need such extensive development. Ten years ago Tring and Berkhamsted were designated to remain as discreet market towns. In Bucks and Beds there are thousands of new houses being built within a 15 minute drive of Herts. The proposed housing numbers for Dacorum are too high. They cannot be accounted for by natural growth. Dacorum will be housing residents from London, who will then have to commute back into London.</p> <p>The speed at which this expansion is laid out is too fast. I cannot imagine that the maximum number of houses being completed will be in 2027. Will all the necessary regulation be adhered to?</p> <p>This sudden expansion is taking place at the same time as the Green Agenda is at last taking shape. I hope all these new houses are not built with poor insulation, gas central heating and cooking, and no electric car charging points just before we should be moving to a new era.</p> <p>How can we be sure that the proposals will be adhered to? SP5 states that employment sites are at critically low levels. The development at LA5 included an extension of the industrial site on Icknield Way – but now, as the houses are being delivered, they have changed the plan and instead of industrial premises, another 50 houses will be built. Where will these people work?</p> <p>It is stated in the overarching vision on page 22 that the impact of growth of the Chilterns Beechwoods Special Area of Conservation will have been effectively mitigated, but I couldn't find the detail of this.</p>

<b>Comment</b>	<p>The overarching vision and strategic objectives can not be met unless the major challenge set out in para 2.3 of the draft plan to deliver, 'a step change in the level of housing growth is achieved. In our view the plan fails to meet this challenge. Failure to meet the objective whilst an issue in its own terms for housing delivery also has implications for the overall vision for the District. In particular the re-generation of the local economy and other economic objectives will be compromised unless housing needs are met particularly given an aging working population.</p> <p>However the objective set out in para 2.24 of the emerging strategy to ensure, 'The important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough ' is supported and our representations identify opportunities to assist that objective.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to play a much greater role in delivering housing growth within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p>

I strongly object to your claim that your vision of Tring has delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>Climate Change Emergency</p> <p>The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.</p> <p>The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas ("GHG") emissions.</p> <p>Overarching Vision: Environmental Sustainability</p> <p>The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.</p> <p>Overarching Vision: Economic Growth</p>

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

**Berkhamsted & Tring Developments**

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but I believe that 'affordable' needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	The overarching vision does not comment sufficiently how the provision of new sport facilities will integrate with existing sporting facilities. The sports clubs in Tring favour increased sport provision on land contiguous with existing facilities. This approach would lead to efficient use of common facilities, such as club houses and changing facilities as well an economy of scale in supporting infrastructure needs such as car parking, foot and cycle paths.

<b>Comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhams Hempstead in the next 18 years.</p> <p>This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and a outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falli and the decline in immigration following Brexit will no doubt continue to decrease this projection.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pr water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastru requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.</p> <p>The high levels of air pollution and the continuing lack of clean drinking water in this area have not been considered with increased breathing related illn etc, this area needs conservation not concrete.</p> <p>The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the exis and infrastructure.</p>

<b>Comment</b>	I think that Berkhamsted is already bigger than the local employment market can sustain. Any increase would just be more commuters. The areas proposed are not within walking distance of town,, and the hills make cycling impracticable. Indeed i have only ever seen 1 person cycle to town from the Hall-Park estate area.

<b>Comment</b>	I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16.596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Daoorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemet Hempstead- a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemet Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged. however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area or Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose or seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead or such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Heme! Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth {2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Heme! Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of

seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhams Hempstead in the next 18 years.

This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and a outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falli and the decline in immigration following Brexit will no doubt continue to decrease this projection.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pr water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastru requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.

The high levels of air pollution and the continuing lack of clean drinking water in this area have not been considered with increased breathing related illn etc, this area needs conservation not concrete.

The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the exis and infrastructure.

<b>Comment</b>	While agreeing with the principles behind the vision, serious concerns remain regarding it's implementation. Although some regeneration would be beneficial the massive growth proposed in Tring will overwhelm its historic character and is contrary to the vision of the plan that all settlements will have retained their separate and distinct identities. Despite a commitment to enhancing the natural beauty of the Chiltern Hills there are no proposals in this plan to achieve this. Whilst mitigation of harm to the natural beauty of the AONB is required under DM27 and considered necessary for the Tring allocations no evidence has been provided as to how this could possibly be achieved given the elevated nature of the AONB i.e overlooking them

<b>Comment</b>	A 9% population increase forecast for the Dacorum area by 2038 does not justify a 25% increase in housing (over 16,596 homes) as proposed for the Borough. A 9% increase can be met through development of brownfield sites in areas with existing capacity in education and health services and where there is a frequently served rail connection.

The claim made in 'Overarching Vision' - 'Environmental Sustainability' that 'The countryside will have been actively managed and enjoyed and will have continued to support a healthy local economy and diversity of wildlife' directly conflicts with the use of Green Belt land for housing, especially on the proposed scale. A perceived need to accommodate a 9% population growth does not present the 'exceptional circumstances' required for development of Green Belt for housing or the encroachment on Areas of Outstanding Natural Beauty.

The plans propose 2,700 new houses for Tring which represents a 55% increase on existing housing in this small market town. It is a far larger increase of housing than in other areas (eg. 13% in Kings Langley, Markyate and Bovington - which in itself would seem unnecessary for a forecast 9% population increase). This decision to locate such a significant proportion of the Borough's new development in Tring is totally unjustified and inappropriate, showing no consideration for the historical character of this small market town surrounded as it is by local Green Belt and important AONB.

Under 'Vision for Dacorum's Places' the proposal that Tring will 'be an inclusive market town that meets the needs and aspirations of existing and new residents and visitors' is contradicted by the proposal outlined in Tr06 for new development on the market site itself.

**Comment**

The suggested allocation of 'at least' 2220 new homes for Berkhamsted is a staggering over estimation of the towns requirements. Given the requirement is to provide housing for a respectable demand, I do not believe adding 8000 people to the towns current population of less than 20000 to be strategically responsible. Considering the plans are to build on Greenbelt land on the outskirts of the town also raises concern about the strategic vision from an environmental point.

<b>Comment</b>	<p>There are a number of issues with the current vision and strategic Objectives.</p> <p>1) Prioritisation of Objectives  Long terms needs to be prioritised before the short term. Enviromental Limits, particularly avoiding biodiversity collapse locally and reaching zero carbon by 2030 (as council has committed to do) need to be prioritied over all other objective. There no point having lots of shiny new homes if we don't have a stable enviroment to living them and food to eat in them. This links onto the next most important objectives, which is ensuring basic needs are meet. Dacorum is current almost totally relaite on the rest of the UK and imports from abroad to meet it's food and clothing needs. Whilst it would be silly to expect it to be self sufficient, in the face of uncertain future climate change creates (even if you we get to Zero carbon by 2030) there is a level of resilience in basic needs which is desirable. Then, and only then are 'nice to have'. Yes we should try and improve our society, built enviroment and local enviroments, and part of that is about the economy and oppurtunitys. But this has to be secondary to enviromental limits and meeting basic needs/resiliance.</p> <p>2) The objectives themselves  Given that dacorum is not an island with fixed population, the idea of "delivering homes for everyone" is rediculas. Who is everyone? Does that include all the refugee in the world looking for a home? Equally "Generating a vibrant economy with oppourtunities for all". Who is the all? current inhavitants? Any who fancy living here? This are poorly defined and ill concerved objectives. We don't need to "generate a vibrant" economy, we need to maintain and improve the one we've already got. We certainly should asipre to maximise the size of Dacorum's economy, as that would suggest that eventually we want Dacorum to become a mega city in it's own right! For objectives to be useful they need to be sperific. Say "mitigating and adapting to climate change" is vague and unhelpful. A better objective would be "Ensuring Dacorum limit's it's consmption and production GHG emission in line with limiting climate change to 1.5 degrees".</p>

3) Dacorum has been failed (like most of the county) by a national government that has failed to have a equitable approach to regional inequaility. The countries vision should be an equitable distrobution of jobs, opputunity, housing and wealth regionally, and that means investing where there is a deficit. If some parts of the UK are lacking in employment oppurtunity's, but have surplus housing, then prehaps investment to create jobs should be directed there. Is some parts of the country have some many jobs and oppurunitys that there isn't enough housing, prehaps that's a reason to avoid create jobs (and there for 'growth') in those areas.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>I don't think the vision is right for the Borough – although I appreciate that towns need to expand, the current plans for expansion are far too severe with far too many houses planned. This number sounds ill-considered and will adversely affect the balance of the town with excess strain put on schools, doctors, dentists and an increase in road traffic and commuting.</p> <p>I am particularly against BK-01 the land south of Berkhamsted – 1000 houses shoe-horned onto those two fields with no added schools, doctors, playing areas etc will have a very disruptive effect on that part of town not to mention the total loss of fields that are used regularly by lots of people, including my family.</p> <p>Berkhamsted is a lovely place to live – with period charm, swathes of countryside within walking distance and just the right size – a perfect combination, please don't ruin it with over development.</p>

<b>Comment</b>	<b>Climate Change Emergency</b>

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

### **Overarching Vision: Environmental Sustainability**

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

### **Overarching Vision: Economic Growth**

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

### **Berkhamsted & Tring Developments**

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>DBC overstates the housing need.</p> <p>Brexit, the pandemic and the net export of people from the UK will impact on the already slowing in the UK's population increase.</p> <p>Some reports, for instance South West Herts Local Housing Needs Assessment Final Report - September 2020 (PDF 2MB), covering neighbouring councils such as St.Albans as well as Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."</p> <p>There is certainly no extraordinary need for the Green Belt to be encroached and these plans should be stopped immediately.</p> <p>A significant volume of housing has been built in Northchurch and Berkhamsted in recent years without the infrastructure to support such increases in the population. The local infrastructure simply cannot support further building / population growth.</p> <p>Further housing developments / population growth will negatively impact upon the character of Northchurch and Berkhamsted.</p> <p>DBC is wrong in presenting Northchurch as West Berkhamsted in its plans. It is a village. It is defined as a village, has its own parish council and one of the oldest churches in Hertfordshire. In fact Northchurch predates Berkhamsted and DBC should apply its own policy for village development and remove its proposal to build on its Greenbelt, in particular BK06 and BK07.</p>

<b>Comment</b>	<p>I object to Dacorum's Emerging Strategy for Growth on a number of grounds.</p> <p><b>Green Belt:</b> This plan presents a significant threat to the Green Belt and also, by proximity, to the Chilterns AONB. The council has not shown 'exceptional circumstances' to justify Green Belt release. There is no consideration of sustainable development - these proposals have not been made with future generations in mind, the loss of Green Belt will be irreversible and damaging. If implemented, these proposals would result in the loss of a massive 850 hectares of Green Belt, wider countryside and urban green space - this would cause irreparable harm to the environment, ignoring the council's own climate emergency declaration.</p> <p><b>Climate Emergency:</b> The Climate Change Emergency needs to be at the core of the Local Plan. There is little detail regarding this subject only vague unquantified aims.</p> <p><b>Environmental Sustainability:</b> The promotion of renewable energy as proposed in the plan is inadequate. In order to achieve net zero emissions by 2030 the council needs to ensure that new buildings are built with high levels of insulation and air tightness (and manually controlled ventilation for post-COVID era), and that they make use of solar panels, heat pumps and other renewable energy provision. The plan would look more environmentally sustainable if there was planned provision for electric public transport vehicles, ubiquitous electric vehicle chargers and increased electricity supply from renewable sources.</p> <p><b>Overprovision of Housing:</b> The housing targets are too large, they are based on out-of-date data and they have not been considered within the context of the constraints imposed by an area that is 85% rural, 60% Green Belt and 33% AONB. Furthermore, these proposals underestimate the potential to provide housing on existing developed sites, nor do they take into account recent government changes to permitted development rights (allowing conversion of commercial premises to residential use) at a time when Covid-19 has forever changed office and commuter work patterns, allowing</p>

an escape from London-centric over-development in the South-East and permitting investment and levelling up across the country.

Finally, the huge impact on local infrastructure has been disregarded - the proposed level of development would place an unacceptable burden on all types of infrastructure services and facilities in Dacorum. The plan does little to address improvements required to support these proposals - with water supply and waste water disposal being of particular concern.

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan, a 25% growth (16,596 house) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,590 houses) population growth forecast by the ONSS in Dacorum for the same period.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead, a 23% growth (10,600 houses) in housing, but strongly object to the substantially disproportionate growth strategy for housing within Tring (55% growth).</p> <p>I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough, a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more evenly.</p> <p>The proposed new development in Tring would directly contradict the Council's stated policies and the aims of the Sustainable Transport Study for Berkhamstead and Tring. Even a significant improvement in bus services from its current</p>

marginal status will have little impact on car use as, despite the huge scale of proposed housing building for Tring, services could not be justified to the extent that using buses would become a practical or popular choice for commuting, school runs or daytime travel. The opportunity for improved cycle routes around Tring that are considered safe and convenient enough for significantly greater use is limited by lack of space along the narrow streets and roads, lack of segregation from road traffic and lack of maintenance. The scope for additional use of the rail network will also be limited by current overcrowding and the ease of access at destination locations. Hemel Hempstead station for example is located between 1 and 3 miles from most areas of employment. In practice every new house built in Tring will result in around two additional cars travelling on local roads twice a day. Paragraph 21.1 of the consultation states that Dacorum has good transport links, but that statement is contradicted by paragraph 21.2, the transport links already become hopelessly congested on a regular basis. The A41 in particular was designed for far lower traffic levels than it currently handles, with no hard shoulder and dangerously short slip roads. The result is that even a flat tyre leads to a lane closure and traffic delays of around 45 minutes at peak periods. The consequence of this, beyond social wellbeing and economic, is the diversion of huge levels of traffic onto smaller roads through Tring or Berkhamstead. Adding another 5000 to 8000 car journeys onto the A41 each weekday will have untold consequences on the local environment, quality of life and directly contradicts Policy DM50 'locate development in areas that provide good levels of access to sustainable modes of transport', Policy DM52 'encourage reduced car ownership', DM60 Health Impact, DM35 NOx emissions, (especially on Northchurch High Street AQMA) and noise pollution (already intrusive on Station Road and A41). It would also greatly increase the challenge to policy DM32, significantly increasing the pressure on Ashridge Estate through increased population and removal of a popular walking area to the east of Tring. The huge impact to the character and integrity of Tring as a unique and historic market town would also make a mockery of policies DM43 and 44, intended surely to protect such an historic environment

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I would call for fewer houses to be built on green belt land and for the Local Plan to have the climate emergency fully integrated into its targets and objectives. I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan, as recommended by national planning guidance. This draft Local Plan fails to demonstrate a pathway to local zero carbon or enhancements to biodiversity. The plan is unambitious and does not commit to any level of sustainability in its sustainability targets. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

We object to parts of the vision as expressed on pp.22-24.

The overarching vision is rightly a political (small “p”) expression of the aspirations held by the community as expressed by the council. The CCB has no reason to dispute the aspirations themselves or the principles behind them. The vision is felt to represent a positive and locally distinctive set of aspirations for Dacorum, recognising the character and function of different areas of the Borough.

We are pleased with the statement that “The natural beauty of the Chiltern Hills and the varied character of the countryside will have been enhanced, and continued to be admired and cherished”, and the emphasis on enhancement is particularly to be welcomed, as are the aspirations for woodland, streams and the historic environment, both inside and outside of the designated AONB.

Chilterns Beechwoods SAC

It is a shame, however, that the same aspiration for enhancement of these environmental assets is not applied to the area’s most sensitive habitat, and we are extremely disappointed that the only aspiration for the Chilterns Beechwoods SAC is that the impacts of growth on these internationally recognised habitats will be “effectively mitigated”.

The CCB objects to this wording (last sentence of the second paragraph under “Environmental Sustainability”). To “mitigate” is something is merely to make it less harsh, and this aspiration in effect says that the SAC will not be as badly destroyed as it might have been. A spatial vision should be aspirational, representing the best realistic outcome anticipated by the community. Rather than setting a bar for the SAC as low as “not as much harm as it could have been” the vision should surely anticipate that “the Chilterns Beechwood SAC is a thriving habitat that is in a better condition than when it was designated, with nearby areas actively being restored to the same high environmental standard”.

Vision for Dacorum’s places

The (separate) “Vision for Dacorum’s places” is also disappointing in that, while it gives an excellent account of the distinctive aspirations for the Borough’s three principal settlements, the vision for “the countryside and other small villages” is very weak: such areas are about more than just being protected while allowing a little farm diversification.

This section could be improved through:

- reference to different aspirations for the AONB and the Green Belt areas (e.g. as expressed in the relevant chapters of the plan as well as in other parts of the vision);
- recognising the range of functions that are important in terms of e.g. food production, tourism and natural capital, as well as contributing to the area’s prosperity and the well-being of its citizens;
- ascribing an economic role to the smaller villages, none of which are merely dormitories or retirement homes for the other towns.

CCB’s officers would be willing to assist with developing this part of the vision.

Strategic Objectives

Object. (pp.25-26)

For the most part the objectives appear to be consistent with achieving the Vision and are reasonable in themselves. They contain specific objectives (e.g. under the natural environment heading) consistent with the conservation and enhancement of the natural beauty of the Chilterns AONB.

However, we draw attention to the first objective (to “deliver the identified housing requirement between 2020 and 2038”) and emphasise that in this context, the “identified housing requirement” must refer to the requirement identified as representing sustainable development for the Borough, and not to the (separate) centrally-determined assessment of local housing need from which the requirement is derived.

It might be more appropriate to express this objective in terms of delivering housing sufficient to meet the needs of the Borough’s citizens, plus a level of growth to support economic regeneration that is consistent with other objectives of the local plan. This would be more consistent with other objectives for promoting development, such as those under the “vibrant economy” heading, which do not specify a particular quantum of development that needs to be met. It is easy to envisage any of the economic objectives being met without necessarily conflicting with other objectives of the plan – not so with the housing objective.

It is essential that a Vision and Strategic objectives are agreed and in place before any development takes place.

Although i live just outside the Borough, actions and activities taken by DBC may well have a significant effect on me and my neighborhood, particularely the Proposal for Long Marston.

<b>Comment</b>	<p>In this document I am replying personally as a resident of Tring, and will draw on a combination of my own responses to the Draft Local Plan, as well as endorsing and using some responses from Tring in Transition, The Grove Fields Residents Association, CPRE and Dacorum Green Party.</p> <p>The overarching vision and strategic objectives seem positive and useful but do not match the proposed actions or level of detail within the document. I find that the words used (e.g. ‘to protect and enhance natural beauty and varied character of the countryside’ or to ‘provide environmentally sustainable growth’ ) are just words which are not supported in the actual development plan.</p> <p>For example, the proposal for increased housing in Tring and use of Green Belt land appears to directly go against the principles of a) conserving and protecting the natural environment, b) mitigating and adapting to climate change and c) promoting the distinctiveness of towns and villages, and d) protecting and enhancing Dacorum distinctive historic environment.</p> <p>The housing allocation set for Dacorum is unreasonably high. The Local Plan proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.</p> <p>The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. The plan does not therefore demonstrate evidence for objectively assessed need.</p> <p>Within the overall housing plans within Dacorum, the proposed number of houses suggested for Tring are highly disproportionate representing a 55% increase in housing (2700 houses).</p> <p>This assessment of housing need then places a significant risk to the heritage of the area, protected landscapes and Green Belt.</p> <p>Any new development on sites to the east of Tring intrinsically would fail to take account of sensitive views, landscape and protected environmental sites. The governments own advice says that ‘meeting housing need is never a reason to cause unacceptable harm to such places’. No evidence to justify unquestionable damage to Green Belt and AONB is given.</p> <p>The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth in Tring has not been sufficiently justified and as such the by product of the schools are unlikely to be necessary.</p> <p>The delivery of open space and sports and leisure facilities is a good aim. However the Local plan suggests however taking away widespread open countryside and land which contributes to the AONB. This would be a very significant loss</p>

which would defeat the object of seeking to secure new space and leisure facilities for the health and wellbeing of local people. The document appears to confuse and conflate the provision of playing fields or linked green areas to wildlife corridors and attempts to reduce biodiversity loss.

The Local Plan has an overarching aim of ensuring developments protect and enhance the distinctiveness and historical importance of towns and villages. This seems completely at odds with the proposed plans for Tring in particular, where bolted on developments are likely to significantly detract from the distinctiveness of a small historic market town surrounded by AONB, Green Belt and SSSI's. It is likely to detract significantly from the enjoyment, health and well being of current and future residents.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

<b>Comment</b>	<p>I am deeply saddened by the prospect of the considerable development of greenbelt land in Dacorum, and I fear it could be something that drives my family out of the area. We live in an area with beautiful green space which we love seeing people of all ages enjoy. Each lockdown has emphasised the importance of this space is to the local community - it provides so much benefit to people's mental and physical health.</p> <p>We are due to move to Boxmoor next month. Again, this area has outstanding natural beauty and it's green spaces and parks are the hub of the community. I am very familiar with this area, and already parking is an issue in this area.</p> <p>I am also greatly concerned about the impact on the environment caused by the loss of green space. Such development feels like an enormous step backwards in the fight against climate change, not to mention the impact of the increased emissions from a denser population. Can the infrastructure really cope with the increase in housing? What about water supplies? I fully understand that everyone should have access to affordable housing, but the use of precious and vital greenbelt land for large housing does not appear to be a solution to the affordable housing problems.</p> <p>Sadly, Dacorum is already lacking in good secondary education provision, and this can surely only become worse (particularly due to the lack of provision for this in the early phases), with the additional pressures that a significantly larger community will bring.</p>

No, simply building more and more homes in Dacorum will not provide any noticeable depressive effect on house prices in the area, it will rather attract more people from London to buy here. This does nothing to reduce the numbers on our housing list, and very little to address the specific housing needs of Dacorum.

This consultation was originally for the period 27th November 2020 to 7 February 2021, but this was extended on 13 January up until the 28 February. However, the country is still under a COVID lockdown, and people are not allowed to leave their houses unless necessary. Whilst the consultation is available online, it is clear that the individuals who are

not able to access it properly include those who are most at risk from this disease, and advising people in risk categories 1 -4 to go to the library to access the documents is nonsensical. The consultation ought to be extended to 6 weeks after the current lockdown has ended so that those without access to appropriate technology are included.

In addition, much of the work done on the local plan was carried out before COVID-19 and the consideration of changes in lifestyle as a result of the pandemic and arising from it have not been included in arriving at this plan for how Dacorum will grow and change over the next 18 years. This is a major flaw in the plan, and it is vital that this is rectified.

The Emerging Local Plan provides for too many houses overall, and insufficient social housing. The number of houses calculated by the Standard method, has changed during the course of the consultation,

Initially, the Standard method that required a 2.6 fold increase in our housing numbers from the Objectively Assessed projections from the ONS 2018. This meant that our projection of 355 dwellings per year was increased to 922. The algorithm which caused this unrealistic uplift was widely criticized and has been abandoned. Whilst it is positive that the original algorithm for the Standard method, which limits the increase to 1.4 fold the ONS figure has been readopted, it is not clear why out of date figures (2014) from the ONS are required to be used, when there are more recent projections. The result of this is that our housing target figure has increased to 1023, and this is both completely out of step with the actual need for new homes in Dacorum, AND a target so large that it risks large amounts of countryside, the amalgamation of our distinct settlements and fundamentally flies in the face of national climate change commitments.

<b>Comment</b>	Too many additional houses per year Too low a proportion of social housing or affordable housing

922 houses a year is disproportionate and excessive. The latest Office for National Statistics states that Dacorum's Housing need is 355 houses a year, so adding nearly 600 houses per year to what our area needs is well beyond what is required.

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

Climate Change Emergency

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow-through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas ("GHG") emissions.

Overarching Vision: Environmental Sustainability

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with carbon-neutral efficient heating such as air source heat pumps. All public transport must be electrified. At construction, provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

#### Overarching Vision: Economic Growth

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

#### Berkhamsted & Tring Developments

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring, but believe that 'affordable' needs to be properly defined in the plan and that the 'affordable housing' must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	Overall, the quantity of housing being proposed is insanely high. It is irresponsible for the council to suggest such housing growth when a climate emergency was declared in 2019! How can you increase housing by 28% and work on net zero climate change? There is already not enough water in the chalk beds and the increase in housing that has been suggested will simply exacerbate this issue. I have been involved in previous consultations leading up to this proposal and feel as a resident of Dacorum that my views have not been listened to at all.

<b>Comment</b>	I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan, a 25% growth (16,596 house) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,590 houses) population growth forecast by the ONSS in Dacorum for the same period.  I agree with the plan's approach to prioritise housing growth in Hemel Hempstead, a 23% growth

(10,600 houses) in housing, but strongly object to the substantially disproportionate growth strategy for housing within Tring (55% growth).

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough, a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more evenly.

The proposed new development in Tring would directly contradict the Council's stated policies and the aims of the Sustainable Transport Study for Berkhamstead and Tring. Even a significant improvement in bus services from its current marginal status will have little impact on car use as, despite the huge scale of proposed house building for Tring, services could not be justified to the extent that using buses would become a practical or popular choice for commuting, school runs or daytime travel. The opportunity for improved cycle routes around Tring that are considered safe and convenient enough for significantly greater use is limited by lack of space along the narrow streets and roads, lack of segregation from road traffic and lack of maintenance. The scope for additional use of the rail network will also be limited by current overcrowding and the ease of access at destination locations. Hemel Hempstead station for example is located between 1 and 3 miles from most areas of employment. In practice every new house built in Tring will result in around two additional cars travelling on local roads twice a day. Paragraph 21.1 of the consultation states that Dacorum has good transport links, but that statement is contradicted by paragraph 21.2, the transport links already become hopelessly congested on a regular basis. The A41 in particular was designed for far lower traffic levels than it currently handles, with no hard shoulder and dangerously short slip roads. The result is that even a flat tyre leads to a lane closure and traffic delays of around 45 minutes at peak periods. The consequence of this, beyond social wellbeing and economic, is the diversion of huge levels of traffic onto smaller roads through Tring or Berkhamstead. Adding another 5000 to 8000 car journeys onto the A41 each weekday will have untold consequences on the local environment, quality of life and directly contradicts Policy DM50 'locate development in areas that provide good levels of access to sustainable modes of transport', Policy DM52 'encourage reduced car ownership', DM60 Health Impact, DM35 NOx emissions, (especially on Northchurch High Street AQMA) and noise pollution (already intrusive on Station Road and A41). It would also greatly increase the challenge to policy DM32, significantly increasing the pressure on Ashridge Estate through increased population and removal of a popular walking area to the east of Tring. The huge impact to the character and integrity of Tring as a unique and historic market town would also make a mockery of policies DM43 and 44, intended surely to protect such an historic environment

<b>Comment</b>	Section (3) Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.

<b>Comment</b>	<p>This plan was devised before the recent government changes to planning guidance and does not seem to have been amended as a result. As part of the 'levelling up agenda' we should be looking at developing more places to live and work in the North of the country rather than further developing the already overcrowded South East. Secondly it does not take into account changes in</p> <p>lifestyles as a result of the Covid 19 pandemic. It is very likely that more people will be spending at least part of the week working from home in the future, rather than commuting every day, and therefore proposed housing density should be reduced to allow people the space they need. We know that people value garden space more now than in the past, and yet this plan agrees to an increase in permitted housing density. This will result in developers building houses that do not properly meet people's needs.</p> <p>We know we are facing a climate crisis, in the UK we have committed to net zero by 2030, and yet there is nothing that I can see in this plan that says that all new housing must meet standards to support this. As a minimum we must have infrastructure to support our climate change goals.</p> <p>Houses must be built to the highest 'green standards we must have a commitment that no natural gas supplies are provided to these homes, that each has a heat pump and solar panels.</p> <p>Every home should have an electric charging point. This should all be explicitly described in the plan.</p> <p>I note that the plans propose significant building on green belt. The statements say that this can only be done in 'exceptional circumstances; but that these exceptional circumstances have been established. There is no detail on how these have been established. If green belt it to be built on I would argue that it would make much more sense to build a new town or towns to meet any future</p>

housing needs. That way the development is planned properly with all the amenities required for modern living, rather than bolting on to an existing one which was never designed to be so large. This ensures that roads, cycle lanes, train stations and open spaces are adequate by design, that schools are available providing enough places and doctors surgeries are adequate. In bolting on to an existing town there is inevitable loss of amenity for existing residents as more pressure is put on roads, schools and healthcare and the additional pressure is often not adequately considered .

I do agreed with the statement that 'All of this needs to be done in a way that maintains and enhances the outstanding qualities of Dacorum – its vibrant communities, high quality countryside and being a great place to live, work and enjoy'.

There are a number of inconsistencies and muddled thinking in the draft Local Plan that are baffling to residents of the ridge area of Berkhamsted (i.e.: Shootersway and neighbouring streets) where a significant number of new dwellings is proposed. This needs revisiting before the plan progresses to the pre-submission phase. In particular:

- 1 There is a discrepancy between the proposed increases in dwellings set out in the draft Local Plan and the projections by The ONS projects a significantly lower housing need in this area.
- 1 DBC's sole justification for accepting Government's numbers (922 new dwellings per year) as a strict target is that "Any option below the standard methodology would have to be robustly justified" (paragraph 5.8 of The Development Strategy Background Topic Paper). Government has, however, put it on the public record that the numbers are not targets and Green Belt should be afforded the highest protection. It is therefore not at all clear why DBC has

felt unable or unwilling to make a case that can be “robustly justified”. This should be revisited given the weight of evidence to the contrary.

- 1 The open valley sides and ridge top location have previously been identified as “especially sensitive to new building” and the Council had previously concluded from this that “development in these locations will not be supported. It now seems, however, that the 2013 Core Strategy vision

of “maintaining the strong valley and linear character of the settlement” has been abandoned and that - 8 years on and after considerable further impactful development within the current Plan - Dacorum Borough Council (DBC) now promotes parcels of land in these areas for removal from the Green Belt and suggests that development can now be built” in a way that takes account of sensitive views and landscape”.

- 1 The town experiences a high level of congestion. The Council has previously concluded there are few opportunities for new road capacity in the town. The consultation document states “All growth areas will be required to provide for on- and off-site measures to alleviate highway local highway problems” yet no explanation has been provided as to how Berkhamsted's road and transport system to and from the ridge area could be adapted to cope with the additional journeys that will be generated by so much development.

The Dacorum Local Plan Emerging Strategy for Growth 2020-2038 lacks creativity and imagination.

It is not clear from the data where the housing numbers come from. They seem to be Government numbers that have been accepted without demur. The Leader of Dacorum Council wrote to the Secretary of State on 30 November 2020 noting the unanimous vote of the Council on 18 November to request a reduction in the numbers. For reasons that need to be made public this request was rejected.

The projections seem to take little account of the changed circumstances in demand that can be expected post-pandemic (see Question 2).

Also, the type of housing and the implied density seems to be inadequate for future needs.

Furthermore, the Plan places far too much emphasis on Green Belt development (60%), which is inappropriate in Dacorum, especially in Tring and environs given its proximity to the Chilterns AONB.

I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhams Hempstead in the next 18 years.

This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and a outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falli and the decline in immigration following Brexit will no doubt continue to decrease this projection.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pr water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastru requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.

The high levels of air pollution and the continuing lack of clean drinking water in this area have not been considered with increased breathing related illn etc, this area needs conservation not concrete.

The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the exis and infrastructure.

<b>Comment</b>	<p>I do not agree with the Borough's vision for 2038, in particular in relation to Berkhamsted. The excessive increase in housing numbers is unrealistic and inappropriate and will have a huge negative impact on the environment and its residents. The majority of the proposed housing will be at the top of the valley and some distance from the town centre causing a significant increase in car use. As Berkhamsted is in a valley with narrow roads, it doesn't have the road infrastructure to cope, nor the ability to create it. There will be a large increase in congestion and air pollution. Dozens of schools in Dacorum are already in areas with dangerous levels of air pollution and with a huge amount of proposed housing built near schools (eg. Swing Gate, Thomas Coram, Ashlyns) this is only likely to worsen.</p>

It appears to be a developer led strategy with no focus on what the residents of Berkhamsted really need. There are no exceptional circumstances to justify the huge reduction of Green Belt. The council needs to think outside the box to ensure the right amount and the right type of houses will be built.

The overarching vision, the vision for Dacorum's places and the strategic objectives for the Borough are all fundamentally flawed. I support the submissions from 'Tring in Transition' and 'Chiltern Countryside Group'. I urge you to take note of the substantial number of points made in these documents that demonstrate the inaccuracies, inconsistencies and total lack of detail provided in the plan.

The scale of the proposed development is not supported in general, and specifically for Tring. It is disproportionate and will destroy Tring as a market town. No evidence is presented for the assertion that Tring and Berkhamsted should play a greater role in delivering growth. This is totally contrary to previous conclusions and is not consistent with research findings that show larger scale settlements like Hemel Hempstead are much more viable. The plan is totally inconsistent with it's own expressed aim to minimise development on the Green Belt.

<b>Comment</b>	<p>Northchurch Parish Council (NPC) has not found one person who believes that Dacorum's vision or strategic objectives are right for the Borough.</p> <p>The views of Northchurch residents reflect those of the country at large. For example, In October 2020, when the government consulted on its proposed changes to the planning system, respondents expressed concerns that "the distribution of need was not right...too much strain was being put on our rural areas, and ... "in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt."</p> <p><a href="https://www.gov.uk/government/consultations/changes-to-the-current-planning-system">https://www.gov.uk/government/consultations/changes-to-the-current-planning-system</a> to come government response to the local housing need proposals and changes to the current planning system</p>

The views of Northchurch residents also reflect those of people across the Borough. For example, only 5% of people who responded to Dacorum's 2017 Local Plan Issues & Options agreed with Dacorum's proposed approach to Green Belt and Major Developed Sites.

[http://www.dacorum.gov.uk/docs/default-source/strategic-planning/appendix-6-q9-to-q11-i-and-o-consultation-report-of-responses-september-2019.pdf?sfvrsn=6b530c9e\\_6](http://www.dacorum.gov.uk/docs/default-source/strategic-planning/appendix-6-q9-to-q11-i-and-o-consultation-report-of-responses-september-2019.pdf?sfvrsn=6b530c9e_6)

NPC believes that Dacorum's vision is fundamentally flawed because it is based on out-of-date 2014 household projections which over-estimate demand and prioritise growth at the expense of other considerations such as the importance of the Green Belt:

Dacorum's Vision 1.37: "For housing, we are making a bold commitment to significantly increasing the supply of land to deliver 922 dwellings per year, more than double the number (430 dwellings per year) in the previous Core Strategy."

None of Dacorum's Borough Councillors appear to agree with this "bold commitment" to double the of dwellings. On 18 November 2020, Dacorum Borough Councillors voted unanimously in favour of a motion expressing concern about the effects on the borough of having to deliver 922 dwellings per year. On 20 November 2020, the Leader of Dacorum Borough Council wrote to the Secretary of State saying that the housing figure was too high and would harm the Green Belt:

"At the moment the housing target generated by both current and proposed standard housing methodologies ignore these constraints and produces a figure well in excess of the Office of National Statistics projection of housing need based on the 2018 figures, if this is accepted it would result in a reduction in the annual target and therefore would help to reduce the current figure suggested for Dacorum which is currently 922 per annum, a level of growth that can only be achieved with significant development in the Green Belt".

So, neither councillors nor residents, support this vision.

The vision would have a devastating effect on the 2800 people who live in Northchurch. New developments would add over 1500 new residents to Northchurch, a population increase of over 50%. The additional buildings and residents would destroy the semi-rural character of Northchurch and the quality of life for local people.

Northchurch is a large village with its own distinct appearance, community, and semi-rural character but the vision does not even mention Northchurch; it has been whitewashed from existence.

Northchurch predates the neighbouring town of Berkhamsted. The parish church of St. Mary is one of the oldest churches in Hertfordshire; and the two-storey half-timbered alms-houses in the Conservation Area were built in the 15th and 16th centuries. Northchurch has two conservation areas and includes the hamlets of Dudswell, Norcott Hill, Northchurch Common and part of the Cow Roast.

The overarching character of Northchurch is that of a large village, within a semi-rural area. Most dwellings are set to the south of the Grand Union Canal, elevated from the valley bottom with sloping hills across Green Belt to the north and south. Our houses have a different style to Berkhamsted. In contrast with the tall, Victorian, high-density, London-style

red-brick houses, common in Berkhamsted, the core of 1940s and 1950s dwellings broadly found in the south eastern part of Northchurch create a strong design identity. Here, most buildings have simple brickwork alleviated in part by angled front bays and front tile hanging. A wide-open feel is created by the low density (around 15 dwellings/ha), roadside verge planting and dwellings set back from the road.

In terms of demographics, people of Northchurch are older and less affluent than those of Berkhamsted. Unlike Berkhamsted, a town with many large, impersonal shops, Northchurch has just a handful of small shops and only one pub where customers recognise each other.

The roads in Northchurch are also different from Berkhamsted. In the part of Berkhamsted to the East of the proposed developments, roads running north/south, from the High Street uphill towards Shooters Way are heavily parked and busy with traffic. In contrast, Northchurch Lanes are much quieter. For example, Darrs Lane, which edges the Chiltern Area of Outstanding Natural Beauty, and Bell Lane, which runs between the two Green Belt fields, are narrow with steep grassy banks and hedging. They are country lanes.

The Green Belt fields that lie between Berkhamsted and Northchurch fulfil the primary aim of Green Belt policy: to prevent urban sprawl. They act as a buffer between the town of Berkhamsted and the village of Northchurch. They stop the communities of Berkhamsted and Northchurch from merging into each other. The proposed developments fill these fields with houses which means that Berkhamsted and Northchurch become one. Dacorum have not included the Bulbourne Cross proposal in the Local Plan, despite its advantages, because it would join Berkhamsted to Bourne End. The proposed developments in Northchurch do the same thing: they join Berkhamsted to Northchurch.

So Dacorum's vision fails to preserve the special character and community of Northchurch.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>All 'vision' statements are inevitably framed with positive language around well-meaning, if platitudinous, sentiments. The 'Overarching Vision for Dacorum's Growth by 2038' is no different with grand statements claiming improvements will be achieved relating to Environmental Sustainability, Economic Growth and Health and Wellbeing. However, much of the plan under consultation works directly against those aspirations, particularly for the two historic market towns of Berkhamsted and Tring and the area between Old Hemel, Piccots End and Potten End.</p> <p>I strongly disagree with 'The Vision for Dacorum's Places' relating to Berkhamsted. The proposed growth is obviously too much for the town. With circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, this equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint (Google Earth used for calculations), most of which is located within sensitive ridge top locations in Green Belt.</p> <p>I note that the 2013 Core Strategy vision of "maintaining the strong valley and linear character of the settlement" has now been emphatically dumped. Where previously the Council asserted that "The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported" (and put this argument strongly to the Planning Inspector), DBC now promote the land for removal from Green Belt and suggests that development can now be built "in a way that takes account of sensitive views and landscape".</p> <p>The plan removes green belt areas that have become and are becoming increasingly popular walking/rambling routes and provide easy access to the wider countryside. Removing these areas will further increase the need to travel for recreational walking/hiking/running purposes. Over the pandemic residents have not flocked to the likes of Velvet Lawn to do laps of a sports' field, but rather the immediate and wider countryside which is greatly valued b our residents. It's loss will inevitably lead to an increase in mental health problems as evidenced by research. It has been found that green space protects against mood disorders, depression, neurotic behaviour, and stress-related issues.. The effect of green space is also dose-dependent, meaning those who have longer exposures to green space have greater mental health benefits.</p>

<b>Comment</b>	<p>I note the comment in Para 1.28 and 1.29 on page 9 of the draft Plan</p> <p>The subsequent comments serve to alight on the numbers designated [SP2] 16,596 dwellings (viz 922 pa) over the Plan period 2020 – 2038. I remain unconvinced that this number (nor the 1023 pa) should be adopted for the Plan Period given that ONS projections based on 2018 data indicates the annual need is around 350 dwellings pa. Moreover, this contrasts with the current Adopted Plan (Core Strategy 2013 – 2036) that settled on 430 pa.</p> <p>Starting from a premise that is suspect and therefore contentious, the overarching Vision is thus undermined or at least questionable; the prospective high build rate will adversely impact the principal urban centers and especially the unwarranted loss of swathes of Green Belt, including around Berkhamsted/Northchurch/Tring, that are designated in the Draft Local Plan as ‘Growth Areas’.</p> <p>This section relates to proposals set for Berkhamsted and Northchurch [considered in the Draft Local Plan as West Berkhamsted]: over the planned period 2200 dwellings are scheduled [SP2- 3b] of which around 500 are in Northchurch Parish and 1700 in Berkhamsted. This equates to a substantial increase in the number of dwellings in Berkhamsted/Northchurch of around 24% - over the 18-year Plan period and where most of the designated sites are currently in the Green Belt at some distance (3 – 4 km) from the town centre and station at the top of steep valley sides. I cannot see how new housing developments at this distance (and difference in elevation) from main services infrastructure can be considered as “sustainable”.</p> <p>As recognised in Para 23.119 [Page 225] the Town experiences a high level of congestion</p> <p>The following paragraph says: “there are few opportunities for new road capacity in the town”. As a town set in a valley with only one main crossing the county’s engineers comment the traffic lights already operate at over capacity. This results in residents choosing to avoid the main roads in the town centre or travelling to shop elsewhere.</p> <p>The Draft Plan continues (23.121)</p> <p>The last sentence is an aspiration without a foundation to support it: The Plan offers no substantive detail that necessary strategic infrastructure or sustainable transport options, to provide access to the town centre and station, from the proposed development sites, other than by car, have been planned for.</p> <p>The referenced ‘Berkhamsted and Tring Sustainable Transport Strategy’ [Para 23.122] is nothing of the sort, mapping as it does junction enhancements at relatively minor side roads and crossings within the urban area and new/widened footpaths along Shootersway. In the absence of a well-considered Strategic Transport Plan that addresses the critical issues, and its inclusion in the Infrastructure Development Plan, I do not support this Draft Plan to accommodate the Sites designated.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>The DBC local plan proposes the building of 16,000 new homes during the period of 2020- 2038. that's 922 new houses every year for 18 years and is over one and a half times the current building rate. This would result in the loss of 850</p>

hectares (the equivalent of 1,214 football pitches) of green belt land. The housing numbers in the plan are based on outdated data from 2014. Using more up to date information on housing need from 2018 would half that number. I think that the plan should be revised and the more up to date information should be used.

The Climate Change Emergency needs to be at the core of the Local Plan. The plan states that DBC want to be carbon net zero by 2030 but this is nothing but an ill-defined aim, another of which promotes an unquantified reduction in greenhouse gas (“GHG”) emissions. The plan is inadequate in tackling climate change and environmental issues and should be revised.

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

The plan as proposed fails to take full account of the opportunities to redevelop existing retail and commercial sites and also fails to include the new implications of the COVID-19 pandemic and how this has shaped peoples working lives and need to commute etc. Figures show that there has been a huge increase of people building home offices as they no longer need to travel into work. This is unlikely to change after the pandemic, meaning that office spaces will become less necessary, meaning that the plan needs to be revised.

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than

a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to play a much greater role in delivering housing growth within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Comment**

The Plan does not provide a solution to the core problem of affordability of housing locally and therefore fails in its objectives.

It proposes very large numbers of new homes built at low density, principally in locations taken from Green Belt. The plan provides no evidence that these houses will be materially more affordable to local residents than the existing housing stock.

It is much more likely that the new homes will be bought and occupied by people from outside the Borough; or by local people who already own their home. Meanwhile the Plan provides no evidence that the acute local need for more social housing as opposed to so-called "Affordable Housing" will be met.

Strategically the Borough needs housing built at high density on brownfield sites in or around the town centres, a significant proportion of which are social housing. This is also the most sustainable option.

According to the Plan's own calculations 600 houses per annum could be built without needing to develop Green Belt sites (TRL report page 32).

There is no evidence that more than 600 houses per annum is required. The higher quota set by central government is flawed as it is based on outdated 2014 ONS population data. The Council should reject this quota.

In short the Plan proposes the wrong number and type of housing to be built in the wrong places.

**Climate Change Emergency**

The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas ("GHG") emissions.

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

In addition to the Enviro-Tech aspirations in the plan I wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

I welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>Section (3) Borough Vision – The Council’s Vision is one we would all sign up for: a world with plenty of good homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected. The reality is that in essence the draft Plan is about how many new homes will be built and where they are to be located. The Council decided to accept what they believe to be a Central Government requirement to build 16,596 new homes over the next 18 years, 922dpa (dwellings per annum), without challenge or resistance. The housing figure is too high for Dacorum.</p> <p>Housing need should be based on the most relevant and recent data and not the nonsensical algorithm method and the outdated 2014 ONS data. Without a review of the projected figures the soundness of the local plan is questionable.</p> <p>In addition, the sheer scale of development proposed on open land is at odds with the NPPF, para 11 footnote 6 which allows local authorities to restrict development due to planning consideration such as Green Belt and AONB. 85 % of Dacorum is rural, 60% is Green Belt and 33% is AONB. This should be taken into account!</p> <p>In addition, the strategy fails to take account the combined impacts of the Pandemic and expanded permitted development rights. The local plan process must review in light of this or there is a serious question over the soundness of any local plan that does not address this.</p> <p>The Council’s proposals are neither justifiable or sustainable and therefore I oppose the draft Plan. DBC should revert to the Core Strategy vision statement.</p>

<b>Comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p>

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by

way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should

be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

I moved to Tring because the size and character of the town appealed to me. Your local plan proposal will change the market town character of Tring by such a massive increase in the number of houses, people and cars. The historic town is constrained in terms of the ability to widen the main through roads, therefore, the proposed local plan increase will lead to congestion and possibly gridlock in the High Street and other main junctions in the town at the ends of Brook Street, London Road, Station Road, Cow Lane, Grove Road, Icknield Way and Wingrave Road.

Hemel Hempstead's housing growth is delivered with a 34% provision of Green Belt allocated land, whereas in Tring the allocation requires 81% Green Belt land allocation. This cannot be right!!

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

<b>Comment</b>	<p>Specifically, I do not agree with ‘The Vision for Dacorum’s Places’ relating to Berkhamsted or Tring. The proposed growth is simply too much for the towns – with circa 500 dwellings planned in Northchurch Parish (aka West Berkhamsted at DBC planning) and around 1700 in Berkhamsted, it equates to a 24% increase in dwellings and a massive 31% growth of the urban footprint, most of which is located in Green Belt. I am concerned that the 2013 Core Strategy vision of “maintaining the strong valley and linear character of the settlement” has been dropped from the new Local Plan. Where previously the Council asserted that “The open valley sides and ridge top locations are especially sensitive to new building and development in these locations will not be supported” (and put this argument strongly to the Planning Inspector), DBC now promotes the land for removal from Green Belt and suggests that development can now be built “in a way that takes account of sensitive views and landscape”. I strongly disagree with this premise and believe the 2013 vision should be re-instated.</p> <p>I note and agree with BRAG’s analysis of the Government’s clear support for the protection of the Green Belt. This set of policies is completely contravened by DCB’s statements. The Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, therefore I do not understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified” that the number of houses proposed is not sustainable. Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.</p> <p>Why cannot Dacorum stand up for what is in the best interests of the residents of the Borough and their quality of life?</p>

<b>Comment</b>	<p>The Dacorum Local Plan for the next 18 years fails to provide the right homes, in the right places for local people, and rise to the twin challenges of climate change and a (post) COVID-19 world. At present there are over 7000 people on the housing list in Dacorum, and despite a modest social housing building programme by DBC this figure has been increasing in recent years. The Local Plan does not provide evidence that demonstrates that the houses that will be delivered will meet this need. Furthermore, the most recent ONS statistics on housing need in Dacorum shows we need to build 355 houses a year over the period of the plan. The target of 922 houses included in the Local Plan is not, therefore, supported by the available evidence, especially when Brexit and Covid have reduced housing demand.</p> <p>Simply building more and more homes in Dacorum will not provide any noticeable depressive effect on house prices in the area, it will rather attract more people from London to buy here. This does nothing to reduce the numbers on our housing list, and very little to address the specific housing needs of Dacorum.</p> <p>This consultation, even when extended, has failed in the intended outcome of engaging with as many of the population as possible. An on-line process excludes large numbers of residents. A widely inconsistent distribution of the leaflet has missed large elements of the community.</p> <p>Availability of paper copies in libraries has been flawed and inconsistent with lockdown messages, especially for residents in high risk categories encouraged to self-isolate. This process was almost entirely run during lockdown at a time when Covid has been an enormous distraction for large elements of the community and as a result, too few residents have known this process was underway. Conducting a consultation over Christmas has not helped. Even in the final days of the consultation people were asking for leaflets from elected members and strategic services. The process has, therefore, been deeply flawed.</p> <p>In addition, much of the work done on the local plan was carried out before COVID-19 and the consideration of changes in lifestyle as a result of the pandemic and arising from it have not been included in arriving at this plan for how Dacorum will grow and change over the next 18 years. This is a major flaw in the plan, and it is vital that this is rectified.</p> <p>The Emerging Local Plan provides for too many houses overall, and insufficient social housing. The number of houses calculated by the Standard method, has changed during the course of the consultation, meaning that the local plan is based on out-of-date figures.</p>

<b>Comment</b>	<p>With respect to Berkhamsted, this is a large development for a town whose geography does not permit expansion on this scale, being largely based on two sides of a steep valley. Whilst recognising that the government has increased pressure on councils to deliver housing, councils are nevertheless permitted to consider environmental factors such as Berkhamsted's location in the Chiltern AONB.</p> <p>The strategy expresses imprecise aims around the provision of supporting infrastructure provision, and offers little confidence in how the constraints on existing infrastructure will be alleviated in time to support the new housing, such as schooling and roads.</p> <p>Berkhamsted's valley location places particular challenges on the potential provision of sustainable transport provision including "improvements in walking and cycling connections". The gradient of the hillside already causes high volume of motor traffic to and from the town centre, and without a clearer plan the aspiration to achieve such "improvements" has limited credibility.</p>

<b>Comment</b>	<p>The draft Plan provides for too many houses overall, while at the same time producing insufficient social housing. It is unclear why out-of-date (2014) ONS figures are being used by Government to set targets for new homes rather than the ONS's more recent assessment of household growth, based on 2018 figures. The prospective high rate of build will lead to an unjustified loss of Green Belt. It will also cause gridlock in Berkhamsted Town Centre, which prior to the pandemic was already reaching saturation point at peak times. The "Berkhamsted and Tring Sustainable Transport Strategy" fails to address this issue.</p> <p>Dacorum has an acute shortage of social housing with over 7,000 people on the housing list. Although the Council has a laudable building programme of its own, it is too modest and has failed to keep up with increasing need. Allowing private developers to build more executive homes in Dacorum will do nothing to reduce the numbers on the housing list, but simply encourage more people to move out of London. Nor will it achieve the Government's stated objective of reducing house prices, since developers will control the number of homes they release in order to maintain prices.</p>

The Local Plan was mostly developed before Covid-19 and does not take account of changes in lifestyle and working patterns that are likely to emerge after the pandemic. In view of this, the Council should adopt a precautionary approach, avoiding any re-designation of the Green Belt, until the Plan can be revised in the light of the pandemic.

ICPAM has a proven track record of delivering high quality schemes in sustainable locations throughout the UK, with a history of working in partnership with Local Authorities ('LAs'. Having reviewed the Local Plan and Evidence Base, they have identified a number of reasons why the Local Plan is unsound as currently drafted. Should the Local Plan progress to the Regulation 19 Stage and be submitted in its current form, there is every chance that the Local Plan may not even reach examination due to the significance of the issues we have highlighted.

The Plan is not justified, as it is not the most appropriate strategy based upon the evidence base.

These representations request that the Council undertake the following:

- Review the Local Plan and Evidence Base and give greater consideration and prioritisation to the reuse of previously developed land;
- Revise the Vision to reflect the pressing needs for older person and care accommodation in the Borough and in turn the important role these play in freeing up housing supply elsewhere in the Borough;
- Recognise the important economic role that care homes provide.

<b>Comment</b>	<p>ICPAM considers that the overarching vision and strategic objectives are not right for the Borough, for the following reasons.</p> <p>Firstly, in considering Housing Growth (paras 2.3-2.5) the Vision is silent on meeting the housing needs of an ageing population. The 2016 Strategic Housing Market Assessment (the 'SHMA') forms a key part of the Local Plan's evidence base.</p> <p>The SHMA identifies a demand for different types of specialist housing for older people and care provision, and projects that by 2036, the Borough's population aged 75+ will have increased by 9,711 people (Table 58, p.147).</p> <p>The South West Herts Local Housing Needs Assessment (the 'LHNA') is a more recent document. Table 80 of the LHNA shows that between 2020 and 2036 there will be 45% increase in the over 65 population, a significant increase.</p> <p>Table 78 of the SHMA identifies an annual need of 72 homes per year between 2013-2036 in order to meet the needs of specialist housing for older persons and a further 30 homes a year for residential/nursing care bedspaces.</p> <p>The equivalent figures in the LHMA are contained in Table 90 which identifies an Older Person's Dwelling requirement between 2020 to 2036 of some 1,340 homes, and a significant increase in care bed requirement to 1,019 bedspaces.</p> <p>This total equates to far more than 10% of the overall housing need figure of 922 dwellings per year (Local Plan para 1.37), albeit is not contained within the 922 dwelling figure. There is therefore a significant need for older person and care accommodation which must be reflected in the Strategic Objectives and Vision for Dacorum.</p> <p>ICPAM do, however, support the strategy in para 2.24 of optimising the use of previously developed land as far as possible. Unfortunately, for reasons set out later in these representations, they consider that the Council has not gone far enough in doing so by failing to allocate development of previously developed land on land at Spring Gardens Lane, which is free from technical constraints.</p>

<b>Comment</b>	ICPAM support the recognition at para 2.9 of providing space for small and medium enterprises. It is important that the Local Plan recognises the key contribution that other non B and E class employment generating uses (such as C2) provide in assisting in meeting employment needs for both skilled and unskilled workers. The Vision must also, therefore, be amended to include reference to this.

<b>Comment</b>	<p>Question 1: Do you think the overarching vision, the vision for Dacorum's places and the strategic objectives are right for the Borough?</p> <p>Our client supports the overall strategic objectives of the Council's Regulation 18 Draft Local Plan and in particular the focus on the delivery of new homes, including affordable homes and those for disabled and older people.</p> <p>Our client supports the Council's vision for Berkhamsted as an inclusive market town and specifically the need to deliver a mix of market and affordable housing and new community facilities. Our client further emphasises that this is a suitable and sustainable location for growth. The vision for Berkhamsted should however go further to ensure new growth continues to make it "an attractive and inclusive market town with regard to its heritage, sensitive views and landscape character".</p> <p>In respect to the Council's Strategic Objectives, our client broadly supports these, but make a series of specific comments. In respect to housing delivery, our client welcomes the Council's aim to deliver the identified housing requirement within the Plan period 2020-2038 and crucially, to deliver more truly affordable homes and homes for older people (includes retirement living). That said, it is evident that DBC needs to identify additional suitable sites for housing in its urban areas if it is to satisfy its Objectively Assessed Need (OAN) and meet its housing target for the Plan period.</p> <p>The Council's OAN of 922 dwellings per annum (dpa) (more than double the current target of 430 dpa) will need to reflect the Government's new Standard Method (December 2020) and minimum requirement for 1,023 dpa (increase of 101 dpa) in interests of ensuring the new Local Plan is positively prepared and as a minimum, seeks to meet the area's OAN in accordance with the paragraph 35 of the NPPF.</p>

In respect to the economy, our client supports the Council's strategic objective of encouraging inward investment, maintaining commercial enterprise and employment opportunities in the market towns such as Berkhamsted and ensuring town centres continue to evolve and flourish.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was

shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has " delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. " This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>There are a number of issues with the current vision and strategic Objectives.</p> <ul style="list-style-type: none"> <li>• Prioritisation of Objectives</li> </ul> <p>Long terms needs to be prioritised before the short term. Enviromental Limits, particularly avoiding biodiversity collapse locally and reaching zero carbon by 2030 (as council has committed to do) need to be prioritied over all other objective. There no point having lots of shiny new homes if we don't have a stable enviroment to living them and food to eat in them. This links onto the next most important objectives, which is ensuring basic needs are meet. Dacorum is current almost totally relaite on the rest of the UK and imports from abroad to meet it's food and clothing needs. Whilst it would be silly to expect it to be self sufficient, in the face of uncertain future climate change creates (even if you we get to Zero carbon by 2030) there is a level of resilience in basic needs which is desirable. Then, and only then are 'nice to have'. Yes we should try and improve our society, built enviroment and local enviroments, and part of that is about the economy and oppurtunitys. But this has to be secondary to enviromental limits and meeting basic needs/resiliance.</p> <ul style="list-style-type: none"> <li>• The objectives themselves</li> </ul> <p>Given that dacorum is not an island with fixed population, the idea of "delivering homes for everyone" is rediculas. Who is everyone? Does that include all the refugee in the world looking for a home? Equally "Generating a vibrant economy with oppourtunities for all". Who is the all? current inhavitants? Any who fancy living here? This are poorly defined and ill concerved objectives. We don't need to "generate a vibrant" economy, we need to maintain and improve the one we've already got. We certainly should asipre to maximise the size of Dacorum's economy, as that would suggest that eventually we want Dacorum to become a mega city in it's own right! For objectives to be useful they need to be sperific. Say</p>

“mitigating and adapting to climate change” is vague and unhelpful. A better objective would be “Ensuring Dacorum limit's its consumption and production GHG emission in line with limiting climate change to 1.5 degrees”.

- Dacorum has been failed (like most of the county) by a national government that has failed to have a equitable approach to regional inequality. The countries vision should be an equitable distrobution of jobs, opputunity, housing and wealth regionally, and that means investing where there is a deficit. If some parts of the UK are lacking in employment oppurtunity's, but have surplus housing, then prehap investment to create jobs should be directed Is some parts of the country have some many jobs and oppurunitys that there isn't enough housing, prehaps that's a reason to avoid create jobs (and there for 'growth') in those areas.

<b>Comment</b>	I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.

This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.

The high levels of air pollution and the continuing lack of clean drinking water in this area have not been considered with increased breathing related illness, asthma etc, this area needs conservation not concrete.

The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.

Yes, however, we acknowledge that there is an identified need for electric vehicle charging infrastructure and affordable homes that we do not believe has been fully addressed.

This consultation response, therefore, respectfully requests that the site known as Kings Langley Service Station and Adjoining Land, 124-127 Hempstead Road, Kings Langley, Bedfordshire, WD4 8AL be consider for inclusion within the plan as a mixed-use commercial/residential allocation.

In particular, it is our client's intention to deliver an electric vehicle charging facility (sui generis) together with an ancillary roadside retail/café unit (Use Class E), and affordable residential development, providing 20 – 30no. units.

I am unclear about the need driving a target growth in Dacorum of 16,595.

Each settlement in Dacorum uniquely contributes to the success of the Borough.

- Hemel Hempstead, the hub of employment with its sizable Business Park (one the largest in east England). The projected growth of Hemel Hempstead appears justified by its global business stature, existing infrastructure, proximity to communication channels, and road networks that make it better equipped to accommodate growth - without encroachment on Green Belt.

- Berkhamstead, Tring, Bovingdon, Kings Langley and Markyate supporting local business and enterprise, have totally different characteristics and offerings to the borough. Tring being the most obviously rural abutting Greenbelt land and the Chiltern area of outstanding natural beauty. It is not clear why there is not a more proportionate allocation of growth across all other communities.

The proposal to grow Tring 55% to meet the 'target' growth is disproportionate and will completely alter the nature of the community and the rural landscape, particularly with the allocation of significant areas of greenbelt to accomplish this. I remain doubtful why Tring is required to "play a much greater role in the delivering housing growth" within the borough, when it already fulfils a needed role attracting tourism, providing historical interest, and access to recreational space for cycling and walking for many in Dacorum.

A comprehensively planned new neighbourhood to the east of Tring with associated infrastructure new schools etc is still likely to impact on the environment through: increased traffic and congestion in Tring's centre, (because people will always choose to drive to central facilities rather than walk); the ecology of the surrounding natural landscape, detriment to open space and views and natural beauty.

I think there are emerging factors to consider given the onset of the pandemic in 2020. The changing nature of business requirements, and retail needs of the population. As the Emerging Strategy for Growth 2.26 (onwards) notes, this is an unknown and may impact the focus of Dacorum's Strategy in stabilizing the existing infrastructures and enhancing these. There is an increase in working from home, and a desire for people to want homes with bigger gardens, and access to green spaces for improved health.

Section 3.3: Dacorum has declared a climate emergency so your over-arching theme should be the preservation and minimal impact to the natural environment.

Overarching Vision for Dacorum's Growth by 2038: This is all rather vague with no real vision and few solid aspirations e.g. "high standard of design" - what does that mean? Excellent architecture? Carbon neutral build? "Enhance the AONB" How exactly?

The Vision for Dacarum's Places - Tring & Berkhamsted

In the Vision for these two towns, you would be hard-pressed to see Tring and Berkhamsted as different market towns with distinct identities and yet anyone who knows them will tell you they are very different. For example: Berkhamsted has far more of the retail experience than Tring with a number of high end luxury shops, whereas Tring has smaller, independent shops but does not offer the full shopping experience (and neither should it). Tring is far more popular with

visitors during the summer months than Berkhamsted. Any vision (as described below for Tring) should enhance the unique identities of the town. This plan, as in subsequent plans, has failed to do so.

#### The Vision for Dacorum's Places - Tring

Once again this is all rather vague, with few aspirations for a town in the 21st century and fails to address the reasons why people live, work and visit Tring. It also strikes me as woefully outdated with the same vague meaningless aspirations that I've seen through numerous consultations. People live here for it's semi-rural location, it's "small town" feel, it's easy access to amenities and the countryside by walking / cycling. People visit Tring to admire the Rothschild architecture, visit the museums, Tring Park and the nearby canal and reservoirs and to browse independent shops and enjoy excellent cafes and restaurants. A vision would look at how we can enhance the positive outcomes residents and visitors feel they get from these unique aspects of Tring and what we want a small town to offer in the future - is a "business hub" really going to be needed in the mid 21st century?

A planned new neighbourhood and the required infrastructure to support it in itself is NOT an aspiration unless it brings benefit to local people (meets local demand for housing and maintains Tring's social and natural history) or to the environment / wildlife (increasing biodiversity, wildlife corridors etc.). This Plan has failed to demonstrate either of these: with a substantial loss of Green Belt, environmental sites and sensitive views and a 55% increase in housing that is far in excess of the expected population growth.

Delivery of "open space" and "leisure facilities" is at the expense of open countryside that acts as a "buffer" to the AONB. This does not mitigate the loss of Green Belt land (which I believe is a requirement?) and therefore cannot form part of a vision for Tring.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemet Hempstead- a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovington, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemet Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness or the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged. However such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area or Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose or seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

3.0 The Overarching Vision for Dacorum is generally supported and the references to delivery of balanced communities with the homes, jobs and supporting infrastructure is welcomed. The reference to the provision of new housing in sustainable locations and to a high standard of design is also generally reflective of national policy.

3.1 The Vision is then applied to separate places to provide a more tailored approach to various settlements. This approach is supported and assists in delivering the Vision through the plan. Tring is identified to grow to be an inclusive market town that meets the needs and aspirations of existing and new residents. In particular, the planned new neighbourhood to the east of the town is identified for delivery which is supported. The Vision states that Hemel Hempstead

will grow significantly whereas other settlements, including Berkhamstead and Tring, are identified to 'grow'. It is suggested that all settlements should be identified to 'grow' as the higher level of growth for Hemel Hempstead is proportionate to its size and status in the settlement hierarchy.

3.2 The Vision is supported by objectives, split into various topic areas. Under delivering Dacorum's Future with Homes for Everyone the first objective is "to deliver the identified housing requirements between 2020 and 2038". This is generally supported however it would be helpful to confirm the identified housing requirement as per the Standard Method figure of 1,023 homes per annum.

<b>Comment</b>	<p>The ambition of this section of the Emerging Local Plan sets out the planning authority's intention to meet the level of growth required for Dacorum. Subject to our later comments, concerning the need for a diverse choice of sites for the provision of new homes, we support this section of the plan.</p> <p>We acknowledge, at paragraph 2.1 first bullet point, the need to manage a step change in housing provision supported by the necessary infrastructure. We are concerned about the allocation of large sites which will inevitably involve long lead in times, prior to the delivery of housing. We note that the plan seeks to provide new housing in sustainable locations, to a high standard of design. The site identified later in this representation provides an ideal opportunity for a free standing scheme incorporating high quality design principles, whilst maintaining the identity and separation between settlements.</p>

<b>Comment</b>	Too little emphasis on redeveloping Brownfield sites, & too much emphasis on development on green field sites.

Agree with the need for more housing and in particular affordable housing, BUT very concerned with the apparent search for very large developments to fulfill the quota in single shot, rather than intelligent use of smaller sustainable sites with managed impact on the local area.

For example, major development in Tring by the Cemetry with no additional infrastructure (schools, doctors, dentists, childcare/nurseries, drainage) planned. In this sepific instance, the housing is being built, but none of the amenities above have had additional capacity added.

<b>Yes / No</b> * <b>Yes</b> * <b>No</b>	No
<b>Comment</b>	<p>Dacorum is currently blessed with significant areas of Green Belt countryside, and market towns rich in history. Those towns and countryside offer significant amenities and benefits to residents. However, it is also an area which lacks significant infrastructure. There is no large hospital within the borough; the train service into London is already at capacity,<sup>1</sup> there are existing air pollution concerns<sup>2</sup>, schools are full<sup>3</sup>, and roads are increasingly clogged.<sup>4</sup></p> <p>The Plan put forward by DBC ('Emerging Strategy for Growth, 2020-2038') threatens to harm the borough irreversibly. Destruction of swathes of Green Belt land, with inevitable adverse impacts on the neighbouring Areas of Outstanding Natural Beauty (<b>AONBs</b>), coupled with the increased pressure on towns and villages built for much smaller populations, and a lack of investment in infrastructure will result in a lowering of living standards, a reduction in biodiversity, an increase in car use and consequently an acceleration of climate change - contrary to the council's own declaration of a climate change emergency. While the council relies on housing growth figures put forward by government, this does not absolve it of its other responsibilities under the National Planning Policy Framework, notably to protect the Green Belt, Areas of Outstanding Natural Beauty and to adopt policies consistent with the climate emergency.</p> <p>While the Plan itself recognises the need to reduce reliance on car travel, reducing congestion and poor air quality,<sup>5</sup> many of the proposed developments will exacerbate, rather than solving the existing problems. Rather than providing affordable housing in locations close to local infrastructure - they are focussed on providing dormitory style accommodation at a distance from town centres resulting in an inevitable continued reliance on car journeys (this is the case in particular with the developments around Northchurch/South West Berkhamsted). This is contrary to requirements of the NPPF that planning should: "<i>support the transition to a low carbon future in a changing climate</i>" and to "<i>shape places in ways that contribute to radical reductions in greenhouse gas emissions</i>" (NPPF, paragraph 148).</p> <p>The scale of the planned development in the market town of Berkhamsted and the village of Northchurch (whose separate identity is not acknowledged in the Plan), and to an even greater degree, in Tring is out of all proportion to the existing size of these historic places, which have insufficient infrastructure to cope with the planned increases in housing.</p> <p>While the housing need may have been calculated in accordance with an formula foisted on boroughs such as Dacorum by central government, it is incumbent on the council to assess its obligations in the light of the other fundamental requirements of the National Planning Policy Framework (<b>NPPF</b>), including notably the need to protect AONBs (which is not met by placing large housing estates in ridge-top locations visible from the AONB itself - e.g. as is proposed in 'Growth Area Bk06') and the obligation to remove Green Belt protection only in exceptional circumstances. These NPPF</p>

requirements are not subservient to the assessed housing need, but the reverse: where housing need can't be met without violating NPPF principles, it is acceptable for the need not to be met or to be met only in part.<sup>6</sup>

The Council needs to rethink its plans in the light of the changes wrought by the pandemic on (among other things) working and shopping patterns as more shopping moves online. It is clear that significant policy change at a central level is coming: for example, reforms to changes of permitted use are planned to facilitate permitted development of empty retail premises into residential properties in and near town centres. This should free up significant high street and urban accommodation, which can be used in preference to greenfield and (in particular) Green Belt sites. Dacorum itself already has experience of successfully blending significant housing (social and mixed low value private) into a town centre, as in Hemel Hempstead. This approach is also consistent with the need to ensure that housing is located near to facilities and transport centres, rather than comprising new dormitory dwellings on the outskirts, which (realistically) can be reached only by car (particularly the case with the developments in Northchurch / South West Berkhamsted, such as Bk06 and Bk08).

Despite proposing changes to the borough which will have a profound influence on residents and on future generations, the consultation has been pushed through at a time when the country has been under national lockdown, resulting in an entirely inadequate consultation process and a failure to adapt to the new, realistic planning needs of the county as we emerge from the pandemic.

A new approach is needed to avoid untold damage being not needlessly done to our countryside, to the detriment of the environment, current residents and future generations.

<b>Comment</b>	<p>The emerging local plan identifies the vision for development in Dacorum between 2020 to 2038. The Emerging Strategy for Growth (ESG) seeks to deliver the planned future growth and demands for the Borough through the well-established principles of sustainable development which focus on the economic, social, and environmental objectives in the NPPF. Section 5.2 of the ESG identifies several key principle considerations to support the delivery of growth, such as:</p> <ul style="list-style-type: none"> <li>• Delivering our requirement to significantly boost the housing supply, and in particular, increasing the number of new and genuinely affordable homes in the Borough;</li> <li>• Seeking out opportunities to maximise the amount of development on previously developed land within existing urban areas but taking this concept much further in Hemel Hempstead by proactively encouraging substantial increases in heights and densities in the most accessible locations;</li> <li>• Providing growth that will contribute to the transformation and regeneration of Hemel Hempstead and renewal of its New Town infrastructure;</li> <li>• Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations;</li> <li>• Providing growth in the villages that reflects their role and character;</li> <li>• Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites; and</li> <li>• Ensuring that the preferred strategy is of such a form and scale to deliver the appropriate level and type of infrastructure such as schools, health and transport/movement.</li> </ul> <p>These proposed principles as set out above are broadly However, we suggest that housing growth should be more dispersed and that the proposed housing allocations within the Local Plan, particularly policies HH01 and HH02, do not follow the ESG as identified within the Vision section of the Local Plan.</p>

**Comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built

infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p><b>VISION AND STRATEGIC OBJECTIVES</b></p> <p>Overall, HCC supports the Vision and Objective of the ESG. HCC particularly welcomes the acknowledgement that Tring is a sustainable settlement within the Borough that is capable of, and should support, a substantial proportion of development to meet the significant increase in housing need across Dacorum.</p> <p>HCC supports the statement within The Overarching Vision for Dacorum's Growth, that new housing should be provided in sustainable locations to a high standard of It has been demonstrated that Tring performs as well as Berkhamsted in terms of settlement characteristics and services and can therefore support the level of growth being proposed within the Local Plan. HCC therefore supports the growth aspirations for Tring and the important contribution that Dunsley Farm site allocation (Tr01) will make towards this vision, particularly in terms of delivering key infrastructure facilities to support the overall growth.</p> <p>HCC notes the Council's comments that the significant long term growth within the Borough will need to be supported by major investment in infrastructure, and that new development must contribute to its full share of the new infrastructure required to deliver HCC are including land at the Dunsley Farm site to provide a replacement fire station and a new primary school. In accommodating this crucial infrastructure at the Dunsley Farm site, HCC would expect the Borough Council to ensure that appropriate levels of contributions are sought from the other strategic development sites within Tring to fund these services, which will serve all of the new development across the town.</p>

<b>Comment</b>	We are pleased to see that Dacorum acknowledges the challenges the borough faces due to climate change including flooding. Drinking water availability will also be affected. Any Climate Change Strategy should fully consider becoming

resilient to the effects of climate change while planning for the future and not solely concentrate efforts to reduce carbon emissions. One of the most proactive approaches to this would be to steer all development away from flood zones.

There are a number of flood risk assets within Dacorum that may need replacing or maintenance within the plan period which may not be acknowledged in your Infrastructure Delivery Plan (IDP). We tried to engage with the consultants working on your IDP but were unable to provide comment.

We would like to see your rivers and globally rare chalk streams included within your sensitive environments to fully embed their importance and their need for protection.

We are supportive of paragraph 2.20, development should be required to improve the environment and biodiversity.

Overall we are supportive of the vision but believe important aspects have been overlooked. Water quality of rivers has been included which is good to see however Chalk streams and river corridors should be included as special features like the Grand Union Canal has been. The vision mentions that the countryside is actively managed but there is no mention of whether the urban green spaces are actively managed. This includes an appreciation for the natural capital provided by the environment.

Again the only reference to climate change is Dacorum's 'contribution to climate change', presumably in relation to carbon. This will need to be expanded to be clear that **Dacorum will also need to be resilient to the effects of climate change through development, not just mitigate its causes**. This needs to be fully imbedded throughout the local plan.

<b>Comment</b>	<p><b>2.3 Housing Growth:</b> The government has recently altered its strategy, so perhaps Dacorum will not need to fulfil its 'quota' after all. I look forward to hearing more about the new plans.</p> <p>The number of dwellings proposed for Tring is monstrous. The reasons for it are not justified in this document, and if carried out, would be a disaster for the town.</p> <p><i>Delivering Dacorum's future with homes for everyone:</i> This should not just mean little houses with gardens in rural areas. The latter are environmentally unsustainable in large numbers. 'Homes for everyone' should also mean flats and high-rise developments which are more sustainable, do not despoil Green Belt areas and ensure vibrancy of towns and cities.</p> <p>I applaud the high priority given, in theory, but by proposing to build houses and roads over large areas of land on Green Belt, the vision is deeply flawed. Roads mean cars, and until everyone has electric or other sustainable vehicles, petrol and diesel emissions will contradict the climate emergency strategy. As will the disappearance of fresh air, fields and trees.</p> <p>2.11 Our high streets are going to be reshaped by a number of factors including continuing changes to retailing patterns brought on by the growth. What is missing here are other possibilities for enhancing town centres, including High Streets, by any kind of art, craft or cultural enterprises. These would also be reasons for visiting the centres, on a regular basis, for people of all ages, and at different times of the day. I urge further consideration for this aspect of development .</p>

...—

Tring - cannot "quickly and easily be reached by sustainable public transport". Tring Station carpark is normally full with nowhere else to park . The buses can only go as fast as congested High Streets allow, i.e. neither quickly nor always easily, especially when travelling to the Station

"Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and help balance growth and development opportunities in the Borough". The words '*balance growth and development opportunities*' do not take into account that Berkhamsted and Tring are defined as "small market towns". That is their character and definition, so should not be just places to theoretically balance growth, because they will lose the essence of their existence.

In addition, because their roads are appropriate to small market towns, they are NOT amenable to growth and development on the scale envisioned in this document.

*2.4 In addition, the Borough's high average house prices means that buying market housings increasingly difficult for many households. The dream of owning a home etc... see earlier comment:*

*Delivering Dacorum's future with homes for everyone:* This should not just mean little houses with gardens in rural areas. The latter are environmentally unsustainable in large numbers. 'Homes for everyone' should also mean flats and high-rise developments which are more sustainable, do not despoil Green Belt areas and ensure vibrancy of towns and cities.

<b>Comment</b>	<p><b>Although some aspects of the plan are laudable, the wholesale and irreversible destruction of countryside contemplated by the plan is shocking.</b></p> <p>It is noted that the plan would, if implemented, involve the sacrifice of 18 distinct sites within the borough that are within the Green Belt. Some 850 hectares of Green Belt land, other countryside and urban green space within Hertfordshire will be lost forever. The scale of the destruction, in a borough which is renowned for the quality and importance of its landscape, is frankly horrifying.</p> <p><b>Many residents wholeheartedly accept that across the country, an increase in housing stock, of the right kind, is needed. The question is whether, in proposing such a massive housebuilding programme in the borough, DBC is acting rationally, responsibly and in the real interests of local inhabitants, or bowing to pressure from Government.</b></p> <p>There are huge questions here about whether DBC's duties to safeguard the Green Belt and the Chilterns Area of Outstanding Natural Beauty (<b>AONB</b>), and other environmental obligations, have been properly taken into account. As explained below, there are indications that DBC has misunderstood its obligations under the National Planning Policy Framework (<b>NPPF</b>) with respect to the meeting of local housing need. DBC seems to be proceeding on the basis that meeting housing need is a paramount obligation under the NPPF, whereas in reality the presumption of sustainable development in paragraph 11 of the NPPF only applies insofar as consistent with other provisions of the NPPF.</p> <p><b>In effect, this means that certain other obligations under the NPPF, inter alia regarding the preservation and protection of land designated as Green Belt, Areas of Outstanding Natural Beauty, and irreplaceable habitats, take priority over the presumption that assessed housing needs must be met. This crucial point seems not to have been recognised.</b></p> <p>The stipulations in the NPPF that Green Belt areas, Areas of Outstanding Natural Beauty and irreplaceable habitats must be protected, and where possible enhanced, are consistent with the widespread view that we are custodians of</p>

the countryside, and must wherever possible protect and enhance it – not only in an attempt to put a stop to the saddening loss of biodiversity that has occurred in recent decades, but also so that it can be enjoyed by our children, grandchildren and great-grandchildren. **As everyone recognises, once countryside has been developed on, it is lost forever. The chipping away at treasured and environmentally significant countryside to line the pockets of big developers has to stop.**

Even aside from the appalling impact that the plan will have on the natural environment if it is implemented, there are good reasons for residents to be deeply concerned about the consequences that the plan will have on their quality of life.

**It is inevitable that more than 16,500 additional homes within the borough (possibly as many as 16,900; an increase of around 25%) will have a very significant adverse impact on traffic, local infrastructure and services. Although these matters are referred to in the plan, the plan does not provide any confidence that they will be addressed in any meaningful way if the proposed development goes ahead.**

There is a lot of talk about sustainability in the draft plan, but the reality seems to be that much of the development would (even if some measures are taken to ensure energy-efficiency) be intrinsically unsustainable. For example there are many proposed development sites on the very outskirts of Northchurch and Berkhamsted. Some of these sites are a good 3-4km from the centre of Berkhamsted, which is more than most people are willing to walk with any regularity, and the local topography is not conducive to cycling. At present there is no public transport to/from these locations and it seems highly improbable that such public transport would be viable. It is all but inevitable, therefore, that inhabitants of the proposed new developments will be highly dependent on their cars, and in the short-term it is unrealistic to assume that a significant proportion of these cars will be electric. **Additional air pollution is almost guaranteed, for example in Northchurch High Street, a thoroughfare which already suffers from occasional high or very high particulate concentrations.**[1]

A further concern is with water supplies. Currently, fresh water for the area is abstracted from chalk aquifers that feed the region's chalk streams, which are rare protected habitats, highly vulnerable to long-term damage from drying out. If there is a 25% increase in the number of homes in the borough, the default position will be a 25% increase in the volume of water abstracted from the catchment areas of these chalk streams. The plan notes the problem, and states that measures will be taken to avoid to abstraction from the aquifers but the lack of specifics on this important issue is concerning.

[1] See e.g. Air Quality England air pollution report for Northchurch High Street, 1 January to 31 December 2019: [airqualityengland-statistics-report-HB013-2019link.pdf](https://www.airqualityengland.org.uk/statistics-report-HB013-2019link.pdf)

<b>Comment</b>	<p>The vision for Dacorum Borough and the main thrust of the objectives are supported. This includes the focus for growth at Hemel Hempstead with support from the market towns and larger villages; the principle of using land efficiently within existing built-up areas and the need to provide a mix of housing products including the delivery of affordable housing. However, the spatial strategy and proposed allocations do not fully reflect these objectives or the overarching vision.</p> <p>The Plan references the reliance upon adjoining authorities to meet some of its employment needs and the delivery of Hemel Garden Communities amongst other matters. As none of these matters are resolved at this second Regulation 18 consultation stage, the plan will need to be re-consulted upon again before progressing to Regulation 19 Pre-submission stage.</p> <p>A joint Strategic Plan is being prepared across the five partner authorities in South West Hertfordshire ('JSP'). The consultation draft DBLP anticipates the JSP will be in place by 2023. This is broadly consistent with the DBLP target adoption date. If the two plans progress concurrently, but separately, there is the potential for conflict to arise between the two processes if they are dealing with different growth requirements, time horizons and strategies.</p> <p>HLM note that at paragraph 1.36 DBC consider it is unlikely to be in a position to assist in helping meet unmet needs of the wider South West Hertfordshire area to 2038. Several local plans have failed over the past few years on the Duty to Cooperate, including at Sevenoaks District. The ramifications are spilling out to its neighbouring authorities who have submitted Local Plans for examination without meeting its DtC obligations.</p> <p>The spatial strategy only identifies 63% of the housing target to Hemel Hempstead despite it being, by far, the most sustainable settlement in the district as the main town. There is a strong reliance on the delivery of previously developed land and sites allocated in the previous local plan that are yet to come forward in the urban area. There is only one new greenfield allocation at Hemel which forms a first phase of a new Garden Community with no certainty on the full extent</p>

of the scheme being allocated/delivered in a future local plan for Dacorum or the neighbouring St Albans district emerging local plan. The majority of greenfield sites that provide certainty of development and are capable of delivering homes in the first half of the plan period are located within the smaller towns and larger villages, predominantly through Green Belt releases.

Whilst HLM agree with the Council that Green Belt release is inevitable and that exceptional circumstances exist to justify GB release in order to deliver a sustainable pattern of growth, the chosen sites do not represent the most sustainable strategy. There are significant concerns over the methodology and content of the interim SA, with a failure for all reasonable alternatives being considered including the ability of Hemel Hempstead to take a greater proportion of greenfield growth to optimise the delivery of development in the most sustainable location. We do not consider the draft strategy represents the most appropriate strategy and conflicts with the stated Vision and Objectives.

The spatial strategy identifies significant allocations at lower tier settlements within the AONB (e.g. Tring) and Green Belt which are disproportionate in scale and the justification for those allocations is not clear from the supporting information and available evidence. The site assessments acknowledge that other suitable Green Belt sites exist around Hemel Hempstead that are not constrained by AONB. There is no justification for this approach based on alternative sites available.

There is no mechanism in the plan if sites under deliver within the plan period. HLM express concerns over the suitability, availability and deliverability of a number of urban sites and the delivery of a first phase of a new Garden Community that is not yet identified in full in a development plan. The emerging strategy for growth lacks any flexibility to respond to change.

The suite of proposed allocations do not accord with the findings of the Council's own evidence base, and some sites are proposed at excessive densities which may not strengthen the sense of place or be sufficiently evidenced to justify the capacities proposed. The ability of the overall strategy to deliver the stated levels of affordable housing is concerning, particularly for Hemel Hempstead given the reliance on PDL sites and the (as yet unknown/unquantified) strategic infrastructure requirements of delivering a first phase of HGC in isolation.

<b>Comment</b>	<p><b>VISION AND STRATEGIC OBJECTIVES</b></p> <p>Overall, St. William support the Vision and Objectives set out in the DESG. The recognition of the challenge of meeting significantly increased housing need in a sustainable manner and with a high quality of design is particularly Achieving this with the provision of adequate infrastructure to keep pace with the delivery of new homes is critical, with recognition that that the public as well as the private sector will play a key role in delivering this infrastructure.</p> <p>The recent publication by the Government of the draft revisions to the National Planning Policy Framework shows clearly the direction of travel of Government policy with regard to the presumption in favour of sustainable development with the emphasis added at 11 of promoting a sustainable pattern of development that aligns growth and infrastructure as well as the highlighting the key objective of making effective use of land in urban areas.</p> <p>In this respect, the DESG is well aligned with the draft A key theme, recognised in the overall vision, is to optimise the use of previously developed land in sustainable locations. The National Grid land is a prime example of such a site.</p> <p>St William fully support the growth agenda for Hemel Hempstead (page 23), recognising the importance of sites in the town centre and Two Waters Returning blighted brownfield land to productive use is vital to meeting local housing needs, energises local economies and relieves pressure on greenfield land. St William also support the Strategic Objectives, including the commitment to delivering the full housing requirement between 2020 and 2038.</p> <p>In transforming former gas works sites into places, St William focuses on high quality placemaking and ensures a long-term commitment to community building and enhancing biodiversity. Former Gasworks sites are unique in both use and character; they are challenging and abnormally expensive to redevelop and regenerate compared to delivery of development on other brownfield sites. In addition, they can also have ongoing operational requirements requiring physical infrastructure and easements which can considerably reduce the developable site area. The further challenge for any developer on these typically complex sites is the quantum of upfront costs required to make the sites adequate for residential delivery.</p> <p>St William is committed to ensuring the highest viable level of climate change mitigation and adaptation whilst recognising that this must be balanced against deliverability of new development and the overall sustainability objective of providing for new homes and contributing to the Council's housing targets and Objectively Assessed Need.</p>

<b>Comment</b>	Climate Change Emergency The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction.

The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

#### Overarching Vision: Environmental Sustainability

The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. All public transport must be electrified. At construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. All power must be supplied by electricity or hydrogen generated from sustainable energy sources.

#### Overarching Vision: Economic Growth

In addition to the Enviro-Tech aspirations in the plan we wish to see preference given to developments which fit with the likely changes to working patterns in the aftermath of the COVID-19 epidemic. Priority should be given to plans and developments which will support local green business, including green STEM businesses, close-to-home communal office space, green domestic builders & installers to help decarbonise Dacorum, and small businesses selling locally sourced goods.

#### Berkhamsted & Tring Developments

We welcome the commitment to genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing with rents set at no more than a third of the average income of workers in Dacorum.

The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in these market towns.

The plan must guarantee the protection of existing natural habitats and creation of new ones by rewilding. It must ensure that there are migration corridors that connect the green spaces as far as possible to increase biodiversity.

To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population.

<b>Comment</b>	<p>Northchurch Parish Council (NPC) has not found one person who believes that Dacorum's vision or strategic objectives are right for the Borough.</p> <p>Dacorum's Vision 1.37: "For housing, we are making a bold commitment to significantly increasing the supply of land to deliver 922 dwellings per year, more than double the number (430 dwellings per year) in the previous Core Strategy."</p> <p>The views of Northchurch residents reflect those of the country at large. For example, In October 2020, when the government consulted on its proposed changes to the planning system, respondents expressed concerns that "the distribution of need was not right...too much strain was being put on our rural areas, and ... "in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt."</p> <p><a href="https://www.gov.uk/government/consultations/changes-to-the-current-planning-system">https://www.gov.uk/government/consultations/changes-to-the-current-planning-system</a> to come government response to the local housing need proposals in changes to the current planning system</p>

The views of Northchurch residents reflect those of people across the Borough. For example, only 5% of people who responded to Dacorum's 2017 Local Plan Issues & Options agreed with Dacorum's proposed approach to Green Belt and Major Developed Sites.

[http://www.dacorum.gov.uk/docs/default-source/strategic-planning/appendix-6-q9-to-q11-i-and-o-consultation-report-of-responses-september-2019.pdf?sfvrsn=6b530c9e\\_6](http://www.dacorum.gov.uk/docs/default-source/strategic-planning/appendix-6-q9-to-q11-i-and-o-consultation-report-of-responses-september-2019.pdf?sfvrsn=6b530c9e_6)

The views of Northchurch residents also reflect those of Dacorum's Borough Councillors, none of whom appear to agree with this "bold commitment" to double the number of dwellings. On 18 November 2020, Dacorum Borough Councillors voted unanimously in favour of a motion expressing concern about the effects on the borough of having to deliver 922 dwellings per year. On 20 November 2020, the Leader of Dacorum Borough Council wrote to the Secretary of State saying that the housing figure was too high and would harm the Green Belt:

"At the moment the housing target generated by both current and proposed standard housing methodologies ignore these constraints and produces a figure well in excess of the Office of National Statistics projection of housing need based on the 2018 figures, if this is accepted it would result in a reduction in the annual target and therefore would help to reduce the current figure suggested for Dacorum which is currently 922 per annum, a level of growth that can only be achieved with significant development in the Green Belt".

So, neither residents nor councillors, support Dacorum's vision.

NPC believes that Dacorum's vision is fundamentally flawed because it is based on out-of-date 2014 household projections which over-estimate demand and prioritise growth at the expense of other considerations such as the importance of the Green Belt:

The vision would have a devastating effect on the 2800 people who live in Northchurch. New developments would add over 1500 new residents to Northchurch, a population increase of over 50%. The additional buildings and residents would destroy the semi-rural character of Northchurch and the quality of life for local people.

Northchurch is a large village with its own distinct appearance, community, and semi-rural character but the vision does not even mention Northchurch; it has been whitewashed from existence.

Northchurch predates the neighbouring town of Berkhamsted: the parish church of St. Mary is one of the oldest churches in Hertfordshire; the two-storey half-timbered alms-houses in the Conservation Area were built in the 15th and 16th centuries. Northchurch has two conservation areas and includes the hamlets of Dudswell, Norcott Hill, Northchurch Common and part of the Cow Roast.

The overarching character of Northchurch is that of a large village, within a semi-rural area. Most dwellings are set to the south of the Grand Union Canal, elevated from the valley bottom with sloping hills across Green Belt to the north and south. Our houses have a different style to Berkhamsted. In contrast with the tall, Victorian, high-density, London-style red-brick houses, common in Berkhamsted, the core of 1940s and 1950s dwellings broadly found in the south eastern part of Northchurch create a strong design identity. Here, most buildings have simple brickwork alleviated in part by

angled front bays and front tile hanging. A wide-open feel is created by the low density (around 15 dwellings/ha), roadside verge planting and dwellings set back from the road.

In terms of demographics, people of Northchurch are older and less affluent than those of Berkhamsted. Unlike Berkhamsted, a town with many large, impersonal shops, Northchurch has just a handful of small shops and only one pub where customers recognise each other.

The roads in Northchurch are also different from Berkhamsted. In the part of Berkhamsted to the East of the proposed developments, roads running north/south, from the High Street uphill towards Shooters Way are heavily parked and busy with traffic. In contrast, Northchurch Lanes are much quieter. For example, Darrs Lane, which edges the Chiltern Area of Outstanding Natural Beauty, and Bell Lane, which runs between the two Green Belt fields, are narrow with steep grassy banks and hedging. They are country lanes.

The Green Belt fields that lie between Berkhamsted and Northchurch fulfil the primary aim of Green Belt policy: to prevent urban sprawl. They act as a buffer between the town of Berkhamsted and the village of Northchurch. They stop the communities of Berkhamsted and Northchurch from merging into each other. The proposed developments fill these fields with houses which means that Berkhamsted and Northchurch become one. Dacorum have not included the Bulbourne Cross proposal in the Local Plan, despite its advantages, because it would join Berkhamsted to Bourne End. The proposed developments in Northchurch do the same thing: they join Berkhamsted to Northchurch.

So Dacorum's vision fails to preserve the special character and community of Northchurch.

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses)

population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Heme! Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements .

I strongly object to the proposal that Tring is required to " play a much greater role in delivering housing growth " within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Heme! Hempstead with the remaining growth shared equally between the remaining settlements .

Whilst I accept that the aspirations *for* existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has " delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. " This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the

existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the **Area** of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

I object to Dacorum's Emerging Strategy for Growth on a number of grounds.

Green Belt: Our Green Belt is a critical part of our heritage - and is critical to maintaining the health and wellbeing of our area. This plan presents a significant threat to the Green Belt and also, by proximity, to the Chilterns AONB. This is extremely short-sighted and totally unacceptable. The council has not shown 'exceptional circumstances' to justify Green Belt release. There is no consideration of sustainable development - these proposals have not been made with future generations in mind, the loss of Green Belt will be irreversible and damaging. If implemented, these proposals would result in the loss of a massive 850 hectares of Green Belt, wider countryside and urban green space - this would cause irreparable harm to the environment, ignoring the council's own climate emergency declaration.

Climate Emergency: The Climate Change Emergency needs to be at the core of the Local Plan. The central thread of the Local Plan should be net zero carbon emissions by 2030 and minimising carbon emissions during any construction. The Climate Change Emergency is rightly a headline statement in the plan, but there is little follow through in the subsequent detail except ill-defined aims, such as promoting an unquantified reduction in greenhouse gas (“GHG”) emissions.

Environmental Sustainability: The promotion of renewable energy as proposed in the plan is insufficient to meet the challenge of the Climate Emergency. To achieve net zero emissions by 2030 all new homes and offices must have maximum insulation, only utilise electrical energy, must have rooftop solar panels installed at the time of construction, and must be fitted with efficient heating such as air source heat pumps. Dacorum should be aiming to be at the forefront of this transition but the development plan shows little vision nor innovation to do so. We need an urgent move to public transport that is electrified and at construction provision must be made for home electric vehicle chargers and an adequate number of community fast chargers. Plans should be in place for power to be supplied by electricity or hydrogen generated from sustainable energy sources.

Overprovision of Housing: The housing targets are too large, they are based on out-of-date data and they have not been considered within the context of the constraints imposed by an area that is 85% rural, 60% Green Belt and 33% AONB. Furthermore, these proposals underestimate the potential to provide housing on existing developed sites, nor do they take into account recent government changes to permitted development rights (allowing conversion of commercial premises to residential use) at a time when Covid-19 has forever changed office and commuter work patterns, allowing an escape from London-centric over-development in the South-East and permitting investment and levelling up across the country.

Infrastructure: Finally, the huge impact on local infrastructure has been disregarded - the proposed level of development would place an unacceptable burden on all types of infrastructure services and facilities in Dacorum. The plan does little to address improvements required to support these proposals - with water supply and waste water disposal being of particular concern.

<b>Comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.</p> <p>This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.</p> <p>The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.</p>

This</p>

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Bell to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Bell and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<p>In our view Central Government's demand for 17,000 new homes in Dacorum is based on housing estimates which have been shown by the ONS to be a significant over-estimate probably by a factor of 2.</p> <p>Furthermore, since the estimates were originally produced, no account has been taken of the changes to employment, shopping and living patterns which will almost certainly arise from or be accelerated by</p>

the pandemic, and which will result in more currently commercial and retail space becoming available for repurposing as residential.

In trying to comply with Central Government's demands, the plan places too much emphasis on development on Green Belt land, rather than maximising the use of brownfield sites. Of the proposed new housing, 60% is proposed on green belt land involving the loss of about 850 hectares of green belt. This is inappropriate in Dacorum, situated as it is, close to and partly in the Chilterns AONB

If the housing projections are almost double current ONS estimates and more commercial and retail buildings become available for alternative use because of pandemic accelerated change, there will be scope for more development on brownfield sites and less need for building on the Green Belt.

strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been

sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

Whiteacre supports the Council's overarching vision for Dacorum's New housing will need to be provided in sustainable locations to a high standard of design. Affordable housing should be provided and be 'genuinely affordable', having regard to local circumstances and new homes to have met the needs of older people, people with disabilities and those with specialist needs.

The overarching vision for Dacorum aims to deliver significant uplift in growth required in a sustainable way across the Borough, seeking out opportunities to regenerate Hemel Hempstead and to continue to act as a catalyst for its transformation. The Council acknowledge that they cannot accommodate all the growth within the urban area, so would need to release land in the Green Belt, which Whiteacre supports.

However, while the large villages of Bovingdon, Kings Langley and Markyate provide a reasonable level of services and facilities, the Council state that they are relatively constrained in terms of local infrastructure. The strategy proposes only modest levels of growth in these settlements, limited to infrastructure developments.

Whiteacre supports the objective to maintain and enhance the sustainability of large villages and to enable the delivery of infrastructure to support development. The current vision for Dacorum's places states that:

*“Bovingdon, Kings Langley and Markyate will have grown and will:*

- have provided increased levels of affordable homes;
- have strengthened their role in providing services and facilities to serve residents and the adjacent rural communities; and
- have secured additional and improved local community facilities”.

In our view, we consider that the vision for Bovingdon should be strengthened to include specific references to local community facilities, including schools and elderly care facilities. Bovingdon is also prone to surface water flooding and therefore environmental objectives should be enhanced within the overarching vision for Bovingdon.

While there is no objection to these objectives in principle they do not fully accord with the Council’s justification for the spatial strategy and site selection. For example, there is no reference to reserving land for a new 3FE Primary School and ‘future-proofing’ the infrastructure requirements for any future growth.

The proposed allocation Growth Bv01 does not set clear criteria for flood alleviation works. The draft Plan states that any development will need to have regard to the recommendations of the Level 2 Strategic Flood Risk Assessment for this site. – the Level 2 assessment will comprise further analysis for any site identified as ‘at risk’ in the Level 1 SFRA, so is not part of the evidence base for consultation. However, the site assessment evidence supporting the proposed allocation at Grange Farm clearly illustrates how benefits to surface water drainage can be achieved and this should be clearly reflected in relevant policy criteria from the outset, as a key component of the Delivery Strategy.

### **Suggested Modifications to the Vision for Dacorum’s Places**

The ability to address the draft Plan’s relevant objectives need to be read together as part of the case for exceptional circumstances.

We therefore suggest that the vision for Bovingdon is amended to:

*“Bovingdon, Kings Langley and Markyate will have grown and will:*

- have provided increased levels of affordable homes;
- have strengthened their role in providing services and facilities to serve residents and the adjacent rural communities;
- have secured additional and improved local community facilities, **including local schools and elderly care facilities, and a hierarchy of open spaces:**
- **have benefitted from further investment in mitigating surface water flooding, particularly in Bovingdon**
- **have reduced existing traffic levels on the High Street”.**

We consider that Dacorum Borough Council’s draft Local Plan has a clear vision and delivery strategy for Bovingdon, and the draft allocation of Grange Farm in Bovingdon can achieve a sustainable development of 150 homes, including significant benefits to the community over other sites that have already been assessed. This will be assessed in more detail in subsequent chapters.

- Whiteacre supports the Council’s overarching vision for Dacorum’s places. New housing will need to be provided in sustainable locations, including large villages, to a high standard of design.

- Whiteacre considers that the vision for Bovingdon should be strengthened and modified to include specific references to local community facilities, including schools and specialist elderly housing. Bovingdon is also prone to surface water flooding and therefore environmental, flood protection and mitigation objectives should be enhanced within the overarching vision for Bovingdon.

<b>Comment</b>	<p>A great deal of green belt land would be destroyed and this would have a very negative affect on air quality, and the wildlife in this area including loss of ancient woodland and hedges. I have concerns regarding flooding and drainage, as I have seen new build properties in other parts of our country built with little consideration regarding this matter and new house owners/ tenants have suffered the consequences.</p> <p>I feel more attention should be focused upon brownfield land which may already have some infrastructure in terms of sewage pipes and electricity. Digging up green belt land to lay pipes and put in electricity lines, etc would be much more costly and detrimental to the environment.</p> <p>I understand and agree that there needs to be an increase in housing for Hemel Hempstead, but where possible brownfield land should be utilised and local services improved to prevent urban decline/ decay. There needs to be greater healthcare facilities for the whole area and Hemel Hempstead Hospital should be part of this vision, providing the service and purpose for which it was built, refurbishing and expanding it, not leaving it as it is.</p> <p>I disagree and object with the proposal that Tring is required to play a much greater role in delivering housing growth. To more than double it's size is detrimental to the town, this idea would mean destruction of huge areas of green belt land. This is a disproportionate amount, failing to acknowledge the building contributions of the surrounding towns and villages.</p> <p>The planned new neighbourhood to the east of Tring has not taken into consideration the important issues around conservation, air quality and protection of wildlife, hedgerows and trees. I have concerns that this move will eventually make Tring part of a conurbation to a larger town, swallowing up its existence with the other small towns and villages and extinguishing its Market Town status - this has happened in other parts of this country.</p> <p>Already, a large number of houses are being built by Tring cemetery which will have an affect on the surrounding area. For Tring and surrounding Villages, consideration must be taken with regard to using already given existing brownfield areas and existing properties that could be renovated. Delivery of sports facilities and open space is welcomed, improved cycling paths.</p> <p>More trees and open spaces sounds good, but this contradicts protection of the more important green belt land.</p>

DBC's vision for the Borough

- This Local Plan (LP) sets out the Council's vision for the Borough for the next 18 years to Whilst we welcome the statements set out in this vision, the Group does not find these to be fulfilled by the proposals of the LP.
- In December 2017, the CCG made a substantial response to the DBC Issues & Options Consultation Local Plan to 2036, which as DBC then stated, would inform the next stage. It is therefore of great concern that this revised LP appears to have completely ignored the critical issues identified by CCG & others in 2017, in particular:
- setting figures which DBC identify (LP. 7.7) as '*ambitious*' for perceived housing demand within the Borough; housing provision should be based upon **need**, rather than speculative demand

- release of Green Belt for development without substantive factual reasons demonstrating the '*exceptional circumstances*' as required by the National Planning Policy Framework
- reliance on possible Government intentions, rather than statutory obligations. Indeed, the new LP continues to ignore recent strengthening in publicly announced Government policy (December 2020) on urban re-generation, particularly in the North & the Midlands and the need to protect Green
- The LP identifies the 3 main towns of the Borough: Hemel Hempstead, Berkhamsted and Hemel Hempstead is the larger town with greater scope for supporting expansion and infrastructure. All 3 have good access to London and larger conurbations such as Watford and Milton Keynes by road and rail. The proposed expansion of London Luton and Heathrow Airports is of concern from increased operations, road traffic, air, visual and noise pollution.
- From a relatively small Old Town, housing at Hemel Hempstead has specifically been developed as 'spokes' of a wheel emanating from that centre, incorporating purpose-built main and local shopping centres, green spaces, schools for all ages, community facilities and churches. Provision of appropriate health care facilities remains a contentious issue. Major and significant investment has been expended upon the town, businesses and its retail centre, which can easily support and would indeed welcome increased footfall, employment opportunities and income generation, some of which may now, indeed, facilitate urban regeneration for
- Berkhamsted and Tring, in particular, are smaller traditional 'ribbon' market towns with historical centres, where housing & associated infrastructure have grown organically. Education and healthcare present challenges to accommodate existing population. Both towns are surrounded by the Chilterns Area of Outstanding Natural Beauty (AONB) and significant swathes of Green Belt, which define and inform the characters of the towns and the AONB
- As identified in pts 1.iii – 1.v, the Borough's three main towns are very different with hugely varying abilities to support and sustain large increases in This is insufficiently taken into account in calculating population growth and housing needs across the Borough.
- The CCG believes this LP to be developer As such it not only fails to fulfil the vision of DBC but also fails to future-proof the intrinsic character and sustainability of the Borough for its present and future residents.

<b>Comment</b>	<ul style="list-style-type: none"> <li>We support the Council's vision for the Borough which recognises the challenges and opportunities which exist over the Plan period to 2038. As emphasised by the Vision, to achieve this it will be critical that balanced communities are delivered with the homes, jobs and supporting infrastructure needed all to be</li> <li>The overarching Vision for Dacorum is supported by a series of sub-visions for the key areas in the Borough. The vision for Berkhamsted is for it to have grown and that it will: <p><i>"be an inclusive market town that meets the needs and aspirations of existing and new residents and visitors;</i></p> <p><i>have delivered comprehensively planned new neighbourhoods to the south and southwest of the town in a way that takes account of sensitive views and landscape;</i></p> <p><i>have provided significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town; and</i></p> <p><i>have delivered a mix of market and affordable housing, new community facilities, including two primary schools and a secondary school, and a hierarchy of open spaces."</i></p> </li> </ul>

- Whilst we support the principle of the key elements the vision for Berkhamsted encompasses, we question whether the Local Plan as currently drafted will result in the achievement of this vision as we will explore through these representations. It is critical that the Council's vision is clearly translated into the Local Plan policies to ensure its delivery and to meet the needs and aspirations of the local communities

Tring Homes (page234)

There are far too many homes proposed for Tring. The town currently has a population of around 12,000 people and the Local Plan up to 2,720 dwellings over the period 2020-2038. Most of these (around 2,200 dwellings ) would be on Green Belt Land in Growth Sites TR01 (Dunsley Farm), Tr02 (New Mill) and TR03 (East of Tring). Paragraph 136 of the National Policy Framework (NPPF) provides that “once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans”. The Council has failed to justify that this test of exceptional circumstances has been met so as to justify a significant intrusion into the Green Belt at Growth sites Tr01 – TR03 to the East of Tring. The proposed development would result in a doubling of the built up area of Tring and significantly detract from its current status as a country market town. It could result in a population increase of around 10,000 people and would alter the character of the town. The huge growth area planned for the area east of Tring would see the loss of much open countryside and wildlife habitat. While the need for some additional homes of course is appropriate the total figure envisaged is too high and should be reduced.

This would allow for some green space between developments such as those planned for Growth Area Tr01 (Dunsley Farm) and Growth Area Tr03 (East of Tring). I would refer to my specific comments as to how this could be achieved in my response to Question 5 below.

## Comment

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to "play a much greater role in delivering housing growth" within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites." This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and *no* evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a **mix** of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Comment</b>	<ul style="list-style-type: none"><li>We support the Overarching Vision and agree that new housing should be provided in sustainable locations, such as Land at Shendish. We also agree that specialist housing for older persons should be incorporated into larger new developments. The Vision also seeks to ensure high quality design and sustainable outcomes, all of which</li></ul>

accord with the principles set out in the Shendish Vision Document. We also support the requirement for growth to be accompanied by supporting services and infrastructure which are delivered at the right time and benefit new and existing communities, particularly in relation to education. Land at Shendish can not only make on site provision for a primary school with pre-school nursery site to serve the new community, but also to serve an existing shortfall that has been identified in Kings

- As the draft Plan has not planned for sufficient housing to meet the needs of Dacorum over the plan period, the text under Hemel Hempstead should be amended to include for a new neighbourhood on Land at Shendish, as the most sustainable site option available to assist in meeting this
- Under the Kings Langley heading, there should be reference to the need for Primary School site, given that there is already an under provision in the area.

**Comment**

Whilst Wigginton Parish Council agrees with the principles behind the vision, it has very serious concerns regarding the implementation of these.

For instance, the vision expects that by 2038:

a) "All settlements will have retained their separate and distinctive identities"

In the particular case of Tring, this cannot possibly be achieved by such a massive increase in the size of the town that will overwhelm its historic character.

b) "The natural beauty of the Chiltern Hills and the varied character of the countryside will have been enhanced"

There are no proposals whatsoever in this plan to enhance the natural beauty of the Chilterns AONB. The plan will achieve quite the opposite by causing undue harm due to the very close proximity of the Tring allocations to the nearby scar slope, a distinct and important feature of the AONB. In fact, very little consideration has generally been given to the importance of the AONB in the various assessments carried out on behalf of Dacorum. Whilst mitigation is required under DM27 and considered necessary for the Tring allocations, no evidence has been provided how this could possibly be achieved given the elevated nature of the AONB relative to these sites, i.e., overlooking them.

- Croudace support the principles of the proposed vision as set out on pages 22-24 of the draft Key features of the Borough are appropriately referenced within the vision, ensuring it is location-specific, and the vision covers environmental, social and economic matters so as to look holistically at sustainable development.
- In particular, the vision for new homes to be provided in sustainable locations to a high standard of design is Croudace control land to the west of Berkhamsted, at Rossway Farm, which presents an opportunity for high quality

new homes, sustainably located on the edge of Berkhamsted as we detail further within Section 7 of these representations.

- In this regard, the vision for the delivery of a new neighbourhood to the west of Berkhamsted, providing a mix of market and affordable housing, open spaces and associated infrastructure is supported and it is recognised that this will minimise the impact on the sensitive landscape surrounding the settlement to provide for a more balanced east-west growth to the town, and limit impact on the better performing Green Belt
- The strategic objectives identified within the draft Plan are also broadly Fundamentally, delivering the identified housing requirement between 2020 and 2038 through well designed development in sustainable locations which is considered key to achieving the ambitious objectives. To this end, Croudace support a proactive approach to delivering development in the Borough which has positive regard to balancing economic, environmental and social objectives as set out in the NPPF.

<b>Comment</b>	<ul style="list-style-type: none"> <li>We broadly support the 'Overarching Vision' for Dacorum, however, in the second paragraph we feel there should be emphasis on ensuring the delivery of specialist accommodation needs in addition to 'new homes'. This would then better align with Planning Practice Guidance which states that provision of appropriate housing for people with disabilities (including older people) should include specialist and supported accommodation (PPG ref. 63-002-20190626). We suggest that the second paragraph of the 'Overarching Vision' should be amended to say: <i>"New housing will have been provided in sustainable locations to a high standard of design. Affordable housing will have been provided and been genuinely affordable having had regards to local circumstances and new homes <u>and specialist accommodation</u> to have met the needs of older people, people with disabilities and those with specialist needs. New housing will have delivered our ambitious place- shaping objectives and secured high quality design and sustainability outcomes. All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place."</i> (additional suggested wording is underlined)</li> </ul>

<b>Comment</b>	<ul style="list-style-type: none"> <li>We support the proposed 'strategic objectives' for the plan, in particular the ambition to <i>"To meet the needs of older people and other groups who need specialist housing"</i>. However, we believe this should be expanded to ensure that it makes clear that the Local Plan will help provide housing as well as other specialist forms of accommodation, such as residential care We therefore suggest that this third bullet point listed under 'Delivering Dacorum's future with Homes for Everyone' is amended as follows:  <i>"To meet the needs of older people and other groups who need specialist housing <u>and other specialist forms of accommodation</u>"</i></li> </ul>

This will make clear that the Local Plan seeks to address the housing and accommodation needs of all groups, in line with paragraph 59 of the National Planning Policy Framework (NPPF).

**Comment** **Overarching Vision for Dacorum's Growth by 2038**

Thakeham supports the Council's vision for the Borough which recognises the challenges and opportunities which exist over the Plan period to 2038. As emphasised by the Vision, to achieve this it will be critical that balanced communities are delivered with the homes, jobs and supporting infrastructure.

Whilst we support the principle of the key elements the vision for Bovingdon encompasses, we question whether the current draft Local Plan will result in the achievement of this vision. It is critical that the Council's vision is clearly translated into the draft Local Plan to ensure its policies meet the needs and aspirations of the local communities.

<b>Comment</b>	<p><b>Berkhamsted Town Council</b> notes the comment in Para 1.28 and 1.29 on page 9 of the draft Plan:</p> <p><i>“1.28 - The Local Plan has been prepared in accordance with current Government guidance. To be found “sound” the Local Plan needs to comply with the NPPF, specifically paragraph 35, which requires Plans are:</i></p> <p style="padding-left: 40px;"><i>1 <b>Positively prepared</b> – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbourhood areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;</i></p> <p><i>1.29 – However, we are a very constrained area with significant amounts of our borough in the Green Belt. We also have a considerable amount of high quality landscape as part of the Chilterns Area of Outstanding Beauty (AONB), which is a national landscape designation shared only by relatively few other authorities across the country. We are also home to parts of the Chilterns Beechwoods Special Area of Conservation (SAC) which is an ecological site of international importance. These are significant constraints which influence the locations for new development in the Borough.”</i></p> <p>The subsequent comments serve to alight on the numbers designated [SP2] 16,596 dwellings (viz 922 pa) over the Plan period 2020 – 2038. We remain unconvinced that this number (nor the 1023 pa) should be adopted for the Plan Period given that ONS projections based on 2018 data indicates the annual need is around 350 dwellings pa. Moreover, this contrasts with the current Adopted Plan (Core Strategy 2013 – 2036) that settled on 430 pa.</p> <p>Starting from a premise that is suspect and therefore contentious, the overarching Vision is questionable; the prospective high build rate will adversely impact the principal urban centers and especially the unwarranted loss of swathes of Green Belt, including around Berkhamsted/Northchurch, that are designated in the Draft Local Plan as ‘Growth Areas’.</p> <p>Further discussion on the matter is set out in Q 7</p> <p>This section relates to proposals set for Berkhamsted and Northchurch [considered in the Draft Local Plan as West Berkhamsted]: over the planned period 2200 dwellings are scheduled [SP2- 3b] of which around 500 are in Northchurch Parish and 1700 in Berkhamsted. This equates to a substantial increase in the number of dwellings in Berkhamsted/Northchurch of around 24% - over the 18-year Plan period and where most of the designated sites are currently in the Green Belt at some distance (3 – 4 km) from the town centre and station at the top of steep valley sides. We cannot see how new housing developments at this distance (and difference in elevation) from main services infrastructure can be considered as “sustainable”.</p>

As recognised in Para 23.119 [Page 225] the Town experiences a high level of congestion:

*“223.119 – As a settlement area, the County Council consider that Berkhamsted already has a sustainable transport network in place. There is an excellent mainline railway service to London and the town forms part of a key inter-urban Aylesbury- Hemel- Watford bus route. However, they identify congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.”*

The following paragraph says: “there are few opportunities for new road capacity in the town”. As a town set in a valley with only one main crossing the county’s engineers comment the traffic lights already operate at over capacity. This results in residents choosing to avoid the main roads in the town centre or travelling to shop elsewhere.

The Draft Plan continues:

*“23.121 – Given their ‘edge of town’ locations, the strategic Growth Areas will need to focus on ensuring they are well connected, accessible to the town centre and railway station, and public and sustainable transport options are enhanced. All Growth Areas will be required to provide for on and off-site measures to alleviate local highway problems.”*

The last sentence is an aspiration without a foundation to support it: the Plan offers no substantive detail that necessary strategic infrastructure or sustainable transport options, to provide access to the town centre and station, from the proposed development sites, other than by car, have been planned for.

The referenced ‘Berkhamsted and Tring Sustainable Transport Strategy’ [Para 23.122] is nothing of the sort, mapping as it does junction enhancements at relatively minor side roads and crossings within the urban area and new/ widened footpaths along Shootersway. In the absence of a well-considered Strategic Transport Plan that addresses the critical issues, and its inclusion in the Infrastructure Development Plan, Berkhamsted Town Council does not support this Draft Plan to accommodate the Sites designated.

<b>Sustainable Development in Dacorum</b>	<b>policy SP1</b> From the plan of the area all I see is large swathes of green belt being churned up and forfeited to comply with your plan of 16.500 new homes. The area appears to be 4 times as large as the current houses existing in Dacorum. No indication of brown field sites. There is a Minuscule, almost non-visible employment growth area. There is no mention of competitive business rates to improve Decorum's economic growth. How can increased housing improve biodiversity, minimise waste and pollution, and mitigate and adapt to climate change.

<b>Sustainable Development in Dacorum</b>	Sustainable development surely means preserving some space and beauty for future generations as well as enough housing, and to build housing of a quality that will last and be pleasant environments to live in, not crammed together with little frontage or space around them.  The figures you are using - almost 1000 houses needed each year, are wrong, and the new government estimate it just over 300. You will have ruined the area based on the wrong calculations  Villages are a vital part of community and very much needed to prevent exclusion and loneliness. If you merge Northchurch into Berkhamsted and lose the village community all you will do is make a dormitory town for commuters. Your 'sustainable' development in Northchurch will provide a hellish place to move around in, and more danger from traffic for those future generations you are pretending to help.

<b>Sustainable Development in Dacorum</b>	<p>The draft plan was produced before two important developments:</p> <p>1. The verdict in the Inquest into the death of a young child, Ella Kissi-Debrah concluded that pollution from road traffic contributed to her death. When proposing new development, especially next to very busy main roads (in Dacorum, particularly the M1 and A41) which can only increase traffic, it will no longer be possible to say that we did not think that the people destined to live there would be at such risk. The plan recognises the importance of a healthy environment and recognises that traffic will increase but then proposes that new houses should be built next to the A41.</p> <p>2 The government is rethinking it's approach to development. Dacorum may not be required to provide so many homes. Once an area is identified in a plan for development, the chances of rowing back from this will be very slim. Much of what is proposed will fill many living in Tring and Berkhamsted and, I suspect, other places with great concern and will not be what they would wish to happen. Those who live in these areas have seen how much more busy they have become in recent years. The shear extent of the proposed development can only make this worse. Until it is known that all of the development will be mandatory, why not distinguish between, on the one hand, relatively modest development that would be acceptable to existing residents within the present commmunity envelopes and, on the other hand, the degree of development that would only be contemplated if we are left with no option? After all, the Council is there primarily to represent and act in the ineterests of those who live here.</p>

<b>Sustainable Development in Dacorum</b>	<p>I believe the housing situation in the UK is a mess, with inadequate supply, profiteering and a complete disconnect between wages and prices. I think brown field development can only go so far, and controlled development on green belt will allow the necessary massive expansion in housing stock necessary to meet current and future demand. Green belt is not sacrosanct, between 1979 and 1993 it grew from 721k hectares to 1.6m hectares (wikipedia/economist). It is very difficult to analyse the proportion of land protected from development over time, due to the introduction of other designations such as AONBs, SSSIs and National Parks. Between them these now account for protecting approx 40% of area of England</p> <p>(<a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/856100/Green_Belt_Statistics_England_2018-19.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/856100/Green_Belt_Statistics_England_2018-19.pdf</a>).</p> <p>I believe this is throttling the supply of housing. Land price now account for approx 75% of property values (25% being build costs), compared with 25% in 1957. Making more land available in areas of high demand in a controlled manner should gradually reduce shortages and reduce prices.</p> <p>I believe a legacy of Covid will be dislike of confined spaces, such as lifts, leading to a trend away from high density developments (tower blocks); a trend which I hope this plan can adapt to reflect.</p>

<b>Sustainable Development in Dacorum</b>	<p><b>Comments on Section 4.3 the SP1 Policy</b></p> <p>Reading the SP1 it is not clear how the weighting will be applied to each of the three roles - economic, social and environmental. On reading the documents in the Emerging Strategy, it feels as if they are not equal, with the economic and social roles having an outsize influence on decision making.</p> <p>One would expect to see decision making across all three roles driven by the principles of net environmental benefits, with significant increases e.g 25%-50% in biodiversity as a default, as well as applying the "polluter pays" principle. In a country which has some of the lowest biodiversity in the world, it feels a very low bar indeed to suggest that where environmental factors are taken into account, we are broadly looking to retain bio-diversity at the same levels of today. Which is what 10% increase implies. Perhaps I have misread and it is actually 100% increases in biodiversity we are looking for?</p> <p>This is important, especially, when we are branding the new developments in the Green Belt, the Hemel Garden Communities. If these are being built on green belt, most probably agricultural land?, which itself probably has very low levels of biodiversity because of the way in which it has been intensively farmed, it undermines the claim of these</p>

communities to be Garden Communities. In short, whilst the sustainable development policy feels genuine and well intentioned, if you were to place it on a spectrum of greenwashing to transformative environmental change, this feels much closer to the former than the latter.

We really believe that there is an opportunity to place environmental initiatives at the heart of our economic and social activity, not only driving a transformative change to the environment, but also creating a more prosperous, healthy region. There is a change to lead by example, and attract funding and investment accordingly.

<b>Sustainable Development in Dacorum</b>	I am very concerned by the extremely high numbers of new housing proposed, much of which is proposed to be on greenbelt land. I am concerned that this volume of new housing will bring with it a significant increase in cars on the road, which is not sustainable environmentally and there is not the road infrastructure to support this. I am also concerned about the lack of provision for other infrastructure, such as water supply and waste water disposal within the plan. My other concern that in the current context of COVID, the economic repercussions of this will be felt significantly and there is a very great risk that as a result of the inevitable economic downturn we are entering into, there will not be people with the economic means to buy or move to these houses and greenbelt sites which are important to the natural ecosystems will be destroyed to build or half build houses which may then sit empty.

<b>Sustainable Development in Dacorum</b>	The extensive use of the Greenbelt for development between Redbourn and Hemel Hempstead goes against the purposes of the Greenbelt as described in the NPPF. Specifically, the Hemel Garden Communities project will see urban sprawl into the Greenbelt and the narrowing of the gap between Redbourn and Hemel Hempstead. In addition, the extensive use of the Greenbelt will damage the local environment and ecology adding to the problems of climate change. On these issues, Redbourn Parish Council objects to the draft Dacorum Local Plan.

<b>Sustainable Development in Dacorum</b>	<p>Currently DBC are not meeting the requirements of sustainable living for its inhabitants. We know that each household in DBC uses more water than is sustainable. We know that the biodiversity of the area ia declining. it is impossible to add extra households and allt eextra people they will contain and still claim to be delivering on environmental targets which are already being missed with the current level of population density.</p> <p>on water usage from  <a href="https://www.thameswater.co.uk/about-us/newsroom/latest-news/2020/jul/reduced-abstraction-from-pann-mill-and-river-wye">https://www.thameswater.co.uk/about-us/newsroom/latest-news/2020/jul/reduced-abstraction-from-pann-mill-and-river-wye</a>  <i>In the Chilterns average daily water use is around 173 litres per person. This is 30 litres more than the national average and much higher than in countries like Germany, where residents use just 121 litres each, per day.</i>  <i>Andrew Tucker, water efficiency manager at Thames Water, said: “Every drop of water we all use comes from the environment so the less we use the more is left in rivers and the underground aquifers that feed them, to sustain wildlife. We’re working hard to reduce the amount of water we lose to leaks and reduced this by 15 per cent last year, but while we continue to do our bit to leave more in the ground to support chalk streams, we also need everyone to use a bit less. <b>It’s vital that at a time when we’re seeing the impacts of climate change and more people move into our area, there’s enough water for everyone.</b></i></p> <p>Where in this document is there any hint of exactly how DBC will reduce current water usage and move forward to reduce water usage in future?</p> <p>The Government's own assessment of the current state of biodiversity and of pollution agrees that it has missed all its targets  <a href="https://jncc.gov.uk/our-work/united-kingdom-s-6th-national-report-to-the-convention-on-biological-diversity/">https://jncc.gov.uk/our-work/united-kingdom-s-6th-national-report-to-the-convention-on-biological-diversity/</a>  In addition, the report identifies other areas where there is significant work to be done:</p>

- There is an overall picture of ongoing species decline, although perhaps not at the rate seen in previous decades. There are some species or species groups where there has been progress and there have been a number of promising reintroduction schemes.
- Despite some progress in improving the condition of protected sites, a significant proportion of the best wildlife habitats inside and outside protected sites remains unfavourable.
- There are ongoing pressures on biodiversity. For example, despite good work to identify introduction pathways and rapid and early response to some detections such as Asian hornet, the prevalence of invasive species continues to increase across the UK.
- There has been a short-term fall in Government funding for biodiversity in the UK, although as biodiversity has increasingly been integrated into other funding streams such as green growth, the data has become increasingly difficult to assess.

<b>Sustainable Development in Dacorum</b>	<p>I object to the proposed development at Rectory Farm which is on precious Green Belt Land in Kings Langley. If Covid-19 and lockdown has taught us anything, it's how important our green spaces are in the village to help with our physical and mental health.</p> <p>Having read the Green Belt section of the National Planning Framework, I understand that the fundamental aim of the Green Belt policy is to prevent urban sprawl by keeping land permanently open, so openness and permanence are key. Building on Rectory Farm does not meet the exceptions required to justify building on our Green Belt. I do not understand what has changed since the last local plan in 2002 and the objections that the Planning Inspector had to developing Rectory Farm at that time. I believe that councils should be concentrating on using brown field's site and ensuring that the brown fields register is kept up-to-date.</p> <p>I do support providing good quality affordable housing, but not at the expense of our open spaces. Around 3,500 homes have been accommodated in Kings Langley and the surrounding area since the last Local Plan. I would like to see the Rectory Farm land used for recreation. If this land was identified as a strategic open space, a green wildlife corridor along the canal and River Gade could be created.</p> <p>I do support providing good quality affordable housing, but not at the expense of our open spaces. The additional 145 homes planned will bring extra traffic onto an already busy main road, bringing further noise and air pollution to the area. With a 40mph speed, it is likely that there will be more accidents as cars try to pull into the fast main road. Before that, the site traffic will bring their own problems to our village.</p> <p>The additional homes will put extra pressure on the infrastructure of the village, particularly on our school and medical care.</p> <p>I hope that all of my points will be considered and we can retain our Green Belt.</p>

<b>Sustainable Development in Dacorum</b>	<p>I believe the overall number of new homes required is significantly over-stated and does not reflect central government's plans for the geographic "levelling up" of the economy. Nor does it reflect the impact of large numbers of EU citizens who were resident in Britain leaving in the light of Brexit.</p> <p>I believe that the Dacorum Plan should be based on the most recent ONS figures from 2018 which suggest a housing target for Dacorum of around 500 houses per annum half the figure in the Dacorum Plan and which would significantly reduce the need to build on Green Belt.</p> <p>I understand that DBC have challenged the total housebuilding figure provided by central government and if this challenge is successful then much of the Plan will need to be torn-up and thousands of hours of work will have been wasted. In the meantime areas of Green Belt may be unnecessarily de-classified never to return to their previous status.</p>

<b>Sustainable Development in Dacorum</b>	The driver for growth envisaged in the plan is the requirement to provide more housing. It is assumed that with more people there will be more employment. This does not necessarily follow. In fact the driver for growth is more likely to be employment-led not the arbitrary decision to build more houses.

Employment patterns are bound to change following the pandemic and the demonstration that remote working for at least part of the time is feasible and desirable. The consequence of this is likely to be that if people can work remotely they will not need to live in expensive areas near to London and may move to cheaper areas. Hence the demand for extra housing may not materialise or may not do so to the extent envisaged.

If population growth is not as great as envisaged it follows that the demand for retail space will not be so great. This coupled with the acceleration of the trend to online shopping may lead to a reduction of demand for retail space.

The pandemic will lead to changes we cannot envisage. The most sustainable development for the foreseeable future will be based on flexibility and the adaptation of the current building stock, particularly current retail and office premises, to residential.

**Sustainable Development in Dacorum** Cramming ever more people into the south east will perpetuate the current inequalities that exist across the UK. The level of new build proposed for towns like Berkhamsted and Tring will seriously damage those towns while doing nothing to improve living conditions and job opportunities in poorer parts of the country. The level of damage this plan would cause is contrary to the declared economic, social and environmental roles.

The population of Berkhamsted has grown rapidly in recent years but there has been little investment in new infrastructure. Already roads are very congested and in places dangerous. Pollution levels are already high in parts of the town. The proposed development is not sustainable contrary to the claims made in the plan.

<b>Sustainable Development in Dacorum</b>	<p>Given that there will be 65% increase in over 65s there appears to be no coherent strategies to entice the over 65s from their 4/5/6 bedroom houses , thus freeing these up fir families and thus limiting new build requirement . I would suggest good quality 3 bedroom houses / bungalows within walking distance of centres .</p> <p>Also strategy should demand that ALL new homes have electric car home charging points .</p> <p>There also appears no response to the government requirements to provide land for Self Builders .Done properly this would enhance the county housing stock as well as giving individuals an incentive to invest in their housing stock.</p>

<b>Sustainable Development in Dacorum</b>	<p>Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.</p> <p>My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.</p> <p>The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.</p> <p>Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity? You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan. It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.</p> <p>Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between</p>

properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.

These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

**Sustainable Development in Dacorum** Here again, I would not quibble with the aims set out in this section of draft plan, but the actual plans for development do not live up to these aspirations.

**4.2** Although I agree with the aim of  
*‘Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites’*,

I do not consider that DBC is managing to fulfil this aim by planning to build most of the new dwellings on Green Belt land and proposing to totally ruin an existing beauty spot by building all over one side of the Gade valley as part of the Garden Community project to the north of Hemel, and also impacting ancient woodland.

**This cannot be acceptable, and certainly does not match the aims of the plan.**

The text goes on with the assurance:

**4.3** *‘Achieving these roles is a central focus of the Dacorum Local Plan to 2038’.*

**..... DBC has ‘an environmental role – ‘contributing to protecting and enhancing the natural, historic and built environment, and as part of this, helping to improve biodiversity’**

*But the ancient settlement of Piccotts End and Water End, and Winkwell are bound to be directly and adversely affected by these new estates, due to their proximity to the new buildings, and the biodiversity of the farmland and with its farmland bird population including Skylarks, Linnets, Yellowhammers, and winter visitors such as Redwing and Fieldfare etc., all of which are on the RSPB Red List, will be directly affected by the proposed development.*

<b>Sustainable Development in Dacorum</b>	My commnets above also relate to this point. There has been significant deveolpment of housing in the last 3 years in the area, and many previous commercial sites have been replaced by housing. In Berkhamsted this has resulted in

congestion on the roads, as a steep sided valley town there is only one through route. In addition the infrastucture has not been uopgraded except for the additional parking in the station and the new multi storey car park in Lower Kings Road this year. Welcome as this is, people have not fared so well with no additinal schools or doctor's surgeries.

<b>Sustainable Development in Dacorum</b>	I do not believe this plan is sustainable in any way. You are proposing a huge increase in housing and therefore the demands on our local environment (loss of green spaces) huge increase in need for water and sewerage treatment. It will irreversibly change the nature of the town. I have seen what has happened in other parts of the country to places such as Bicester, Buckingham, Thame where development has caused loss of local community and identity.

<b>Sustainable Development in Dacorum</b>	The three core roles of the planning system are described. . It is proposed to release a considerable amount of Green Belt ( 850 hectares) for residential development. This is in direct conflict with the Environmental Role of planning. Such a scale of development scattered around the Borough in a number of environmentally sensitive locations cannot be described as sustainable and the planning system in Dacorum is therefore failing in its performance of this role.

<b>Sustainable Development in Dacorum</b>	The greatly-increased “demand” for housing is heavily influenced by Herts County Council, other consortia of local authorities and unelected bodies such as Herts Enterprise Partnership, which persuaded Dacorum to declare itself in favour of “accelerated growth. This Local Plan therefore has far more of the characteristics of the late and unlamented Regional Plans and few that relate to the Dacorum locality itself. The “demand” is greatly in excess of that which would meet housing needs for Dacorum's residents. It is so far in excess of what is justified that the Leader of the Council, on behalf of all the elected Councillors, has in effect disavowed the elected Council members from support for the core element of the draft Plan. The numbers, which are the driver of the plan, are based on both the “mutant algorithm”, which inappropriately concentrates development in the south-east, and also on outdated numbers from ONS 2014 census information, If the numbers were calculated on the basis of the 2018 census data the numbers would be reduced by 53% and would make it unnecessary for any predation on green spaces.

<b>Sustainable Development in Dacorum</b>	<p>I dispute your assumption that such a scale of housing development could be achieved without ruining the character and quality of life in the market towns of Berkhamsted and Tring. The green spaces around these towns are its lungs and contribute to good air quality as well as to the wellbeing of their residents. To build on such vast areas could not possibly not impact upon these towns, adding to pressures on their infrastructure.</p> <p>You envisage a growth in retail space, including in Hemel. But since the massive evacuation of high street shops everywhere, this just doesn't make sense. A post covid review of the empty space, both office and retail, in the town centres would surely highlight opportunities to develop sustainable mixed developments, and for residents of new housing in the centres, fewer car and bus journeys would be required, easing pressures on available transport links and traffic. Any existing pockets of green space in and between towns should be carefully guarded for the future. The future citizens of our Dacorum will not thank you for implementing your plan.</p>

<b>Sustainable Development in Dacorum</b>	<p>Sustainable development requires new infrastructure to support the new housing developments . In Berkhamsted the plan identifies potential sites for new schools at both secondary and primary level which is welcome .(Although future education provision is still being considered by the county council .) I can see very little evidence of any additional employment opportunities in Berkhamsted or of additional health services .The provision of in excess of 2200 homes in Berkhamsted is not accompanied by any improvement in transport other than the provision of walkways and cycle ways . It is acknowledged throughout the local plan that the steep hills in Berkhamsted deter walking and the use of cycles and that the majority of trips, even short journeys , will still be made by car .The roads in Berkhamsted are already congested . Many roads from the southern side of the town to the high street are already used as ratruns making them dangerous for walking .Parking on pavements is a problem in the town again hindering walking to town .The vast majority of development in Berkhamsted is on the outskirts of the town and will lead to many more car journeys . There is currently a very limited bus services in Berkhamsted and train services , in normal times, are seriously overcrowded in the rush hour .</p> <p>The council states that housing needs to be located in places with excellent access to jobs ,shops and services and can quickly be reached by sustainable public transport and benefit from high quality walking and cycling infrastructure. I do not think the provision of the housing in Berkhamsted meets this objective.</p> <p>The vast majority of the housing in Berkhamsted (and in Dacorum ) is on green belt land . The new government white paper states that development on green belt should only be in exceptional circumstances . The green belt in the south of Berkhamsted is a buffer between the A41 and housing in the town . This green lung will be lost under the current plans .I cannot see how the loss of all this green belt in Berkhamsted can lead to a net gain in biodiversity.The provision of</p>

a small park at the bottom of Durrants Lane and small green spaces on the development sites will not ease the pressure from the massive growth of Berkhamsted on the surrounding National Trust land .

The water in Berkhamsted is sourced aquifers . Is the future water supply sustainable? There is no evidence for this .

**Sustainable Development in Dacorum** The idea of any growth on the scale you are proposing as contributing to sustainability is laughable. The housing growth you propose continues to damage green open spaces and further reduce the space between towns and villages. Even over the timeframe you propose, growth on this scale, in this region, can only produce additional pollution through increased traffic and noise.

<b>Sustainable Development in Dacorum</b>	I would like to see clearer evidence of sustainable development which is also respectful of the the environment for the future and for individuals. Building on the valley ridges away from the town centres will encourage more cars (buses on country lanes in Berkhamsted are tricky to negotiate and few in number) and not be ideal for inclusive dwellings as well as being too far from social facilities. With Covid changing the way we live our lives please look forward in the near future to the changes in lifestyle and the eco credentials of the new buildings.

<b>Sustainable Development in Dacorum</b>	<p><i>The Un-secretary-general said in 2020 making peace with nature is the defining task of the 21st century</i></p> <p>Pointing out the dire current environmental and climate trends, he said: “humanity is waging war on nature,” and that nature was already “striking back with growing force and fury.” Consequently, he said that “making peace with nature is the defining task of the 21st century. It must be the top, top priority for everyone, everywhere.”</p> <p>I believe Housing development must be holistic and consider societies need’s now and in the long term future.</p> <p>Current development plans as presented in the Dacorum Council Local Plan and as shown through government policy are archaic, short sited and extremely narrow in scope. They prioritise developers and political objectives against those with actual housing need, reflecting an ideological obsession with the free market and prejudice against government intervention. Worst of all they do not value in any meaningful way the intrinsic value of green belt land and our need to respect nature.</p> <p><b>Any Local Housing plan In Dacorum (and beyond) must consider ethically and legally the following points :</b></p>

The starting principal should be that the countryside belongs to every one as we all have a stake through: bio diversity; open space vital for wellbeing and amenity and food security ( 80% of our food is imported )

Building on Greenbelt is currently and should always be a last resort. Although there are some rare times when wider society deems it ok this should be done only in carefully controlled and genuinely democratically consulted situations. Steps should be taken to get rid of the culture of developer/landowner land and profit grab. For example government could set the price of virgin land to fight back against uncontrolled and corrupt developments .

Releasing housing pressure on the South East by pushing for economic development of the north is a win win situation .

More publically built social housing is required and more affordable housing which should be genuinely affordable not discounted ( 20 % off a million pounds does not make an affordable house. This should include housing for specific and vital groups like emergency workers .

Stopping Urban sprawl is essential for our nations well being

This assault on green spaces is coming from a place of centralized government , not local democracy . Already councils and developers don't listen to residents' objections. We need a more democratic planning system not less. Recent government plans to weaken local council planning is a a further assault on local democracy . Councils should and must fight back against centralised government.

Demand for housing is being used as a tool to strip local democratic powers and profit Tory party developer donors .

Sustainable Carbon 0 housing should be an absolute requirement not a marketing policy .

Recognize that building on greenbelt runs directly against governments plans to be Carbon zero by 2050 .

Building a few bat boxes is not enough to protect bio diversity when you are concreting over many acres of fields.

Bring empty homes back into use and Consider how government intervention be used to increase the efficiency of housing . Building large homes for wealthy divorcees on Green belt land might be good for ones political base but will not solve the housing crisis .

Planning for housing development should prioritise housing need not profit.

All developments need to be more efficient in their use of space ,

Architects should be encouraged and incentivized to develop efficient housing developments on brownfield spaces; As opposed to Wimpey box style developments on Green belt.

Ecological, sustainable and aesthetic principals must be considered in all Housing development and prioritised over profit.

<b>Sustainable Development in Dacorum</b>	<p>Building this quantity of housing over a very condensed 18 year period, does not reflect true sustainable development in line with economic, social and environmental considerations. Tring will increase by 55%. This is not about meeting the needs of housing for people. It is meeting the needs of developers profits by using greenbelt land.</p> <p>This amount of housing in such a short period of time, compromises and restricts the ability of future generations to progress economically, socially and environmentally .</p> <p>In the proposed planned use of greenbelt land to develop housing, future generations will lose a precious resource and may be restricted in how they manage their own economic, climate and societal changes.</p> <p>Consideration of an increase in proper infrastructure and the growth of employment opportunities should come first, before unwarranted large scale house building.</p> <p>The plans for the proposed housing numbers, do not represent economic, social nor environmental sustainability.</p>

<b>Sustainable Development in Dacorum</b>	There seems to be a conflict between the out of proportion growth targets outlined in this plan and environmental role of the DBC planning system in protecting and enhancing the natural, historic and built environment of the Borough. As highlighted in my comments on section 3, 'the visions and strategic outcomes' referred to in Policy SP1 are not in line with Dacorum's Green Sustainable Land Management for Environmental Protection, while the 'proposals and sites' included in the Plan are fundamentally not "sustainable" sites. Readers of paragraphs 19.6 and 19.7 in the 'Managing Development in the Countryside' section are referred to this section for the 'justification' of the Green Belt boundary changes but it is not possible to read anything in paragraphs 4.1, 4.2, 4.3 or Policy SP1 that could remotely be described as "fully evidenced and justified" as required by the NPPF. Therefore Sustainable Development cannot possibly be considered to satisfy the the environmental role of "contributing to protecting and enhancing the natural, historic and built environment, and as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change."

<b>Sustainable Development in Dacorum</b>	I believe that Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning & Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development st

<b>Sustainable Development in Dacorum</b>	We are concerned about the interaction between housing, employment and commercial activities having regard to the effect of the pandemic on overall plans. It is likely that remote working will become more prevalent and there will be less need for London workers to live in Hertfordshire, including Dacorum. This reduced demand for housing can be met by the use of brownfield sites rather than on Green Belt land, particularly if there is also a reduced demand for local office and retail space following the pandemic which would allow this space to be converted to residential housing.

<b>Sustainable Development in Dacorum</b>	<p>. In relation to policy SP1, all the developments in the sustainable development of Dacorum must contribute to play an economic, social and environmental role. On reading the proposal, it is very evident the only real reason for the proposed developments is to provide additional Housing. In relation to the proposed developments in Tring, this is at the expense of the environment (Green Belt, and areas of agriculture being built upon) and social, (where a reportedly increase of over 50% of the current population as a result of the developments) would put a strain on all infrastructure and services..</p> <p>With the proposed strategy and developments being produced prior to the Governments levelling up agenda and the changes in working norms as a result of the pandemic, there is a need to re assess whether these developments are still required for the future.</p> <p>It would be a disaster of epic proportions to make the proposed irreversible changes to the Greenbelt and countryside within Dacorum only to find the demand for Housing in these areas is no longer required.</p> <p>The responsible and reasonable decision is to not approve the proposal but to pause, re-assess and review the needs of Dacorum once the impact of the Government's new policies, Brexit, and the society working norm changes as a result of the pandemic as known.</p>

<b>Sustainable Development in Dacorum</b>	<p>This plan is premature, does not address the fundamental priority of adequate infrastructure to match the accumulation of developments (not just the impact of an individual one v.DM60), is unrealistic in its transport aspirations, is in places illogically formulated and contravenes official Green Belt policy . An increase in affordable homes at the expense of the environment, biodiversity and amenity in areas of low affordability will result in a levelling-down, not up, as the Government intends. It neglects the reasons why affordability is low in such areas. i.e. that house prices in places considered the most amenable are determined by market forces. Consequently where demand is at its highest affordability is at its lowest.</p> <p>If growth is to be fostered policy should be directed to less prosperous parts of the country. Rather than destroying Green Belt land and further burdening an already deficient infrastructure, any growth in Dacorum should be created by improving productivity, providing and maintaining adequate infrastructure, particularly in the fields of education and healthcare ,reducing red tape and bureaucracy, improving electronic communications, embracing technological advances and discouraging public sector waste and inefficiency.</p>

<b>Sustainable Development in Dacorum</b>	<p>I am writing with concerns about Dacorum's proposed Local Plan, titled "Emerging Strategy for Growth 2020-2038".</p> <p>I am broadly in agreement with the CPRE Herts views on the proposal, an in particular on these aspects:</p> <ul style="list-style-type: none"> <li>• <b>The impact on the Green Belt and ANOB</b> - I think that delivering 100% of the self-assessed housing need will have a significant impact on these areas around Dacorum</li> <li>• <b>Overprovision of new housing</b> - I agree and understand there is a need for more housing, particularly affordable housing, but I don't agree with the scale of the proposed development. The much criticised government algorithm should not be used, the latest ONS projections should be considered as the most relevant data. Projections should include an assessment of impact of the pandemic on working/living/business location patterns. The Plan should be making use of the recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to housing. And why, now that the St Albans Submission Local Plan has been withdrawn from Examination, should the Plan still see the proposed sites north of Hemel Hempstead (5,500dw) in Dacorum as still being sound?</li> <li>• <b>Climate emergency</b> - why is economic growth still prioritised over climate change in this plan? These plans should include detailed evidence-based carbon budgets and committed targets of local carbon reductions and effectively show how these carbon budgets will be regularly and effectively monitored. Several local authorities in England (e.g., Greater Cambridge, Reading and Liverpool City) have developed integrated local plans that take account of climate change, biodiversity, well-being and social inclusion. Why is there evidence in the Plan of such an approach?</li> <li>• <b>Impact on infrastructure, including water supply</b> - I'm particularly concerned about the burden on infrastructure services and facilities in Dacorum - especially on water supply and waste water disposal. I understand from the CPRE Herts that the level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these situations more water would be extracted from the chalk aquifer, affecting our chalk streams which I think are very precious. New supplies of water, and improvements to transport and treat wastewater and sewage will last 10 years and be very expensive - how does this Plan take the cost/disruption/timescale and chalk stream protection into consideration?</li> </ul>

<b>Sustainable Development in Dacorum</b>	<p>How is 'supporting strong, vibrant and healthy communities' addressed by 'providing housing'? All the plans indicate the additional housing will compromise air quality, increase congestion, reduce access to green space, and for these reasons reduces the strength and vibrancy of the communities you seek to support.</p> <p>The plan doesn't mention how the existing developments support delivery of more sustainable life in the borough. Adding on new sustainably built housing isn't building a sustainable life.</p> <p>Planning should not be rushed because a development is set out in the plan. This allows for quick and hasty development that contradicts many of the stated aims.</p>

<b>Sustainable Development in Dacorum</b>	<p>Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning &amp; Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.</p> <p>There are many laudable plans set out to be met in building new houses (linked to climate change and "green"). However, what measures are there to <b>ensure</b> that these are adhered to in the plans submitted by developers. We have heard</p>

such words in previous plans/master plans and these have not been followed through to the plans that were actually approved by DMC.  
 Several of the "green" elements are based on draft documents so it is difficult to assess/comment properly until these are finalised.

**Sustainable Development in Dacorum** The sites outlined in the documents for Berkhamsted are NOT sustainable and nowhere within the section for 'justification' is there anything convincing that would cover the 'fully evidenced and justified' changes to greenbelt as required by the NPPF. Thus the plans for Berkhamsted & Tring do not pass the sustainability test.

<b>Sustainable Development in Dacorum</b>	How will this plan be protecting and enhancing the natural, historical and built environment, improving biodiversity and mitigating and adapting to climate change? How will Dacorum ensure that this happens? We have all seen promises like this not kept in the long term by builders of housing

<b>Sustainable Development in Dacorum</b>	The three roles economic, social and environmental need to be embraced but the former two must not be given precedent over the third, the environment. By eating into the Green Belt around the towns and villages such as Northchurch, there is a significantly negative on biodiversity.

<b>Sustainable Development in Dacorum</b>	<p>I do not believe the proposed strategy and those elsewhere in Hertfordshire and in neighbouring Buckinghamshire have been fully considered. During the Swallowdale/Spencers Park phase 1 development, of around 360 houses, there were concerns raised around Traffic and Schools. Surprisingly these would only be addressed with the phase 2 part of the project that hasn't happened yet and doesn't seem likely. In the plans, I believe there was a budget for around £250k from the developer, matched by the council or Herts Highways/Ringway for improvements to Three Cherry Trees, Swallowdale Lane and Redbourn Road. This seems to have now been superseded by a large trunk road connecting Green Lane to the A5, the north east relief road, again through farm land. The St Albans Submission Local Plan has recently been withdrawn from Examination as the Inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead in Dacorum must be called into question, along with the north east relief road.</p> <p>During the building and occupation of the Swallowdale/Spencers Park phase 1 development, I looked for a new job based in the other direction (Milton Keynes) due to the impact on my journey to the M1 and M25(Maple Cross). I also note that the traffic surveys carried out were done so during half term, when lots of families wouldn't have been commuting to work.</p> <p>Our schools around Woodhall Farm are full to the brim, with some families having to transport their children to schools on the other side of Hemel Hempstead.</p> <p>The strategy is largely silent on new sources of water required to meet the demand from the proposed new developments and on the significant investment required to move and treat wastewater.</p> <p>Downgrading of Hemel Hempstead A&amp;E to urgent care meaning the nearest A&amp;E's are Luton or Watford, large centres themselves.</p>

<b>Sustainable Development in Dacorum</b>	Sustainable Development in Dacorum. As far as I can see the plans for where I live in Berkhamsted will damage the historic town with overdevelopment. Whilst we may sit in an area of outstanding beauty there is virtually no green space of any size for the residents to use that is walking distance in the town (it's all been built on over the years) and cars are needed to get to Ashridge. The developments over one side of the town are removing a large band of wood and foot paths through green belt and would mean there is no sizeable green natural area that side of the town and take housing right up to to the A41. This area is used extensively by walkers and horse riders (the numbers of dog owners has grown massively in the town) and gives protection to the town from the pollution, noise of the A41. Building more houses eats up what little green space we have left, brings more traffic to our already congested roads, more pollution and pressure on other already buckling services and facilities. There is no space to build cycle lanes as a vast majority of the roads are narrow already lined with cottages and have no grass verges. Northchurch end of the town already can't cope with the sewage demands of the town and I know people who have toilets backing up and the sewage people have told them there is nothing they can do there is too much pressure. Nothing in this section can be remotely described as "fully evidenced and justified" as required by NPPF to remove green belt designations. The growth proposal is neither sustainable nor respecting the environmental role of planning.

<b>Sustainable Development in Dacorum</b>	I am struggling to see how an extra 2700 houses, mostly being built in two very large "wet" fields, between Station Road and Bulbourne Road, will maintain, support or allow wild life and their habitats to flourish. It will certainly reduce the positive effects of the natural environment for the people who live here.

<b>Sustainable Development in Dacorum</b>	This strategy assumes far too much building of new homes, and far more too much destruction of the local environment. The number of new homes should be halved and new homes should be built only on brown field sites, in large built up areas already. Villages such as the historic Kings Langley - which was the capital of England in the late 1340s - should be protected against future development (which entails the destruction of the local environment) and cherished as low density settlements, with open spaces, and a close connectivity between man and nature.

<b>Sustainable Development in Dacorum</b>	The scale of development envisaged in this plan is not sustainable. Therefore, given that Dacorum says it wants to promote sustainability and protect biodiversity, and promote healthy communities, it should halve the number of homes that it is assumed will be built during the period of this plan. All villages in the green belt (including Kings Langley) should be protected, otherwise their character will be changed forever. It should not be forgotten that Kings Langley is an historic village that was the capital of England in the late 1340s and needs to be protected and cherished; and its character as a village must be preserved.

<b>Sustainable Development in Dacorum</b>	<p><b>Sustainable development</b></p> <p><b>An economic role</b> - excessive housing 'communities' do not equal economic sustainability. It is not sustainable to build on Green Belt Land, nor to build on the outskirts of existing settlements, when there is no defined infrastructure described to support it. As it stands the major building sites in Berkhamsted and Tring or indeed the villages are not sustainable in terms of supporting a strong economy, when there are few sites identified for new businesses to thrive.</p> <p><b>Social role</b>, introducing an overwhelming increase of up to 50% more people into developments on the outskirts of existing market towns or villages will create separate communities.</p> <p><b>An environmental role</b> - building on Green Belt will not enhance the countryside as claimed. There are no concrete plans to deliver climate change. The Green Belt is supposed to be protected, so building on it will not protect it environmentally.</p>

<b>Sustainable Development in Dacorum</b>	<p><b>SP1 (1)</b>. There are a significant number of policies in the NPPF relevant to the application that protect assets that are already known to exist in the Dacorum area that will be adversely impacted upon if the Council grant permission to approve the Local Plan as it stands based on the scale of currently proposed development.</p> <p>Critically, the council will be in breach of policy listed under NPPF paragraph 174 to “safeguard components of local wild-life rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated</p>

sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation”. This applies to housing development that will, for example, adversely impact on Dacorum’s Chalk Rivers and all sites listed as Value 1 and 2 under Hertfordshire Ecological Network Dataset provided by the Hertfordshire Environmental Records Centre. Value 1 habitat qualifies for protection under S41 of the Natural Environment and Rural Communities Act, whilst guidance provided by the Hertfordshire Local Nature Partnership is that all Value 2 sites should be protected {by the Local Plan} and considered for habitat restoration and enhancement. Value 1 and 2 sites include BK06 and BK07.

Furthermore, all too often mitigation to ‘provide net gains for diversity’ is held up as the acceptable compensating factor on which the concept of Sustainable Development is carried. This is missing the point of the environmental safeguards incorporated into the NPPF. Far too little emphasis is placed on **minimising impact** (para 170d) on existing specialist habitat biodiversity which often may include preserving the existing habitat for species prioritised under current local biodiversity plans, such as the Skylark. It is usually the case that once the habitat for these vulnerable species is gone, so are they.

Chiltern Beechwoods and other Ancient Woodlands are recognised as *irreplaceable* in the NPPF precisely because they are irreplaceable. This concept should not be diminished in the mistaken belief that ‘mitigation to improve biodiversity’ somehow replaces, or is of equal ecological value to what has been lost or damaged.

Specific policies that the NPPF indicates should restrict development that apply to Dacorum include, but are not restricted to –

- **land designated as Green Belt,**
- Areas of Outstanding Natural Beauty (including land adjacent to)
- Special Areas of Conservation including Chiltern Beechwoods
- National Parks - See ##
- Habitat sites
- Irreplaceable habitats such as Ancient Woodland;
- Local Green Space,
- Sites of Special Scientific Interest;
- Areas at risk of flooding
- Designated heritage assets
- Non- heritage assets of archaeological interest that are demonstrably of equivalent interest to scheduled monuments (e.g. report of mediaeval plateau ridge and furrow farming earthworks adjacent to Bell’s Lane, Northchurch)

NPPF Paragraph 177 clearly states the presumption in favour of Sustainable Development does not apply where the plan is likely to have a significant effect on a habitat site unless an appropriate assessment has concluded that the plan will not adversely affect the integrity of the site. As the Chiltern’s Beechwood Screening Report has not been carried out, decisions regarding sites in close proximity to the Beechwoods at Tring, Ashridge and other sites that will generate sources of increased footfall *should not, at present, be considered to have Sustainable Development status.*

## In NPPF para 172, it states that “Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues. The conservation and enhancement of wildlife and cultural heritage are also important considerations in these areas, and should be given great weight in National Parks”. The Glover Report 2019 recommends that sites adjacent to these areas should also be conserved. These should be protected in anticipation of National Park status, Although not specifically included, the precedent that establishes the principle that proposed sites of this level of importance should be given protection is established in NPPF para 176.

**SP1 (2).** There is at least one significant material consideration that means that approval of the development plan should be *delayed until after the results of the Census 2021 when more accurate and reliable population data will become available to form the basis for the calculation of housing need*. This material consideration is that current housing need calculations are unsound and should not be used as proof that exceptional circumstances apply by which restrictions on development to protect large areas of Green Belt and sensitive wildlife and heritage sites are otherwise disregarded.

The basis for this material consideration is the mounting evidence that the calculation of need based on the 2014 population dataset, over-estimates need by approximately 50%. The Campaign to Protect Rural England Hertfordshire ( CPREHerts -See CPRE Herts review of DBC Local Plan Final) justifies a more realistic estimate of Dacorum’s annual housing need as being in the range 351 and 536 dwellings per annum – significantly fewer than the 922 dwellings per annum proposed in the Local Plan. This range is based on the most recent Office for National Statistics 2018-based household projections alone, with allowance for past under-provision and a 3% vacancy rate. Furthermore, since 2018 and the onset of the Covid epidemic, there is estimated to be a national net loss in population of 1.3 million. This will include net losses from Dacorum, meaning that in the short term at least, there will be reduced and slower growth in demand for new homes to be built. In other words,

In the NPPF, Sustainable Development status means that housing needs must be met unless protected areas, or assets, provide a strong reason for rejecting the proposed development. Green Belt land is the primary casualty of presumption of Sustainable Development and would normally qualify for protection. These figures demonstrate that ***at least 50% of the Green Belt land should not be re-designated*** to enable housing as the calculation of need is unsound and therefore exceptional circumstances are not proven. The level of need presented in this Local Plan does not have to be met. Also, under paragraph 175c, for the same reason, developments resulting in the deterioration of irreplaceable habitats such as Ancient Woodland should also be rejected for development as wholly exceptional reasons have not been proven. Any decision counter to this is in breach of the framework as the adverse impacts to these highly valued assets would significantly outweigh the benefits.

<b>Sustainable Development in Dacorum</b>	<p>I am very concerned about the impact on the chalk streams and their eco-systems in the area - the Bulbourne, the Gade, the Ver, and the winterbournes - Bourne Gutter, Red.</p> <p>I tweet as <a href="https://www.twitter.com/riverbulbourne">https://www.twitter.com/riverbulbourne</a> , I am a member of the Rivers and Wetlands group of the Chiltern Society ( <a href="https://chilternsociety.org.uk/rivers-wetlands/">https://chilternsociety.org.uk/rivers-wetlands/</a> ), and a river watcher for the Upper Bulbourne, reporting the groundwater levels monthly to the Environment Agency (EA) and concerned local residents</p> <p>The Bulbourne water quality is deteriorating, despite attempts at improving it. Here is the EA classification for the Bulbourne for 2019 and previous years</p> <p><a href="https://environment.data.gov.uk/catchment-planning/WaterBody/GB106039029890">https://environment.data.gov.uk/catchment-planning/WaterBody/GB106039029890</a></p> <p>It now has EA Overall classification for 2019 of poor, including poor for ecological and fail for chemical, and has been plagued by low flows for years.</p> <p>A recent EA study has concluded that unsustainable levels of abstraction for public water supply are contributing to low flows, and abstraction reductions have been proposed. In the summer of 2019 one leaking canal lock gate, at Lock 48, at Dudswell wasted 2.7 mega litres a day. That is equivalent to the daily use of water by the whole of Berkhamsted.</p> <p>Please see attached png of the groundwater monthly measurements taken at Dudswell &amp; Northchurch from 1994-2020, showing the fluctuation even after amelioration measures taken by EA. It has investigated the low flows on the Bulbourne: these documents <a href="http://dacenvforum.org.uk/wp-content/uploads/2019/03/Bulbourne_Briefing_February2019.pdf">http://dacenvforum.org.uk/wp-content/uploads/2019/03/Bulbourne_Briefing_February2019.pdf</a> , <a href="http://dacenvforum.org.uk/wp-content/uploads/2019/03/DEF-EA-Presentation-21-Feb-2019.pdf">http://dacenvforum.org.uk/wp-content/uploads/2019/03/DEF-EA-Presentation-21-Feb-2019.pdf</a></p> <p>give background to how Cow Roast and Northchurch abstractions are reducing baseflows into the upper River Bulbourne.</p> <p>After years of concern about low flow, the pumps at New Ground were turned off and levels improved for a while, but they are gradually dropping again. The Bulbourne is still usually dry at Dudswell in most summers. DEFRA and Affinity claimed the closure of New Ground was an ecological concession, but might have had as much to do with very high nitrate levels, in that area, at that time.</p> <p>The proposed local plan development will make this much worse unless drastic action is taken to protect the chalk streams</p> <p>So I object to the no of houses planned as the aquifers cannot support it</p>

<b>Sustainable Development in Dacorum</b>	<b>Water supply and waste water disposal</b>

The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer which in turn would cause further damage to the Borough's precious chalk streams. New supplies of water are not likely to be possible until after 2030.

Geographers say there are only 210 true chalk streams anywhere in the world and the Chilterns is home to 9 of these rare and precious habitats. The siting of housing must not be allowed to degrade these special places.

The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This would take many years to complete, and be extremely expensive as well as disruptive to affected communities.

**Sustainable Development in Dacorum** The presumption to grant development proposals unless material consideration can indicate otherwise is too subjective and favours large developers with investment capital. They can bully planners and harrass local communities. All development must be considered in the light of policy and its impact properly assessed before permission can be granted. Further, planning permission must be conditional in terms that can be enforced. Laissez faire is breaking Upper Bourne End Lane, for example.

<b>Sustainable Development in Dacorum</b>	<p>“4.2 Sustainable development is about meeting the needs of the present without compromising the ability of future generations to meet their own needs and making economic, environmental and social progress for current and future generations.” This is lip service; the proposal makes no insistence on addressing the environmental needs of present or future generations.</p> <p>Instead there should be clear expectations for the land linked with sustainability and the environment including maintaining, and developing, biodiversity, including fauna and flora, and geodiversity.</p> <p>Account should be taken of the National Pollinator Strategy 2014 to 2024: Implementation (NPS, to be found at <a href="https://www.gov.uk/government/publications/national-pollinator-strategy-2014-to-2024-implementation-plan#:~:text=The%20National%20Pollinator%20Strategy%20sets,%2C%20flies%2C%20butterflies%20and%20moths.&amp;text=Added%20a%20link%20to%20the%20evidence%20statements%20and%20summary%20of%20evidence">https://www.gov.uk/government/publications/national-pollinator-strategy-2014-to-2024-implementation-plan#:~:text=The%20National%20Pollinator%20Strategy%20sets,%2C%20flies%2C%20butterflies%20and%20moths.&amp;text=Added%20a%20link%20to%20the%20evidence%20statements%20and%20summary%20of%20evidence</a>). This sets out what the Government will be doing to improve the state of our bees and other pollinating insects and how they are monitoring progress. There is a need for more and better habitat. This does not mean monoculture parks but biodiverse areas of 'wildflower recovery areas' to provide opportunities for conserving pollinators, as outlined in the 25 Year Environment Plan (page 10 of the NPS). Any development must be respectful of action fitting to the climate emergency as declared by the country and local government.</p>

<b>Sustainable Development in Dacorum</b>	It does not seem that developments can be sustainable, already the road network struggles to cope with the amount of traffic. The way people live will change after the pandemic and the type and location of housing will change. So dramatically increasing the size of the small market towns of Berkhamsted and Tring is not sustainable.

<b>Sustainable Development in Dacorum</b>	There is nothing sustainable about building houses on greenbelt and degrading the environment and animal habitats and riding roughshod over local ancient monuments. Once these green areas are gone there is no bringing them back. Growth and innovation will be gained by repurposing existing brownfield sites and converting empty commercial property into accomodation. The convential model of building out from cities and towns is no longer valid in the post covid environment where people work from home and cities are loosing commercial tenants.

<b>Sustainable Development in Dacorum</b>	The over development of the area will bring considerable pollution and too much traffic to the area which is already busy and crowded. The land should be kept as green belt (it was green belt protected for a reason) and these laws are just being ignored. Wildlife areas will be desimated. This is a lovely, green, leafy area which will be ruined if these plans go ahead.

<b>Sustainable Development in Dacorum</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p> <p>The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would</p>

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Sustainable Development in Dacorum</b>	<p>There is a fundamental conflict between the overstatement of housing need (922p.p.) for Dacorum and the protection of the environment.</p> <p>The level and intensification of new housing in Berkhamsted, Northchurch and Tring can't be achieved without destroying the settings in which these historic towns sit. Their rural setting is as much to do with their character as their town centres. The map of the planned work shows that it is slowly developing most of the land between South West Berkhamsted and the A41 bypass loop. The 'bypass' will become a perimeter fence for a much larger town. This also loses the 'green lung' which was so important when the bypass was built to protect residents from the noise and pollution from the main road.</p> <p>In the previous Core Strategy, you acknowledged that Hemel Hempstead would attract the greatest concentration of housing with an even spread between the smaller settlements. I don't understand why you think that Berkhamsted, Northchurch and Tring's infrastructure can sustain this level of development whereas you recognise that Bovingdon,</p>

Kings Langley and Markyate have limitations. There has been no assessment of capacity for Berkhamsted, Northchurch and Tring.

You acknowledge that DBC is an enabler of infrastructure rather than a provider – which means you have no control over what is actually delivered by partner organisations. I have seen no tangible infrastructure improvements despite substantial increases in house building in Berkhamsted over recent years. Nor any affordable housing. It is a builder's paradise. They make much higher profits building executive homes on small plots on the Green Belt e.g. Bearroc Park, Shootersway.

In reality, our hospital health care was under huge pressure. long before Covid. Our hospitals in West Herts. are below standard and inaccessible. Our primary care is imploding. Witness the collapse of Milton House and Boxwell Rd surgeries. Their new arrangement at Gossoms End has extremely limited parking on site and none on the High Street.

Rothschild House in Tring has stepped in to provide additional support – but has anyone asked them how they will cope with a 55% increase in households in Tring?

In relation to a transport strategy which will support such a large housing development, I am at a loss to understand how these already busy narrow roads will cope.

The streets through Berkhamsted, Northchurch and Tring are narrow and do not have the capacity to be widened. The new building in Berkhamsted and Northchurch is mainly at the top of hills at some distance from the town centre and station. It is ridiculous to think that walking and cycling will be realistic alternatives to car journeys up and down these steep hills into the town. There are hobby cyclists but most drive to work around here or work from home. Buses do scrape around the narrow residential areas but not reliably enough for people to rely on them for work or leisure.

<b>Sustainable Development in Dacorum</b>	The overall strategy appears to be target, and possibly developer led, in terms of numbers of homes with all other considerations, particularly conserving the Green Belt environment and enabling the delivery of infrastructure, being very much secondary considerations. This threatens the argument that the development strategy is sustainable.

<b>Sustainable Development in Dacorum</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This</p>

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Sustainable Development in Dacorum</b>	<p>I am emailing you to express my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038)</p> <p>As a resident, I implore DBC to reconsider this plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019 Glover report recommended that the Chilterns should be given National Park Status). Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.</p> <p>The following are my principal objections:</p> <ol style="list-style-type: none"> <li>1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.</li> <li>2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.</li> </ol>

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

**Sustainable Development in Dacorum** During our time of national lockdown is this the best, most equitable and accessible time for members of the community to comment on the local development plan? How has Dacorum satisfied itself that all peoples have had a fair & reasonable opportunity to comment on the local plan when we are unable to meet councillors and planning staff in person? Not every

person readily has access to enter comments online or the technical ability to do so. There is a chance therefore that the views are not fully representative of the local community and that decisions will be taken without full participation from the affected residents of the borough.

**Sustainable Development in Dacorum** Sustainable Development in Dacorum

There are no specific details of the measures proposed to meet the 2030 net zero target. By 2025 the borough needs to be more than halfway there, but without targets there is a high risk that we do not meet the 2030 net zero target and that we compromise “the ability of future generations to meet their own needs” since they will be in Climate Chaos.

The plan must allow for an increase in electrically powered transport and roads must be designed to encourage walking and cycling.

Berkhamsted and Tring are identified in the plan to be sustainable locations. These are ‘commuter towns’ where many residents work out of borough. There are insufficient employment opportunities locally in Tring and Berkhamsted to sustain the proposed growth.

To ensure future sustainability, there will need to be a significant shift to local employment, there are no proposals in the plan to make the necessary employment space available for a change of this scale.

Delivering the Infrastructure to Support Growth

The plan must ensure that the necessary increase in infrastructure is powered electrically and the electricity demand met by sustainable sources (renewable energy).

Plans must promote green mobility: Home and public electric vehicle charge points, cycle paths and developers to contribute to the development of reliable electric local bus network with strengthened grid supply to support it

<b>Sustainable Development in Dacorum</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate</p> <p>Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p>

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Sustainable Development in Dacorum**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.
