Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built

infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

## **Sustainable Development in Dacorum**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. <b>Sustainable Development in Dacorum</b>	<b>The proposals for Berkhamsted are again aspirational with little foundation or supporting evidence</b> <i>Growth in Dacorum will have been environmentally sustainable and have helped to reduce the Borough's contribution to climate change through the location and design of development, by having promoted energy efficiency and renewable</i>

*energy and sustainable construction, by having facilitated a significant increase in sustainable travel modes and through having supported reductions in the use of finite resources.”*

This certainly cannot be said of the Proposals for Berkhamsted

### **Housing Numbers**

I appreciate that overall numbers are handed down from government, but given that the latest 1023dpa ( 922) is over twice the need (355 - 497 if the formula is applied) indicated by the latest 2018 ONS figures

DBC should be mounting a robust challenge to the numbers proposed by government, particularly in view of the Green belt constraints in the area, the NPPF regulations on Greenbelt and government’s commitment to preserving Greenbelt. Para2.29 of the Planning for the future white paper accepts that this has not yet been taken into account in calculating housing numbers

*“In particular, the methodology does not yet adjust for the land constraints, including Green Belt. We will consider further the options for doing this and welcome proposals.”*

The plan appears to prioritise Growth over environmental considerations in an effort to meet the unsupportable numbers issued by government.

### **Sustainability**

The proposed release of Greenbelt at the top of the steep sided valley, can in no way be described as being sustainably located *“close to passenger transport, facilities and employment opportunities”*

None of those are a walkable, or cycle-able, distance for most, from the proposed sites. Even if the use of electric bikes increases, as envisaged in the Transport Study, there are no safe cycle ways, and none are proposed. There is no regular intra town public transport and the Transport Study acknowledges in any case that cost would preclude its usage.

<b>Sustainable Development in Dacorum</b>	<p>It is interesting to note that the key principles of the Sustainable Development Strategy make no reference to how the strategy responds to its ecological context. Furthermore, the ‘supporting evidence’ for SP2 only refers to the Spatial Hierarchy documents which principally deal with access to services and connectivity. Whilst the Spatial Hierarchy documents are key informants to the spatial strategy, pursuing this in isolation from other key evidence results in the Sustainable Development Strategy being unjustified, notably in how it responds to its environmental context.</p> <p>Noting that survey data from the Chiltern Beechwoods Topic Paper (2020) states that the greatest recreation impact on the natural resources comes from Berkhamsted, the below key principle for a step change in growth is at odds with this:  <i>‘Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations.’</i></p> <p>Whilst acknowledging that a greater role could be played by Berkhamsted and Tring, this has to be balanced against the recreational pressure that additional development in this location would place on the SSSI. The Sustainable Development Strategy should reflect a greater role for Kings Langley (in being the settlement furthest away from the SSSI) as a location that can sustainably accommodate more housing and complement the growth arising from Hemel Hempstead.</p> <p>At present the Draft Local Plan allocates housing as follows: Tring (2,700), Berkhamsted (2,220) and Kings Langley (275). By comparison, the population of Tring is circa double that of Kings Langley but the Draft Local Plan proposes almost 10 times the amount of housing growth.</p> <p>Beyond this being a key requirement to ensuring the preparation of a plan that can be found sound, Section 40 of the Natural Environment and Rural Communities Act 2006 also places a duty on all public authorities in England and Wales to have regard, in the exercise of their functions, to the purpose of conserving biodiversity.</p> <p>Paragraph 7.5 of the Draft Plan states <i>‘We have therefore progressed the Plan on the basis of this new housing need calculation of 922 homes pa (i.e. 16,596 homes over the period 2020-38). We recognise that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this issue under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more.’</i> As previously noted in response to other questions, the draft plan should meet the requirements for 1,023pa as required by the Standard Methodology in ensuring the provision of a plan that is positively prepared.</p>

<b>Sustainable Development in Dacorum</b>	<p>We are encouraged that the proposed policies maintain and support the current Settlement Hierarchy with specific policies for Rural Areas and continue to recognise that the countryside in Dacorum is the least sustainable location for major new development in the borough and therefore will remain an area of development restraint.</p> <p>We are however extremely concerned that the Sustainability Appraisal suggests that if the proposed release of Greenbelt land for growth fails, for whatever reason, a fallback position of major development abutting Long Marston could be applied. TRPC would not support this option</p>

<b>Sustainable Development in Dacorum</b>	<p>I believe that the overall vision for Dacorum is driven by a perception of the amount of housing required. The published requirement for sustainable development (SP1) is therefore not met because the scale of increases will further encourage commuter town status to the detriment of a "strong, vibrant and healthy community". This is particularly the case because the high average price of houses in the borough (£454,000 is quoted as just below London prices according to study documents associated with the draft plan) will make "affordable housing" an unrealistic objective for those with real</p>

housing need. Indeed the way in which development is negotiated, much of the proposed housing developmen will only fuel the growth (and hence unaffordability) of houses in Dacorum.

**Sustainable Development in Dacorum** The previous Local Plan was not sustainable, this even less so. I imagine there is sufficient office accommodation for the future, especially with the expected long term trend of partial working from home. There is a shortage of manufacturing and service industry space and job opportunities for the current population; this is even more the case for the latest Local Plan.

50 years ago when we moved to Berkhamsted there was a shortage of water, and water cress beds were abandoned; sewerage drains were not fit for purpose, electricity supply was erratic. None have improved since. In the meantime gas supply lines have aged, medical provision has dwindled to a most unsatisfactory level and although the A41 bypass was a blessed relief to Berkhamsted High Street, other traffic has soared and the centre of Berkhamsted is a bottleneck. We are constrained by being a linear town situated on the valley floor and in general, roads cannot be widened.

<b>Sustainable Development in Dacorum</b>	Building on greenbelt land around Tring contradicts the environmental role of the planning system. It will literally destroy the environment and natural habitats and place huge demands on already over burdened water and sewage utilities. As for social role, the plan destroys Tring's sense of community as a small town by turning it into a crawling suburb. As regards economic, what shops and businesses are going to open in this proposed area? Businesses are adapting to a very different future that this plan ignores or is now too old for.

<b>Sustainable Development in Dacorum</b>	<p>I do believe that tackling environmental issues, regeneration and well being are at the heart of any arguments against concentrated building plans in Hertfordshire.</p> <p>We need to think of the consequences of such schemes on our resources such as water, green space for nature to flourish and air quality.</p> <p>Lockdown has taught the working generation that proximity to London is no longer a requirement now that the success of working from home or a local hub is established.</p> <p>We have an obligation to redress inequality in the UK. Many towns in the North, South West and along our coasts, that have suffered years of neglect, should have funds diverted from the South East building projects in order to attract young people and small businesses to affordable, desirable, refurbished properties, so that communities can once again flourish and thrive.</p>

An overpopulated South East alongside deprived empty shopping centres in overlooked towns up and down the country is an irresponsible response to the future prosperity of the UK.

Progress should be measured by putting the well- being of people living alongside nature in decent, regenerated towns and villages with character that build vibrant communities across the UK.

We need to remind councils and politicians about their obligation to 'Level Up'; to provide a better environment for all across our country; to sustainably transform existing housing, shops and business premises and bring an end to out of town New Build.

It is time to be innovative and make better things happen for everyone now.

<b>Sustainable Development in Dacorum</b>	Looking at the map Tring appears to be getting a far larger percentage of new houses than other areas . Why ? The world is also changing , the pandemic is making a lot of people work from home. This trend is likely to continue post pandemic . This will leave a lot of empty offices . It would make far more sense to convert these into flats rather than build on green belt land.

<b>Sustainable Development in Dacorum</b>	<p>I strongly oppose draft policy SP2. Neither the total housing figure proposed (16,596 homes) or the basis of its calculation can be relied on as robust. Subsequently, the policy requirement to deliver 2,700 homes in Tring (SP2.3c) cannot be justified in planning terms, especially as the majority is in green belt land. The Council has failed to justify the target against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities.</p> <p>The target of 922 homes a year seems to have been created despite the knowledge that the guidance it's based on is out for consultation and not established. The target doesn't present a requirement for plan making but is a starting point for determining the level of need in an area. Only after consideration of the level of need, crucially alongside constraints of the green belt, can actual land available for development be determined and a decision be made on how many homes should be planned. The council should reassess the housing target and consider what is practical to deliver in the borough in a way that doesn't undermine the protection of the green belt set out in paragraph 11b. Without such analysis, the council cannot bring forward exceptional circumstances which would justify the use of green belt for housing.</p> <p>No assessment seems to have been undertaken of opportunities to intensify development within existing boundaries of Tring through brownfield development or by considering increasing development intensity at available sites. Irrespective of the final numbers determined, all efforts should be made to fill-in the existing boundaries before encroaching on green belt land, especially within an Area of Outstanding Natural Beauty. It cannot be classed as 'sustainable' development if such things are not taken into consideration.</p> <p>You state at the beginning of this section that sustainable development should <i>contribute to protecting and enhancing the natural, historic and built environment, and as part of this, help to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change</i>. I strongly disagree that the plans laid out fulfil this brief considering the large portion of housing proposed for green belt land in the Area of Outstanding Natural Beauty.</p> <p>The housing needs delivery strategy was that Hemel Hempsted provides the vast majority of housing supply and the rest split between other local settlements to avoid pressure on existing infrastructure. The council have identified that this was discounted due to the constraints on infrastructure in most of these settlements, however no assessment of the impact of the proposed location to the east of Tring has been done so it has not been proven that the development could occur without substantially impacting on infrastructure which is already stretched.</p>

<b>Sustainable Development in Dacorum</b>	<p>1. The way the whole consultation has been designed makes it near impossible to contribute, an incredibly complicated process.</p> <p>2. I am against proposals for the huge quantities of housing around Hemel Hempstead Two Waters area. There is a complete lack of consideration on the supporting infrastructure, in particular the road infrastructure.</p> <p>3. The London Road is already grid locked at most times of the day, it being the only way to reach vital access to the A41 and other local facilities.</p>

4. The recent Bovis estate is a prime example of introducing 325 new homes without the basic infrastructure. Promises for bus routes have been lost, locals had to fight for a basic bridge to enable heavy two way traffic and the lack of parking make the development dangerous with cars parked closely along the main route through the development.

5. Suggestions of cycle routes show no evidence of working on Aspen Park the Bovis estate. It is naive to think that people will be cycling and abandoning their cars.

**Sustainable Development in Dacorum** Its unfortunate that Policy SP1 isn;t fit for purpose as it offers no clarity or definition as to what its means within the planning system roles. What is meant by sufficient land of the right type within the economic role - surely the right type is not greenbelt land? There is also no explanation as to how excessive growth (55% increase in the size of Tring) on greenbelt land will support innovation? and what kind of innovation is being implied?

In terms of the policy offering a social role within the planning process to "support health communities" there is no reference to the loss of green space and excessive development targets that can link back to this role.

And finally its role in protecting the environment has not been realised as it has failed to optimise existing brownfield sites across Dacorum for favouring Green belt land usage instead. The excessive growth targets also do not consider the protection of each of the smaller settlement identities and community.

As yet the council have also failed in SP1 .2 to work proactively with applicants to resolve issues and work together to find reasonable solutions with the people who know the areas impacted best (the residents).

<b>Sustainable Development in Dacorum</b>	I do not understand how the proposed developments can be said to be sustainable or respecting the environmental role of planning. The current proposal builds predominantly on green belt land. it doesnot respect the historic character of Berkhamsted by having a 24% increase in dwellings most of whichare centred around one areawhich is far enough from the station that it would still probably require peopleto drive to there or into town.

<b>Sustainable Development in Dacorum</b>	<p>New Gospel Hall Trust object to Policy SP1 and the supporting text. Recent government guidance and advice from Inspectors at Local Plan Examinations has made it clear that it is unnecessary and unhelpful for a Local Plan to repeat national policy with a local nuance. The National Planning Policy Framework is an important 'material consideration' in all planning decisions. It is submitted that Policy SP1 will introduce an element of confusion for decision-makers by attempting to replicate and duplicate the national presumption in favour of sustainable development.</p> <p>Furthermore, the supporting text at paragraph 4.2 appears to overlook the advice of Framework paragraph 9 which advises that the three overarching objectives for sustainable development are not criteria against which every decision can or should be judged.</p>

<b>Sustainable Development in Dacorum</b>	<p>The aim of having “Sustainable Development in Dacorum” is a good in principle. But the changes outlined in the plan completely contradict this aim.</p> <p>In section 4.2 “To achieve this, economic, social and environmental gains should be pursued in an interconnected way.” How can building homes on Green belt land be an environmental gain? This is not interconnected when the development will also have a negative impact on the social fabric of the towns of Berkhamsted and Tring.</p> <p>In section 4.2 “An environmental role – <i>contributing to protecting and enhancing the natural, historic and built environment, and as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change</i>”. Building new homes on Green belt land is NOT protecting and enhancing the natural environment. It is also NOT being prudent to build houses on land that will necessitate most people using a car to journey into town and causing more pollution and waste. This is also only going to contribute to the current climate change crisis that the council should be doing everything it can to help mitigate</p> <p>In ‘Policy SP1 - Sustainable Development in Dacorum’ section b. i “any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits” The environmental damage and loss of Green belt land significantly outweighs any perceived benefits of building on this land. The adverse impact on the environment of all the increased cars on the road in Berkhamsted also outweighs any benefits of building on Green belt land.</p>

<b>Sustainable Development in Dacorum</b>	<p>My coments below refer to the plan in general as it relates to Tring.</p> <p>I also fully suport the more detailed coments submitted by Tring in Transition.</p> <p>1) A very high percentage of the proposed Tring development is to be on Green Belt land, there is, I believe, a strong case for any developments on former Green Belt to be of the very highest possible environmentally friendly, sustainability and energy efficiency standards. Explicit provision should be made for this – if as the plan states the object is to ensure a sustainable futuree for Tring it is vital that not only do they inculde the points above, but that they are maintained. As you will know, the NPPF calls for "compensatory improvements to be made to the environmental quality and accessibility of remaining Green Belt land and this must also be explicit with minimum 10% net gain". This is not at present clearly addressed in the plan and is a significant point of non-compliance.</p> <p>2) The plans proposeal build over 2700 new homes in Tring is not compliant with the core of the NPPF guidance for "sustainable development" (which I repeat is meant to be the objective of the plan). The planned development of Tring is, proportionately, by far the largest urban growth across Dacorum in a location that is arguably least well suited for it. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by the Government's 'affordability' formula (evidenced in the September 2020 SW Herts Local Housing</p>

document). Even if the numbers decrease significantly after recently announced Government changes there is no information in the Plan about prioritisation for reduced numbers (this needs to be made public) and it is likely the essence of the plan will remain much the same.

3. I find it particularly disappointing that the plan paid little or no attention to the earlier public consultation. Which now appears to have been nothing more than a publicity exercise. If you really wanted to consult with the people of Tring you would have started with us.

4. The proposed north–south link road from Bulbourne to London Road via Station Road is ill-defined and cuts through a major wildlife corridor – Marshcroft Lane – and an AONB. It is therefore subject to constraints that have yet to be examined, yet it seems key to the present development plan for Tr03. No development on Tr03 should be sanctioned until this is fully resolved.

5. The provisions for green/wildlife corridors (especially in Tr01, 02 and 03) are confused, inadequately defined and fall well short of the provision called for in the most recent Herts Environment and Sustainability guidelines (Nov 2020). In particular, the corridors are poorly linked together and do not explicitly protect the hedgerows (including Marshcroft Lane) and the surrounding countryside that are a key part of the character of the area and vital to local biodiversity. Overall, the plan for Tring falls short of NPPF para 147, and paras 99/100.

6. The proposals for Tr06 (Brook St) are based on assumptions that are no longer valid given other stated goals and the growth in development elsewhere in Tring. They also miss a clear opportunity to provide distinctive and modern facilities better suited to the mid-21st century.

7.

8. The plans goals for public transport are only aspirational and there is nothing in the Plan that convincingly addresses transport between Tring Station and the town centre (except some vague idea of more cycle paths) or around the new developments, or which supports modern, novel solutions.

9. Net carbon neutrality is an essential target and new developments present an ideal opportunity to meet the highest standards. We note DBC policy of 2020 is to be zero carbon by 2030. The Plan makes several references to ‘exemplar’ development but falls short of explicitly defining standards for energy efficiency (through building standards) and the inclusion of extensive local energy capture (e.g., via solar) etc. The Plan does not set the bar high enough with respect to these at present.

10. Tring is flanked on two sides by Buckinghamshire and traffic, town centre use, schooling and employment patterns are influenced very strongly by this. There is no reference to liaison with Bucks in the plan. We are concerned that conclusions about the locations of employment, retail and recreational sites are flawed in places and generally sub-optimised as a result. The same is also true when looking at environmental considerations.

11. A key and important goal, first built into the Issues and Options (2017) Plan, is for the Local Plan and developments to reflect local distinctiveness. There is no evidence that Tring's distinctive character (in its history, town economy, unique location, etc.) has been defined, and there is therefore no associated vision; this presents an unacceptably high risk of generic, unsympathetic development.

<b>Sustainable Development in Dacorum</b>	<p>Numerous local groups have commented on this consultation including Berkhamsted Residents Action Group (BRAG), Berkhamsted Citizens Association, CPRE, Chiltern Society, Berkhamsted Town Council, Dacorum Green Party, Berkhamsted and Tring Labour Party to name a few. <b>I agree with the stance taken by all of these groups.</b> The fact that all these (and there will be others) are providing the same substantive message from the local population to you should demonstrate that these proposals do not have the support of the people. I do not propose to add to your reading burden by rehashing all of their points but I do make the following observations.</p> <p>Despite best efforts (and I do applaud directionally the intention to try to offset the danaging impact of removing so much Green Belt and biodiversity) it is simply not possible to create so much new building in a carbon neutral or biodiversity enhancing manner. The CO2 footprint of all the construction alone would be enormous - even if the homes are more efficient that the existing housing stock you simply cannot eradicate the impact of constructing these houses and associated roads. As the vast bulk of these properties are of necessity located some distance away from the pre-existing town centres then inevitably this will generate a huge increase in traffic flow which itself will be unsustainable (even if they are electric powered they will still generate CO2 in their construction as well as pollution and congestion in their usage. The necessary volume of traffic will undermine the endeavours of local authorities to restore town centres to the people (as</p>

suggested later in this document). Surely the post-Covid response and the response to the loss of footfall arising from online shopping is to revitalise the social and community aspects of town life? Streams of traffic will scupper this plan dead in the water.

Governments of all stripes and this local authority have repeatedly made pronouncements on the importance of the Green Belt and yet this plan is reliant upon supplementing previous releases of Green Belt with an unprecedented release. Numerous studies have shown the well being benefits of access to Green Spaces and yet this plan, by building another layer of suburbs around the existing towns, essentially puts existing populations even further away from vital footpaths and open spaces. Hence, even more driving to get out of the town for recreational purposes.

When the by pass was constructed 30 years ago it was deliberately decided to run it in the valley beyond the ridge line to the south of Berkhamsted some half a mile away from the town. The importance of this was said to be threefold: 1. to provide "green lung" to retain access for local residents to green spaces but also to avoid excess air pollution. 2. to manage the noise levels and 3. to maintain a natural green skyline. All three of these have been partially eroded since then by uncontrolled development but this plan would destroy any remaining benefits. It is critical to maintain the remaining parts of that original "green lung".

In Berkhamsted 2250 new homes are proposed but no appreciable increase in the local employment opportunities (in fact the reverse - as the Jewsons site which hosts several small businesses is proposed as a development site).

<b>Sustainable Development in Dacorum</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “ play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p>

I strongly object to your claim that your vision of Tring has “ delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Sustainable Development in Dacorum</b>	I am concerned that the proposed increase in housing will have a detrimental effect on water supplies and will damage our precious local chalk streams. I note that the supporting document relating to water supplies (Water cycle scoping study) was produced in 2010 so is well out of date. The proposed developments covered in that study are well below what is proposed now and yet even then it indicated that more water resources would be needed. Where are the plans for these and when are they likely to be available?

<b>Sustainable Development in Dacorum</b>	Key Diagram, page 29: Currently the map shows 'St Albans DC Growth Area' and 'Employment Area' as allocations / designations which are located outside the borough boundary in St Albans District. It is not possible to designate or allocate land in a local plan on land which is located outside of the plan area. The key diagram should instead make clear that East Hemel growth areas falling within St Albans District are part of the strategic context of the plan but do not form part of it – this might be better communicated by using indicative shaded shapes rather than clearly defined boundaries, and also correctly referencing them in the legend. Additionally, the map would be easier to read if the main settlements were labelled. These comments apply to all other maps in the Plan with regard to sites identified in St Albans District.

It may be possible to include within the plan that through the DTC with SADC that a proportion of the employment land will be able to count as meeting part of DBC's needs.

<b>Sustainable Development in Dacorum</b>	<p>The emphasis in this section seems to be on providing new homes and an assumption that having a larger labour force will justify including “20 hectares of new office and industrial development land within Employment Growth Areas” as well as “additional retail floorspace in Dacorum’s towns”. However, it is quite possible that the Covid-19 Pandemic will lead to a permanent increase in people working from home and shopping online and that there may be a surplus of office and retail space, rather than a need for more. While Dacorum might well be seen as an ideal, if expensive, location for London commuters, a trend toward more home working would possibly decrease the demand for property in such an expensive area and further decrease the need for retail and commercial units. Sustainability might best be achieved by re-purposing surplus retail and office units for residential use.</p> <p>Surely a Sustainable Development Strategy should also pay more attention to Climate Change? In 2019, Dacorum Borough Council declared a climate emergency but this strategy prioritises economic growth and the development of Greenfield Sites.</p>

<b>Sustainable Development in Dacorum</b>	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don’t want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p>

Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.

To summarise:

1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed.
2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area.
3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact.
4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).
5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.

These are fundamental flaws in the strategy underpinning the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.

These points are expanded below.

#### **Incorrect Assumptions for Housing Provision**

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

### **\_Failure to Provide Adequate Supportive Infrastructure\_**

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

### **\_Impact on Green Belt and Other Designated Land\_**

The Local Plan states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB". This strategic principle is then violated by the declared mission to provide at least 100% of the Council's self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

<b>Sustainable Development in Dacorum</b>	<p>The scale of increase in development considered for Tring is excessive, illustrating that the Local Authority has inadequate understanding of the highly distinctive character of Tring as a small, attractive market town.</p> <p>Within the section delivering development around Tring it is developer-led, with input from the local authority lacking authoritative detail. The plans show a lack of understanding of the highly distinctive character of Tring town and the surrounding area, together with its current state and future needs. Developer-led development is seen by local authorities as the cheapest way of providing development with only lip service paid to sustainability. This provides the local community with housing and infrastructure that the developer wishes to provide at a profit for their shareholders - not the development that a community deserves and this approach to development growth is not value for money if it does not deliver what is necessary to ensure a sustainable future.</p>

A 55% increase in housing for a small market town is totally inappropriate, given its setting within the AONB, and surrounded by Green Belt land. There can be no meaningful sustainable development strategy that will address the issues resulting from such a large increase. Whilst acknowledging that there is a need for development in Dacorum the draft plan is a wholly inadequate response to the challenges faced by the need for sustainable development. A large increase in human pressure will result from the DBC proposals and further deterioration on the local environment. The plan lacks the strength needed to address adverse impacts, both from current levels of stress on the environment and increased future impacts. This draft plan is governed by a developer-led strategy which will fail to deliver the necessary, but much reduced, sustainable growth that Dacorum and especially Tring deserve.

**Sustainable Development in Dacorum**

The housing target numbers are far too High. Realising that these have come down from Government the Borough should strive to do EVERYTHING THEY POSSIBLY CAN TO OPPOSE THESE NUMBERS. There needs to be a re-balancing, hence reduction on the number of homes to be built in Dacorum. The planned numbers will see a destruction in the essence of the Green belt and all surrounding areas in Dacorum. The national ONS numbers reduce the planned numbers of houses NOT 300k pa for England but closer to 170k based upon the most recently available data. with an estimated fall in population of 1.4m in 202 this continues the downward trend seen in more recent data from ONS in 2018 and FAILS TO TAKE ACCOUNT OF BREXIT, THE GENERAL ELECTION AND THE PANDEMIC. 170k/300k should see a reduction of 44% in NATIONAL targets, I believe that an even GREATER reduction should be attributed to Dacorum to 'balance up with the north'. In order to achieve the required numbers of new homes the 922 target (increased to 1023 in Dec20) should be reduced by a minimum of 44% and closer to 60%, leading to a physical target of between 525 and 370.

This plan takes little notice of the changing dynamics and needs of home provision in Dacorum but a blind obedience to Government dictats. Increasing density of homes closer to HH Town centre will bring significant benefits in many ways:

Greater tax take and opportunity to increase expenditure on infrastructure and local community facilities

**Housing:** Greater intergenerational living centres with a wider opportunity to integrate families through a range of accommodation to cater for all life stages, including:

- Single person studios
- 2 bedroom couple flats
- 3 bedroom family flats
- Larger high-quality premium 'penthouses' apartments – eg KODAK Building
- Independent elders living close to other family members
- Assisted living apartments for less able older communities integrated into more socially cohesive communities
- Multi-home communities contributing to greater care in the family/community hubs
- Office block conversions
- Family homes best located nearer to schools

Increasing ability for extended families to live in close proximity and to look after elder generations.

Working from home is becoming more prevalent for Dacorum as commuting into London has reduced demand.

As more retail space becomes available, this provides the opportunity for more conversions to homes.

These factors should contribute to reducing the demand for housing and hence the continuance of designated Green Belt.

**Sustainable Development in Dacorum** I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses)

population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

There is a problem in Tring where it is very difficult for the children to remain in the town when they have completed education and start work. We see many young adults forced to move to Leighton Buzzard and Aylesbury etc where housing is more affordable, although they would rather live nearer to parents and grandparents in their home town of

Tring. Whilst recognising that large 4-5 bedroom houses achieve a better yield for the developers, I believe that affordable housing should be a higher priority to the council. But not half as many houses in addition to the current stock.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Sustainable Development in Dacorum</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p> <p>The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach</p>

was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

<b>Sustainable Development in Dacorum</b>	The plans proposed contradict the term sustainable. Dacorum needs to review the proposals under this term. Sustainable infrastructure means development in harmony with the environment and green belt consumption cannot be considered if Dacorum want a truly sustainable development. There are many other areas within dacorum that could easily take high density housing with easy access to the road networks, for example the ex industrial estates, buncefield areas etc. To eat into green belt on both sides of berkhamsted will suffoctae the town further which is already struggling to cope with the extra housing developments. Most residents feel that berkhamsted is at capacity and the roads and infra structure cannot sustainably take more

<b>Sustainable Development in Dacorum</b>	Looking at the map, with the proximity of the Chiltern beechwood SAC and AONB to the housing development and the amount of green belt disappearing within the proposed plan, how can the level of the development be called sustainable?  It is in no way preserving natural resources for future generations, or in any way trying to halt climate change as was promised in the very definition of sustainability provided.

<b>Sustainable Development in Dacorum</b>	There are no specific details of the measures proposed to meet the 2030 net zero target. By 2025 the borough needs to be more than halfway there, but without targets there is a high risk that we do not meet the 2030 net zero target and that we compromise “the ability of future generations to meet their own needs” since they will be in Climate Chaos.

<b>Sustainable Development in Dacorum</b>	"Sustainable development is about meeting the needs of the present without compromising the ability of future generations to meet their own needs"

Building large scale housing estates of largely detached houses on Chiltern Green Belt is not sustainable. It is removing Green Belt land with agricultural and public amenity, and diverse wildlife that have been enjoyed by this, and previous, generations. These assets cannot be replaced. This is, and future generations of Dacorum residents will be impoverished because of this policy.

If it wishes to adhere to the NPPF, Dacorum should optimize the housing potential of its brownfield sites to provide appropriate and sustainable housing for all its residents and their offspring, It is going against the National Plan if it expands into surrounding agricultural land. This would clearly be unsustainable and would immediately impoverish the lives both of current residents, and of future generations

<b>Sustainable Development in Dacorum</b>	<p><b>The Housing Strategy - Potential overprovision of housing</b></p> <p>We support the need for additional housing, in particular affordable housing, and understand the potential need to encroach on existing green belt in order to meet housing needs.</p> <p>However, we support comments from CPRE (The Countryside Charity) and fellow parish councils that data used to estimate housing requirements should be the most current data available (using Office of National Statistics data from 2018 rather than 2014) and that Dacorum's allocation is fair in comparison to other boroughs. We note that paragraph 7.5 in the draft plan also acknowledges that proposed changes to government methods of calculating housing could mean that the figure used in the plan is not correct.</p> <p>We need to be sure that over-estimations do not lead to unnecessary use of green belt.</p> <p>The plan also needs to further consider changes likely to occur as a result of the pandemic. Will unused office space provide opportunity for conversion to residential property, minimising the need to build on green belt?</p>

<b>Sustainable Development in Dacorum</b>	'Proposals that are in accordance with the development plan will be approved without delay, unless material considerations indicate otherwise'. I am concerned that this will give developers carte blanche to cherry pick, the earmarked sites for development that will have the most profit for them first; rather than building houses where they are most needed; or on brownfield sites in perhaps less desirable areas. All available brownfield sites should be built on first; before any green belt land or green amenity land is used for houses. Green belt and green land within established developments should be built on last; when we know that there is still a need for housing (Brexit and the pandemic may change what was envisaged even a year ago). As an example a developer put a leaflet through my door with plans for 150 homes on green belt land that had been identified for housing; within a few weeks of the plan being released. Even the 'affordable' houses within their plan, are very unlikely to be anywhere near what most people aspiring to buy would call affordable.

<b>Sustainable Development in Dacorum</b>	<p>How is this sustainable development. You highlight the importance of an environmental role and 'managing growth in a positive way' when your plans will obliterate significant areas of green belt. Hasn't lockdown taught us how important our green space is and you are planning to destroy it?</p> <p>By putting so many different areas in to develop you are also putting people at odds with each other, forcing them to opt for where we want the green belt destroyed. The answer to all of this is, this is not supporting the environment so is not sustainable development.</p>

<b>Sustainable Development in Dacorum</b>	Repurpose empty or underused commercial and/or retail sites in the borough before developing rural areas. Existing brownfield sites will have the necessary infrastructure in place whereas greenfield sites are less likely to. Brownfield sites will require less resources to repurpose and will be more sustainable than Greenfield sites. Brownfield sites will permit the reprocessing of construction materials in the conversion of the built environment rather than building from scratch.

<b>Sustainable Development in Dacorum</b>	It is important for the wellbeing of everyone that new development should be in keeping with the local environment. In the villages trees and hedges should not be indiscriminately destroyed but be an integral part of any development. The size and type of housing should also be sympathetic and in keeping with the character of the village. No blocks of flats for instance towering over existing homes just to save money or cram in social housing. And social housing should mean small family homes with gardens. There is not enough of this type of housing and very little incentive for developers to build small houses despite the shortage.

<b>Sustainable Development in Dacorum</b>	<p>4.2 it is not environmentally sustainable to build on green belt land. This detrimentally affects the environment. The proposed development is a massive expansion which will result in significant loss of green space, without any protection for the remaining green belt land. This neither protects nor enhances the natural environment. Most of the proposed building sites are not sustainable.</p> <p>Policy SP1 It should be an absolute requirement that all new homes are carbon neutral, have parking and charging points for electric cars, be designed to maximise natural heating and ventilation and include solar panels.No gas boilers should be permitted and connection to high speed broadband should be mandatory. Aspirational wording is not sufficient - too many developers will find ways to cut corners unless forced to adhere to the highest standards.</p>

<b>Sustainable Development in Dacorum</b>	You state admirably that ' sustainable development is about meeting the needs of the present without compromising the ability of future generations to meet their own needs', yet you propose to remove vast swathes of green belt land without proven need which will fundamentally remove the health, exercise and wellbeing options for future generations. The criteria for house building plans you are using are outmoded and based on old data that predates both COVID and Brexit. A recent Bank of America report sees no increases in the workforce in London in the next 5 years due to falls in office based working and Brexit related immigration changes yet you insist on drawing up housing targets based on immigration and working data from another era. The release of green belt land is supposed to be only in 'exceptional circumstances'. I do not believe those circumstance exist any more, or at the very least the assumptions underlying them need to be revisited in the wake of Brexit and the home working revolution that has been unleashed by Covid 19.

<b>Sustainable Development in Dacorum</b>	<p>As a citizen member of the Herts CC panel I had commented previously on the Herts Sustainability proposals. Very keen supporter of encouraging sustainable development in Dacorum but am aghast at what has been proposed in the Local Plan.</p> <p>None of the proposed developments can be described as “fully evidenced and justified” as required by the NPPF to remove Green Belt designations. The growth proposed is neither sustainable nor respecting the environmental role of planning.</p> <p>No account is taken of the current geographic layout of Berkhamsted and surrounding areas and the valley effect creating traffic pinch points and higher pollution. The towns of Berkhamsted and Tring are already stressed when it comes to environment and I see no stronger leadership in terms of lowering carbon emissions in this plan, such as mandating no gas boilers more renewables like heat pumps, less road traffic more cycle paths and so on.</p>

<b>Sustainable Development in Dacorum</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p>

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Sustainable Development in Dacorum**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

<b>Sustainable Development in Dacorum</b>	16,500+ new houses is an over provision and is based on out of date (2014) ONS data. Estimates from the 2018 ONS survey should be used instead.

The sheer scale of the proposed developments will have a significant and detrimental impact on the natural environment. Not enough innovative thought processes have gone into looking how to redevelop current (tired) town centre sites. These should be explored exhaustively before building on even an inch of the green belt.

**Sustainable Development in Dacorum** There has been previous examples in Hemel Hempstead of developers 'playing the green and sustainable card' without proper investigation and validation e.g. automatic car parking underground which would not have enabled electric car charging in situ and not suitable for any resident who needed a van for their job. or had small children.  
Traffic reports are provided by the developer and have been found to be skewed in their favour with inaccurate figures and no understanding of the heavy traffic flow in HH.

<p>Yes / No * Yes * No</p>	<p>Yes</p>
<p><b>Sustainable Development in Dacorum</b></p>	<p>The local plan - in particular for Berkhamsted - does not align with the 'environmental role' quoted here as the plan would damage the natural, historic, and built environment and actively increase pollution, particularly air pollution. Ambitions around sustainable transport are not realistic, due in part to the topography of the area.</p> <p>2.14 refers to concerns around "the ability of the roads to accommodate high levels of housing growth and to tackle climate change we need to significantly reduce harmful emissions and particulates from transport and at the same time greatly improve local air quality. Therefore, <b>new development will need to be located in places</b> which have excellent access to jobs, shops, services, can quickly and <b>easily be reached by sustainable public transport and benefit from high quality walking and cycling infrastructure.</b>" The Berkhamsted sites in particular BK01 do not fulfill this criteria and cannot be improved to do so sufficiently. The topography combined with high car ownership of residents and limitations of the town and road network means the outcome will simply be a massive increase in traffic that the town cannot cope with.</p> <p>The vision (2.2) says: "A central thread of the Local Plan is to plan for a low-carbon future in which carbon emissions and other greenhouse gases are reduced". The current plans will only <b>increase carbon emissions</b> particular through increased traffic and congestion in Berkhamsted. This risks making the centre a polluted, traffic filled, unpleasant place to be, impacting also on the businesses this plan claims to support.</p> <p>Berkhamsted cannot sustain this growth without significant damage to the health and wellbeing of the community, increased pollution and congestion and a demolition of the character of the town, effectively building towards a merger with Hemel Hempstead.</p> <p>Cramming in 850 homes in a site at the top of a steep hill (BK01 - but the other BK sites are in the same position), will add <b>1000's of car journeys</b> and add to the problems of an already congested Berkhamsted, with risks around air pollution, the town sitting as it does in a valley. It is massive disregard for reality to suggest that people will walk / cycle - has anyone involved in producing this plan walked up Swing Gate Lane?! Do you imagine that families will walk / cycle into town as a rule instead of hopping into their 4X4s?</p> <p>The improvements suggested in the Berkhamsted and Tring Sustainable Transport Study are barely sticking plasters and the author accepts that there are limited options. The study says: "Development will lead to an increase of trips both within and beyond the town. It is therefore imperative to ensure that <b>as many of these trips as possible</b> are made using sustainable transport options". [The bit I've highlighted in bold is simply not going to happen].</p> <p>"In Berkhamsted, development is proposed around the southern edges of the town [...]. Given the town's steep topography, this will lead to issues for future residents accessing the town centre. This could exacerbate further the town's reliance on the car and dissuade use of more sustainable modes. In some areas where development is proposed, there is currently little or no bus services, footways or cycle routes."</p> <p>"Further development in Berkhamsted is also likely to increase dependence on the A4251 which runs through the centre of the town, increasing congestion and journey times"</p>

"It would not be feasible or cost effective to address all of the issues identified. Some characteristics of the town, most notably its location within a deep valley and more historic and physically constrained network of roads, will continue to create barriers for people making trips on foot or by bike as there may be fewer opportunities to introduce high-quality interventions."

**Sustainable Development in Dacorum** My main focus in answering this relates to Tring as this is the area I am most familiar with. The plan states that '*Tring will accommodate growth of at least 2,700 new homes.*' This is simply not sustainable, and likely in breach of the heart of NPPF which is 'sustainable development'. It represents at least a 55% increase in the size of Tring, by far the largest urban growth across Dacorum envisaged by the Plan. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by Government 'affordability' formula (evidenced in the September 2020 SW Herts Local Housing document). In addition, the Plan presents no evidence that development will enhance the town centre or strengthen its function as a key market town in the Borough.

<b>Sustainable Development in Dacorum</b>	<p>Because sustainability, mentioned in DM22.5, will be assessed on its merits with only expectation of compliance rather than the force of regulation, there is obvious scope for avoiding sustainable development requirements, leaving that assessment in the hands of planning officers who do not enjoy the confidence of our community on the basis of long term failure even to enforce conditions they themselves proposed on developments in our village.</p> <p>It is particularly relevant that our community had an employment site which was split into employment and housing and now it is proposed to replace the housing part "lost" with a further removal of green belt land. This seems unreasonable strategy.</p>

<b>Sustainable Development in Dacorum</b>	<p><b>Economic</b></p> <p>The Plan proposes to support retail development, whereas this is now recognised as an area in decline across the country and not a sustainable source of economic development.</p> <p><b>Social</b></p> <p>The plans for Northchurch (classified as part of Berkhamsted West) do not take account of the distance to local services</p> <p><b>Environmental</b></p> <p>The local plan undermines Dacorum's goal to minimise and manage the requirement for development on Green Belt - almost all the development plans for Berkhamsted are on Green Belt land, ignoring Brownfield sites such as Egerton Rothsay school, and pushing for an excessive number of houses and development</p>

Dacorum states that it 'will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.

However, the Local Plan for Northchurch does not support this strategy. Northchurch village is not recognised as a separate community in the plan but classified as part of Berkhamsted West. Yet it is not part of Berkhamsted market town, rather a village with numerous actively farmed green fields on Green Belt land and very rural in nature. The village is quiet with a local shop/post office and has a lot of older residents. The local greet each other when walking past. The proposed plan does not 'reflect its role and character' as promised for villages.

The plan proposes investment in open space rather than preserving the open space we already have on Green Belt land with established and well used footpaths

The plans for Berkhamsted West rely on car ownership and car usage as there is no access to passenger transport, thus increasing pollution, congestion and local traffic including from idling by St Mary's primary school.

<b>Sustainable Development in Dacorum</b>	<p>I do not see sufficient explanation in the Plan as to why DBC is interpreting housing numbers from the Government's Standard Methodology as a 'target' that justifies development on Green Belt land. Neither do I see sufficient justification for the 'exceptional circumstances' justification for development in Green Belt designated areas. The Government has stated on many occasions, but most recently on 16/12/2020 in its response to the White Paper consultations, that "meeting housing need is never a reason to cause unacceptable harm to such places" [protected landscapes and Green Belt]. So why is DBC proposing to change Green Belt designations to build more houses?</p> <p>The whole Strategy for Growth is based on pre-Covid-19 assumptions of working and commuting practices and the logic of where to locate additional housing. Many of the assumptions on which the Draft Local Plan is based are now out of date. Fewer people need to be commuting into London to work in offices and more people will now be working from</p>

home which for many can be anywhere with good internet access. Surely the pressure for additional housing in Berkhamsted has now been **reduced** by Covid-19 and the projected numbers should now be revised downwards?

<b>Sustainable Development in Dacorum</b>	<i>We are concerned about the interaction between housing, employment and commercial activities having regard to the effect of the pandemic on overall plans. It is likely that remote working will become more prevalent and there will be less need for London workers to live in Hertfordshire, including Dacorum. This reduced demand for housing can be met by the use of brownfield sites rather than on Green Belt land, particularly if there is also a reduced demand for local office and retail space following the pandemic which would allow this space to be converted to residential housing.</i>

<b>Sustainable Development in Dacorum</b>	<p>The local plan focuses on building on Green belt land, not minimising it, instead of cloaking at brownfield sites.</p> <p>There aren't many work opportunities in Berkhamsted so all these new people would have to drive to other towns for work - it would be a better strategy to build houses in urban centres where there are work opportunities and would be better for Dacorum's environmental strategy too.</p> <p>Although Dacorum is looking for balance in urban growth, the houses need to be built in areas where there are jobs and already a lot of services and amenities. These are very limited in Northchurch - not a place to build, it makes much more sense to continue protecting green belt and extending larger conurbations such as Hemel Hempstead where there are jobs and good transport links</p> <p>Dacorum has Northchurch down as Berkhamsted west but we are a separate countryside village of green fields and mainly old people - only 1,500 population and an extra 400 houses on green belt land would create an imbalance in itself. Instead of building a new park, let us keep the green fields we have always had and are typical of a village in the Chilterns - part to our wonderful nature</p>

<b>Sustainable Development in Dacorum</b>	<p>—The local plan says very little about sustaining villages; We want vibrant self-sustaining villages that are not just dormitory settlements.</p> <p>— This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan.</p> <p>— Northchurch has not been recognised at all. It has been called West Berkhamsted instead.</p> <p>— The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology.</p> <p>— There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.</p>

<b>Sustainable Development in Dacorum</b>	<p>The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. The proposed plan as presented is largely silent on new sources of water supply and on how it will protect the three designated chalk streams in the borough (the Gade, Bulbourne and Ver).</p> <p>The proposed local plan fails to take into account the impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which are likely to result in much greater conversion of commercial space (especially office and retail) to residential use. The potential for such windfall provision of housing throughout the borough is likely to be much higher than that identified in the proposed plan. As a result, such a windfall many of the proposals for development on Green Belt and greenfield sites outside of existing towns and villages are likely to be unnecessary.</p>

<b>Sustainable Development in Dacorum</b>	<p>I strongly feel that the scale of development in Hemel fails to measure the impact on the quality of life of increased traffic, overcrowding, loss of green spaces, strain on infrastructure, increased pollution and possible related social problems - crime and mental health issues.</p> <p>I believe a more imaginative and resourceful approach needs to be taken when identifying industrial areas to keep them away from housing developments and green space. For example, using disused farm and agricultural buildings.</p> <p>Where industrial development is planned there needs to be attention to matching rural architecture and landscaping to minimise visual blight. Use green materials for buildings not silver.</p>

<b>Sustainable Development in Dacorum</b>	<p>Whilst I support and understand the need for the growth strategy, and for the most part it looks a well planned and thought out vision of an ideal Borough. Unfortunately the reality is there are some areas that need to be highlighted that may seem trivial in the great scheme of the whole strategy but need to be addressed . I have highlighted areas where mistake have been made and are of grave concern to the local residents where I live so I have commented on them on thir behalf also. They are elderly and vulnerable adults who would not have been able to access and read the proposals</p> <p>The development around London Road and Durrants Hill Road is a prime example of development disregarding consultation and the fact that it sits in the exceeded level of pollution AQMAs, yet you have now encouraged over 200 extra vehicles to use the already over congested and ineptly designed area of town.</p> <p>There was consultation, but only a few residents were contacted before it was too late, and any objections or questions were rejected or ignored.</p>

This area of town is high polluted and congested already, yet development is ongoing and continues to be in the plan without proper infrastructure to divert traffic from the residential areas and highways causing increase pollution.

I have attempted to read the parking document that has been commissioned to run alongside the development of residential property parking allocation. It is based purely on assumption and comment that has no real evidence to support the reality that exists.

It will be many decades before all diesel/petrol vehicles cease to be on the roads.

Public transport will need to be regular, clean and inexpensive before people will forego the need for a vehicle of their own.

Providing cycle storage will not deter people from owning a vehicle.

Not providing adequate parking spaces for the size of the property will not encourage people to give up on owning a car.

Fact : Parking is one of the major causes of Anti-Social behaviour and neighbour disputes, which can result in a devastating spiral of problems which end up with many agencies spending time, money and effort in resolving and at worst breakdown in communities and ultimately can end in death.

The one thing I would comment on development is provide adequate (Free) parking spaces for the size of the property. It must be one space for the number of bedrooms plus one more for visitors. This would make the areas more spacious and create a better community feel allowing for children better areas to play outside and integrate with one another again creating adhesion to build better communities. This in turn breeds tolerance and understanding and is a great prevention of criminality. After all isn't this what we want for the Borough to have a great sense of community self-worth, reduced crime all go towards encouraging businesses and prosperity. A Place that good teachers want to teach, better prospects for youngsters, more business to offer our youngsters employment .

**Sustainable Development in Dacorum** Sustainable development would offset pollution by things like raised walkways, perhaps vertical gardens and public transport to offset increased cars on the roads.

It's nice that Tring is getting more social and sports facilities but Hemel Hempstead's provision of these has fallen over the past few years, as have our hospital services. As the population will be substantially larger than in 2015 we do need the community services to be funded as part of the build, and this could be part of the deal with developers or indeed with the Government as you appear to be allocating over target.

Dacorum needs more council housing, I do not see the 2020-21 figures published but as of a few years ago Dacorum had 5,000 families on the waiting list and the UK was failing to replace council homes sold (within 3 years).

<b>Sustainable Development in Dacorum</b>	<p><b>Policy SP1 ‘Sustainable Development in Dacorum’, section 4.2 and 4.3</b></p> <ul style="list-style-type: none"> <li>• Three priority areas are defined ‘<i>economic, social and environment</i>’ The latter however is NOT well defined in the Plan. I am concerned that Herts Sustainability Strategy and HCCSP priorities are not explicitly included for example. There is a lack of explicit statement in support of this goal in the plan and – tellingly – there are NO areas (except for Ashridge) earmarked for improvement.</li> <li>• Of the three key areas – ‘<i>economic, social and environment</i>’ – the latter is the least well defined in the Plan. We have a concern that specific targets from the Herts Sustainability Strategy and HCCSP priorities are not explicitly reflected in general or that a robust enough approach is being taken on building standards or energy efficiency. There should be reference to, for example, stringent building regulations, requiring orientation of housing to allow for thermal solar and solar PV installations as part of all new builds, alongside ground and/or air source heat pump electricity generation, but these are not apparent anywhere in the plan.</li> </ul>

<b>Sustainable Development in Dacorum</b>	<p>This is an awful way of getting a response from ordinary citizens. The document is over long and unreadable. It is ridiculous and irresponsible that this is happening during such an unprecedented crisis for our country. I can't believe that this is legitimate. It is extremely confusing and makes commenting difficult.</p> <p>This section is vague. Berkhamsted is already not meeting the needs of the population in schooling and health provision. By adding more housing the health of the town will not be sustainable. This strikes me that this is about developers, money making and not the people who live here.</p>

<b>Sustainable Development in Dacorum</b>	<p>This continues from the last comment box.</p> <p>Tring school is already very large any new developments will only add further pressure here and the students will not receive the personalised attention they need for their development.</p> <p>Also linked to sustainability is the disruption, traffic, noisepollution and air pollution that will be created by the proposed developments.</p> <p>To be sustainable 'you have to meet the needs of the current population and protect them for future generations', these proposals do not meet the needs of the residents now. Too much disruption, poorer quality of life and reduced happiness are not sustainable for the current population.</p> <p>Tring is a small market town, these proposals will increase its size by over 40% this again is not sustainable for the town. The town itself would be completely changed, no longer small, no longer peaceful etc. If I had wanted to live in a large town, I would have bought a house in Hemel or Watford!</p> <p>a</p>

<b>Sustainable Development in Dacorum</b>	Land prices are high in berkhamsted. therefore the houses that will be built will as a result be expensive, and therefore those living there will work in london as that is where people can arn the high wages to afford these houses. the edge of town / top of a hill location of the South berkhamsted site means that those London workers will drive to the station. that is for a 2 adult household a potential extra 3200 car journeys a day, which is not environmentally sustainable (each adult travelling to and back from the station by car, 800 units proposed)

<b>Sustainable Development in Dacorum</b>	Nothing in this section can be remotely described as "fully evidenced and justified" as required by the NPPF to remove Green Belt designations. The growth proposed is neither sustainable nor respecting the environmental role of planning. You mention that sustainable development is central to the planning system, but the number of dwellings and building on Green Belt land shows a complete disregard for sustainable growth and the underlying impact on the environment. Your reference to 'enhancing the natural, historic and built environment..' is again not evidenced in the attached. The number of dwellings you propose to build will completely ruin a number of local/historic towns in the borough.

<b>Sustainable Development in Dacorum</b>	Further to my comment at Section 3, I cannot see how the scale of development proposed in Berkhamsted contributes to sustainable development. There has been considerable development already in Berkhamsted in the last 20 years. The biggest development recently has been Bearroc Park on Shootersway (2 phases). The developer (Taylor Wimpey) appear to have used bog standard building techniques. They have not provided a single solar panel or heat pump across their 2 phases of development, and do not appear to have used any triple glazing. This is not environmentally sustainable construction. Nor do they appear to have provided any new or upgraded infrastructure to the town or any new public spaces or amenities. If all future developments are conducted in the same isolated and piecemeal fashion then the already strained infrastructure in Berkhamsted will no longer cope with the increase in housing, people and traffic - especially at the levels intended in the Strategic Plan.

<b>Sustainable Development in Dacorum</b>	<p>Yes namely the social role and environmental role in regards to your proposed builds in tring.</p> <p>Social role - tring is a small town - it has the feel of small town and as such has a very close knit community. the amount of houses proposed in nearly on a par with berkhamstead (which is a city) - in this role you are completely desimating the feel of the local community. The town will be overcrowded - there is no healthy aspect to this. You want to build affordable housing - but is this at the cost of losing what makes are small town and villages retain their identities.</p> <p>Environmental role - this links in with this. In tring your proposed development is on fields and supposed greenbelt land. Our wildneress around small towns should be maintained for everyones health and wellbeing. The beautiful views looking to tring from pistone hill and ivinghoe will be lost. The historic natural environment is widely damaged by the amount of proposed housing. Which runs into the 1000's in tring.</p>

<b>Sustainable Development in Dacorum</b>	<p>There is nothing sustainable about the planned development. the infrastructure , even with the proposed improvements, could not support the number of new dwellings.</p> <p>The plan would put extreme strain on the water supply in the area and damage the areas chalk streams.</p> <p>The loss of green areas , specifically Berkhamsted and Northchurch will have huge impact on the physical and mental health of residents. Northchurch cannot be treated as an extention of Berkhamstead, it is a separate community, with its own needs.</p> <p>Since the scale of the development is unnecessary, this cannot be forgiven...the loss of wildlife habitat is irreversable, and with the current climate crisis , this should always be the priority</p>

<b>Sustainable Development in Dacorum</b>	<p>With reference to p31 Policy SP2 – Spatial Strategy for Growth 3c: there doesn't appear to be any detail at all anywhere in the entire Consultation documentation that sets out the size, scale and composition of the open space and sports facilities that “Development” will provide investment into.</p> <p>At a minimum, these sorts of details should be provided in parallel with the debate about whether there should or shouldn't be any new housing and where that should be built.</p> <p>The same applies to p40 Policy SP4 – Delivering the Housing Strategy 1k: where there is no definition of how much land for “other facilities” there will be and what those other facilities will be.</p>

In relation to **9 The Retail and Leisure Development Strategy:**

- p46 9.9 - Tornadoes disagrees that the Indoor Sports provision in Tring is sufficient. DBC Leisure Facilities Strategy May 2019, clearly states on p5 that Indoor Sports provision for Futsal, Netball, Handball and Basketball is non-existent. Tornadoes own demand for an Indoor Centre enabling multiple Indoor Team Sports is the equivalent of 4 Netball / Futsal Courts alone.
- p48 – it appears that Tring Town Council does not yet know that it is responsible for seeking the delivery of a new neighbourhood centre as set out in 4c.

In relation to **10 Delivering the Infrastructure to Support Growth:**

- p49 – given the extensive scope of what Infrastructure covers and the fact that only a draft was available after the start of the Local Plan consultation, Tornadoes considers that a separate consultation, just on the IDP should be conducted by DBC ahead of the submission of the Plan for Examination. Tornadoes would like to ensure that what is proposed for Tring is documented in sufficient detail that there can be no subsequent compromising on Sports & Leisure provision in negotiation with developers.
- p50 **Policy SP7 Delivering Infrastructure 4a** – Tornadoes would seek confirmation from DBC that Sports Facilities provision in Tring is deemed critical, essential and required infrastructure.

In relation to **11 Neighbourhood Planning:**

- p52 11.5 – Tornadoes has encouraged Tring Town Council to take the responsibility for developing a neighbourhood Plan for Tring. We look forward to contributing to this critical input to the future Local Plan.

In relation to **12 Monitoring and Review:**

- p54 12.2 – whilst DBC has considered the potential impact of the South West Herts Joint Strategic Plan, there is no evidence that any consideration has been given to the massive new developments surrounding Tring already underway in Aston Clinton, Wendover and Pitstone, or the similarly massive new proposals being lodged in recent weeks.

<b>Sustainable Development in Dacorum</b>	<p>Dacorum's Strategy is based on out-of-date projections that do not reflect a true picture of housing demand. Since the projections were made in 2014, significant social and economic changes have reduced the need for dwellings in Dacorum.</p> <p>Since COVID struck the world has changed and there is a sizable move to a permanent shift to working from home for those who can and the increased utilisation of online shopping and delivery to fulfil retail demand. The answer is not to build new retail outlets.</p> <p>In addition, some of the sites proposed will actively damage the Area of Natural Beauty (AoNB) and I've found that nothing in this section can be remotely described as "fully evidenced and justified" as required by the NPPF to remove Green Belt designations. The growth proposed is neither sustainable nor respecting the environmental role of planning.</p>

<b>Sustainable Development in Dacorum</b>	Removing Green Belt designations requires full and justifiable evidence of exceptional circumstances. These exceptional circumstances have not been fully evidenced and justified as per NPPF requirements. The growth proposed is neither sustainable nor does it respect the environmental role of planning. The proposed development will forever change the very essence of the towns and there is no justification for such a change.

<b>Sustainable Development in Dacorum</b>	I do not believe that a wholly expected increase in population size and housing need meets the 'exceptional' test for the release of greenbelt land for building.  There is insufficient consideration of brownfield sites throughout.  Housing need can be met in the north west of the Borough without encroaching on greenbelt land. I do not believe the reasons given for not pursuing this option are sufficient.

<b>Sustainable Development in Dacorum</b>	<p>1. In terms of land use I do not see the proposals as sustainable. Far greater densities of development have recently been achieved and the future development densities envisaged are very low. As a consequence a far larger areas of Green Belt have been taken than necessary - especially in Tring. Gross densities are 8 dwellings per ha in North Hemel Hempstead HH01, 12/ha in East of Tring TR03, 13/ha on Dunsley Farm TR01.</p> <p>2. The "Garden Communities" in Hemel Hempstead look very nice but cover productive farmland and are a very inefficient use of land.</p> <p>3. It could, in the light of the above, be said the the cost of these "Garden Communities" is borne by Tring in the form of loss of Green Belt and damage to the setting of the AONB - visited by people from all over the country.</p> <p>4. The Green Belt areas under consideration in Tring and Berkhamsted are different in character from those surrounding Hemel Hempstead. The Tring and Berkhamsted Green Belt areas abut the AONB and therefore qualify as "settings" of the AONB. In Hemel Hempstead, apart from a length of a few hundred metres of HH01 this is not the case.</p> <p>Dunsley TR01 (37 ha) abuts the AONB on 2 of the 3 sides of this triangular site and will be clearly visible will be clearly visible from a large area of the AONB, especially from Wigginton, Tring Park and Aldbury.</p> <p>New Mill TR02 (15 ha) and East of Tring (120 ha) are effectively one major development which abuts the AONB to the north-east and the south. They will be clearly visible from Pitstone Hill and Aldbury and along the crest that the Ridgeway Path follows.</p> <p>NPPF paragraph 115 requires that in any decision "great weight should be given to conserving landscape and scenic beauty" in AONBs. This applies not only to developments proposed within an AONB but <b>if proposed in its setting such that the AONB would be affected.</b></p> <p>Because the Chilterns AONB is set on a scarp and the upland plateaux of the Chiltern Hills it commands views over the surrounding lowlands (its "settings") which will be substantially altered visually to a degree that would damage and detract from the adjacent AONB.</p> <p>I have found no evidence of any adequate consideration of these points and so the proposals could well be found to be "unsound" by the Inspector.</p>

<b>Sustainable Development in Dacorum</b>	<p>This consultation has not been widely advertised to the people of dacorum hence the low number of comments submitted. Unfortunately our planning officials seem to be making it as difficult as possible for the local community and residents to comment. They need to remember that they are planning officials most people are not. The sustainability of the strategic plan seems to be anything but sustainable. the dacorum area has 155k people and the strategic plan has its sights on increasing this by as much as 30,000 taking dacorum to circa 185,000 - all without a hospital .</p> <p>The planning officials appear to be wanting to cover up that the land Hemel Hempstead Hospital is built on is owned by the people of Hemel Hempstead not the council and should not be available for selling off but preserved for healthcare purposes for which it was gifted to the people of HH, NOT the council.</p> <p>Hemel Hempstead does not have the infrastructure to to accomodate these increases, and the strategic plan despite its wording does not include any improvements to infrastructure and does not take into account the massive developments proposed on St Albans land to the west of the M1 which is essentially going to adjoin HH not St Albans.</p> <p>The residents of HH should oppose nearly every proposed site that is currently green field and hospital land development and the Local authority should be consulting with the local population in writing to every current household (after all we are the people who live here already) by post with simple support or not questions for each part.</p>

<b>Sustainable Development in Dacorum</b>	I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Sustainable Development in Dacorum</b>	<p>I strongly object to the proposal of some 3400 new homes to be built around the small peaceful village of Long Marston.</p> <p>Having been a resident of Long Marston for over 17 years now I have seen an increase of traffic through our village that the road system simply can't cope with.</p> <p>The roads are constantly peppered with potholes from large lorries that the roads cannot take and the speed at which traffic travels through is simply not safe.</p>

I live on the cross roads opposite the pub and the amount of cars abusing the long straight roads in and out of the village is ridiculous.

The roads in and out of the village can hardly cope with the lorries coming through on a daily basis up to the airfield, there is categorically no capacity for any more, which a development of this size would bring in spades.

I have seen the village flood numerous times, how can it cope with another 3400 homes??

The school is not big enough to accommodate more children and the parking at school run times is already mad enough.

The village has one small pub, and no other facilities. The church would not be able to cope with extra people either.

The village would be irreversibly changed for the worse, ultimately turning it in to a town.

There simply isn't enough in the area to cope with such a huge development.

It would inevitably devalue all the properties in the village too.

I urge you to consider the lives of the residents of Long Marston and think how it would affect you if this was proposed on your doorstep.

<b>Sustainable Development in Dacorum</b>	<p>I am writing to object to the proposed local plan.</p> <p>I find it shocking and disturbing that the Council is looking to change so dramatically the size and therefore nature of our local towns.</p> <p>Having grown up in the area and gone to school in Tring, I now live in Berkhamsted with my family. I value the character of these market towns and the amazing natural beauty of the surrounding countryside.</p>

I find it very difficult to reconcile how there can possibly be a demand for the level of housing proposed. The statistics on which these numbers are based appear to be already many years out of date and on any basis clearly do not take account of the changes which the pandemic will undoubtedly have on housing needs. The local towns are currently very much in the commuter-belt for London with the inevitable knock-on effect on house prices. With more people working more often from home in future, it is widely considered that people will also look to locate much further out from London. It seems premature to put in place a Local Plan for such a drastic increase in house building before the true impact of the pandemic on working lifestyles and housing needs is known. Given the pace of change in businesses already in the last year, a delay of only a few years may be all that is necessary to get a better handle on what the local area's housing need actually is going to be over the next 10-20 years.

I am also particularly concerned about the impact on the local environment. I am shocked to learn that it is even possible to build on green belt land and dismayed at how much of it is proposed to be sacrificed for "growth". The impact that such an increase in the local population will have on the surrounding countryside will surely be immense and in particular will increase the need for water extraction from the aquifer which will threaten the upper reaches of the rivers Gade and Bulbourne, and is likely to leave these dried out to nothing.

Finally I consider the way this consultation has been conducted is simply inadequate. We received for the first time today - 25 February - a leaflet through the post with some details of the Local Plan from the Council. This is for a consultation which apparently opened on 27 November 2020 and is to close in two days' time. Fortunately I had recently been alerted by a friend to do my own reading on the plan but I am concerned that many in the local community may not have been aware of the plans until this late stage or even now.

I am also submitting this objection by email as the online portal for doing so is so unwieldy. How anyone who is not online or computer literate is supposed to respond to the consultation I don't know. Limiting the ability to respond to this format must surely be excluding a sizeable proportion of the local population.

I hope that the Council will reflect and accept that this plan needs to be delayed until there is greater clarity on the likely impact of the pandemic. In the meantime the opportunity could be taken to consider further the environmental impact and in particular the purpose and precious nature of the green belt. Once it has been built on, we won't get it back.

<b>Sustainable Development in Dacorum</b>	<p>Please take this email as my formal response to Dacorum’s Local Plan (2020-2038) Emerging Strategy for Growth.</p> <p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum’s green belt.</p> <p>Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.</p> <p>This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.</p> <p>The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses, especially here in Hemel Hempstead. We currently have a hospital that lacks many key departments such as an A&amp;E or a 24 hour urgent care centre and is constantly seeing departments and services removed and relocated to Watford, not enough GP surgeries for the existing number of residents across Dacorum, we no longer have a walk in police station or adequate police staffing numbers, or sufficient schools or residents’ parking. Building more housing is going to make all of these areas much worse, particularly when the proposed infrastructure is severely lacking.</p>

I also understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on a local Facebook group but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

**Sustainable Development in Dacorum**

I am writing to express my profound disappointment and to object in the strongest possible terms to the Local Plan as promulgated by the Dacorum Borough Council. Not only are the plans for Hemel Hempstead disproportionately high in terms of numbers of houses proposed but it clearly shows that absolutely no account has been taken of the effect on the environment and the disruption to existing communities by the imposition of this travesty.

With reference to the plan for Berkhamsted, the concentration of proposed development in the Shootersway area, namely the area between existing housing and leisure facilities and the A41 Berkhamsted Bypass will seriously degrade the amount of Green Belt land remaining in and around Berkhamsted. The increase in traffic caused by the development of Bearoc by Taylor Wimpey , which is already having a detrimental effect on the safety of inhabitants, will be multiplied several fold by the proposed development. In addition, further development will place an intolerable strain on schools, services and amenities such as medical practices and care for the aged.

It is quite clear that the Dacorum Borough Council is being unduly influenced by the desires of developers rather than the concern of the people whom they are supposed to represent.,

I look forward to your comments and a redraft of the Local Plan.

**Sustainable Development in Dacorum**

I am writing in regards to the proposed plans from DBC and Three Rivers District Council to develop of multiple green belt sites on and around Kings Langley.

The COVID-19 global pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exception circumstance for removing Dacorum's green belt.

I believe that green belt land such as Rectory Farm helps protect the shape, size and character of towns and villages like Kings Langley and prevents them merging into one another

I also feel your plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home

Your plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses

I feel that we don't have enough water to supply all the extra houses. It is a fact that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

My final point is that Kings Langley is a village. We pride ourselves on this and the 'village feel' is prevalent. We live here because we love Kings Langley and we're passionate about the area. Please don't turn our village into a town, please don't ruin this wonderful community that you've been so involved in creating.

**Sustainable Development in Dacorum** I understand that the borough requires more housing but am not in a position to comment on the scope of the local plan. However I have read in Appendix F of the Dacorum local plan interim sustainability appraisal report appendices -November 2020 that a development of over 3500 houses is being considered on the outskirts of Long Marston.  
In my view there are three main reasons why this is not a suitable site for a development of this size.

Firstly, the surrounding transport infrastructure struggles to cope with the existing number of vehicles. The crossroads in Long Marston becomes congested especially during rush hour and at school times. This is exacerbated by the large vehicles coming through the village en route to and from the airfield industrial estate on Cheddington Lane. This would be the route taken to Cheddington station, the proximity of which is mentioned as a mitigating factor in reducing the number of car journeys. The road into Wingrave is very narrow in places and would not be suitable for a large number of additional vehicles.

Secondly, Long Marston has an ongoing issue with flooding. Much of the village has had several days without mains drainage already this year and two households have been out of their homes since October after a flooding event. Both properties have had water in again since. If much of our surrounding countryside is built on then the volume of water running into the centre of the village is going to increase. The fields hold a lot of water during the winter and are very boggy underfoot.

Lastly, the impact on the local wildlife would be atrocious. Personally I have seen two species of deer, hares and many different insects and birds in this area over the last year. Destruction of their habitat would be an extremely sad loss for Long Marston and the whole of Dacorum.

**Sustainable Development in Dacorum** I agree we need some more homes but I strongly disagree with the proposed number of homes which is grossly in excess of the latest ONS data which suggests less than 7,000 new homes will be needed in Dacorum by 2038.  
The three key roles of sustainable development strategy is again admirable but I have many reservations about how much this will be shown in the new developments.  
I suggest that the council takes additional time - in view of the covid pandemic - to reassess particularly the retail and office/industrial areas. It might be fine but it might not as circumstances have changed in business with more people working from home etc

<b>Sustainable Development in Dacorum</b>	<p>I would like to register the following comments on the local plan.</p> <p>General:</p> <p>Whilst the provision of new housing in the borough is important I have three key concerns. Where developments are given permission for new housing it is well documented that they often do not honour their commitments to affordable and social housing. I urge the council to put in place the most stringent safeguards on this provision for any developments which do go ahead. Secondly, the number of homes provided will result in too great a load on local infrastructure, increase the well known parking problems in the borough, increase pollution levels, pressure on the water table and exacerbate drainage issues. Thirdly, proceeding with all these developments would mean the loss of much needed green spaces, not only for wildlife but for the mental and physical health of the human population. I am concerned that the mitigating greening proposed for each development will not retain enough of this vital asset both in the new developments and those adjacent. Clearly, land occupied by houses - however sensitively- will never achieve the same effects and once it is lost it is lost.</p> <p>Specific:</p> <p>As a kings Langley resident I would like to specifically register an objection to the further development of the rectory farm site (growth area KL02) on the above grounds. I am concerned that increasing the number of houses here from 55 to 200 is far more than the local access can support and such an increase in attendant traffic in the already extremely congested high street will have detrimental effects on the environment, on local businesses and on the character of the historic centre of the village. Furthermore, sites such as rectory farm help to demarcate the village as a settlement in its own right, as well as providing an important green space and carbon sink in a busy area. This is a green belt site and should not be put forward for development.</p> <p>Thank you for taking these comments into consideration.</p>

<b>Sustainable Development in Dacorum</b>	<p>I object to the proposed local plan for Dacorum, which has been based on incorrect statistics. With regard to BK06, West Berkhamsted, although it is actually Northchurch, I realise that more houses need to be built in the area but too many houses, 200 of the wrong type are proposed and the only people that will benefit are the developers selling off the green belt. What we need in this area is good affordable social housing using brown-field sites, not using green belt land. There has been too much green belt land built on already in this area and the local roads cannot cope with the extra traffic.</p> <p>I would like to draw your attention to The National Planning Policy Framework set out by the government in 2019, Chapter 13 Protecting Green Belt Land. It states that:</p>

**133. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.**

**134. Green Belt serves five purposes:**

- a) to check the unrestricted sprawl of large built-up areas;**
- b) to prevent neighbouring towns merging into one another;**
- c) to assist in safeguarding the countryside from encroachment;**
- d) to preserve the setting and special character of historic towns; and**
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.**

Why is the National Planning Policy Framework being ignored? Surely it was put in place to protect the green belt? How much work has been undertaken to identify brown field sites that could be used in the area instead of green belt land?

We should be protecting our green belt for future generations, not destroying it.

<b>Sustainable Development in Dacorum</b>	Do you have any specific comments about the sustainable development strategy? —The local plan says very little about sustaining villages; We want vibrant self-sustaining villages that are not just dormitory settlements. — This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan. — Northchurch has not been recognised at all. It has been called West Berkhamsted instead. — The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology. — There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.

<b>Sustainable Development in Dacorum</b>	<p>The plan does not build sustainable communities. There is inadequate or no detail as to the standards or types of properties that will be built meeting the needs for zero carbon housing, rewilding, wildlife corridors. Led by developers, the housing proposed does not meet the climate change needs of the 21st century. There does not seem to be sufficient provision to develop local employment provision through office or industry site provision. The local plan says very little about sustaining villages, indeed the plans aim to double the size of Tring and substantially increase the size of Northchurch and Berkhamsted with no consideration of the history, identity or community that is part and parcel of sustaining any community. This is particularly apparent in the approach to the historic village of Northchurch, which appears to be written out and renamed West Berkhamsted.</p> <p>The travel corridors are also unsustainable, where is the public transport provision? How do you propose A41 and west coast line support such a huge rise in traffic? What is the sustainable provision for primary health care and hospital provision for these large communities?</p>

<b>Sustainable Development in Dacorum</b>	<p>I am writing to express my concern and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, in particular the massive proposed development in the countryside and the impact this will have on the Community and the Environment.</p> <p>In particular I am very concerned about:</p> <ul style="list-style-type: none"> <li>- The consultation has been very difficult to engage with and feel that it should have been deferred until lockdown restrictions were lifted.</li> <li>- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation including the impact on important chalk streams and wildlife habitats</li> <li>- Over-provision of housing, have you challenged the government on numbers which seem to be at odds with the ONS data. Towns and villages will merge leading to the south east of England being one gigantic urban sprawl. This will lead to increased car use as people will have to travel further to the countryside. Equally increased car use within the town as walking to the shops and station from properties further away becomes more difficult.</li> <li>- The lack of truly affordable housing i.e more social housing at affordable rent. Also better quality housing. as a health visitor I fear that flats with the kitchen in the corner of the living room present an avoidable risk to children and will ultimately be the slums of the future.</li> <li>- Impact on infrastructure and local community</li> <li>- The lack of brownfield regeneration proposals e.g. the land behind majestic wine in Berkhamsted has been empty for years now with no sign of it being used.</li> <li>- Failure to address climate change.</li> <li>- The effects of the pandemic are not yet fully understood and the plan does not address the imbalance of investment between the north and south of England.</li> </ul>

<b>Sustainable Development in Dacorum</b>	<p>I am responding to the consultation on behalf of myself and the X adults who live with me.</p> <p>I gave up trying to use the portal as it was impossible to work through all the documentation to answer the questions - why wasn't a simple questionnaire set up, separate from the documentation? This is one of the worst examples of a system set up for the benefit of the people receiving and collating responses rather than making it easy for citizens to reply. This is an unacceptable barrier to responding.</p> <p>I have lived in Boxmoor for over 23 years, I went to senior school in Warners End and until the pandemic commuted to London daily. I brought up my family here and have loved being close to the town centre, the canal and plenty of green space that sets Hemel aside from many post war developments.</p> <p>My response lacks detail as there is far too much information to go through on top of an office job, caring for an elderly mother with dementia who has been unable to attend her day centre since April last year, two close relatives suffering from recent and historic trauma, running a small local business that has been busier due to more people working from home during the pandemic, and my role as a local councillor. The consultation is not very accessible or easy to digest on a screen, even for me an IT literate person who has a professional office set up at home, with a large screen/keyboard/mouse etc. For those who only have a tablet or phone it is impossible to engage in any meaningful way with the consultation. I apologise in advance for any typos - I am exhausted from all the extra work I have had to do in the pandemic due to public services being closed for a year and more people in the house and community to look after.</p> <p>I am educated to MSc level, a former Senior Civil Servant, and am computer literate - for the avoidance of doubt when reviewing my complaints about how hard you have made it to reply and engage with the process for the citizens of Dacorum.</p> <p>I urge councillors and officers to take a step back and put themselves in the shoes of residents when designing huge and life-changing consultations. This has not put the council in a good light. Some local councillors have taken to social media to publicise the consultation but there was very little from the council. This consultation should have been postponed</p>

or extended to beyond lockdowns and school closures to enable a full and open review and engagement with the whole community.

We support the responses of OneVoice, Chiltern Society and the Liberal Democrat Group, among others, so I will not seek to duplicate their detailed points here, but focus on the main points of concern for a long time resident of Boxmoor, a jewel in Hemel's crown.

#### Greenfield/greenbelt

The green belt should be protected at all costs, and brownfield sites prioritised over any permanent destruction of greenbelt land. The council has said in public council meetings that they will protect greenbelt to the death but this is not what the consultation says and this is what has enraged so many residents.

#### Housing requirement and council tactics (Q1)

Too many houses, too few affordable homes.

It is absolutely clear that the number of houses supposedly held to our temples is far far too many on any rationale and evidence-based up to date analysis. The plan is woefully short on ensuring a large proportion of social/affordable housing, which is what residents of Dacorum need. The council has failed its citizens by refusing to face up to the Government and push back on the numbers. To throw the pass to the community in the middle of a pandemic with a consultation that proposes an eye-watering and irrevocable destruction of greenbelt and increase in town sizes of Berkhamsted and Tring is incomprehensible. This is an incredibly risky strategy in the middle of a pandemic when you will not have reached a significant proportion of the community die to pandemic restrictions. There are still more people in Dacorum who don't know about the consultation or its life-changing implications than there are who do know. And of those who do know, how many of them will have the time or energy to reply substantively? Please, on behalf of your residents, fight back at the government figures and listen to us. To ignore any criticism as politically motivated blinds you to listening to what we have to say *as people who live here and will live here, hopefully alongside the next generation, for the rest of our lives - decades* is rude at best and incredibly insulting and not in the interests of what's best for Dacorum at worst. Other councils have fought back, why didn't we? Why didn't you agree the tactics with the residents whose lives will be affected by the new Local Plan?

The evidence base for the number of houses needed in Dacorum should be the 2014 ONS numbers and not 2018.

#### London Road development

4 storeys max at the station.

Another case of the Council not appearing to listen...in the most recent consultation on the station development, the overwhelming response from residents was to limit any development to 4 storeys to protect the local scenery, including overlooking the ancient grazing land of Boxmoor Trust and the view of Roughdown common and the fields beyond from resident in the heart of Boxmoor village. Why does the current plan say '8 storeys or more'??? What is the point of consultation?

It is clear to anyone who lives in the immediate area or who travels along London Road to and from town and Apsley or the A41 that height is a given at the Plough roundabout and at the scarred land and buildings next to Aldi at the A41 Junction.

There is scope to develop the ugly brownfield sites along London road opposite the moor, eg around the old gas works and near the trainline between the A41 and the roundabout at Roughdown road.

The area between Roughdown Road and the station roundabout must remain low rise to protect the street scene as Hemel moves into more green land towards Box Lane. I will fight any proposal to have higher than 4 storeys along this stretch of road and at the station.

#### Who are the new homes for?

The original proposals for the station development showed apartments that were clearly for commuters, which would be certain to pull people from London into the areas and with inadequate numbers of affordable properties, would not help local people looking to get onto the property ladder.

#### Commercial/retail at the station

Lockdown has impacted local businesses heavily and the council should be very cautious about approving retail space at the station that could take business away from Boxmoor village centre or town centre, the latter having taken a huge hit from multiple lockdowns. With the town walkable for the majority of people who would live in starter apartments like those proposed for the station development and regular bus services to town, there is limited rationale to have a supermarket or too many restaurant or food businesses at the station location.

#### Sustainability/climate change

There is nothing in this plan to reassure me that we would have sufficient water to provide for all of the new homes, nor that the council is acting NOW on the climate emergency they declared. An emergency means taking action immediately and we have seen far too little action and too few ideas in this plan, contradicted by the destruction of the greenbelt etc. The council has also agreed to protect the area's unique chalk streams which are essential to maintaining a balanced ecology. These are at risk now and adding too many more houses will impact them further.

The planned housing should be carbon neutral at worst and negative at best. The plan is woefully unambitious on this.

#### Infrastructure

The infrastructure plan lacks detail on how the roads and cycle lanes will be built/improved and designed to reduce car use. The council needs to be far more proactive, imaginative and positive about designing for a low carbon future and helping residents live in uncongested places.

#### In summary

There is insufficient evidence of housing need to support the level of development (Q8). Full exploitation of brownfield sites for the Local Plan is not fully evidenced. So the Plan fails to meet Section 137 of the NPPF, which specifies the exceptional circumstances that need to exist to justify changes to Green Belt boundaries.

PLEASE LISTEN TO US - use the citizen's panel and have one for each area in the plan so we can co-design housing, infrastructure and space together. No one knows the area and its needs better than the people who live here. There are so many good people who work for the council and have worked so very hard on this plan but this proposal is cloth-eared, unambitious and risks ruining the lives and the enjoyment of Hemel and Dacorum's green spaces forever.

**Sustainable Development in Dacorum** We are writing to express our objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth. The sheer scale of the proposed development will have a devastating effect on the environment and also the shape and nature of our towns.

The areas of concern are:

- Loss of Green belt land within the Chilterns which is an area of Outstanding Natural Beauty
- Impact on environment with loss of green space, loss of trees and damage to wildlife habitats
- The sheer scale of the proposed development would result in an over-provision of housing and this would have an impact on the infrastructure and local community of our towns
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

Berkhamsted, Tring and surrounding towns and villages enjoy green spaces and this is what makes them attractive to the residents. If this green space is turned into residential areas, we will be nothing more than an extension to London with built up and cramped living. This will change the shape and nature of the towns we love. Green Belt was introduced for a reason... to prevent over-building and protect our green spaces... this must remain.

**Sustainable Development in Dacorum** Please take this email as my formal response to Dacorum’s Local Plan (2020-2038) Emerging Strategy for Growth. I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

**Sustainable Development in Dacorum** We wish to object to the plan for the following reasons.

- 1 Although emphasising green spaces the plan increases housing by 25% and uses 2000 acres of valuable Green Belt and open spaces across the borough. If Covid has taught us anything it is that Green spaces are vital and must be kept in our local community.
  - 2 Impact on Green Belt & Chiltern area of Outstanding Natural beauty (AONB). The scale of the proposed housing will have a detrimental impact on the natural environment
  - 3 Underestimating Brown field potential (Q2 of consultation). Although the plan includes some brownfield suites the major housing developments are on the outskirts of Hemel, Berkhamsted and Tring. The plan fails to take into account the impact of Covid and recent working from home changes; in the near future more office and work sites may become available.
- 1 Unsustainable development (Q3 of the consultation) Focusing building on the outskirts of the main towns means that the developments are some distance from existing transport infrastructure. This will result in several thousand more cars on local roads.
  - 2 More congestion on the roads, particularly impacting Potten End. The plans suggest traffic coming from Tring and Berkhamsted would use the new link road in North Hemel from the Dagnall road (B440) to J 8 on the M1, rather than using the old link road through Hemel. This is so close , the new link road is an unnecessary addition. Also there is no way for the traffic to get to the A41 From the B440. The route would take you up through Potten End and then the narrow streets of Berkhamsted. The leight on buzzard road is often queuing in the rush hour times at the moment especially to go over the bridge at Water End. The proposal would worsen this situation. It is unacceptable.
  - 3 Water supply and waste water disposal (Q6 ) The chalk aquifer is already over abstracted and local residents are aware of the fragility of the water supply. The level of the new housing will put a severe strain on supply and disposal. There is the potential to damage the boroughs precious chalk streams. Dacorum and affinity water have recently spent time and money on improving the River Gade only for this plan to put it at risk.

We strongly object to the number of houses and the Motorway link proposed. The plan is based on figures the the government has now withdrawn. The plan should be based on the most recent ONS figures from 2018 which suggest a housing target for Dacorum of c. 500 houses pa, this is half the figure on which the plan is based.

<b>Sustainable Development in Dacorum</b>	Section 4.2 What exactly will developers be asked to do which will help deliver the environmental enhancement vision? Who will check if the developers have done what that have said they would in terms of improving biodiversity, and that the enhancements are appropriate and sustainable? For example a developer at a site in Chesham was told that the gabion baskets they we reproping to install along the river bank should be covered in natural material and planted with native species appropriate to a chalk stream river bank. 3 years on the gabions are still uncovered and un-planted. Method The planting of flower meadows is a popular method used to encourage native wildlife but without someone being made responsible for maintenance and re-seeding when necessary these often revert to rough grassland rather than a wild flower meadow... it can take years of appropriate maintenance and re-seeding to establish a self sustaining wild flower meadow.

<b>Sustainable Development in Dacorum</b>	<p>I would like to express my concerns with regard to the Local Plan and the consultation. First of all in this current period of crisis I think it would have been sensible to have extended the consultation period beyond the revised end date of 28 February.</p> <p>I am also concerned that, whilst numerous methods seem to have been used to disseminate information, the brochure clearly detailing all the areas of proposed building was not sent out to residents until the last week of February.</p> <p>We have been made to realise during the last year the vital importance of our local open spaces and the protection which needs to be maintained of our Green Belt and areas of outstanding natural beauty. Once these are lost they can never be recovered and are more and more essential to maintain and protect in our overcrowded island. I understand that local authorities have the flexibility to restrict the scale of development when impacts on Green Belt etc are taken into consideration. Surely another impact of the current crisis is a chance to re-think and reuse current office and brownfield sites before destroying further open or agricultural land.</p> <p>Current environmental and infrastructure impacts should weigh heavily in all the planning decisions. The plans need to look carefully not only at the impact on roads, power, support agencies, water extraction and disposal etc but the wider requirements of such areas as climate change obligations.</p> <p>I trust that this consultation is a realistic opportunity for concerned residents to express their opinions and that the ideas and thoughts of local people will be taken into account.</p>

<b>Sustainable Development in Dacorum</b>	Traffic levels through Potten End and Berkhamsted will become far greater as vehicles move between the A41 and the M1/M25. The country lanes leading to and from Potten End are already under severe pressure. Berkhamsted is already a traffic jam during normal times despite the A41 by-pass.

<b>Sustainable Development in Dacorum</b>	<p>Harrow supports the key principles of the sustainability strategy (paragraph 5.2) and agrees that the most sustainable strategy to accommodate the growth required in Dacorum is to focus development in the larger settlements of Hemel Hempstead, Berkhamsted and Tring, providing more opportunities for balanced growth to meet the needs of all communities in the borough.</p> <p>While it is important to ensure that the most efficient use is made of land within the existing urban areas of those settlements, Harrow agrees that a policy of urban intensification would be inappropriate if it were to detract from the existing character of those locations, particularly Berkhamsted and Tring (paragraph 5.5). The borough's aspirations for growth are best achieved through urban expansions of the main settlements that manages landscape and Green Belt impacts while providing opportunities for sustainable growth close to passenger transport, employment and other services and facilities. This is consistent with national planning policy at paragraph 72 of NPPF.</p> <p>Harrow agrees with the findings of the Development Strategy Topic Paper which identifies housing growth as the main driver for change in the borough. The company supports the Council in recognising the benefits that this can bring and also its commitment to meeting the full development needs of Dacorum.</p> <p>Harrow also agrees with the Council's evidence base which shows that growth of sufficient critical mass also enables the integrated provision of key infrastructure, such as schools, roads and community facilities. These can be designed into major developments from the outset, ensuring their early delivery to both support future growth and offer wider benefits to existing communities.</p> <p>Land East of Tring (draft allocation Tr03) is one of only two potential sites in the Growth Plan that are capable of accommodating more than 1000 new homes and of sufficient critical mass to integrate and deliver key infrastructure.</p> <p>Harrow owns or controls all of that site and has prepared a Vision Document containing an illustrative masterplan to show how that land could deliver a sustainable garden suburb for Tring, planned and delivered alongside the adjacent draft allocation at New Mill (Tr02) . Collectively those allocations could provide c.1800 new homes of a wide variety of types and tenures; including first homes, elderly persons accommodation and custom-build housing; a primary and a secondary school, and community and sports facilities all set within an extensive green and blue infrastructure network that connects into the existing community.</p>

<b>Sustainable Development in Dacorum</b>	I am writing in relation to the massive development of Dacorum housing currently in consultation, which I - and most people I have recently spoken to - have only just heard about, and which is only in consultation until this coming Sunday. I was unaware of the booklet that was supposed to come through residents doors.

Whilst I support the need to increase housing, this needs to be done in a sustainable way and to preserve the greenbelt. The plans to increase housing in the area by 16,600 new homes is completely excessive to what the projected need is. The latest ONS data available projects 6051 new homes by 2038 - 64% fewer than this plan projects. I therefore object to the proposed plans and would like this email put forward to the decisions board.

There is already a high demand for services such as traffic needs, schools and healthcare in the Dacorum area. The plan does not commit to any level of sustainability in its sustainability targets.

A booklet through some doors and info on the website is not sufficient to inform all residents of Dacorum, especially during these times and urgently needs reconsideration.

**Sustainable Development in Dacorum** I strongly disagree with the Local Plan and the number of houses proposed for Berkhamsted which are well in excess of the number quoted by the ONS. The infrastructure cannot sustain such an increase in population and the ensuing traffic congestion and pollution would be most unwelcome.

<b>Sustainable Development in Dacorum</b>	I am opposed to building on green belt it will damage the environment as well as the infrastructure of the town, we have had a substantial building of flats and houses through out Dacorum, we don't have the facilities to go with this like, schools, doctors, dentists and of course a hospital it's in danger of becoming a concrete jungle with all the difficulties that it also brings. Green belt is there to be protected from building on, for us and also the wildlife that uses it also for the carbon footprint we are supposed to be lowering.

<b>Sustainable Development in Dacorum</b>	I need to express my extreme concern - and objection to - the proposals contained in the Dacorum Borough Council Emerging Strategy for Growth.  In particular, the huge proposed development in the countryside and the impact this will have on the local Community as well as the Environment.

The overall impact on the environment and infrastructure, including increased traffic congestion, a strain on water supply, and waste water

disposal, will be felt across the whole of Dacorum and further afield.

Specifically, I am extremely concerned about:

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns
- Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

**Sustainable Development in Dacorum** 5.2 – This paragraph includes a bullet point about minimising and managing development on Green Belt land. It needs to be clear whether this relates to the existing area of Green Belt or the remaining areas of Green Belt once the site

allocations are removed. Either way the strategy must include an objective to reduce land removed from the Green Belt to an absolute minimum and exceptional circumstances must be clearly demonstrated.

5.3 – 5.5 – The Society supports proposals to increase density and heights in urban areas to reduce impacts on the wider countryside. This could include significant developments of flats and starter homes, which require less land take, to reduce the need to expand Hemel Hempstead, Berkhamsted and Tring into the Green Belt. Careful assessment would need to be undertaken in each settlement in relation to building heights. For example, Berkhamsted does not generally have buildings over 3 storeys and increasing that height could harm the character of the settlement.

We would advocate the approach similar to that set out in the Chesham Masterplan which encourages housing development in sustainable locations in the town centre whilst reducing the need for car travel. This can be viewed on the following link <https://cheshammasterplan.org/> This approach could be adapted to make it suitable for Tring and Berkhamsted. In the light of Covid-19 the strategy will need to consider whether there is scope for new uses of town centre buildings arising due to more people working from home and retail businesses closing.

<b>Sustainable Development in Dacorum</b>	<p>Yes. I do not believe any of this Plan is sustainable. Nothing in the Plan gives me any encouragement that much serious thought has been given to</p> <p>Water and sewerage which are already inadequate for the area. See CPRE’s analysis. Why is there no mention of the work needed, the money required and the location of the necessary services?</p> <p>Here in Potten End, many residents have cessation of water supplies every summer and very poor water pressure the rest of the time.</p>

There is talk in the Plan of improved transport but again no real proposals of routes, the type of transport or the money required. As the proposed development in Berkhamsted and Tring is way out on the outskirts there is NO chance that people will walk or cycle on the narrow or steep roads in these 2 towns.

To make matters worse the proposed Mass Rapid Transport system in Hemel suggests that traffic coming to and from Tring and Berkhamsted would be diverted from the A414 in Hemel. The most direct route for this traffic goes through Potten End to the centre of Berkhamsted. There is no plan for a new link road from the A41 to the Dagnall Road and the traffic problem would be exported to Potten End village and the centre of Berkhamsted. This is anything but sustainable. One of the aims of Dacorum's previous plans was maintaining its villages as villages, making Potten End a major transport route will ruin any chance of maintaining its village character.

\* No**Sustainable Development in Dacorum** I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

<b>Sustainable Development in Dacorum</b>	<p>I object to the housing plan on the grounds that it is disproportionate in the totals for each of the areas - Hemel Hempstead, Berkhamsted and Tring - and that the formula that has created these high target numbers is fundamentally flawed (see here: <a href="https://www.building.co.uk/news/jenrick-abandons-mutant-housing-algorithm-to-focus-on-urban-development/5109569.article">https://www.building.co.uk/news/jenrick-abandons-mutant-housing-algorithm-to-focus-on-urban-development/5109569.article</a>).</p> <p>Dacorum, in conjunction with MHCLG, should revise the numbers and the plan and they should be significantly lower. Furthermore, in any revision there should be much more detail provided on infrastructure assessments and improvements (eg traffic, clean air and capacity of schools, GPs and social care etc) and how they will be provided, including through Section 106 agreements.</p> <p>The existing green belt and recreational locations, including all school playing fields should be protected and any development must prioritise brownfield locations or sites within existing built on areas. Where development is permitted in any future plan over this timescale, it should be clearly set out which sites are priorities in next 5-10 years and which will only be developed in the longer term (ie after this time).</p> <p>There should be full economic assessments of where people will work, including impacts on travel and public transport as well as a comprehensive local economic development plan for Dacorum as a whole. This should include appropriate liaison and joining up with other local authorities and a clear understanding of where housing and local development strategies are complementary. This should include neighbouring boroughs and also major employment/economic centres nearby such as London and Milton Keynes. This is particularly important given the proximity of Dacorum to these locations (and its distance/isolation from other parts of Hertfordshire including the main centres within Herts CC).</p> <p>Lastly, any developments that are permitted to take place within such a revised plan, should prioritise affordable housing and homes with the highest environmental standards. Plans should demonstrate how they will contribute to national and</p>

local 'net zero' targets not just through building standards, but also through energy usage and reduced car use including for commuting, access to schools, local recreational facilities etc).

<b>Sustainable Development in Dacorum</b>	<p>I cannot navigate your website. It is not well designed. Please find my feedback below - which is submitted BEFORE the deadline.</p> <p>I understand that growth is inevitable, but it MUST be done WELL:</p> <p>If you develop Lock Field, Northchurch then I have the following comments:</p> <ul style="list-style-type: none"> <li>You MUST also develop NEW ROAD. This pathway is already NOT SAFE. My children have to walk along it to go to their school (St Marys CofE) and I often get hit by van side mirrors as they pass. Imagine if that was a child!!!! The pathway needs to be widened, even at the cost of vehicles. Our children's safety is paramount!</li> <li>You MUST develop the bridge on New Road. It is a single track bridge over the canal. Yes it is beautiful to look at. But it is not SAFE, especially for our children. There is no safe way to cross the road from the path to the canal</li> </ul>

path. This bridge must be developed into something that is safe for our children to walk across and over. Especially as there is a school next to it.

- The canal path must be upgraded. It gets so muddy in the winter. It must be pathed or concreted in order to sustain the proposed increased foot-fall.
- I don't think that one road access to a residential area is wise. I think two ways in and out is safer.
- Cars already SPEED down New Road and the High Street - especially near the school and the Northchurch playing fields. What do you propose to do to keep cars and all this new traffic obeying the speed limit and keeping our children safe? Especially with the proposed new amount of vehicles to be using it.
- You MUST develop at least a footbridge (with cycle path) over the canal and river, across from Lock Field over to the Northchurch playing fields/Tesco. This will keep any children who then live in Lock Field safe, away from the roads, so they can visit the park/shops without having to use the VERY DANGEROUS New Road and High Street pathways.
- If children live on Lock Field - you must also develop the footpaths on the High Street as well. Children will want to access Tesco and the Northchurch Playing fields. People park cars on pathways, which are already un-safe, small as it is. There have been times I've had to push my babies in a pram IN THE ROAD due to cars being parked on the pavement! You MUST double-yellow-line all along those pathways!
- You are developing a 'green-belt' area. Firstly, by doing this you are making your 'rules' void. How do you expect anyone in Dacorum to respect you, believe what you say or take you seriously if you develop on a 'green-belt' area? Secondly, how do you plan to keep it 'green'? Are you asking the construction company to include minimum of 2 trees and 3 shrubs per home?
- Instead of building 60 tiny homes that are ugly and bad for the environment. What about building 40 homes that have larger gardens, more trees and shrubs and keep the area vaguely 'green'?
- Will the new houses be 'green' in the sense of - they will all have solar panels and other sources of renewable energy? It is a green-belt area.
- I'm no wild-life expert...but this is not an urban area (such as an old factory in a city being replaced with residential) - this is countryside. Many animals will live there. I myself have seen king fishers, ducks, herons, foxes, badgers, and much more wildlife along that stretch of the canal. You are killing their homes. Not only in the long run, but in the short term - while all the horrible machines are there digging and making noise. What are you doing to protect the wildlife that lives here? Are you planning on keeping a minimum 10 meter wildlife 'belt' between the canal and any potential housing? If this 'belt' is grass - will you plant more trees and shrubs to encourage wildlife to return after the bombardment of a building sight?
- You must add a footpath from Lock Field into Ashridge. So people can walk directly from Lock Field into Ashridge without having to use the foot path on New Road - again, this is too thin and not safe compared with the speed of traffic.
- Everywhere in Berkhamsted and Northchurch there are parking issues. Please can you design the new residential area to cope with the amount of vehicles. For example, plan houses to have ample driveways and garages for residents and guests. And double yellow the surrounding roads to STOP people from parking on footpaths. This is not safe for children. Again, if making safe footpaths means building 40 houses rather than 60 - then do it. Make

this estate so that bin lorries and fire engines can EASILY drive everywhere (whilst keeping their bin collectors safe!)

- What about social responsibility? Is this new estate designed for middle and upper-class people? Or is it for everyone? Even working class? Are you mixing social housing between the large detached houses?
- How are you planning to future-proof this estate? Are you planning footpaths to be wide enough for two wheel chairs to pass each other safely? This would also be a safer width of path in case there is another pandemic and people have to keep 2 meters away from each other. Are you adding cycle paths? I think if you are serious about the environment then you should include cycle paths EVERYWHERE - even on New Road and the High Street. Even if cycling does not prove to be popular - you are future-proofing this space for things such as hovercrafts or the food-delivery-robots that you see even today in Milton Keynes. Everywhere footpath in Berkhamsted FAILS for safety. Lets make this new estate safe.
- Repair local roads after development. As seen on the new estates up Durrants Lane - the amount of construction traffic (and its pollution) has ruined the roads. Will you repair and redevelop the roads after this estate has been built?
- All of these new houses (both in Berkhamsted, Northchurch, Tring etc) will create a LOT more traffic on the road. How do you plan to future develop the T-junction next to St Marys School between New Road and the High Street? There is no safe crossing for children over New Road AT ALL! And it is next to a school!!!
- You MUST develop the infrastructure. How will you develop the Tesco shop parade and parking to deal with greater numbers? How will you develop local doctors and dentists to deal with greater numbers? Which hospitals are due to take on these greater numbers of people and how are you contributing to their development too?

To summarize; I know that growth is inevitable. But you MUST do it WELL and RESPONSIBLY, for the future of our area, our children and our wildlife.

I'm more than happy to talk to someone or detail my thoughts further. I'm happy to provide photographs of cars parked on pathways everywhere, videos of cars nearly hitting myself and my children walking to school etc etc.

If you build this Lock Field estate then do it WELL. Be innovators, be planet-protectors, be an inspiration to other areas who seek to grow too.

<b>Sustainable Development in Dacorum</b>	(4) <u>Sustainable Development in Dacorum</u> – I do not see how these proposals fully evidence and justify the removal Green Belt designations. The growth proposed is neither sustainable, aquifers are at compacity and no details are provided about how this will be addressed and will lead to increased car journeys as the location of the development, particularly in South Berkhamsted area are at the top of hills and too far from local services. Building on Green Belt land will fundamentally change and destroy the attractive market towns of Berkhamsted and Tring and dont respect the environmental role of planning

<b>Sustainable Development in Dacorum</b>	<b>Chapter 4</b> is entitled Sustainable Development Strategy, and three issues are apparent. Firstly, in a Borough where 85% of the land area is rural, it is unacceptable not to see a rural strategy as part of the Emerging Strategy, to encompass particularly the need to identify and protect natural capital resources, including soils, and demonstrate how rural areas can contribute to climate change mitigation and the promotion of biodiversity across the whole area, and not just in conjunction with development.

<b>Sustainable Development in Dacorum</b>	Secondly, the key diagram should be amended to exclude the major proposed greenfield allocations in the Green Belt at Hemel Hempstead, Berkhamsted and Tring which are not justified by current evidence. Thirdly, selective development proposals are shown outside the plan area, including proposals in St Albans which has recently withdrawn its local plan, and proposals for which must be considered speculative at present, but major proposals in other local authorities that now have a formal status are not shown.

<b>Sustainable Development in Dacorum</b>	I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support the proposed new houses. Shops built in previous housing development have remained empty. More houses but no addition retail is difficult to understand. Village school is at capacity and places at secondary school of choice hard to achieve.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

**Sustainable Development in Dacorum**

I am writing to submit my response to the Local Plan. I welcome the opportunity to contribute to this consultation and hope that you listen to my response and to that of other respondents, and look forward to seeing the revised Local Plan once all points raised are properly addressed.

The Local Plan is clearly not fit for purpose for many reasons, with two being foremost.

- 1 The increased housing numbers are based on outdated information, which leads to an unacceptable and irreversible impact on our natural heritage. The Local Plan must be re-drawn based on more recent information and with more

respect for the Green Belt, Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC).

- 2 The Local Plan must define the practical steps necessary to meet the DBC declaration of a climate emergency, and lay out how DBC will contribute to the UK meeting our international legal commitments to reducing emissions. At present, the Local Plan admits to the options being put forward having a negative impact on climate targets, which is the opposite of what is legally and morally required.

The revised Local Plan must be based on evidence that is itself subject to public scrutiny. The current plan relies on aspirational growth strategies and has led to a bias in the plans which must be addressed.

**Sustainable Development in Dacorum**

I am emailing to express my serious worries and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, notably the huge proposed development in the countryside and the impact this will have on the community and the environment.

There'll be a enormous detrimental impact :

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.

- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.  
 - The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

**Sustainable Development in Dacorum** I believe there have been suggestions for a more acceptable plan for the future of this area. It is after all incredibly exciting and important project to be involved in.

My personal view is that it is an opportunity to create a plan that could fit the knowledge we now have concerning the need for huge changes to comply with the new environment people will be living in. By this I mean the changes that have to be made to help to prevent Climate change, and the environment and new developments in building etc.

I do not see that that can be done by adding loads of houses in odd spaces around small towns and on Green Belt land.

I was alive after the war when new towns were built that have developed over the years to be communities in their own right fitting in with the needs of the time. Now I would have hoped that houses could be built where there is space and inventiveness to make them fit into the years that the plan is covering between now and 2038 including new designs of roads and paths and cycle tracks , new ways of insulating and heating houses etc etc.

<b>Sustainable Development in Dacorum</b>	<p>I live in Berkhamsted with my wife and two school age children. My principle objections to the Dacorum Local Plan are based on the negative impact these proposals will have on schools, amenities and transport in the town.</p> <p>The 'plan', such as it is, proposes well over 1,000 new homes in Berkhamsted, an expansion which will presumably lead to a significant increase in working age people living in the town. However the local economy cannot currently provide sufficient employment for these additional working age adults, nor does the plan suggest how the local economy would be expanded. As a result, I would expect a surge in the numbers of people commuting from Berkhamsted railway station, putting additional pressure on an already extremely over subscribed service. Those who do not commute via train, will presumably commute to jobs outside of the borough by car, resulting in significant strain on local roads (not to mention the woefully inadequate bus network).</p> <p>The sites at Bk02: British Film Institute; Bk03: Haslam Playing Fields; Bk04 Land between Hanburys and A41; Bk05 Blegberry Gardens will together comprise 390 new homes. Access to the town (and railway station) from these sites is proposed via Kingshill Way, Cross Oak Road and Shootersway, with enhanced pedestrian and cycle links with the town centre and train station. Kingshill and Shootershill are already incredibly busy at peak times and lie along a walking route used by pupils at Ashlyns school. Cross Oak is single lane traffic for large sections with no pedestrian footpath. School children have to walk in the road for a hundred metres. How is it possible to increase the traffic flow along this road without a significant impact on road safety? It is physically impossible to widen the road given the proximity of housing along the route.</p> <p>In addition to traffic from the 390 homes mentioned above, the roundabout linking Kingshill Way and Chesham Road would need to cater for traffic from the 850 proposed homes from site Bk01. Clearly this would result in substantial congestion and road safety issues for local school children.</p>

In addition, I fail to see how 'enhanced pedestrian and cycle links' can be constructed? Where could these routes possibly be constructed without narrowing the roads? Clearly this has not been thought through and has been put into the plan as a vague afterthought.

The commutative effect will be to send the hundreds of vehicles along routes used by school children attending Ashlyns school with consequences for congestion, air pollution and road safety.

Traffic from the proposed 40 dwellings at Site Bk11 and the further 30 dwelling at Bk13 Billet Lane would have to pass through the already congested junction with the High Street or turn left and pass up Billet Lane and along Bridgewater Road, directly along the school route for Bridgewater School. This clearly presents another significant increase in traffic, pollution and road safety issues.

The hundreds of extra commuters using Berkhamsted railway station will put huge additional strain on an already overcrowded service. Trains are currently frequently overcrowded to the point where commuters often cannot board trains during rush hour. Given that most of the proposed new housing is on the edge of the town, will there be a commitment to increase parking at the station? Those living in new developments in Northchurch will have no option but to drive to the station. I cannot understand how the car park could accommodate such an increase in demand. The physical infrastructure at Berkhamsted station could not cope with the consequential rise in the number of commuters. The additional housing developments at Tring will place further strain on the public transport system, notably a rise in commuters using the services which pass through Berkhamsted station. This huge growth in numbers will make commuting from Berkhamsted completely unsustainable.

Although there are proposals for one additional primary school, there is no commitment to increase secondary school provision in the town. The proposal states that land will be provided for a secondary school, but there is absolutely no commitment or guarantee that one will be built. If no new secondary is constructed, the catchment area for Ashlyns would presumably shrink drastically, with the result that many families currently living to the north, east and west of the town would be forced to travel further afield to schools in Tring and Hemel. This in itself would put a further additional burden on local roads and transport infrastructure. The only alternative would be an expansion of Ashlyns, but given that it already caters for 1,400 pupils is such an expansion realistic?

The proposals lack any credibility. The access and transport proposals are woefully lacking in detail. Anyone with even the vaguest familiarity with the south side of Berkhamsted knows that the routes along Shooters Hill, Chesham Road, Cross Oak Road, and the residential streets in between, are extremely busy during peak hours. The proposals as outlined in the Berkhamsted plan will exacerbate these problems.

There appears to be no cohesion to the proposed developments, nor any appreciation of the impact and pressures they would have on the town.

In conclusion, the proposals would result in a huge strain on local roads, rail infrastructure, schools and local amenities. It is clear to me the proposals have not been thoroughly assessed for their impact on the town and should be rejected.

**Sustainable Development in Dacorum**

We are writing to object to the plan for development in Dacorum for the following reasons:

The number of houses proposed for development per year until 2038 is based on figures produced in 2014, we understand that this proposes a figure of 1,023 houses being built in the area. These figures are now outdated and we're superseded by ONS figures produced in 2018 which only proposed 355 houses per year built. The government figures given need to be challenged by yourselves on this basis. In addition, the figures derived are not the objectively assessed for our area.

Secondly, green belt has been defined as land that can only be developed upon in exceptional circumstances. Despite the statement in the plan, the simple need for extra housing cannot be defined as exceptional.

Thirdly, resources cannot support the extra houses currently and there is nothing in the plan that states how this will be resolved. In particular, water extraction is at the maximum it can support without the extra supply that will be needed for these developments.

Fourthly, there has been insufficient effort to locate brownfield sites in preference to releasing greenfield sites for development.

Fifthly, the proportion of social housing proposed is far too low in comparison with the waiting list of 7,000 awaiting housing. It should be ensured that housing meets the needs of the people looking to be housed locally.

We are also concerned that there has been insufficient publicity of the plan to ensure that people know what is happening. It is apparent that a significant number of people did not receive a copy of the plan in the post. We did not receive one and had to request it very late on in the available time for consultation because we were unaware of it.

Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". The same should be done for Dacorum.

**Sustainable Development in Dacorum** I oppose any new buildings, there are too many homes, cars, traffic already. There are not enough school places nor parking for local shops  
Please do not build anymore new houses and take away our green space  
You are aware of the concept of Climate change? The impact we are having on our own planet? The more we remove our green space to allow nature to be at home, the more we are putting ourselves at risk. We need to stop the greed and stop the build.

<b>Sustainable Development in Dacorum</b>	<p>My Parents moved to HH from London in the 50s.</p> <p>They were part of the 'New Town' idea - satellite towns around London to accommodate families from London and possibly it's slums.</p> <p>They loved their new life in the 'country' along with my brother and sister both under 10 years old. They knew that no matter what, as this town was surrounded by 'green belt' it would always stay a small town in the countryside- what better way to provide a good life for your children and future generations?</p> <p>They had a shiny new hospital built, shops, schools, parks, doctors surgeries... it was idyllic for them.</p> <p>My sister has since told me how the original Hemelites hated the newcomers and what they did to their small town... ripping down buildings and 'developing' areas.... I do not blame them and can empathise with them completely.</p> <p>One only has to look on Facebook to read how people now mourn the loss of such beautiful buildings and places... and cannot understand why places like Berkhamsted, Tring and St Albans have retained their charm and character managing to remain pretty, yet functional places to live.. they love the community we have but are sad for the loss of the beautiful town we could have been...</p> <p>Hemel is now soulless. I was born in 1964, and I grew up in Hemel Hempstead- I loved my town yet as the years have passed I am more and more disillusioned with the planner's poor decisions- I do not understand what you are trying to do to our town?</p> <p>History is repeating itself but now, it's not the beautiful old buildings being ripped apart it's our beautiful green belt- our surrounding countryside, our green space that my parents were told would ALWAYS be protected. Their legacy is being</p>

trampled on, they came here for a new life for themselves and their children yet, now I am saddened to find I don't want this awful town for my children and grandchildren, or indeed myself... as soon as we are able we are leaving Hemel because the town planners do not listen or are not interested in what the people of Hemel Hempstead want.

We need schools, a hospital, pretty little shops, department stores, proper police station.... the list is endless yet DBC charged extortionate rent/rates and plan more housing in a town with absolutely no infrastructure to support it. Yes I am aware that HCC and other government bodies are responsible for done of these things but building more housing will only add pressure onto the already crumbling infrastructure... and Dacorum BC, it's councillors, it's MPs should all be focused on fighting on behalf of their townfolk to retain the green belt, stop new buildings planning and improve/reinstate the facilities we do desperately need.

I do not understand why or how anyone would feel it is in anyone's interests to build more housing on our greenbelt land when it cannot support properly those already living in the town.

Please reconsider this terrible plan, the town is dying and you are killing it off.

I do not support the plans and object to the programme 100%.

Let's try to make Hemel Hempstead a nice place to live - together. Please do not destroy my parents legacy.

<b>Sustainable Development in Dacorum</b>	<p><b>We strongly disagree with the plan for the type and number of additional houses in Berkhamsted and Tring. Although we accept the need for the provision of new properties, the plan is misconceived as a significant amount of green belt will be lost plus the fact that it will put a considerable strain on the current and future planned infrastructure. Getting a doctor’s appointment is almost impossible and the number of pupils in our school classes are too high. The teachers cannot cope with more children.</b></p> <p><b>It appears that the volume of houses proposed in the Berkhamsted and Tring area is disproportionate to the number of new homes in the whole of Dacorum.</b></p> <p><b>This proposal needs revisiting in order to get the support of the local community.</b></p>

<b>Sustainable Development in Dacorum</b>	<p>I write to object to the proposed Dacorum local plan.</p> <p>The number of houses proposed for Dacorum will alter the character of the area from rural with defined villages and market towns to a suburban sprawl. No explanation has been put forward justifying this detrimental change.</p>

I am in particular shocked at the proposed massive expansion of Tring. We are all accustomed to new building and resigned to new housing estates built in the new placeless vernacular of the large developers, but the scale of the proposed changes is unacceptable.

The great achievement of post war planning is to prevent urban sprawl, using the Green Belt to keep towns distinct and separate. The proposed developments between Berkhamsted and Hemel Hempstead suggest that councillors and officials have failed to comprehend the legacy handed down to them and have no intention of living up to it.

I understand the grounds by which Green Belt land may be released for development and do not consider these to have been met. I do not have confidence in the council's forecasts of housing need or the analysis on which these are based; nor do I have confidence that these are robust as a forward-looking exercise given the as yet unknown effects of the pandemic on patterns of work and family formation, on the apparent migration from London and the resulting changes to the capital, on the future requirements for currently commercial premises in our towns, and on the effects of population size in the wake of Covid and Brexit, with the Economic Statistics Centre of Excellence having recently estimated that 1.3 million foreign-born residents have left the UK.

Given this uncertainty, it seems shortsighted to 'lock in' the destruction through irreversible change of a much cherished area by reliance on estimates that simply cannot bear the weight being placed on them.

I am acutely conscious of the environmental impacts inherent in the proposed plans. In particular, the effect on the chalk streams within the area will be profound. The dry upper reaches of the river Ver upstream from St Albans should be a minatory lesson for all involved in this decision and I urge all officials and councillors involved to walk this route and subsequently justify to themselves and residents why this should be inflicted on the rivers Gade and Bulbourne.

<b>Sustainable Development in Dacorum</b>	<p>I'm writing to you in response to the local plan consultation. I have tried to respond through your portal but to no avail.</p> <p>As a resident of Apsley, I have looked at the Hemel Hempstead proposal in the most detail but my general thoughts apply to all of your local plans.</p> <p>Quite simply, I don't think it's appropriate for ANY development to be happening on greenfield sites such as those proposed near the Redborun link road and Leighton Buzzard roads are; nor a crematorium at Bunker's Park - what an absurd proposal! I fully believe that NOTHING should happen on any Boxmoor land or adjacent to. We should be enhancing and celebrating our green spaces, and the history of our area. Hemel has a bad reputation but only because its history has been squashed by poorly thought out housing and land use. There's actually a lot to celebrate and learn about the history of this area - I am sure most people do not know anything because it is not celebrated or even recognised.</p> <p>This leads me onto the brownfield sites that have been proposed. For me, it is only acceptable to develop on these if they will:</p> <ul style="list-style-type: none"> <li>• enhance the local area aesthetically.</li> <li>• use sustainable materials</li> <li>• greenery and wildlife will be incorporated into the building and surrounding land design</li> <li>• ENOUGH PARKING IS PROVIDED</li> </ul> <p>I spend a lot of time walking around Hemel and looking at land use and I can see that development on some of these brownfield sites could be beneficial to the town if they are managed correctly.</p> <p>I have also heard (on the grapevine) that Dacorum doesn't actually need as many houses as have been proposed but haven't reviewed this. In addition, I notice there is housing for those who have money and those who do not have any. What about the people that have some, but not lots and perhaps are renting or borrowing from the bank of mum and dad? There is NEVER housing for this demographic.</p>

<b>Sustainable Development in Dacorum</b>	<p>—The local plan says very little about sustaining villages; We want vibrant self-sustaining villages that are not just dormitory settlements.</p> <p>— This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan.</p> <p>— Northchurch has not been recognised at all. It has been called West Berkhamsted instead.</p> <p>— The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology.</p> <p>— There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.</p>

<b>Sustainable Development in Dacorum</b>	<p>The Local Plan must have firm commitments to build Net Zero Homes. We are calling for all new buildings to be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.</p> <p>The current wording of the plan is aspirational but fails to commit to firm quantifiable performance measures.</p> <p>Trees and woodland are very valuable to the environment and the community’s physical and mental health. We welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, each new major development area.</p>

An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors. The Local Plan should commit to every new building incorporating wildlife into the properties design. Simple and very cheap commitments could easily be incorporated into every building design which would greatly benefit local wildlife.

**Sustainable Development in Dacorum** I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Further to the aforementioned government response of December 2020,

neither the housing need figure of 16,596 homes nor the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms.

Further to this, there has been no evidenced position provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken so as to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement

In the Grove Fields Residents Association – Consultation Response January 2021 for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

Policy SP2 also seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions, changes to the Use Class Order in 2020 and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units irrespective of the aspirations of Dacorum's plan. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

The GFRA considered with their 2017 consultation submission, that a housing needs delivery strategy, wherein Hemel Hempstead provides the vast majority of supply and the remaining requirement was equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, the GFRA note that there has

<b>Sustainable Development in Dacorum</b>	<p>I do not believe any of this Plan is sustainable. Nothing in the Plan gives me any encouragement that much serious thought has been given to:</p> <p>1. Water and sewerage which are already inadequate for the area. See CPRE's analysis. Where is there any mention of the work needed, the money required and the location of the necessary services? Here in Potten End we already have cessation of water supplies every summer and very poor water pressure the rest of the time. Its inadequate to keep our freezer functioning normally.</p> <p>2. There is talk in the Plan of improved transport but again no real proposals of routes, the type of transport or the money required. As the proposed development in Berkhamsted and Tring is way on the outskirts there is NO chance that people will walk or cycle on the narrow or steep roads in these 2 towns. To make matters worse the proposed Mass Rapid Transport system in Hemel suggests that traffic coming to and from Tring and Berkhamsted would be diverted from the A414 in Hemel. The most direct route for this traffic goes through Potten End to the centre of Berkhamsted. There is no plan for a new link road from the A41 to the Dagnall Road and the traffic problem would be exported to Potten End village and the centre of Berkhamsted. This is anything but sustainable.</p>

<b>Sustainable Development in Dacorum</b>	<p>What is proposed does not stand up under scrutiny with regard to sustainability. The promises made sound impressive, but what will happen in reality.</p> <p>I believe development on this scale in the greenfield locations proposed is in itself unsustainable.</p> <p>Climate change is a reality. The UK has an ambitious and admirable target to reduce carbon emissions. Once again the issue of the scale of development arises here. The very fact of building on this scale will create high levels of carbon emissions. The loss of green spaces and increased volume of traffic will have a negative impact on air quality. There will be loss of habitat for wildlife.</p> <p>I agree with your statement that, "Development can help to mitigate and adapt to the impacts of climate change, through sustainable design and construction and reducing the need for travel, particularly by car." However, many of the sites proposed are remote from town centres and would result in increased traffic in already congested towns.</p> <p>It would be important to ensure that any developers paid more than lip service to delivering truly sustainable design and construction. Often this does not happen in reality.</p>

<b>Sustainable Development in Dacorum</b>	<p>I've been trying to recover my password in order to make a comment on the strategic plan, but though the website says it has sent me a link to reset my password, I have still not received a reset email. I cannot print off the pdf consultation document either so have no other way to reply other than a direct email.</p> <p>May I therefore submit some comments in this email?</p> <p>We recently heard- last week-of the inclusion of Long Marston as a potential site for 3,000 houses, as part of Dacorum's strategic plan. I realise that it is one of many options, but the fact that it is proposed at all, is extraordinary.</p>

Long Marston's name means Long Marsh, we are a wet, rural area with increasing flood problems, and wet habitat offering unique spaces for rare and protected species e.g. black poplars and greater crested newts. The village flooded several times in the last months. Our roads are too narrow for even 2 cars to pass, in many places. We have a conservation area and listed buildings. Yet of all the places to suggest new houses, we are a potential site? I believe strongly in local democracy, but I wonder then if anyone from Dacorum who has been involved in writing the report has visited the site in question, or spoken to residents, and would perhaps like to do so after wet weather. We certainly, as a village, have had no notification of the potential for building, no discussion, no consultation.

So if you're looking to build houses on a flood plain, to increase flooding for others in the village, and to build houses which will become uninsurable when they too flood, on small narrow roads with potholes far from any major road network, where community cohesion will be ripped apart as all locals who know of the plans object, where rare local species will be negatively affected, green sites destroyed, conservation areas made pointless, then what a great choice. This kind of proposal is precisely what makes people lose faith in the competence of local decision making.

**Sustainable Development in Dacorum** There is little in the way of reassurance in the planning process about sustaining villages and the historic character of Northchurch. Rather Northchurch has been labelled West Berkhamsted and simply writes Northchurch out of existence showing absolutely no respect for its historical significance, limited infrastructure or ecology.

What reassurances can be given to protect the individual identity of communities such as Northchurch and Dudswell and that they won't be wrapped up in an enormous and homogenous development stretching along the length of the A41.

<b>Sustainable Development in Dacorum</b>	<p>I live on Orchard Avenue [XXX], and have some serious concerns with the proposed local development plan.</p> <p>The Dacorum Local Plan (to 2038) does not sufficiently consider the government’s Ten Point Plan for a Green Industrial Revolution (Nov 2020), or the government’s Cycling and Walking Investment Strategy (April 2017) – and may consequently leave the council vulnerable to legal action.</p> <p>Specifically, the tokenistic references in the Plan regarding contributions to “off-site enhancements to the local road network” do not clearly delineate plans for traffic calming measures and segregated cycle lanes/footpaths, which would reduce air pollution and increase the viability of walking and cycling for short journeys in Berkhamsted.</p> <p>West Berkhamsted currently has an average of 1.48 motor vehicles per household, in 2,401 households. According to the plan, the proposed development in the West Berkhamsted area will create 1,860 households – which will lead to 2,753 additional motor vehicles on Berkhamsted roads, with next-to no commitment to sustainable local travel provision for the thousands of families in the town.</p> <p>Most of the additional motor vehicles will frequently use Shootersway and Kings Road for commuting and town centre access. The junction of these two roads has already seen a deterioration in air quality since the opening of Bearroc Park and the multistorey car park. The air quality at the junction of the high street and Kings Road has also degraded in the same period. Both junctions are a thoroughfare for school children as they make their way to local primary and secondary schools – currently with negligible infrastructure to support them.</p> <p>The current version of the plan does not adequately address four of its own objectives: ‘Mitigating and adapting to climate change’, ‘Conserving and protecting the natural environment’, ‘Promoting and facilitating sustainable transport and connectivity’ and ‘Supporting community health, wellbeing and cohesion’. If these points are not addressed, then the council may endure protracted legal proceedings.</p> <p>As a Berkhamsted resident, a father of two young children, and a strong advocate of sustainable transport for short journeys, I will not stand idly by as my children’s ability to move safely around their hometown is compromised.</p>

<b>Sustainable Development in Dacorum</b>	<p>1, Proposed housing demand</p> <p>We consider that you have over-estimated the housing demand, as you have based your assumptions on the out-dated Department for Communities and Local Government data, rather than the 2018 ONS projections. Your out-dated data results in an over-development and will create a supply:demand imbalance, with all the issues that will then arise.</p> <p>2, Impact on Green Belt</p>

S 13, para 133 of the National Planning Policy Framework:

The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

We consider that proposals within the Local Plan directly contradict the National Planning Policy – particularly as 60% of Dacorum is designated Green Belt and the proposed development would therefore be extremely damaging and indeed place a significant question mark over the protection offered by Green Belt status

**Sustainable Development in Dacorum** 1 **Sustainable development**  
Currently, the economic seems to prevail over all else. We watch as areas which are labelled as green belt deteriorate because the economic arguments outweigh the social and environmental. Success in this area depends on policies which redress this balance and the ability to apply them.

<b>Sustainable Development in Dacorum</b>	<p>The Sustainable Development Strategy should meet the needs of the present without compromising the ability of future generations to meet their own needs. I do not believe the current planned level of development meets either of these needs.</p> <p>Such a large scale building of houses will surely put a severe strain on water supplies to Dacorum. In times of drought there would be no option but to extract additional water from the chalk acquifer which would in turn cause further damage to the Borough precious chalk steams. There are only around 200 chalk streams anywhere in the world and luckily in</p>

the Chilterns we are home to 9 of these rare and precious habitats. Any development in this area must not be allowed to degrade these special places but should in fact protect them for future generations.

<https://www.wwf.org.uk/where-we-work/uk-rivers-and-chalk-streams>

Any proposed development should improve the bio-diversity and protect the natural habitat ,however, the removal of such a large area of green open space in the Berkhamsted plan is very much at odds with this.

Looking closely at the detailed map of Berkhamsted development shows that practically all current green and open spaces will be removed. These are currently used daily by the people of Berkhamsted - young and old, dog walkers, runners - for exercise, fresh air and general good health. Removing these areas does not support a vibrant and healthy population.

Any Sustainable Development Strategy should effectively engage plan makers and communities, local businesses and other interested parties. I am appalled at how the consultation period has been run during a COVID-19 lockdown with no way for concerned parties to meet, discuss and

co-ordinate responses to the Council. I am very concerned that most people in Berkhamsted do not know of the proposed plans because of a lack of information and other issues due to the current pandemic. I sincerely believe the consultation period should be extended so that all interested parties can be informed and have time to respond and comment.

<b>Sustainable Development in Dacorum</b>	<p>The scale of proposed housing across the country (not just our borough) is staggering at a time when we are in a climate emergency and the need to protect our natural environment is at its greatest. If I could I would raise objections to all developments that will negatively impact the environment and local communities. But I only have a voice in this borough, my views are not NIMBYism but a call for a well thought out strategy which will benefit all communities, large and small, a strategy with the minimum possible impact on the environment, so that the Natural Environment can, in the most Nature depleted country in Europe, play its role in securing all our futures.</p> <p><u>Because</u> people are important we need to protect our natural environment, so it can protect us. The Natural Environment is not an optional extra but the one thing that supports us all, from the food we eat to the air we breathe, this has become even more evident as we have struggled with Covid 19 and the Brexit 'teething issues.</p>

<b>Sustainable Development in Dacorum</b>	Key Diagram The provision of the Key Diagram on Page 29 of the Plan is unhelpful. It is not referred to in Policy SP1 and in terms of the annotations it is unclear to those who don't have a detailed understanding of the geography of Dacorum Borough. It is considered that the Proposals Map better serves the objectives of the Plan and as a result, the Key Diagram should be deleted.

<b>Sustainable Development in Dacorum</b>	<p>Policy SP1</p> <p>The “environment” element of sustainable development is very weakly addressed. Especially disappointing are the lack of referencing of specific targets from the Herts Sustainability Strategy and HCCSP priorities; ditto re relevant elements</p>

of DBC's own climate emergency action plan; and a clear commitment on standards on building fabric in excess of Building Regs ( especially given Govt progress and road map on improving housing fabric efficiency via its Future Homes Standard); orientation of housing to allow for thermal solar and solar PV installations as part of all new builds, alongside ground and/or air source heat pump electricity generation.

<b>Sustainable Development in Dacorum</b>	<p>Sustainable development should mean that which is sympathetic to the existing towns and will not change their intrinsic character. The plan proposes very large developments in Tring, Berkhamsted and Northchurch which will detrimentally affect the character of these towns and is not needed as explained in my comments on question one.</p> <p>The proposals are also unsustainable as they do not ensure suitable job opportunities in these locations, which will result in the towns becoming increasingly dormitory locations and lose community cohesion.</p> <p>Sustainable now means also compatible with the country's efforts to mitigate climate change. The plan only provides warm words; what we need is concrete actions such as, all new housing should be to Passivhaus standards with heating by heat pumps not gas boilers (as proposed by government). Development should include specific public transport, cycling and walking requirements, if these cannot be included, then the development is not viable.</p>

<b>Sustainable Development in Dacorum</b>	"Sustainable development" ? In 1.37 the Council state that they wish to "release land from the Green Belt", which is a truly shocking way of describing their wish to destroy huge acreages of Green Belt. How can this be considered in any way sustainable? Once again, nature will be in retreat.

<b>Sustainable Development in Dacorum</b>	We consider the Housing Growth numbers in the Plan is based on flawed assumptions, we note the text in Para 5.3 – 5.5 [P30] :

We acknowledge and welcome the statement "... but will not pursue and urban intensification strategy that detracts from the character of these locations." However there have been many householder planning applications where greater densification has eroded former Character Area guidance, hence becoming the new default.

The proposed release of Green Belt around Berkhamsted cannot be described as being '*sustainably located close to passenger transport and other services, facilities and employment opportunities*'.

<b>Sustainable Development in Dacorum</b>	<p>Climate Emergency and Conserving Nature both mean that the numbers are impossible, without unthinkable costs to our environment. The overall level of growth is clearly unsustainable (there must be a Water supply lock).</p> <p><b>Water supply is a fatal shortcoming for this plan. In my view the Plan (with numbers anywhere above 355 or 363, ie, the affordable homes) fails on this test alone.</b></p> <p>18.16 refers to protection of “sites”, but does not refer to the rivers or the groundwater.</p> <p>18.18 refers to “refusing planning permission” if there are “significant adverse impacts”, specifically mentioning “water quality”, (lack of quantity being extreme lack of quality!)</p> <p>18.23 is out of date; it refers to “a new NPP expected in 2020”.</p> <p>18.39 notes the global rarity of the chalk streams in Dacorum, their relatively poor ecological status and the need to return them to good status. DBC passed a Motion recognizing this in 2019, but it is not acknowledged; it must be.</p> <p>18.40 notes that water resources are under “extreme pressure” from the use of groundwater for water supply and from climate change. The recharge of groundwater is under pressure and this threatens the retention of fragile ecosystems susceptible to the availability and flow of water.</p> <p>18.41 talks about restoring river flows and natural habitats along the chalk streams, retaining water in the catchment and supporting biodiversity.</p> <p>It then leads to Policy DM33. This policy contains six sub-sections, the most crucial one being:</p> <p>C. avoid the need to abstract water from the ground, in particular from the Rivers Ver, Gade and Bulbourne catchments. The problem is that ESfG details say the right things, but the number of homes defies the statements there. I can see no real tools or an action plan here to ensure that the policies will be achieved because the housing numbers are so large.</p> <p>Referring to the “Interim Sustainability Appraisal Report”</p> <p>B.8.1 provides the key policy context including the current Key Directives, Regulations and Plans in relation to water and water resources.</p> <p>One of the key aims stated is “to prevent deterioration and where possible improve the quality of rivers and other water bodies”....to “good ecological and chemical status”....and for “groundwater to reach good status” by 2027 <u>at the latest</u>.</p>

B.8.2 outlines in detail the concerns about water quality and in more detail, the quantity of water for consumption. It refers to the underlying chalk aquifer as being “over-abstracted” and the groundwater resources being “at or approaching full utilisation”. It also estimates that climate change will result in a further 5% loss of available water by 2035.

Further into the Sustainability Report, water is considered in relation to the assessments of each of the main development options A to E. (C.17 to C.18). The section on the generic effects for all of the options states, “**Any** new housing development will put pressure on water resources. The higher the level of housing the greater the potential adverse effects will be”.

It also says that at the highest level of development periodic water shortages are likely. This is unacceptable.

The section on mitigation of the negative impacts clearly recognises that not all detrimental effects will be avoided if these numbers are contemplated.

Council passed a Chalk streams Motion unanimously in 2019, to protect the Gade and Bulbourne, but a 28% increase in housing which increases population cannot be sound unless the work needed to establish a sustainable water supply is firmly established and assured, such that the groundwater is NOT further depleted.

**The draft plan does not say where the additional water for housing, offices, shops and factories is going to come from. It must do this credibly and therefore the developments planned cannot be planned until Affinity/Thames deliver the alternative supply. If it comes from local groundwater then DBC will be breaking it's own stated policy in the new plan.**

MANAGING INFILL, BUILDING HEIGHTS AND USE OF GREENBELT (Planning rules on permitted development will lead to much greater infill development; this needs to be better quantified as a significant contributor to numbers. Where there are plans to build higher, to assist developers, the focus must be on achieving a net reduction in car use and parking congestion. At the edge of Boxmoor Trust, there must be a limit of six storeys, unless gradient allows creative management of storeys and protected sightlines. Higher heights are tolerable approaching the Plough roundabout.

The delivery strategies include a large amount of greenbelt which I do not agree should be released. A housing target which cannot be considered an objectively assessed need for our area is not an exceptional circumstance to release green belt.

SOCIAL HOUSING FOR THE HOUSING LIST 7000 (We need time to accelerate, but by 2025 we could be re-investing rents to fund the borrowing, following a programme linked to substantially car-free living, as active transport kicks in). This ties in with the above point about the shortage of water availability.

The growth we are committed to, through 80% organic population growth factor and social-rent housing need (a Social housing \*lock\*) must be prioritised, since this phase of growth is the last opportunity to do so, unless there is massive regeneration of existing social housing stock.

The Borough's Greenbelt and AONB is precious and should only be released as a trade-off with Social Rent Housing at a strong ratio of Social Units delivered, to space.

The borough needs to see a commitment from the Planning Inspectorate and the Government to the absolute limits on demand for greenbelt land in Dacorum.

## Climate Change, water availability, housing list vs new arrivals

This Plan does not respond credibly to the 2019 Motions of Full Council on Climate Emergency and Chalk streams.

The following is the text of the MOTION ON CHALK STREAMS (2019) (Delete paragraph 2.i and renumber ii and iii as I and ii)

Dacorum has internationally recognised rare natural chalk streams deserving protection and support, rarity to the point where even the World Wildlife Fund have suggested that they should be given special protection. The existing Dacorum Core Strategy documents acknowledge the importance of this asset in supporting endangered species and it is noted that the quality of these chalk streams is measured according to the amount of water present, balance of the water chemistry and the biodiversity of the water habitats supported by flow. Therefore

### 1 This Council

A. notes with concern the perilous state of the Gade and Bulbourne rivers in respect of vitality and water levels, and

B. expresses concern about the depletion of water resources by groundwater abstraction and the harm being caused to the ecology and biodiversity of the local chalk streams.

### 2. This Council

A. instructs officers to

i. write to the Environment Agency (EA) to express the alarm of this Council as to the current poor environmental health of these important chalk streams and to ask the EA to explain to the Council how they intend to retain, protect and manage the rivers Gade, Ver and Bulbourne in the future, this explanation to also set out the EA's requirements of Affinity Water and Thames Water to adapt the sourcing of water

ii. Consider the increased water resources that will need to be provided by Affinity Water and Thames Water for the anticipated local increase in housing development, and write to the Planning Inspectorate and the Environment Agency, making them aware of the issues and seeking their advice with regard to the future development (see reply below)

### 3. This Council, in furtherance of its objects, will

a. work with all relevant agencies to ensure that the decline in the quality of our chalk streams is halted and reversed, and

b. undertake to ensure that our Local Plan will be sympathetic to these rivers and that this council will do all that is possible to protect these important ecosystems

In February 2020 Cllr Anderson received a reply, which points out that rainfall in the South East of England, in the last three years it has been lower than its average. The letter also reveals 3 points:

- The Environment Agency has, since 1993, overseen sustainable reductions in pumping from the chalk aquifer. But the Environment Agency say that “they know these are not enough”.
- A further reduction is planned for the Ver, in 2024, but there are no plans for a reduction on the Gade and Bulborne, because Affinity “have no spare water” for drinking.

- The EA say, in terms, that: “In order to have further reductions after 2024, new resources will need to be developed. For instance a new reservoir or a transfer of water from the midlands or the River Severn. (but the latter is beset with bio-diversity problems and both strategies face long delays).

So the Environment Agency cannot ask Affinity to reduce pumping of the Dacorum chalk until there is – sometime in the future - a new reservoir (at Abingdon).

But who is telling the Planning Inspector? If Affinity is saying there IS enough water but the Environment Agency now say – in this (above) correspondence – that there ISN'T, (and there won't be, for a long time) to whom is the Planning Inspector listening?”

“If Affinity have “authority” to declare that they “have enough” water, and yet they are saying consumers must use less, how clear is that judgement? It is an undemocratic and conditional commercial opinion. Dacorum must limit development on the basis of a water shortage.

I am saying that just as the Planning Inspector has the power to disapprove our Local Plan, likewise Affinity must be compelled by local or national Government to accept the clear conclusion from all evidence that there IS NOT enough water to maintain the World-rare chalk-streams and simultaneously meet the realistic local consumer demand, which includes the demand which can be expected from planned new housing.

Why is the Gade dry in Gadebridge Park, in late summer, and why is it so much reduced from its documented condition two or three decades ago?

**Question 2 – answer continued: Numbers matter, everything, greenbelt AND height are driven by this. This is a One time opportunity if the numbers are not challenged – all flows from there..**

17.1 We declared a Climate Emergency in July 2019 to respond to these challenges and, through this, have committed to reducing carbon emissions across Council activities to net zero by 2030. The declaration also places key responsibilities on the Local Plan to include all available measures to cut carbon emissions and reduce the impact on the environment.

However, adding 28% to our capacity for population will add to Dacorum’s human carbon requirement (beyond the activities of the Council).

There is Carbon requirement, Carbon use and Carbon offset. A Carbon neutral community is not going to happen until 2050, so any increase in the population before then will negate the progress in reducing reliance on CO2, even if the Council Services are Carbon neutral by 2030 (unproven). This is not covered in 17.1 to 17.6.

2.2 A significant part of this number is due to come before net zero carbon is achieved, and each additional home supports population growth which will drive carbon demand that will at minimum require local offsetting)

<b>Sustainable Development in Dacorum</b>	I accept that the pandemic has happened between when most of the work was carried out to prepare this plan and now. We do need to have a re-think about how urban areas are used, for example as 'mini communities' to minimise travel and build local communities. The pandemic appears to have accelerated the trends that were happening regarding home working and home delivery. If we want vibrant town centres that prioritise 'active' transport over car use, then we need to move away from old ideas and think about how the provision of services (healthcare, libraries, exercise etc.) are

provided alongside the town centre meeting places and repair shops to create centres for the community. These are generally within fifteen minutes walking time, which means that larger towns need multiple areas.

<b>Sustainable Development in Dacorum</b>	<p><b>5. Sustainable development.</b></p> <p>5.1 While the Emerging Strategy for Growth talks about sustainability it refers primarily to economic sustainability. Full sustainability needs to cover the three ‘pillars’ of sustainability – economic, environmental, social. Most housing is proposed to be on green belt therefore not environmentally sustainable, as this will remove valuable carbon sinks and reduce biodiversity. Social sustainability is questionable too – while the commitment to ‘affordable’ housing is good, all green belt housing will be on the outskirts of towns, away from amenities, therefore communities will be totally reliant on cars, which is bad for community integration as well as pollution.</p>

<b>Sustainable Development in Dacorum</b>	I would like the recommendations of Dacorum Green Party to be listened to. I have summarised the points below.

Sustainable Development in Dacorum  
 Net zero homes which meet the highest externally certified sustainability standards.  
 A commitment to new mixed woodland and re-wilding (with public access) for each new major development area. This is to compensate removal of green belt.  
 An increase in habitat for wildlife to be incorporated into all green field development areas. Each new building incorporating wildlife into the property design.

<b>Sustainable Development in Dacorum</b>	<p>I do not believe any of this Plan is sustainable. Nothing in the Plan gives me any encouragement that much serious thought has been given to:</p> <ol style="list-style-type: none"> <li>1 Water and sewerage which are already inadequate for the area. See CPRE's analysis. Where is there any mention of the work needed, the money required and the location of the necessary services?</li> </ol> <p>Here in Potten End we already have cessation of water supplies every summer and very poor water pressure the rest of the time. Its inadequate to keep our freezer functioning normally.</p> <ol style="list-style-type: none"> <li>1 There is talk in the Plan of improved transport but again no real proposals of routes, the type of transport or the money required. As the proposed development in Berkhamsted and Tring is way on the outskirts there is NO chance that people will walk or cycle on the narrow or steep roads in these 2 towns.</li> </ol> <p>To make matters worse the proposed Mass Rapid Transport system in Hemel suggests that traffic coming to and from Tring and Berkhamsted would be diverted from the A414 in Hemel. The most direct route for this traffic goes through Potten End to the centre of Berkhamsted. There is no plan for a new link road from the A41 to the Dagnall Road and the traffic problem would be exported to Potten End village and the centre of Berkhamsted. This is anything but sustainable.</p>

**Sustainable Development in Dacorum** **Presumption in favour of sustainable development**  
St William support policy SP1 in general terms although note it is not entirely in accordance with the wording of the current NPPF. St William would like to see the addition specific wording at the beginning of the policy which states “*There will be a presumption in favour of sustainable development.*” *The policy should also be updated to reflect the terminology of the revised NPPF, once the revised version has been published. As highlighted above, the draft places greater emphasis on sustainable patterns of development, aligning infrastructure with growth and maximising the use of brownfield land in addressing the climate change agenda.*

<b>Sustainable Development in Dacorum</b>	<p>Section 4 of the Emerging LP has regard to <i>Sustainable Development in Dacorum</i>, the overall strategy for which is contained within <b>Policy SP1: Sustainable Development in Dacorum</b>. BPC would expect that the proposed levels of growth that are proposed for the settlement will be at a level that is wholly sustainable and will not be detrimental to the village in the future.</p> <p>Section 5 of the Emerging LP has regard to the <i>Spatial Strategy for Growth</i> and BPC supports the general focus of the strategy that will see the greatest concentration being focused on the principal settlements within the Borough, that is</p>

Hemel Hempstead, Berkhamsted and Tring, in the first instance, followed by accommodating appropriate levels of sustainable growth in the villages and the rural area. It should, however, be acknowledged that, whilst Bovingdon is one of three named Large Villages within the Borough, it suffers quite considerably in respect of its location, accessibility to public transport and main highways, infrastructure problems and its overall sustainability when compared to the other two settlements.

BPC acknowledges that Bovingdon should receive modest and appropriate levels of new development in order to support a range of development needs, infrastructure and community facilities within the village.

<b>Sustainable Development in Dacorum</b>	<p>Whiteacre understands that the principles of sustainable development are central to the planning system. As set out in the NPPF (paragraphs 11-16) all development must accord with the central presumption in favour of sustainable development.</p> <p>The Council’s proposed sustainable development strategy aims to deliver the significant uplift in growth required in a sustainable way across the Borough, seeking out opportunities to regenerate Hemel Hempstead and to continue to act as a catalyst for its transformation. The Council acknowledge that they cannot accommodate all the growth within the urban area, so would need to release some land in the Green Belt.</p> <p>While the large villages of Bovington, Kings Langley and Markyate provide a reasonable level of services and facilities, the Council believe that they are relatively constrained in terms of local infrastructure. Therefore, the strategy proposes only modest levels of growth in these settlements.</p> <p><b>National Policy and Guidance Regarding Exceptional Circumstances for the Amendment of Green Belt Boundaries</b></p> <p>The Council has prepared detailed Topic Papers to inform the Emerging Strategy for Growth, including the ‘Green Belt and Rural Area’ Topic Paper and ‘Development Strategy’ Topic The evidence base provides robust support for selection of Grange Farm as a proposed allocation. These representations do not dispute that conclusions for site selection must be informed by the three tests at paragraph 137 of the NPPF2019. It is also true that Caselaw, including the five prescriptive tests identified by Mr Justice Jay in the case of <i>Calverton Parish Council v Nottingham City Council</i> [2015] EWHC 1078 (Admin) are a useful reference point in determining the potential for exceptional circumstances being demonstrated to support the amendment of Green Belt boundaries.</p> <p>Paragraph 138 of the NPPF2019 also demands a comparative understanding of strategy options when considering weighing the potential case for exceptional circumstances and the amendment of Green Belt boundaries. This entails a broader view, taking into account the Plan’s strategic priorities, looking to promote sustainable patterns of development and consider the consequences of directing growth towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary.</p> <p>Paragraph 139 of the NPPF2019 also sets out that the definition of Green Belt boundaries should ensure consistency with the development plan’s strategy for meeting identified requirements for sustainable development. The NPPF is clear that plan-making should seek net gains across all three strands of sustainable development (NPPF2019 paragraph 32) and recognises that the role of strategic policies extends to matters relating to infrastructure provision and community facilities (NPPF2019 paragraph 20).</p> <p>The proper application of national policy and guidance, supported by the Council’s evidence base, therefore provides even more support for the proposed growth strategy for Bovington, including allocation of the Grange Farm site. In</p>

adopting this wider view, it is helpful to summarise the judgment in *Compton PC, Ockham PC & Cranwell v Guildford BC*, SSHCLG & Ors [2019] EWHC 3242 (Admin) (also referred to in the Council's Green Belt Topic Paper).

This case provides an important update in the understanding of exceptional circumstances as part of plan-making. A key principle of national policy identified through the judgment is that “exceptional circumstances” is a less demanding test than the development control test for permitting inappropriate development in the Green Belt i.e. very special circumstances.

There are a number of important findings in the judgment. These highlight the potentially important contribution of infrastructure provision and the potential for release of land from the Green Belt to sustain housing land supply and provide for ‘headroom’ against identified requirements when determining the case for exceptional circumstances. The key principles are summarised in paragraph 72 of the judgment:

*“General planning needs, such as ordinary housing, are not precluded from its scope; indeed, meeting such needs is often part of the judgment that “exceptional circumstances” exist; the phrase is not limited to some unusual form of housing, nor to a particular intensity of need. I accept that it is clearly implicit in the stage 2 process that restraint may mean that the OAN is not met. But that is not the same as saying that the unmet need is irrelevant to the existence of “exceptional circumstances”, or that it cannot weigh heavily or decisively; it is simply not necessarily sufficient of itself. These factors do not exist in a vacuum or by themselves: there will almost inevitably be an analysis of the nature and degree of the need, allied to consideration of why the need cannot be met in locations which are sequentially preferable for such developments, an analysis of the impact on the functioning of the Green Belt and its purpose, and what other advantages the proposed locations, released from the Green Belt, might bring, for example, in terms of a sound spatial distribution strategy. The analysis in Calverton PC of how the issue should be approached was described by Jay J as perhaps a counsel of perfection; but it is not exhaustive or a checklist. The points may not all matter in any particular case, and others may be important especially the overall distribution of development, and the scope for other uses to be provided for along with sustainable infrastructure.” (Paragraph 72, our emphasis)*

### **The Overall Case for Exceptional Circumstances in Bovington – Relationship to the Proposed Delivery Strategy and allocation at Grange Farm**

Within this context, the importance of the Emerging Strategy for Growth making appropriate provision for growth at Bovington (as a Large Village) cannot be Selection of the proposed allocation at Grange Farm is entirely in accordance with wider objectives for the delivery of sustainable infrastructure, as part of a sound spatial distribution strategy. Successive delays to plan-making have delayed opportunities to sustain and enhance the provision of services and facilities at Bovington. Indeed, the only housing site allocated in Bovington in the 2012 Core Strategy has not been delivered, nine years later.

Significant concern is therefore expressed at those instances where the policies and proposals in the Plan do not fully reflect the ability to provide for identified requirements for sustainable development. It is also relevant to highlight apparent inconsistencies in the evidence base which introduce potential conflict with reasons to support the overall distribution of development (including scope for growth at Bovington).

Briefly, the Council's Development Strategy Background Paper (see paragraphs 5.26-5.27 and 6.28-6.30) reflects a constrained capacity for growth at Large Villages with scope to deliver only modest infrastructure improvements. The Green Belt and Rural Areas Topic Paper (paragraphs 8.42 and 9.11-9.1) provides a similar summary of barriers to identifying opportunities for the expansion or redevelopment of infrastructure provision.

This fails to reflect that the chosen strategy for Bovingdon, including selection of the proposed allocation at Grange Farm, is positively prepared, justified, and far from introducing potential adverse impacts upon development, the Grange Farm site is demonstrably required to support the Council's proposed housing and infrastructure delivery strategy for Bovingdon. The evidence base does not adequately reflect the specific opportunity identified to safeguard land for provision of a new 3 Form Entry Primary School at Grange Farm at a location that would result in no detriment to the character of the settlement and thereby 'future-proof' any additional requirement for growth. This is prior to additionally considering the significant benefits of alleviating surface water flood risk in the wider village and reducing congestion on the High Street.

There would be adverse consequences for sustainable development in any scenario where the current minimum proposed level of growth in the village was not supported specifically as part of the amendment of Green Belt boundaries at Grange Farm.

Failure to recognise this could ultimately risk undermining the perceived effectiveness and justification of the emerging strategy and therefore the Council's overall case for exceptional. However, any such outcome would be incorrect in our view and would itself be inconsistent with national policy in terms of how sustainable development should be secured. These representations should be interpreted on that basis, in seeking to reinforce and enhance the Council's proposed spatial strategy and in-particular ensure that delivery of the proposed allocation at Grange Farm is fully supported and reflected in sound policy proposals that maximise the potential for planning gains.

- Whiteacre supports the selection of the proposed allocation at Grange Farm and this is entirely in accordance with wider objectives for the delivery of sustainable infrastructure, as part of a sound spatial distribution strategy.
- However, successive past delays to plan-making have delayed opportunities to sustain and enhance the provision of services and facilities at Bovingdon, and have limited the amount of new housing built in Bovingdon for many years.
- Concern is therefore expressed at those instances where the policies and proposals in the Plan do not adequately reflect the opportunities to provide for sustainable Whiteacre also highlights inconsistencies in the evidence base, which introduce potential conflict with reasons to support the overall distribution of development (including scope for growth at Bovingdon).

<b>Spatial Strategy for Growth comment</b>	<p>Policy SP2, 3c: 'Tring will accomodate growth of at least 2,700 homes'- This is confusing to me as the plan that I looked at before estimated at least 5000 homes. In Pitstone there have been 2 large developments, both down the same road comprising of at least 140 houses, only a small number of which are affordable. there are also I believe 226 new homes being built on Icknield Way as well as a few others. there has been no new infrustructure added and so has made doctors surgeries, nurseries and the town in generl a much busier place and therefore harder to navigate. I understand that the proposal endeavours to include such amenities but in my opinion this is just too much growth for our small town. On the plan I saw back in October, it looked as if much of Tring would be built over to accomodate these houses. I think that this is unsustainable (both environmentally and socially) and unnecessary.</p>

<b>Spatial Strategy for Growth comment</b>	As a resident of Boxmoor I am concerned by the principle as stated in 5.2 about encouraging substantial increases in heights ... in the most accessible locations. Development must be sensitive to the local character.  It is hard to see the need for additional retail floorspace when Hemel Hempstead has numerous empty shops and we hear that Debenhams and Topshop are both likely to close.

<b>Spatial Strategy for Growth comment</b>	Where is the potential businesses that will be requiring the “Extra Retail Floor Space” in Hemel Tring and Berkhamstead. The only growth strategy for Tring and Berkhamstead and the local villages. Before the Covid outbreak local and country wide stores were closing down leaving empty shops??? All I see , once again, is to build on green field areas. It appears that all the ringing statements about protecting the environment conflict with these plans. What will be the diverse effect on a larger village populous have on the local community, shops, doctors and schools. AS of yet there has been no mention regarding these oblivious issues.

<b>Spatial Strategy for Growth comment</b>	I support the strategy as it pertains to Berkhamsted, and in particular the non-pursuit of an urban intensification strategy. The proposed Bulbourne Cross development contemplates an estate of 1,100 homes on a single site, and I would far sooner the needs of the growth strategy are met by several smaller settlements around the town.

<b>Spatial Strategy for Growth comment</b>	The proposed growth is not sustainable. Tring Berkhamsted and Hemel Hemstead (to a lesser degree) are commuter towns. This plan does not provide the employment opportunities commensurate with the scale of housing provision and you need to demonstrate your plan for how this increased population will be employed and how they will travel. My pre-covid experience is that the rail service to central London is already full and that there will not be the service to deal with the additional population.

<b>Spatial Strategy for Growth comment</b>	Site Ref: KL02 Land at Rectory Farm. I am seriously concerned at the volume of housing the South East in general is being asked to accommodate. In particular I am very concerned that we are being asked to comment on Dacorum's local plan without sight of the Three Rivers District plan both of which will impact Kings Langley, and in light of the St Albans plan being withdrawn because it is not

sound! The thought that Dacorum have earmarked 275 homes for Kings Langley without any knowledge of Three Rivers plans, is nothing short of irresponsible. Not least because the majority of the village is Green belt, including Rectory Farm. This land is really the last bit of green land between Kings Langley and Hemel Hempstead, which would contribute to the merging of both locations, which is contrary to Green Belt purpose. This is public open space and if 2020 has taught us nothing else, **outside space and green belt is more valuable than ever to people's health, and well being.** Local parks and open spaces have been rammed with people every time the weather is decent, that shows us we need more open green belt space not less! Given we also have no sight of what Three Rivers Council are planning for its part of Kings Langley, I do not see how consideration can even be given to this site without full facts. You really should co-ordinate and work together not isolation, its ridiculous.

There's no consideration in your plans either for the impact of COVID on our high streets, or office space, of which so much more is going to be available now, our old shopping and working world will never be the same again. People have proved they can work from anywhere, it doesn't even have to be the South East, housing pressure will therefore lessen as people see what they can get for their money elsewhere! Office and retail space has to be considered for conversion to housing, if nothing else it would bring the High Streets back to life. Then there's Brexit, and the sheer volume of European population that has left. We are a smaller population now, than we were 2 years ago, and that may continue.

Then we have to consider the impact on the local roads - already gridlocked and Hempstead Road already excessively busy cannot carry on taking all the extra traffic (not forgetting the excess building and flow down from Apsley towards the A41) the local schools are full - indeed Abbots Langley children who would previously have expected to get into Kings Langley school - circa 1 -2 mile journey are now taking long bus rides to schools in West Watford, rather than attending their nearest school. That makes building and maintaining friendships out of school much more difficult again given the focus on youngster mental health not a positive situation at all. Our local health services and hospital are at breaking point, who is going to take all these extra people on? Then there's the environmental impact, summer water shortages, and flooding - which we are already seeing on Railway Terrace where the new houses should really change their address to Railway Lake given the current flooding problem. Our roads cannot cope with the change in weather patterns and the extra rainfall we now see, and because we are building over everything the water has to go somewhere, but where???

This country is known for its green and pleasant lands not for concrete. What about the wildlife that inhabits the greenbelt, that generally brings so much joy to people??

Kings Langley is a historic settlement incorporating the site of a Royal Palace and is still meant to be a village, 200+ houses is a huge increase in population vs existing (10%), and a housing development of that size and scale will be visible from every vantage point, much like the Manor Estate is today, the new bit of which is an absolute eye sore.

I would also be very concerned about the impact of 200+ houses on road safety on Hempstead Road, which is already an accident blackspot.

Finally I am so disappointed that the council is so prepared to turn over our green belt without so much as a fight. It is your duty to protect it at all costs, it is our equivalent of the rain forest and we have to treasure it, respect it and look after it.

<b>Spatial Strategy for Growth comment</b>	<p>Question 5, Site ref, Growth Area KL02, Land at Rectory Farm</p> <p>I am contacting you to express my objections to the proposed development on the Green Belt Land which is Rectory Farm in Kings Langley.</p> <p>The purpose of Green Belt has always been to prevent coalescence between settlements. Any development on the Green Belt at Rectory Farm would only serve to further merge the village of Kings Langley with the town of Hemel Hempstead.</p> <p>Additionally building 200 houses on this Green Belt goes against another of its purposes which is to prevent sprawl of large built up areas.</p> <p>Further, building 200 houses here would require traffic access onto the Hempstead Road – this road is already extremely busy at all times and, as traffic heads into or out of the narrow village High Street there are already long delays daily, especially during morning and evening rush hours.</p> <p>Another purpose of Green Belt, which is particularly important to Kings Langley, is that it should be to preserve the setting and special character of historic towns. Kings Langley is a village of historic importance which has the site of a Royal palace, an ancient Priory and a beautiful 12th Century Church (All Saints).</p> <p>The addition of 200 further dwellings into Kings Langley, on top of the 3000 + which have been built since the last Local Plan in 2002, not to mention the numerous infills, will put further pressure on the already overstretched infrastructure. The local schools, doctors and other vital service are already at full capacity. The additional traffic will also contribute to further air, light and noise pollution.</p> <p>If the COVID crisis has taught us anything it has to be that open green spaces, fresh air and recreational areas are vital to the well-being and health of the local community therefore building on it is a violation of its purpose.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Hemel Hempstead as a relatively new town, has several brown field sites which could be used for development much more appropriately without threatening the massive ruination of the villages. By definition, villages are small communities with their own identities. Of course, powerful building companies are not concerned with people, nor quality of life, but only as vultures looking for rich financial pickings.</p> <p>Can you get Hertfordshire CC to agree to massive spending on the road system to sustain all these extra houses and traffic?</p>

<b>Spatial Strategy for Growth comment</b>	<p>You talk about working with neighbouring districts - developments would be much better placed in areas around Bovington, Ashley Green etc. Are you sure your plans aren't just based on maximising housing revenues from expensive towns such as Berkhamsted?</p> <p>We cannot handle the growth in Berkhamsted itself. The proposals - through the Bulborne Cross development (I cannot tell if these are part of the development you are proposing or not) would also mean destroying Berkhamsted Football Club and replacing it with housing. How can you seriously damage the town's cultural heritage by making moves such as this?!</p>

<b>Spatial Strategy for Growth comment</b>	"Providing growth in the villages that reflects their role and character;" - this bullet is critical for Kings Langley. It's a village that has seen growth already with the work around Kings Langley Station. I applaud the building on brownfield sites - just what we should be doing. The greenfield areas like Wayside Farm, should stay green as it is part of the character of the village and the green areas prevent KL from becoming one large conurbation with Apsley & Hunton Bridge/Watford. Your point 5.6 makes a sound point that growth levels should be modest.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to express my objection to the use of green belt land on the outskirts of Kings Langley village at Rectory Farm. Any use of green belt land for housing or industrial development is unnecessary whilst there are brownfield sites and land which can be repurposed to achieve the same goal and minimise the destruction of wildlife habitats.</p> <p>This particular proposed development site would reduce the boundary between Kings Langley and nearby Nash Mills and put extra strain on the main road through the village which is often very busy anyway. A new, additional junction on this road would inevitably increase the likelihood of a congestion and potentially accidents.</p>

<b>Spatial Strategy for Growth comment</b>	I am against this proposal, as I wish to prevent adjacent towns merging together, to check the sprawl of large built up areas, to assist in protecting the countryside from encroachment and to preserve historic towns.

Additionally, traffic and services (eg GP and trains) are already stretched far too thin as things are, further development will completely overload the system. Just leave the land alone.

SP2 Providing the additional new homes for Tring will be a significant challenge.

To meet that aspiration, I support significant new investment into sustainable transport initiatives, education, open space and sports facilities. Doctors and Dental surgeries will also need to keep pace with expansion. I also believe that it is important to promote local employment opportunities. We have had a big loss in local employment sites to housing over the last 50 years.

Retail has also suffered of late and a review of business rate policy to favour and assist small enterprises would be welcomed.

I welcome genuinely affordable homes in Tring. We have had a surfeit of Executive and homes for the over 55's of late on brownfield sites.

I think that the releasing of green belt land needs to be very carefully considered.

<b>Spatial Strategy for Growth comment</b>	I suspect market forces and emerging trends (post-Grenfell and Covid) will drive developments away from 'high rises', and I would disagree with the document: 'proactively encouraging substantial increases in heights'. I think providing adequate amenity space, over and above that dictated by current planning guidelines, is essential for physical and mental wellbeing, now and in the future. 'Social distancing' is likely to be a way of life in future, and high rises or tiny gardens are likely to prove unattractive to those most in need.

<b>Spatial Strategy for Growth comment</b>	The methodology used in the local planning process is being updated, with details to be confirmed, as the Government's algorithm has changed to prioritise construction in urban areas. DBC should hold back from committing to any large scale development until these changes has been settled.  Providing growth through large scale development on Green Belt is a highly flawed strategy and doesn't fit with the ideology of maintaining the character of the 2 market towns, Tring and Berkhamsted. Berkhamsted is settled in a valley with very linear connections to the A41 and any increase in traffic to the already busy railway station and other amenities, would have a great detrimental impact on the centre of town. Tring is surrounded by Green Belt, the Chiltern AONB and

the Chiltern Beechwood SAC, any further large scale development would have a terrible negative impact on both the character of the town and it's unique natural position. How can this be environmentally sustainable and enhancing bio-diversity?  
 Added to all this growth, an almost covert allowance of 2,400 windfall dwellings is to be squeezed in somewhere!

In regards to:

- 1 No net loss of office floorspace from 2025 onwards.
- 2 A net floorspace increase of 116,500 sqm of industrial floorspaceThis should be reconsidered due to the effect of the Coronavirus. Many companies will be considering closing office spaces as their employees have been working from home for over a year and the business has survived. As office spaces are a high cost to a company (rent, electrics, gas, health and saftey, security etc), if the virus has proved these are not, in effect, needed, then why pay for them? Rather than increasing office space, it could be that existing space could be converted into housing.

<b>Spatial Strategy for Growth comment</b>	The volume of new housing proposed is too high for each of the sites to accomodate and will overwhelm the infrastructure (current and proposed) for the areas. I am very concerned that this strategy is being driven by economic profit rather at the cost of local community and the natural environment. The transport infrastructure will not sustain this volume of new housing and consideration is not being given to the fact that a significant part of this development is taking place on green belt land which should be protects from development, on the edge of the Chilterns AONB. With climate change and the consequences of this becoming ever more pressing, clearing areas of woodland and wildlife for building will increase the risk of flooding in these areas and heighten the possible impact of climate change.

<b>Spatial Strategy for Growth comment</b>	The extensive use of the Greenbelt for development between Redbourn and Hemel Hempstead goes against the purposes of the Greenbelt as described in the NPPF. Specifically, the Hemel Garden Communities project will see urban sprawl into the Greenbelt and the narrowing of the gap between Redbourn and Hemel Hempstead. In addition, the extensive use of the Greenbelt will damage the local environment and ecology adding to the problems of climate change. On these issues, Redbourn Parish Council objects to the draft Dacorum Local Plan.

<b>Spatial Strategy for Growth comment</b>	The Covid crisis may precipitate a significant longer-term change in the way that we work and live. The most likely of these outcomes is that there is a significant increase in home working a reduction in travel and potentially faster changes in our high streets.

It doesn't appear that the likely longer term changes in the way that we live have been taken into account in the Local Plan, and I would strongly advocate that this is done before the plan is finalised. Key areas to consider are:

- A review of the future needs for office space. This should consider whether the new office space identified in the Plan is still likely to be required. It should also consider whether the current level of office space will be required, and what opportunities there are to redevelop or repurpose existing offices for housing or other purposes. This could make a significant contribution to providing housing and reduce the need to develop green field sites. It could also be part of a broader plan to revitalise our town centres (see below).
- Town centres have been struggling over recent years and Covid has further increased pressures. The Plan should address how we are going to ensure that town centres are vibrant spaces which address the needs of the community. This may be in part through redevelopment of commercial/retail into domestic accommodation, meaning more people are living in the centre of town. It may also be through providing flexible office space and work resources to provide people different opportunities to work locally. It may also be through development of other community and leisure resources.

A review of 'Home' Working. Covid has seen a massive rise in the number of people working at home. This changes the requirements for travel, increases reliance on good tele-communications and changes the use of houses. All of these issues need to be considered by the Plan. For instance: Do we need housing to include provision of work spaces? Do we need to provide capacity for flexible office spaces and work resources within new developments and within town centres?

**Spatial Strategy for Growth comment** Housing

The Plan identifies a number of areas for housing development, many of which are green field and relatively low density developments. This will result in destruction of green spaces with direct negative impacts on biodiversity and the creation of urban sprawl with the associated problems of more car usage and a change in the character of places. It is also likely that much of this low density development will not be affordable, as there is a history of developments of this type not meeting targets for affordability.

The developments around Tring are particularly noticeable for being green field, low density, which significantly increase the footprint of the town and are likely to change its character. The development of housing further from the town centre is likely to increase short distance car usage, and infilling between the town and the canal (which currently provides a valuable wildlife corridor) is likely to have significant negative impacts on biodiversity.

I would strongly advocate that before the plan is finalised there is a thorough review of opportunities for other types of development, focusing on what can be done by redeveloping existing building or the development of brown field sites. As noted above –reimagining town centres and reductions in the requirements for office space can provide opportunities for housing in the heart of towns, which is likely to provide higher density more affordable housing, which can help to invigorate town centres. The redevelopment of brown field and town centre sites may be more complex than the large new green field developments favoured by the large property developers, but we should take the time and commitment to build a better, greener future. Green field development should be only pursued as a last resort, and where broader value can be identified for the wider community.

The 2050 net zero target means that the homes we build need to be carbon neutral now. The Plan is incredibly unambitious in terms of carbon, para 17.24 states ‘All new homes carbon neutral from 2034’. This means that we will be allowing houses to be built now that will need significant retrofit in the coming years to meet 2050 targets. Carbon neutrality for new build housing is something that was in Government Policy for 2016 (but was then withdrawn), so it can be achieved. The Local Plan must ensure that all new housing is carbon neutral, with high requirements for insulation, requirements for solar photovoltaics and solar thermal panels on roof spaces, the use of heat pumps, and houses designed to maximise/control solar gain. Houses are a key part of our infrastructure so we should demand new investment is fit for the future.

The Plan should also set high standards for the carbon impacts during construction and for the embedded carbon within construction materials.

<b>Spatial Strategy for Growth comment</b>	<p>Increasing the population of Tring by 50% will undoubtedly have a positive economic impact on the commerce in the centre but I would not describe the increase in traffic down a narrow high street, with narrow pavements, and no plan for additional parking as an enhancement.</p> <p>Some of the development in Tring will be close to the station but the plan states that the rail link is at capacity and little likelihood that HS2 will relieve this. There are no plans for additional parking (car or bike) both of which were at capacity before the pandemic.</p> <p>If the council makes good on its promise for additional recreation space in Tring that will be welcome as there is already a shortage of football and rugby pitches and the hockey club does not play in Tring. There was an opportunity with the development site at Roman Park but that has not been included. Why not if it is a priority? Why should we believe the promises in this plan when current developments fall so far short of the promises?</p> <p>There is mention of additional green space but there is no commitment as to what % of the land taken will be made available. There is for the school sites so it is not unreasonable to expect that it should be included. Another opportunity to back out of these promises.</p>

<b>Spatial Strategy for Growth comment</b>	In the process of building new homes, I think two things are important. One - ensure affordable homes are long-term, and will not be sold off by the council to private investors. Two - house building should work with existing features to maximise value of the new property created. For example, if greenbelt is built on, design of the new layout must provide easy access to green spaces/water/views, as this will increase value, and increase revenue from sales. It is also important for developing a sense of place, not merely another characterless housing estate from Taylor Wimpey etc.

<b>Spatial Strategy for Growth comment</b>	I believe that the Growth Strategy detracts from the character of Berkhamsted. Most of the planned dwelling sites are not sustainably located close to passenger transport and other services, the High Street or the station. They will not enhance the town centre. Of themselves they will not provide significant new investment into the initiatives outlined in 3. b. Being piecemeal in nature, they may supply contributions to CIL, but there will be no obligation on the developers to meet those aims. Please see supporting document: 5. Suboptimal stites

<b>Spatial Strategy for Growth comment</b>	There are far to many houses being planned, particularaly on green belt areas. The road network can not cope with the number of cars as it is! Have you tried driving through Berkhamstead or getting onto the M25 from the A41 junction? If these plans go ahead you will destroy Tring and Berkhamstead. Tring high street is/has died with huge numbers of empty shops. Many of these areas residents will not want lots of affordable houses being built as well, this is likely to lead to change in community mix which is not a good thing.

<b>Spatial Strategy for Growth comment</b>	The Government must review the housing quota for Dacorum Local Plan (2020-2038) Emerging Strategy for Growth Consultation and bring about a halt the Local Plan Consultation, for the following reasons:  * When the Government changed it's policy Dacorum should have changed it's Strategy, instead the housing quotas were bolted onto work already done.

\* The plan has too many of the wrong houses in the wrong places, across acres of farmland and neighbouring the Chiltern Area of Outstanding Natural Beauty, comprising wildlife, nature and the local environment.

\* Too many houses where there are too few local jobs.

\* Infrastructure, already at it's limits (doctor surgeries, schools), will experience an increased burden/strain on local communities and facilities. Areas such as Tring, Northchurch and Berkhamsted will have increased, traffic with inadequate Highways, these areas have limited ability to change highways due to narrow old roads and streets lined with character properties of historical value, not to mention the destruction of quiet country lanes. Increased traffic on road networks with limited capacity will increase congestion, air pollution and comprising road safety.

\* Tring and Northchurch will be completely overwhelmed - Tring (old small market town) with a housing quota which would increase it's population by more than half - 55% and Northchurch a village, which in the plan is being referred to as West Berkhamsted. Tring and Northchurch will be changes beyond recognition at a cost of losing their present and historical identities as small rural communities

The above points raise huge concerns to the future of Dacorum and must be addressed before it is too late!

**Spatial Strategy for Growth comment**

The new Local Plan sets out a growth strategy of providing a minimum of 16,595 homes between 2020 to 2038. This is an ambitious target to achieve, taking into account the Government's recently published Housing Delivery Targets identified the authority as delivering only 89% of the housing target from 2017 to 2020. There is already a deficit of 202 dwellings within a 3 year period and this does not take into account the current implications of the Covid-19 pandemic.

To seek to address the under-delivery of housing, the new Local Plan designates development within the main towns and villages, some of which are significant schemes, that will take many years to deliver.

Policy SP2 sets out a hierarchy that highlights that within smaller villages there will be more limited housing growth coming forward through either ‘windfall’ applications or Neighbourhood Plan allocations rather than allocations in the new Local Plan. It is worth noting that criteria e. refers “smaller villages” and does not make any further distinction between settlements.

I object to the proposed development at Rectory Farm which is on precious Green Belt Land in Kings Langley.

If Covid-19 and lockdown has taught us anything, it’s how important our green spaces are in the village to help with our physical and mental health.

Having read the Green Belt section of the National Planning Framework, I understand that the fundamental aim of the Green Belt policy is to prevent urban sprawl by keeping land permanently open, so openness and permanence are key. Building on Rectory Farm does not meet the exceptions required to justify building on our Green Belt. I do not understand what has changed since the last local plan in 2002 and the objections that the Planning Inspector had to developing Rectory Farm at that time. I believe that councils should be concentrating on using brown field’s site and ensuring that the brown fields register is kept up-to-date.

I do support providing good quality affordable housing, but not at the expense of our open spaces. Around 3,500 homes have been accommodated in Kings Langley and the surrounding area since the last Local Plan. I would like to see the Rectory Farm land used for recreation. If this land was identified as a strategic open space, a green wildlife corridor along the canal and River Gade could be created.

I do support providing good quality affordable housing, but not at the expense of our open spaces. The additional 145 homes planned will bring extra traffic onto an already busy main road, bringing further noise and air pollution to the area. With a 40mph speed, it is likely that there will be more accidents as cars try to pull into the fast main road. Before that, the site traffic will bring their own problems to our village.

The additional homes will put extra pressure on the infrastructure of the village, particularly on our school and medical care.

I hope that all of my points will be considered and we can retain our Green Belt.

This proposal is extremely concerning in how much green space it proposes to eliminate; a main reason why people have moved to the area and continue to invest in it.

Such drastic builds cannot be responsibility thought through when we are unsure of the affects Brexit and Covid will have on Berkhamsted and the rest of the country and it's economic and social demographic and associated needs at this point.

This level of development is not supported by the employment infrastructure of Berkhamsted. Increased congestion and over development but no extra employment or revenue and decreasing benefits as a commuter town if little to no green space left

<b>Spatial Strategy for Growth comment</b>	<p>Growth Area KL02: Land at Rectory Farm</p> <p>I am writing to strongly object to the proposed development on the greenbelt land at Rectory Farm.</p>

Greenbelt land is extremely precious protected by policy to retain areas of largely undeveloped, wild or agricultural land surrounding or neighbouring urban areas. It prevents development of the area and allows wildlife to flourish, return or be established.

There has already been c3,500 dwellings built in Kings Langley and surrounding areas and this proposal will reduce further the already limited area of open land between Hemel Hempstead and Kings Langley. This proposal will essentially merge the two together contrary to the main purpose of greenbelt policy.

Developing on this greenbelt land will bring another huge increase in volumes of traffic as well as a mass increase in the requirement for parking spaces negatively impacting the already overcrowded and inconsiderate parking on Hempstead Road, contributing to the existing high levels of pollution.

We have already experienced the impact of development in Nash Mills and the resulting increase in volumes of traffic, precarious parking along Red Lion [Nash Mills] Lane and increase in regular bottlenecks in Apsley and Kings Langley High Streets.

Whilst Three Rivers continue to build large developments just across the canal from Rectory Farm, this proposal will bring further traffic chaos and grid lock through Apsley and Kings Langley as Hempstead Road acts as a funnel for all surrounding towns and villages wanting to access the M25.

We have all learnt valuable lessons as to how precious open spaces are especially during lockdown due to the Covid pandemic. Therefore instead of developing the land for housing, the greenbelt on Rectory Farm should be used as a green wildlife corridor/nature reserve along the canal and River Gade, preserving this valuable open space.

The importance of open space and greenbelt is central to sustaining the conservation of the environment, protecting wildlife and the shape and character of Kings Langley village.

Building houses on greenbelt will destroy the village of Kings Langley through merging boundaries with Hemel Hempstead into one continuous built up area, cause further havoc and mayhem on our roads, vastly increasing levels of pollution, further eroding our countryside resulting in a major negative impact on not only our wildlife but the health and wellbeing of the community.

I vehemently object to this proposal

<b>Spatial Strategy for Growth comment</b>	Both Berkhamstead and Tring will be fundamentally chnaged by this plan - my view is this makes them less attractive to live in and will damage the environment in which we live. I'd prefer this didn't happen - Dacorum will eventually encorage anyone who'd like a decent quality of life and environment to leave. They are also singificantly commuter towns today - something that might not happen as much in the future.

<b>Spatial Strategy for Growth comment</b>	<p>Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.</p> <p>My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.</p> <p>The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.</p> <p>Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity? You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan. It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.</p> <p>Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.</p> <p>These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.</p>

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

**Comments on Section 5.8 Spatial Strategy for Growth**

1a - We would question the necessity of planning for a minimum of 16,596 homes. This appears to be a top down target from the Government. Where is the evidence both from past performance and forecasting that this the appropriate number of new homes to build? This is such a core foundation of the Local Plan, and we can see little evidence of how this number has been arrived at?

3a - What is the definition of a "sustainable location?" Isn't the use of green belt land for 5,500 new homes with a net biodiversity gain of 10% only an example of using land in an unsustainable way?

<b>Spatial Strategy for Growth comment</b>	<p>The proposed level of housing growth in Tring is on an excessive scale and the strategy does not address the need to maintain the role and character of Tring as an increasingly rare and valuable example of a <b>small and historic rural</b> market town which is attractive and easily linked to larger existing areas of commerce such as Hemel Hempstead and London. Tring serves as <b>green commuter belt</b> which attracts hikers and visitors to the distinctive beautiful town with the Zoological Museum and much more. It is also increasingly important in these days to provide recreational opportunities for residents in the bigger built up areas near Tring, as well as for Tring residents, for health - <b>physical and mental health</b> - without having to drive or travel further afield.</p> <p>If the proposed population growth in Hemel Hempstead and Berkhamsted is 20%, other smaller towns that are more like Tring are 10% and Dacorum overall, 9%, it does not seem fair that Tring should have an astronomical 55% growth.</p>

<b>Spatial Strategy for Growth comment</b>	The predicted growth is very suspect and the plan makes excessive use of Green Field sites as already set out. There is no guarantee that work will follow the provided housing, Hemel Hemstead has long struggled to attract business despite its proximity to the M1. The existing plan and forecasted numbers appear not to have factored in that much of Dacorum is an AONB and the geography of Berkhamsted and resulting traffic implications for the towns and surrounding villages which will no doubt become even worse rat runs. If traffic is to be directed back onto the recently downgraded Leighton Buzzard roads how will the single traffic weak bridge at Water End cope. How is the plan to deal with this?

<b>Spatial Strategy for Growth comment</b>	The spatial strategy for growth to focus on Berkhamsted and Tring (in particular Tring) are totally in contradiction with all environmental and conservation promises in this proposal by building almost entirely on GREEN BELT land and areas of outstanding natural beauty. There is no mention about how this will be in keeping with the area. The vast swathes of land that are designated to Tring in this plan are truly shocking, on the doorstep of the Ridgeway trail, National Trust estate and the Chiltern hills. These areas are known nationally for large numbers migratory and resident birds, rare wildlife, chalk downs and other areas of historical and SSI. As seen by the mess of the new housing estate now being built on the Western side of Tring (Aylesbury Road - part of this consultation but the estate is already being built on Green Belt), with the best will in the world, the double aims of providing more homes and improving standards of living and environmental factors are absolutely at odds, particularly when allowing private companies to win the work. As seen with the current HS2 construction, conservation and environment is at the bottom of the priority list for this strategy and the landscapes, nature and wildlife will be forever lost to future generations.

<b>Spatial Strategy for Growth comment</b>	I applaud your stance in wanting to provide affordable homes for local people but another feature of the Covid pandemic has been that there has been a significant increase in number of people wishing to move from London (Estate agent told me that 60% of enquiries on houses were from people wanting to move out of London). What this has done has pushed up the prices out of the reach of local people. How will you ensure that trying to build houses for local people will not still be out of reach as Londoners outbid local people.

<b>Spatial Strategy for Growth comment</b>	1. At a fundamental level, I consider that the estimated demand for housing should not all be accommodated within the local area. To do so allows the continuation of the imbalance between continuing development in the south east, and

lack of investment elsewhere in the country. The harm to the local environment by cramming bulky high density development into sensitive sites and the creation of peripheral boundary extensions, including taking Green Belt land diminishes the openness and green spaces which are important characteristics of Dacorum District.

I do not believe that the development of residential areas, adjacent to the M1 and Junction 8 can be considered acceptable. There will be significant air and noise pollution from such a heavily and continuously used transport artery, with accelerating and decelerating traffic.

2. It is unfortunate that in Hemel Hempstead, there is no comprehensive urban design vision for the Town Centre.

The Conservation Area is limited to the Old Town Area, and that part of the town is to be hemmed in by high density development on presently open land. Has consideration been given to Conservation Area designation of key elements of the original New Town Centre (now denuded significantly by modern development)? New Town developments were a very significant feature of post WWII re- building in Britain, and its 1950s features merit preservation.

The iconic early New Town architecturally low rise and spatial character of the wider Marlowes area is being overwhelmed by infilling redevelopment sites with high rise, bulky blocks. These deliver an overbearing and overcrowded non-human scale built environment. Existing developments replacing the former Civic Quarter, Pavilion and College sites, the developments at the lower end of the town centre between St Albans Road/Golden Hill, the block going up near B&Q and the Canal/adjacent to the A414 Two Waters Road, are all evidence of how unpleasant the townscape will become.

The Water Gardens are imprisoned between the carparks and lower Leighton Buzzard Road, and road and the less interesting building facades of the facing commercial premises in Waterhouse Street. There there is already little permeability through to the pedestrianised town centre. There should be proposals which incorporate this historically significant and valuable space into a larger landscaped pedestrianised area integral with the Marlowes, rather than as at present, trapped between two roads.

The key town centre urban design principles that have been recognised in this recent year of Covid-19 lockdowns, are the requirement for the re-assessment of town centre land uses, the need for spaciousness and landscaping to allow people to spend leisure time and share activities, in open, unpolluted and greened areas.

Future development proposals should enhance such a vision of openness rather than filling every potential open, underdeveloped or re-usable site with massive, tall, bulky buildings.

Under present proposals, the spatial permeability, little as there is, is to be further eroded by development proposed in the former Bus Station/Market Place and the remainder of what was the Civic Quarter. The infilling with large ugly developments will destroy the character of the area...and with high street uses in flux following Covid 19 economic impacts, there will be little sense of place.

I agree that the majority of growth needs to be around the main towns, where it is most sustainable, but I do wonder how the infrastructure and environment will support such a high level of growth.

The loss of so much greenbelt is unfortunate and it could be argued, unnecessary given the changes to working practices brought about by COVID-19.

There is an obvious opportunity to meet DBC development objectives whilst minimising the impact on the local community by finding a way to focus development plans on the Bovingdon airfield site which is large enough to accommodate both employment (film studios) and residential units. This could be accessed directly to the A41 roundabout thereby reducing the need to increase traffic flow on the already congested Hempstead to Chesham road.

<b>Spatial Strategy for Growth comment</b>	<p>Policy SP2 is the heart of the draft Plan and is opposed on the following grounds:</p> <p>The proposed number of new homes is excessive given the constraints that exist in the Borough. The number may be driven by a perceived need to accommodate the housing targets included in the Conservative Election manifesto, but no effort has been made to challenge this nor take account of the provisions of the NPPF or various Ministerial statements, including one from the Prime Minister to one of our two local MP's, that the Green Belt will be protected and boundaries should only be changed in "exceptional circumstances".</p> <p>The result of the council's decision is that approximately 850 hectares of Green Belt are to disappear, much of it of essential value to the historic market towns of Berkhamsted and Tring. There is no actual explanation of the exceptional circumstances the Council claim exist other than the necessity to meet their target of 922 dpa.</p> <p>The proposed locations of the growth at Berkhamsted will not manage landscape and Green Belt impacts, quite the reverse, nor given the topography of the town and its network of narrow roads allow for any sustainable transport or related infrastructure initiatives.</p> <p>Berkhamsted has exceeded its Core Strategy dpa by 31% - 47 to 62dpa, whereas Hemel has under delivered which brings up the matter of windfalls and where development should be located. An allowance has been made for 2,408 windfall dwellings over the Plan period, 133dpa. The average windfall dpa for the last 14 years is 306. The Council accept that a windfall of 200dpa is a reasonable expectation. (Why a lower figure of 133dpa is used in the SP2 summary is not explained).</p> <p>At the 14 year average an additional 3104 windfall homes would be built over the life of this new Plan. At the Council's reasonable estimate an additional 1192 homes will be built. Out of the total of 16,596 new homes targetted 5945 will be built on Green Belt, (actually referred to as green field development interestingly). If a realistic account of windfall dpa is made the Green Belt requirement would drop to 4753 @200dpa or 2841@306 dpa.</p> <p>North Hemel has two parcels of Green Belt due for release. HH01 to provide 1500 homes, HH02 to provide 4,000 homes but post 2038. Combined and master planned for development now HH01 and HH02 can accommodate all the Borough's Green Belt requirement in a way which will be sustainable and provide the benefits of real scale development to infrastructure and the Council's aims of regenerating Hemel.</p> <p>Policy SP2 is not sustainable and will fail the test of soundness. The Council needs to rethink what their target numbers are and if development on Green Belt is required look to locate it where it can be best accommodated and provide the most benefit, North Hemel.</p>

my comments to section 4 apply to this section also.

*[I dispute your assumption that such a scale of housing development could be achieved without ruining the character and quality of life in the market towns of Berkhamsted and Tring. The green spaces around these towns are its lungs and contribute to good air quality as well as to the wellbeing of their residents. To build on such vast areas could not possible not impact upon these towns, adding to pressures on their infrastructure.*

*You envisage a growth in retail space, including in Hemel. But since the massive evacuation of high street shops everywhere, this just doesn't make sense. A post covid review of the empty space, both office and retail, in the town centres would surely highlight opportunities to develop sustainable mixed developments, and for residents of new housing in the centres, fewer car and bus journeys would be required, easing pressures on available transport links and traffic. Any existing pockets of green space in and between towns should be carefully guarded for the future. The future citizens of our Dacorum will not thank you for implementing your plan.]*

<b>Spatial Strategy for Growth comment</b>	<p>The whole strategy, in fact the whole local plan, seems geared around providing a significant number of additional houses and flats, which is far far too much for the region and compared to the number required nationally on average. This is not acceptable regardless of the strategies you employ to deliver them.</p> <p>"taking this concept much further in Hemel Hempstead by proactively encouraging substantial increases in heights and densities in the most accessible locations" This strategy in particular is incredibly worrying for existing residents who, choosing to live in Hemel for the 'town' aspect risk ending up living in an urban jungle with increasing numbers of properties being squeezed into spaces where the strain on resulting infrastructure is not considered until it is too late.</p> <p>"We know that we cannot accommodate all the growth within the urban area, so despite our approach to increasing densities and heights, we do need to release land in the Green Belt" - this is wholly unacceptable. The number of houses being proposed is far far higher than it should be, and the fact that you are proposing to build those homes on the Green Belt should immediately be a sign that it is too many. This is completely at odds with your 'sustainable' narrative.</p> <p>I absolutely object to building further large housing developments on the Green Belt in order to meet a target for new properties which is far far too high for the requirements of the region.</p> <p>"Additional retail floorspace to meet the main identified needs in Dacorum's towns focused on Hemel Hempstead and Tring town centres and, on a smaller scale, in the larger strategic Growth Areas." Has your strategy taken into account the likely revised shopping and social trends of the public in a post-COVID era, and factored this into the requirements for both retail and office space?</p> <p>"A key feature of the strategy will be the intensification of sites within Hemel Hempstead through increased heights and densities. Key areas for redevelopment include sites across the Town Centre and Two Waters Areas. " The Two Waters Area in particular is very prone to flooding. Removal of existing fields and agriculture space there is only likely to exacerbate this problem. The flooding issues on surrounding roads is not even addressed currently, how does the</p>

Council plan to address this if existing flood plains are utilised for residential or office space? Is the additional damage, repair and maintenance factored into the future council budget?

**Spatial Strategy for Growth comment**

I am concerned that the growth is being planned to comply without regard to the beauty or characteristics of the area. There seems to be a delight on the planners part to extend towns and before long they will all be linked in one giant conurbation. In part this is possibly because the plans are based on government calculations from 2014 which are now outdated. Berkhamsted for instance is also restricted in terms of access routes through a Chilterns Valley and a vastly increased population will struggle to negotiate the infrastructure in a timely fashion on a daily basis. Building on the ridges and building higher will reduce vistas and the concept of space for which Hemel was created to give. Can some moderation be applied to the numbers of new dwellings. As town centres are losing their attraction (especially shopping centres) perhaps some housing should be interwoven bringing back life to a deserted Hemel for instance and making good use of the existing infrastructure.

<b>Spatial Strategy for Growth comment</b>	Growth in Berkhamsted and Tring will be achieved by building the vast majority of houses on Green Belt - this will of course detract from the character of the locations. You are proposing a massive and disproportionate increase in their size. There is no evidence that there are any 'exceptional circumstances' to justify this use of Green Belt. Also, why is investment focussed in Hemel Hempstead 'supported by growth in Berkhamsted, Tring and the villages'? Does this imply that money generated by development in these locations will simply fund infrastructure development in Hemel?

<b>Spatial Strategy for Growth comment</b>	<p><b>Policy SP2 'Spatial Strategy for Growth', para 3c (Page 31)</b></p> <ul style="list-style-type: none"> <li>'Tring will accommodate growth of at least 2,700 new homes.' This is simply not sustainable, and likely in breach of the heart of NPPF which is 'sustainable development'. It represents at least a 55% increase in the size of Tring, by far the largest urban growth across Dacorum envisaged by the Plan. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by Government 'affordability' formula (evidenced in the September 2020 SW Herts Local Housing document). In addition, the Plan presents no evidence that development will enhance the town centre or strengthen its function as a key market town in the Borough.</li> </ul>

**Policy SP2 'Spatial Strategy for Growth', section 5.7 (Page 31)**

- We are not convinced by this point. The size of a village or town is not necessarily the only factor to be considered in determining how sensitive it is to substantial change. If other locations have poorer access and public transport, and/or a general lack of employment opportunities, supporting services or facilities, then arguably these are exactly the places that should see development and improvements.

<b>Spatial Strategy for Growth comment</b>	<p>As mentioned previously, the housing numbers for Dacorum are wrong and far in excess of what can be considered 'sustainable'.</p> <p>The spacial strategy for growth has many principles of which should be realised first, before the delivery of housing on this scale over this short period of time.</p> <p>The plan must take into account the fact that there must be significant progress towards the strategy's 'aspirations of 'providing employment opportunities' and 'supporting retail development', prior to any delivery of housing supply.</p> <p>It must be considered that the provisions of b.'No net loss of office floorspace from 2025 onwards' and d.'additional retail floorspace' should be continually reviewed and subject to change, on a yearly basis.</p> <p>The new growth and investment strategy does not seem to mention maximising the height restriction of buildings within larger towns, to boost the numbers of dwellings (with appropriate access to green spaces) so to remove the need for large scale use of greenbelt land.</p> <p>Development in the greenbelt will destroy ancient hedgrows &amp; heritage woodland, result in mass tree felling and a reduce green spaces. It will result in the destruction of heritage agricultural land, which will remove future generational job opportunities.</p>

It is agreeable that smaller villages should have limited housing growth, however there should be some importance placed on smaller villages being protected from 'windfall' applications which may seek to destroy the nature and character of these villages and alter their status into a town.

**Spatial Strategy for Growth comment**

Paragraph 5.5 states “The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.” This paragraph is in conflict with the proposed sites, in which for Berkhamsted are mainly valley wall and ridge-top sites situated at a distance (3-4km) from the town centre. These, by definition are located at a distance away from “passenger transport and other services, facilities and employment opportunities.” Indeed, despite promoting massive growth, the Draft Local Plan offers no proposals for any growth of employment opportunities in Berkhamsted, thus promoting what realistically will be increased high-carbon travel for work for london Commuters. It has also not considered the vast increase of Home Office Workers (Post Covid19) who need green spaces close to town vicinity for physical exercise. South Berkhamsted provides for this space admirably being close to the town. The 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but while paragraph 5.5 offers some protection for the ‘historic character’ of the town it offers no protection for the town’s setting.

I therefore cannot agree with Policy SP2.

<b>Spatial Strategy for Growth comment</b>	Along with many other people I have a lot of reservations about the above plan. It seems to have been extremely poorly thought out and has taken no account of environmental issues and the fact that greenbelt land is going to be built on. We don't even know how many houses are actually needed. Instead a higher proportion of the houses should be built on brownfield sites.

<b>Spatial Strategy for Growth comment</b>	<p>SUMMARY OF MAIN POINTS.</p> <p>1. The 2017 consultation has morphed into the present plan without any public consultation or participation, especially with regard to the formulation of the Development Strategy, preferred Option and Green Belt use. In the process more</p>

notice has been paid to the desires of the development industry and neighbouring councils than those of Dacorum's own residents.

2. The timing of the consultation is inappropriate-official policy is still being formulated and the effects of Brexit and Covid-19 are unknown.
3. The South East of England needs growth less than the rest of the country.
4. DBC should be taking more of a lead on behalf of its taxpayers and challenging central government more robustly ,emphasising the particular constraints of the Borough.
5. Research for the plan is considerable and for the most part objective but its transmission into policy is flawed. There is enough detailed material to avoid such a sterile, top-down approach.
6. The artificial formulation into a "Spatial Strategy" is needless, too complex and illogical and the most sustainable options and sites (e.g. Option B and a number of individual sites) have not been consistently selected.
7. Growth is being viewed as a means of improving an infrastructure which is already deficient. Growth will itself generate the need for more infrastructure.
- 8 Proper infrastructure planning should come first and should not be used as a mere means of mitigating the deleterious consequences of development.
9. The cumulative effects of development are still being largely overlooked.
10. Developers make large profits(e.g. Persimmon etc.)and should be required to contribute much more via CIL and Section 106 obligations to the provision of proper and appropriate infrastructure throughout the Borough.
11. Enforcement of planning conditions should be applied more rigorously than in the past.
12. If unavoidable, as the most sustainable site, North Hemel Hempstead should be utilised in its entirety at the outset, allowing it to benefit from proper infrastructure planning and delivery and economies of scale.
13. Bovingdon Airfield should be used as it is previously developed land and would relieve pressure on other Green Belt areas, notably Grade 2 land in Tring and Bovingdon itself and smaller sites in Berkhamsted.
14. Official Green Belt policy is being flouted. "Exceptional circumstances" mean exceptional circumstances. Alternative sites or solutions have not been sufficiently investigated or considered.
15. The particular topography of Berkhamsted is being totally ignored where obvious physical constraints mean sustainable transport proposals are unrealistic and unworkable. The centre of Tring is similarly constrained.
16. The conversion of offices to affordable housing should continue (albeit suitably controlled) in the light of changed working practices. Shortage of space in industrial areas, however, may necessitate a ban on such conversion.
17. Current WHHT plans to concentrate redevelopment on Watford are diametrically opposed to announced sustainability and connectivity policies and should be opposed.
18. DBC itself should adhere to its own policies( e.g. Trees & Woodlands) more strictly than hitherto.

19. Notwithstanding the declaration of a Climate Emergency there is little acknowledgement that any development is negative for the environment, biodiversity and sustainability. Offsetting damage in one area by a contribution to another does not constitute a positive outcome for the initial development. How is a 10% gain in biodiversity to be measured, let alone achieved?

20. The proposed infrastructure interventions, particularly in connection with transport and highways, are in the main cosmetic, minor, a ludicrously expensive waste of public money and fail to solve the major underlying issues.

**Spatial Strategy for Growth comment**

As for site selection, some more sustainable sites in Hemel Hempstead (Polehanger, Shendish, Fletcher Way), Bovingdon (Homefield, Duckhall, HH rd.) and Kings Langley (Hill Farm, Wayside) have been rejected while lower scoring sites on Green Belt land in Tring and Berkhamsted (Haslam, Blegberry, BFI, Rossway, Hanburys etc.) are being put forward. The “scoring” in the TFL survey has been ignored in order to make the results fit the desired, pre-conceived, schematic plan thereby undermining the claims at 7.3. Such an approach then impacts directly upon development in the Green Belt. Sufficient analysis has been carried out to produce a more logical result. What has been put forward does not look like the best available outcome. This top-down methodology, similar to that being employed by central government, will completely negate the fine sentiments of the Borough Vision. The guiding principle of sustainability has been clumsily applied, especially with regard to connectivity and in the light of the supposed official requirement to justify exceptional circumstances for Green Belt release, and insufficient attention has been given to particular topographical, physical and demographic constraints.

We therefore question the assertion at 6.2 of the Development Strategy Paper - “Our preferred approach to the overall scale of growth and its broad spatial distribution is logical and justified.”

<b>Spatial Strategy for Growth comment</b>	<p>LOCATION OF DEVELOPMENT.</p> <p>As mentioned above much research has been put into the plan and yet the result is an illogical denial of much of that work. The production of the Spatial Strategy ignores many of the appraisal findings and then shoe-horns the eclectic results into a needlessly complex schematic format. The support for option C1 in preference to option B defies the statements that Hemel Hempstead is the most sustainable location for development.(23.21 et al.)The council defends its decision at Int.SA p.43-“the council considers that significant growth is already proposed for Hemel Hempstead. “</p> <p>That justification is arbitrary, unscientific, fails to acknowledge that" Dacorum is uniquely constrained”(1.35) and runs counter to the scoring of the appraisals, especially with regard to climate change (Int.SA Table 5-1 p.29)supposedly the object of a 2019 declaration of emergency.</p> <p>On the matter of individual site selection, the reasons for selecting some sites over others and for rejecting some sites altogether is not transparent or consistent with the appraisals which have been carried out. Nor does the selection pay proper regard to the official requirement for Green Belt to be released only when other options have been exhausted and then only in “exceptional circumstances.” (see in more detail below.)</p> <p>Bovingdon, Kings Langley and to a relative extent Hemel Hempstead appear to have escaped the full brunt of new Government calculations at the expense of Tring and Berkhamsted. The justification for this seems to lie in a particular interpretation of 'sustainable development' and what may well prove to be a questionable attempt to cut emissions. Are Hemel Hempstead and Kings Langley not more sustainable on grounds of connectivity and less constrained by Green Belt and other topological factors than Berkhamsted and Tring?</p> <p>Indeed the Sustainability Appraisal indicates at p.43 “Significant growth is planned for Berkhamsted and Tring. This growth is necessary to consolidate these towns’ respective roles as the most sustainable locations outside of Hemel Hempstead ensuring the necessary infrastructure is in place to support existing and future communities.”</p>

This statement begs at least 4 questions. Why does their role require consolidation? Do not their physical constraints (congestion, Green Belt, topography) argue against their level of “sustainability”? Is the Borough admitting that their existing infrastructure is demonstrably inadequate? Is further growth requiring further infrastructure being imposed there as the solution to present infrastructure inadequacies? (see also above. )

” Developments acknowledge local character “ says 2.2. In fact, the local character of Tring and Berkhamsted will be severely compromised by the plan.SA D 53 admits that the houses proposed on greenfield sites in Berkhamsted “could have” negative impacts for the landscape. How is this consistent with SP11? Studies indicate that 1750 out of a total of 1876 houses in Berkhamsted will be built on Green Belt land and 2250 out of 2274 in Tring. Such overwhelming proportions must surely contravene official policy, as noted below.

The regeneration and transformation of Hemel Hempstead features prominently in the plan’s priorities.(2.1.) The plan stresses repeatedly that Hemel Hempstead is the most sustainable location (SP3.23.21.Int SA p.47 etc.) Kings Langley looks sustainable (23.166) and Bovingdon less so but not as “remote” (Int.SA C12.) from the Hemel railway/transport hub as some parts of HH itself. The logic of withholding part of the North Hemel site which with regard to climate change and employment is the most sustainable of all completely defeats us when set against the topography and settings and other constraints of the proposed developments in Berkhamsted and Tring. The Development Strategy Paper of November 2020 lists the benefits of North Hemel as a large scale development(4.44 p.25). Hemel Hempstead also possesses more open land within the urban area than any of the other settlements.

2.20 stresses how important it is to make “effective use ”of urban land; indeed Government policy requires it.(2.23.)

With regard to water supplies Int.SA B p.45 indicates ”Focusing growth proposals on Hemel Hempstead could provide a greater number of unrestricted opportunities utilising the capacity of the present system and relieving pressure on Berkhamsted.” Indeed the plan declares that it is “likely that (the water situation in Berkhamsted) will require strategic intervention from 2031 onwards to accommodate the scale of growth within the Berkhamsted STW catchment.”

We would certainly agree that Hemel Hempstead requires further regeneration but think that should also be achieved by more town centre, higher-rise residential development to enliven the drab, post-war western parts of the main shopping area. Such an expansion of residential character should enhance the leisure economy and provide many affordable homes , particularly when conventional retail business looks wholly uncertain in the wake of increased internet shopping(v.9.16). If Hemel Hempstead, as the most sustainable location, is to be the main beneficiary of Borough funds, as it has certainly been in the past, the town should bear a commensurate burden in providing new affordable homes. House prices there are already the most affordable in the Borough (Int.SA B TableB-11-2) . The very principle of connectivity on which site allocations are supposedly based also supports this emphasis. Furthermore Hemel Hempstead currently possesses a surplus of school places (SA B 13.2.4 ) and, unlike Tring and Berkhamsted, a significant proportion of the proposed sites lie within the existing urban area.(23.21). Indeed Jarman Park even offers a brownfield site for housing which, contrary to the hierarchy of sites, is being ignored for such a purpose. The plan wrongly intends to retain the vacant land(9.16) on what is hardly an out of town site.

If such a site is not used or development discouraged as per Int SA B p.80 - and current retail patterns argue that it will not be required - the council can hardly argue for any Green Belt release under “exceptional circumstances”.

A full immediate development of all the North Hemel Hempstead site would allow proper and adequate infrastructure to be put in place from the beginning, provide economies of scale and avoid the pitfalls of a series of smaller sites on Green Belt land, as proposed in Berkhamsted, where the infrastructure required cumulatively will not be provided by any one site and therefore will prove inadequate (v.Int SA B D-16). Indeed the deficiencies of Berkhamsted are well articulated; primary and secondary schools (23.102 ), open leisure space (Int SA B 60,63 ), sports facilities (22.44 implies), service provision, water supply (DM 33,35.2.c) and treatment (SA19) (SA B 10.2.5). Moreover the topography of the town militates against the use of more sustainable forms of transport.(v.SA p.22) Tring is similarly handicapped by a shortage of school places and plans there will also require the provision of 2 primary and 1 secondary school.(23.147.)

The plan still insists that growth will be infrastructure-led in Berkhamsted ( 23.102) and Tring (23.139). We would contend the opposite, as mentioned above.

<b>Spatial Strategy for Growth comment</b>	Paragraph 5.5 states “The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.”

This is absolutely not the case! The proposed sites for Berkhamsted are mainly valley wall and ridge-top sites situated at a distance (3-4km) from the town centre. These, by definition are located at a distance away from “passenger transport and other services, facilities and employment opportunities.”

Despite promoting massive growth, the Draft Local Plan offers no proposals for any growth of employment opportunities in Berkhamsted, thus promoting what realistically will be increased high-carbon travel for work. The 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but while paragraph 5.5 offers some protection for the ‘historic character’ of the town it offers no protection for the town’s setting.

I do not agree with Policy SP2. The headline target of ‘A minimum of 16,596 homes’ is simply wrong. I understand that the figure is based on the Government’s method of calculating housing ‘need’ for an area, which is/was 922dpa (potentially usurped by 1023dpa), but at this point there is no need to argue the rights and wrongs of the algorithm employed by Government (that should have been done within DBC’s evidence base – see section 26), because it is not a strict target set by Government. These numbers CANNOT be used to take land out of Green Belt – they do not represent “exceptional circumstance”.

Government has made it crystal clear that the numbers are a starting point only and it is up to Local Authorities to know if local constraints such as Green Belt means that the numbers cannot be delivered.

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, I fail to understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified”. DBC have seem to mis-understood their responsibilities. Paragraph 136 of the NPPF is clear “Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified’, and not the other way round. Paragraph 19.6 of the Plan does say “In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.’ But, beyond that statement there is absolutely no justification offered, except the Government ‘target’ that isn’t actually a ‘target’. Readers of paragraphs 19.6 and 19.7 in the ‘Managing Development in the Countryside’ section are directed to the Sustainable Development Strategy chapter of the plan for justification, but I am at a loss to see anything in paragraphs 4.1, 4.2, 4.3 or Policy SP1 that could remotely be described as “fully evidenced and justified” as required by the NPPF. Indeed 19.7 also specifically states DBC have “identified those areas on the edge of the main settlements where exceptional circumstances exist”, thus inferring that exceptional circumstance exist for the settlements protected by the specific Green Belt releases. These “exceptional circumstances” are certainly not evidenced.

If the SP2 target is allowed to stand, latest ONS statistics confirm that DBC are planning for a massive oversupply compared to local need at the expense of valuable and irreplaceable Green Belt land, potentially as much as 850 hectares. The 2018-based household projections suggest an annual household need figure of 341 for Dacorum, while The Development Strategy Background Topic Paper identifies 10,954 (609dpa) urban housing supply over the Plan period.

So, using DBCs own figures for identified housing supply, developing in urban areas only will produce a 78.6% uplift in housing supply above the ONS identified need for Dacorum.

There are clearly no exceptional circumstances with regards to housing supply in Dacorum. Indeed, if we look further at the DBC's figures it is noted that DBC have included just 2,408 windfalls (133.8dpa) of the total 10,954 urban homes (22%), but over the last 14 years, the Urban Capacity Study shows windfalls have come on-line at the rate of 306.2dpa (4,287 total). DBC have effectively reduced their windfall expectation by a massive 56%. To put it plainly if windfalls continue at the same rate, urban capacity will produce a total of 14,059 homes or an annual rate of 781.1dpa. BRAG accepts that a cautious approach by DBC on windfalls may be prudent in normal circumstances and that past completions may not be repeated at the same rate, but we are entering a postpandemic time with altered working practices that will surely lead to more change of use developments. Reducing windfall projects to the level that DBC has is impossible to reconcile with the facts and clearly shows that the destruction of 850 hectares of Green Belt is totally unjustified. Statement 2 in SP2 starts

“The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring”. BRAG is concerned about this wording as in its current form it suggests that ‘investment’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring. Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum's coffers for funding investment elsewhere. With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong. Statement 3 in SP2 states “The majority of new growth and investment will be concentrated in sustainable locations” and continues “Berkhamsted will accommodate growth of at least 2,200 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities.” However, the vast majority of this growth is to be sited on valley side and ridge-top Green Belt land sited at a distance (3-4km) from the town centre and railway station, with significant gradients (some in excess of any gradient on the Tour de France!) that will only promote high-carbon forms of travel rather than the stated preference of walking and cycling. Indeed paragraph 23.119 accepts that “congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.” And in paragraph 23.120 goes on to concede that “There are few opportunities for new road capacity in the town.”, while offering one of two solutions “The careful location of new development and promoting opportunities for sustainable travel, will in part help tackle a number of parking and traffic issues.” If it was not so destructive the wording “careful location” would be comic. I repeat that these sites are located at a distance (3-4km) on valley side with very steep gradients and ridge tops. They can only be regarded as carefully selected locations if the express aim was to deter walking and cycling. The second solution offered comes in the form of the ‘Berkhamsted and Tring Sustainable Transport Strategy’ (Paragraph 23.122) but again the report has absolutely no ‘Sustainability’ credentials. Rather it simply concedes defeat for Berkhamsted by merely outlining junction enhancements at relatively minor side roads and crossings within the urban area and new/ widened footpaths along

Shootersway. I have already addressed the flawed numbers proposed by DBC as a whole across the Borough, but I specifically object to the target of 'at least 2,200 new homes' for Berkhamsted and Northchurch. The adopted Core Strategy identified growth of 1,180 homes over that plan's 25-year lifespan, which equates to 47.2dpa. In reality, Berkhamsted has contributed to the Dacorum's new housing stock at a rate of 61.9dpa – in other words completions have out-performed the target by 31.2% in Berkhamsted while new housing stock in Hemel Hempstead has fallen behind the town's target by 9.3%. Much of this can be explained by developers' demand to build in Berkhamsted rather than satisfying need, i.e. Berkhamsted growth is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process. BRAG contests that given its current size and topography, Berkhamsted has reached its limits of capacity. As conceded by DBC, the town centre already suffers from congestion and poor air quality (data for Lower Kings Road shows the level of NO2 in some periods exceed the 40micrograms/cm3 limit). Building more edge of town developments on valley side/ridge-top Green Belt locations at a distance (3-4km) from the town centre and railway station to satisfy flawed housing targets is not sustainable in any sense of the word. These plans will not enhance the quality of life for residents current or future.

**Spatial Strategy for Growth comment** The growth for Berkhamsted and Northchurch would increase dwellings by 24%, the urban footprint by 31% and the number of daily car movements by 15,400. 77% of this development would be on green belt. This is totally unacceptable and WILL fundamentally change the town, destroying 850 hectares of green belt.

<b>Spatial Strategy for Growth comment</b>	<p>It is unclear from the document how such large development growth in Berkhamsted and Tring 'strengthens' these market towns. The towns are not designed for the sort of growth indicated - single road centres, narrow roads, existing congestion, insufficient schooling. All of these factors mean additional housing only weakens the towns. These are strong communities but are already not coping with the additional traffic, requirements for GPs, schooling and other infrastructure.</p> <p>The number of houses required appears to exceed the ONS forecast numbers. Why is this? I understand the more recent ONS statistics would almost halve the the numbers Dacorum would plan for. this would reduce the impact significantly on communities and Green Belt land. If not already, Dacorum should be challenging the targets for housing development and revisiting a plan when that challenge has been cleared up.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The Strategy assumes that large areas of Green Belt land east of Hemel Hempstead and in St Albans District will be allocated for residential and employment development as part of the Hemel Garden Communities project. The St Albans Submission Local Plan has recently been withdrawn from Examination as the Inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead (5,500dw) in Dacorum must be called into question if there is any doubt about the future viability of the Garden Communities project as a whole.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Paragraph 5.5 relating to maximising urban capacity but not urban intensification is nonsensical. The sites proposed are some 3-4km from the town and are therefore not close to “passenger transport and other services, facilities and employment opportunities.” and this will increase high carbon transport to work, there are no plans for employment opportunities outlined.</p> <p>The minimum required number of houses outlined is fundamentally flawed in its 'calculation' as is the belief that it is okay to use greenbelt land for such growth. The number produced by the algorithm are not a strict target to be reached come hell or high water. These numbers are a starting point and it is up to Local Authorities to know if these numbers cannot be reached due to constraints such as greenbelt. Government response to recent white paper consultations (published December 2020, so post this Growth Plan) with reference to greenbelt and protected landscapes reads: We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”</p> <p>5 The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”</p> <p>6 And further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.”</p> <p>Congestion within Berkhamsted is already unbearable as conceded in paragraph 23.119, the mitigation being that “The careful location of new development and promoting opportunities for sustainable travel, will in part help tackle a number</p>

of parking and traffic issues.”. The sites proposed are not carefully located and will NOT help tackle parking and traffic issues (all locations will inevitably increase car usage within Berkhamsted town centre).

Statement 3 alludes to new investment in sports facilities and yet nowhere is this justified with plans for any. It is very difficult for children within Berkhamsted to get access to the many extra curricula activities that others in other areas take for granted. Swimming lessons, football are just two that have huge long waiting lists due to a lack of provision and nowhere are these addressed.

The plans as outlined will not enhance the quality of life for current residents and will ensure it becomes a less desirable place to live for potential future residents. Please DBC leave a legacy to be proud of, many of this supporting this will be gone in a matter of years, how will future generations remember them?

How will you ensure new and genuinely affordable homes?  
 Growth in Berkhamsted and Tring will certainly detract from the character of these towns when they are so full already in the town centres. Berkhamsteads population will grow from 18500 to about 24000 if this goes ahead which is too much but Tring will be set to grow from 12000 to about 22000 which is almost doubling and is way too much housing. There is only one quite small street in the centre. This is too much growth. There would need to be lots more health centres and schools to accomodate this and the whole town would completely change for ever  
 I do not think we would not a lot of extra retail areas in Dacorum because there is so much shopping online nowadays

<b>Spatial Strategy for Growth comment</b>	<p>Why do the towns of Berkhamsted and Tring need need to play a greater role in delivering growth to complement Hemel Hempstead? This encourages more traffic. The towns are very different too, Berkhamsted's topography, its deep valley and steep sides, already causes significant challenges regarding its growth, traffic and pollution levels.</p> <p>Planning to put 60 houses in Lock Field is an example of a flawed spatial strategy for growth. How do 60 houses fit into a semi rural location like NewRoad in Northchurch? It does not reflect Northchurch's role and character and it is on Green Belt with beautiful views over the Chilterns and a gateway to National Trust forest.</p>

<b>Spatial Strategy for Growth comment</b>	The proposed level of housing is based on outdated 2014 population and housing data and overstates the housing need by around 50%, when compared to using more recent 2018 data. The proposed strategy prioritises meeting an excessive level of housing need over protection of the Green Belt on the assumption that this is required by a national policy. I don't believe these are exceptional circumstances where we need to have been belt released. The housing proposed to the north of Woodhall Farm, all be it protected until 2038, recently flooded, so I would like to see if anyone has carried out a recent flood risk survey on the farm land. With the covid-19 epidemic, it may also release more brownfield sites for development, as-well-as the Windfall completions that will occur from recently expanded permitted development rights.

<b>Spatial Strategy for Growth comment</b>	In terms of 5.2, I would expect my Council to push back on any government strategy that impacts the overall nature of our beautiful Market towns. Furthermore, the fifth bullet point within 5.2 heavily implies that you expect both Berkhamsted and Tring to become more like Hemel Hempstead in terms of look and feel. I would say that your "spatial strategy for growth" shows no concern for the future of the Market towns your oversee. It is clear you are adopting a smash and grab policy to minimise the thought you have to put into it. In addition, I can see no way that this plan minimises the impact on Green Belt or AONB. Re 5.5, I think you need to look again at your plan for Tring. The vast majority of the new builds will be on Green Belt and open farm land. The words you use throughout your document are not supported by the reality of what you say on development. Point 5.7 is absolute rubbish. Tring, in particular, will be vastly changed

as a result of your plan. There is no way that the existing public transport in Tring will be up to the job, especially if your plan is to bring in people who have no transport of their own.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and

infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamsted, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>The driver for growth envisaged in the plan is the requirement to provide more housing. It is assumed that with more people there will be more employment. This does not necessarily follow. In fact the driver for growth is more likely to be employment-led not the arbitrary decision to build more houses.</p> <p>Employment patterns are bound to change following the pandemic and the demonstration that remote working for at least part of the time is feasible and desirable. The consequence of this is likely to be that if people can work remotely they will not need to live in expensive areas near to London and may move to cheaper areas. Hence the demand for extra housing may not materialise or may not do so to the extent envisaged.</p> <p>If population growth is not as great as envisaged it follows that the demand for retail space will not be so great. This coupled with the acceleration of the trend to online shopping may lead to a reduction of demand for retail space.</p> <p>The pandemic will lead to changes we cannot envisage. The most sustainable development for the foreseeable future will be based on flexibility and the adaptation of the current building stock, particularly current retail and office premises, to residential.</p> <p>The pressure on the AONB, particularly Ashridge forest, as a result of the increase in the number of people visiting the area during the pandemic is a demonstration of damage that can be caused by overuse of important and beautiful natural landscape. Encouraging the population of Dacorum to grow by 20% by building 17,000 new homes will put unsustainable additional pressure on Ashridge and the surrounding AONB.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The number of new homes envisaged by the spacial strategy should be halved in order for this plan to be sustainable - otherwise it will simply add to the global climate and ecological crisis. Villages such as the historic Kings Langley - which was the capital of England during the late 1370s - should be cherished for what they are: villages, where man and nature are in close contact. With reference to Kings Langley in particular, the idea that a village which already had more than</p>

5,000 inhabitants should accommodate an additional 275 homes (which would add approximately another 1,000 to the population) is wrong-headed and shocking. Kings Langley needs to be protected against further development, otherwise it will lose its character as a village and will come ever closer to being subsumed by Hemel Hempstead in one direction and Watford in the other direction. The proposed development at Rectory Farm is far too big and overpowering for a village such as Kings Langley and should be rejected even at this late stage. New homes should only be built on brown field sites in densely populated areas.

**Spatial Strategy for Growth comment** DBC has incorrectly taken the housing numbers as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	The spatial strategy for growth exhibits the same old thinking based on the tired and erroneous idea that growth is good. Climate change and loss of biodiversity show us that the continued obsession with growth is not a good thing in fact it is a driver of ecocide. Therefore, I would urge Dacorum to halve the number of new homes envisaged in this plan and plead that all villages in green belt areas (including Kings Langley) are protected against large scale development. The proposal to build at least 275 new homes in Kings Langley would, if enacted, totally change the character of Kings Langley as an historic village - from where England was governed during the late 1340s. I would urge Dacorum to hugely scale back its overall housing numbers and in particular scale back the number of new homes that are proposed for Kings Langley. The building of 275 new homes in Kings Langley would add around 1,000 people to the total population of this historic place and fatally undermine its current character: which is that of an historic village.

<b>Spatial Strategy for Growth comment</b>	Spacial Equality in Dacorum. The percentage increases in housing stock across the Borough is biased very heavily on Tring, there being proposed an increase of approximately 50% increase, compared with Berkhamsted, for instance, at less than half of this.

<b>Spatial Strategy for Growth comment</b>	<p>Paragraph 5.5 states <i>“The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.”</i></p> <p>This paragraph makes no sense in the context of the actual Plan and proposed sites, which for Berkhamsted are mainly valley wall and ridge-top sites situated at a distance (3-4km) from the town centre. These, by definition are located at a distance away from <i>“passenger transport and other services, facilities and employment opportunities.”</i></p> <p>Indeed, despite promoting massive growth, the Draft Local Plan offers no proposals for any growth of employment opportunities in Berkhamsted, thus promoting what realistically will be increased high-carbon travel for work.</p> <p>The 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted <i>“has to be balanced against the need to protect the town’s historic character and setting”</i>, but while paragraph 5.5 offers some protection for the ‘historic character’ of the town it offers no protection for the town’s setting.</p> <p>BRAG does not agree with Policy SP2. The headline target of ‘A minimum of 16,596 homes’ is simply wrong.</p> <p>BRAG understands that the figure is based on the Government’s method of calculating housing ‘need’ for an area, which is/was 922dpa (potentially usurped by 1023dpa), but at this point there is no need to argue the rights and wrongs of the algorithm employed by Government (that should have been done within DBC’s evidence base – see section 26), because it is not a strict target set by Government. These numbers CANNOT be used to take land out of Green Belt – they do not represent <i>“exceptional circumstance”</i>.</p> <p>Government has made it crystal clear that the numbers are a starting point only and it is up to Local Authorities to know if local constraints such as Green Belt means that the numbers cannot be delivered.</p> <p>There are many examples that could be used, but BRAG has limited itself to highlighting just six examples of guidance issued by Government that shows the policy on Green Belt protection is clear and unambiguous:</p>

- The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests.
- In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming *“demand for housing alone will not change Green Belt boundaries”*.
- Paragraph 9 of the 2017 DCLG *“Planning for the right homes in the right places: consultation proposals”* states that *“Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.”*
- On December 16th 2020 the Government published a response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states *“We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”*
- The same response goes on to state *“We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”*
- And further clarifies *“Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.”*

DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that *“Any option below the standard methodology would have to be robustly justified”* (paragraph 5.8 of The Development Strategy Background Topic Paper).

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, BRAG fails to understand why DBC Planning felt unable or unwilling to make a case that can be *“robustly justified”*.

DBC have seem to mis-understood their responsibilities. Paragraph 136 of the NPPF is clear *“Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified”*, and not the other way round.

Paragraph 19.6 of the Plan does say *“In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.* But, beyond that statement there is absolutely no justification offered, except the Government ‘target’ that isn’t actually a ‘target’.

Readers of paragraphs 19.6 and 19.7 in the ‘Managing Development in the Countryside’ section are directed to the Sustainable Development Strategy chapter of the plan for justification, but BRAG is at a loss to see anything in paragraphs 4.1, 4.2, 4.3 or Policy SP1 that could remotely be described as “*fully evidenced and justified*” as required by the NPPF.

Indeed 19.7 also specifically states DBC have “*identified those areas on the edge of the main settlements where exceptional circumstances exist*”, thus inferring that exceptional circumstances exist for the settlements protected by the specific Green Belt releases. *These “exceptional circumstances”* are certainly not evidenced.

If the SP2 target is allowed to stand, latest ONS statistics confirm that DBC are planning for a massive oversupply compared to local need at the expense of valuable and irreplaceable Green Belt land, potentially as much as 850 hectares.

The 2018-based household projections suggest an annual household need figure of 341 for Dacorum, while The Development Strategy Background Topic Paper identifies 10,954 (609dpa) urban housing supply over the Plan period.

So, using DBCs own figures for identified housing supply, developing in urban areas only will produce a 78.6% uplift in housing supply above the ONS identified need for Dacorum. There are clearly no exceptional circumstances with regards to housing supply in Dacorum.

Indeed, if we look further at the DBC’s figures it is noted that DBC have included just 2,408 windfalls (133.8dpa) of the total 10,954 urban homes (22%), but over the last 14 years, the Urban Capacity Study shows windfalls have come on-line at the rate of 306.2dpa (4,287 total). DBC have effectively reduced their windfall expectation by a massive 56%. To put it plainly if windfalls continue at the same rate, urban capacity will produce a total of 14,059 homes or an annual rate of 781.1dpa.

BRAG accepts that a cautious approach by DBC on windfalls may be prudent in normal circumstances and that past completions may not be repeated at the same rate, but we are entering a post-pandemic time with altered working practices that will surely lead to more change of use developments. Reducing windfall projects to the level that DBC has is impossible to reconcile with the facts and clearly shows that the destruction of 850 hectares of Green Belt is totally unjustified.

Statement 2 in SP2 starts “*The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring*”. BRAG is concerned about this wording as in its current form it suggests that ‘*investment*’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring.

Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum’s coffers for funding investment elsewhere.

With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong.

Statement 3 in SP2 states “*The majority of new growth and investment will be concentrated in sustainable locations*” and continues “*Berkhamsted will accommodate growth of at least 2,200 new homes. Development will enhance the town*

*centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities.”*

However, the vast majority of this growth is to be sited on valley side and ridge-top Green Belt land sited at a distance (3-4km) from the town centre and railway station, with significant gradients (some in excess of any gradient on the Tour de France!) that will only promote high-carbon forms of travel rather than the stated preference of walking and cycling.

Indeed paragraph 23.119 accepts that *“congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.”* And in paragraph 23.120 goes on to concede that *“There are few opportunities for new road capacity in the town.”*, while offering one of two solutions *“The careful location of new development and promoting opportunities for sustainable travel, will in part help tackle a number of parking and traffic issues.”*

If it was not so destructive the wording *“careful location”* would be comic. BRAG repeats that these sites are located at a distance (3-4km) on valley side with very steep gradients and ridge tops. They can only be regarded as carefully selected locations if the express aim was to deter walking and cycling.

The second solution offered comes in the form of the ‘Berkhamsted and Tring Sustainable Transport Strategy’ (Paragraph 23.122) but again the report has absolutely no ‘Sustainability’ credentials. Rather it simply concedes defeat for Berkhamsted by merely outlining junction enhancements at relatively minor side roads and crossings within the urban area and new/widened footpaths along Shootersway.

BRAG has already addressed the flawed numbers proposed by DBC as a whole across the Borough, but we specifically object to the target of *‘at least 2,200 new homes’* for Berkhamsted and Northchurch.

The adopted Core Strategy identified growth of 1,180 homes over that plan’s 25-year lifespan, which equates to 47.2dpa. In reality, Berkhamsted has contributed to the Dacorum’s new housing stock at a rate of 61.9dpa – in other words completions have out-performed the target by 31.2% in Berkhamsted while new housing stock in Hemel Hempstead has fallen behind the town’s target by 9.3%.

Much of this can be explained by developers’ demand to build in Berkhamsted rather than satisfying need, i.e. Berkhamsted growth is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process.

BRAG contests that given its current size and topography, Berkhamsted has reached its limits of capacity. As conceded by DBC, the town centre already suffers from congestion and poor air quality (data for Lower Kings Road shows the level of NO<sub>2</sub> in some periods exceed the 40micrograms/cm<sup>3</sup> limit).

Building more edge of town developments on valley side/ridge-top Green Belt locations at a distance (3-4km) from the town centre and railway station to satisfy flawed housing targets is not sustainable in any sense of the word. These plans will not enhance the quality of life for residents current or future.

<b>Spatial Strategy for Growth comment</b>	<p>A much more creative look needs to be taken in the search for deveoped land that can be repurposed for housing . This strategy does not go far enough .</p> <p>Turning the market towns of Berkhamsted and Tring into an area that will become in time Greater Hemel Hempstead is a terrible folly .</p> <p>para 5.5 .Most of the Berkhamsted sites along Shootersway are clearly not located close to transport,facilties , services and employment .There are other examples, but it shows again total disconnect between Strategic words and site plans .</p>

<b>Spatial Strategy for Growth comment</b>	I dont agree that the plan seeks out opportunities to maximise the amount of development on previously developed land within exisiting urban areas. The proposed inclusion of geenbelt land in Berkhamsted Northchurch and Tring goes against this principle. The plan changes the role and character of the villages, one of the key attributes of Northchurch and Tring is their semi rural aspect with rich environmental settings of AONB and Ashridge estate, the plan will diminish their character. The plan does not minimise the requirement for development on Green Belt land the impact on the Chilterns AONB and protected sites. Development of site 18 will maximise the impact on Green Belt, impact on AONB and disturb Grims ditch protected historic environment.

<b>Spatial Strategy for Growth comment</b>	<p>By referring to targets for housing growth, DBC seems to imply only the numbers matter and neglects the smaller developments in less sustainable locations which seem to fall outside the strategic plan.</p> <p>Better would be precise definition of what is sustainable in wider terms. A huge housing development along the Gade valley is not sustainable in landscape, environment terms.</p> <p>Small developments in a patchwork on the southern side of Berkhamsted impact less on the green agricultural buffer between Berkhamsted and Bourne End and DBC planners have more chance of imposing conditions on small developers than on big concerns like Barratt Homes, Wimpey, Bovis or Thakeham who have their own agenda.</p> <p>Providing growth for transformation for Hemel Hempstead seems to mean urban sprawl and obliteration of its New Town infrastructure. There is no evidence of how important market town or larger villages can balance growth to complement delivery of anything but sprawl because infrastructure is predicated on future growth rather than existing need.</p>

<b>Spatial Strategy for Growth comment</b>	<p>This Local Plan is a shocking environmental disaster, wrecking our local Green belt with unforgiveable, massive expansions of Hemel, mainly along the beautiful Gade Valley, ditto in Tring etc. Proposing 16,899 new housing units in Dacorum means a population increase of some 50,000 people, and years of construction dirt, pollution and traffic for existing residents. All the plans's claims of Sustainability, Environment Preservation and similar worthy terms, are in reality 1984-style untruths, grossly misleading, and in most case the opposite. Whilst infilling and redevelopment within town boundaries is acceptable, this proposed wholesale destruction of huge swathes of prime countryside/farm land is appalling. Which Hemel residents have voted in favour of such huge overdevelopment? Where will adequate water supplies be sourced from, without damaging precious local chalk streams. What have Hemel agreed to host massive St Albans District Council housing developments right beside Hemel. Increased traffic congestion, much greater air pollution, and lack of adequate services (schools , doctors, etc will result.</p> <p>.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The objective is in "providing growth in the villages that reflects their role and character." The same considerations should apply to the towns of Tring and Berkhamsted. There is no reason why they should bear an inordinate share of the development - nobody wants new housing developments foisted on them, the burden should be shared equally across the borough Infrastructure in terms of schools and roads etc will have to be built wherever the new housing is built - if it can be provided in Tring and Berkhamsted, it can be provided in Bovingdon, Kings Langley and Markyate, which it is proposed will suffer only a couple of hundred houses each.</p> <p>No justification is given for rejecting large-scale development outside the existing towns and large villages - there is plenty of space in Dacorum for new towns and villages.</p> <p>A major issue is the destruction of Green Belt around Tring, Hemel Hempstead and Berkhamsted. You do not "manage landscape and Green Belt impacts" by destroying them. Green Belt should be sacrosanct, otherwise what is the point of having it at all. If you can concrete it over in Tring, Berkhamsted and Hemel, why not in the rest of Hertfordshire?</p>

<b>Spatial Strategy for Growth comment</b>	<p>GREEN BELT LAND SHOULD NEVER BE RELEASED FOR DEVELOPMENT. WE NEED TO SEE GREENERY!</p> <p>As per your own document, Bovingdon is already constrained with regard to infrastructure, the doctors' surgeries are full, the local school is full, there is no car park for the High Street and we have an ever-increasing number of vehicles using our village (eg due to the Open Market, Dancing on Ice, film-making etc).</p> <p>Increasing the number of homes built in Bovingdon must not be used as an argument for improving the infrastructure. The high street is already gridlocked on many occasions, and Green Lane (in particular) is fast becoming a single-lane road at the junction of the High Street. Large builders merchant lorries are increasingly using Green Lane to get to EH Smith.</p> <p>240 new homes in Bovingdon means an extra 240+ cars on the road. Expecting people to ditch their cars is a fools errand.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The <b>proposed number of homes to be built across Dacorum and the total scale of the development are unacceptable</b>. The term '<i>our requirement</i>' is also inappropriate. The local authority has the discretion to disregard and downscale government targets for housing development that relies on release of Green Belt Land and indeed, the Council has not met the necessary requirement to prove that exceptional circumstances apply in order to release the stated quantity of Green Belt land for development. I have supplied evidence that actual need is approximately half that stated and so I would support the delivery across Dacorum of 8,300 dwellings plus additional small scale windfalls and no more at present. <b><i>The Local Plan should be withdrawn, revised based on reduced housing estimates and resubmitted with the majority (approx. 83%) of Green Belt land sites removed.</i></b></p> <p>The policy of "Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough..." contradicts one of the fundamental principles of local government democracy, namely to represent the views of constituents. Whether or not a settlement chooses to make a significant contribution to the Strategy for Growth is a matter for that community and they should not be bullied, coerced or deceived in that respect. <b>I regard the proposed number of dwellings in and around 'Berkhamsted' to be excessive and unnecessary</b>. Allowing for an 83% reduction in Green Belt land required based on the proposed dataset revision and adding together the balance and non-Green Belt site housing totals would mean that a fair contribution from the 'Berkhamsted' area is 272 homes</p>

$((1750*0.17)+40+86=424)$ . I support a target for Berkhamsted of approximately 424 homes plus windfalls over the duration of the Strategic Plan.

If the above actions are taken then I would have faith in the value of the very important section 5.3 statement “Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites”;

The principle should include “.....and in particular, *decreasing unmet need for social housing* and increasing the number of new and genuinely affordable homes in the Borough”. There should be increased focus on producing a larger proportion of 1 to 3 bedroom homes within housing developments to achieve this.

Classification of a site as ‘urban’ prejudices the outcome of the consultation because it leads residents to believe that the site has already been built upon, or is less attractive, or is generally less worth preserving than a non-urban site. Throughout the Local Plan there are references to ‘urban’ areas and this includes sites on the periphery of towns and villages that are currently farmland, or open greenspace surrounded by hedges and/or bordered by lanes. Public perceptions of such sites are that they are ‘rural’ or ‘semi-rural’ not ‘urban’ – and this is certainly the case in Northchurch and Dudswell and for me personally. In the section named “How **not** to use the Rural and Urban Classification” of the Crown Publication “Rural and Urban Classification Guide 2004”, users (planners) are cautioned against applying a classification term that does not agree with what local residents think about their area. *The Local Plan should be withdrawn and resubmitted with peripheral sites of settlements re-classified in accordance with public perception as semi-rural or rural.*

Having established this principle, encouraging *substantial* increases in heights and densities in genuine brownfield urban sites is a concern. The tower blocks in Hemel Hempstead are still an eyesore despite recent attempts to make them more attractive and given the clear added dangers of high rise living that are now well known following the Grenfell disaster, I wish to see **a maximum height of buildings as being no more than five storeys** and then in incremental steps from the edge of the development so as not to dominate surrounding housing. In areas the public regard as semi-rural, which the Local Plan categorises as urban, I would want to see no more than three storey buildings and then only when there is existing screening by mature trees or natural land contours. I have no objection to high density in principle where hedgerows are preserved with 10m -15m undeveloped adjacent buffer zones if it does not impact on vulnerable species, wildlife sites, wildlife corridors, AONB’s, other special sites or the beautiful views across and down the valley.

Regarding net loss of office space, surely it is better to convert to housing than remain empty if there is sustained insufficient demand? Suggest amending statement to “No *permanent* loss of office floorspace from 2025 onwards *unless there is a sustained reduction in demand.*”

I support the addition of future windfalls to the Plan targets. I believe the actual number is likely to be significantly higher than that stated due to the predictable increase in the rate of release of small business premises that fail because of Covid.

**5.4 & 6 No Green Belt land should be automatically released or de-designated in anticipation of future needs beyond the duration of this plan other than sites expressly declared and approved in this 2021-38 Local Plan**

**process.** DBC’s Green Belt Review shows an alarming number of sites adjacent to those in the Local Plan that will also be released if those in the current Local Plan are approved for development. This is tantamount to planning for additional homes by stealth and does not meet the standards of transparency expected by constituents. This secondary release policy should be explicitly stated in the Local Plan and all such additional sites clearly shown in the Plan. Population growth and maintenance of predicted levels of need are not inevitable. There are predictions that global population levels will naturally fall in 20 to 30 years’ time and that this phenomenon is expected to be particularly strong in developed nations, as it is currently in Japan.

**5.5** In the opinion of my family members and neighbours the growth strategy for Berkhamsted already pursues an urban intensification agenda and does detract from the character of market town and village locations. Just a few fields prevent merger of the ribbon development along the valley. If this is lost we will also lose the distinction in character between the town of Berkhamsted, the village of Northchurch and the hamlet of Dudswell with each other and also with the neighbouring small settlements of Bourne End and Cow Roast. In order to retain that character, existing Berkhamsted and Northchurch Green Belt sites closest to these settlements should be withdrawn from the Local Plan.

<b>Spatial Strategy for Growth comment</b>	Government policy has changed, but your strategy is still based on the old policy.  This plan is developing Tring in a completely disproportionate way. Tring is a small town and should not have to take on so much of the borough's development. This plan would fundamentally harm the character of the town and is taking a huge amount of green belt land. Tring's infrastructure cannot cope with such an expansion.  There are too many houses in this plan, and too few jobs to go with them.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	This section says "minimising and managing the requirement for development on Green Belt land" and yet, a significant number of houses are planned to built on Green Belt land, with no allowance for the creation of new brownfield sites as a result of COVID. Many people are not going back to work in the same way they did before the pandemic, our high streets and business parks may be unrecognisable, and may provide an opportunity to provide housing, instead of retail/restaurants/offices.

<b>Spatial Strategy for Growth comment</b>	The building on green belt land around Berkhamsted is not acceptable. The numbers of buildings projected, are requiring the building on green belt land and this should not be the answer. The Green belt is there for a reason and has special status and should not be built on

<b>Spatial Strategy for Growth comment</b>	<p><b>Spatial Strategy for Growth</b></p> <p>We understand that the Spatial Strategy for Growth was driven by a Government requirement for 922 dpa derived from the Strategic Housing Market Assessment (SHMA) as set out in the Planning Reform white paper published in August 2020 together with the Office for National Statistics (ONS) estimate of housing needs from 2018.</p> <p>We have been advised by officers that the SHMA derived target is non-negotiable, and yet we note that on the 16th December 2020 the Minister stated that the Ministry's projected house building numbers are not a target<sup>3</sup> and the South West Hertfordshire SHMA cited in the Housing Policy (Supply and Delivery) Topic Paper (s. 2.39) states that:</p>

“The SHMA does not set housing targets. In effect, national policy sets out that development needs should be assessed leaving aside constraints (Stage 1) which is what the SHMA does. This is then brought together with evidence related to land availability, environmental and policy constraints (including Green Belt)”

The Housing Policy (Supply and Delivery) Topic Paper also states that:

"The Government ... recognised that Local Authorities may not be able to meet their identified housing need in full, for example because of land constraints (such as Green Belt) in their area and it may be that need is better met elsewhere (2.21)

The Government ... in its recent consultations on the Planning Reform White Paper and related changes to the planning system ... (6.23)

... identifies the following factors that will form part of these adjustments (to housing requirement numbers) ..... the extent of land constraints in an area, including ... the Green Belt ..." (6.28)

The Housing Policy (Supply and Delivery) Topic Paper cites the new revised standard method (of the White Paper) in order to arrive at a local housing need to 922 homes pa (6.26). However, the White Paper Consultation document referred to states that:

"The new standard method should ensure that all areas of the country are encouraged to build the homes their communities' need." (19)

Where is the evidence that Dacorum “needs” these additional homes? Particularly as responses received during the 2017 Dacorum consultation were summarised in the Housing Policy (Supply and Delivery) Topic Paper (s. 5.11) as:

“There was significant support from key stakeholders, Town and Parish Councils, individuals, resident action groups and other organisations for protecting the Green Belt from development.”

When the Government withdrew its SHMA proposals in December 2020, the Housing Secretary, Robert Jenrick, said in his statement to the House of Commons:

“We heard clearly through the consultation that the building of these homes should not come at the expense of harming our precious green spaces. We also heard views that this need can be better met in existing urban areas.”

We understand that when the Government withdrew the August 2020 SHMA it determined both to revert to the previous SHMA and also to the ONS figure for housing need from 2014. Whilst we understand that the Government has stipulated the use of 2014 ONS data, this is contrary to the National Planning Policy Framework which states (s. 31) that all policies:

“should be underpinned by relevant and up-to-date evidence ....”

Far from achieving the Government’s objective of saving “our precious green spaces” the net result of the December 2020 change in policy was to increase Dacorum’s housing target to 1,023dpa along with an increase in Hertfordshire’s target by 19% whilst all other Home Counties targets are reduced from Surrey (-6%) to Sussex (-23%). Using the 2018 ONS data with the pre-August 2020 SHMA by contrast would reduce the target to a far more realistic 497dpa.

In summary:

- we do not believe that Green Belt land should be used for development.
- we urge the Council to challenge both the August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.

### **Urban Growth Capacity**

We are concerned that the 2017 Issues and Options consultation identified the potential for 476 dpa from Urban Growth and that after review this increased in the Development Strategy Topic Paper to c. 600 dpa or 10,954 homes (s.5.12). But in the main plan document (7.7) Urban Growth Areas are only quoted as 5,638 (or 313 dpa).

As the National Planning Policy Framework (NPPF) requires that the Plan fully explores the potential to make effective use of urban land (paras 118 and 137) , especially before considering the exceptional circumstances needed for releasing Green Belt land for housing purposes. Clearly the capacity to build an additional 5,000 houses in Urban areas would have a material impact on the plan, whatever the housing target.

### **Delivering the infrastructure to support growth**

Clearly when considering a proposed 25% increase in population the provision of adequate infrastructure is key, but there are only three pages about infrastructure development in the Plan (pp 49 – 52) and the Infrastructure Development Plan is incomplete (10.5).

We have a significant concern with the impact of the new transport corridor to the north of Hemel Hempstead and through the North and East Growth Areas (10.4) linking Leighton Buzzard Road to J8 on the M1 to be used by traffic from Tring and Berkhamsted and the Hemel Garden Communities. Despite the fact that the most direct access routes from the A41 to the new link road are all extremely restricted by single-lane bridges and tunnels, we are concerned that the alternative (south down the A41 to the A4146 junction, north up the A4146, east across the north of Hemel Hempstead and then south to J8 – see the attached map) is significantly longer and will result in increased traffic flows through Great Gaddesden Parish.

Broadly speaking it appears that Hemel Hempstead’s traffic problems are to be exported to Great Gaddesden, Potten End and Berkhamsted. This is unacceptable.

We cannot support a Plan with inadequate information regarding the infrastructure developments required to deliver it.

<b>Spatial Strategy for Growth comment</b>	The 2200 houses proposed for Berkhamsted will change the nature of the market town, not for the better. Over recent years the town has expanded by building on Brown field sites. This plan proposes building on green field sites. The South Berkhamsted site, which was previously known as the South Berkhamsted Concept in recent planning history, has not changed its location, or access to the town changed since the application was turned down before. In fact the town has become busier and the ability of the inhabitants of 800 houses trying to access the town more difficult.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation</p>

rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**5.2:**

2nd bullet: The provision of light industrial sites should precede the development of housing so that commuting, and therefore congestion and pollution, is reduced.

5th bullet: The geographical constraints of Berkhamsted limits development to the east and west forcing traffic to the middle of Berkhamsted and through Northchurch to access the A41.

6th bullet: What on earth does that sentence mean? You must speak in plain, easily understood that says what you mean.

**SP2**

3b - 2,200 new homes in Berkhamsted is a significant increase in homes and associated people and cars; around 20+%. The Council missed an opportunity to develop Berkhamsted town centre when Waitrose was allowed to build a superstore

in the centre of town. It would good to understand why Tesco wasn't allowed to develop a site on the edge of town and Waitrose allow to develop one in the centre. Move Waitrose out and use that area as an off-road retail and social space. 3c - Tring has already been over developd with housing with the town centre ignored which is now dying. The Council must develop the infrastructure before increasing the housing. 2,700 houses is a 50+% increase in the population...develop the twon centre and create employment opportunities in new light industrial sites first....please.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	I don't think the plans are minimising the impact on green belt use neither do they seem to be reflecting the character of the area. 'Ensuring Berkhamsted and Tring play a greater role in delivering growth seems to mean shouldering a disproportionate burden for the size of these towns. Berkhamsted does not have the infrastructure to cope with the level of growth being planned. The development already in progress is already testing the limits of the road infrastructure with traffic and pollution.

<b>Spatial Strategy for Growth comment</b>	<p>We understand that the Spatial Strategy for Growth was driven by a Government requirement for 922 dpa derived from the Strategic Housing Market Assessment (SHMA) as set out in the Planning Reform white paper published in August 2020 together with the Office for National Statistics (ONS) estimate of housing needs from 2018.</p> <p>We have been advised by officers that the SHMA derived target is non-negotiable, and yet we note that on the 16th December 2020 the Minister stated that the Ministry's projected house building numbers are not a target<sup>3</sup> and the South West Hertfordshire SHMA cited in the Housing Policy (Supply and Delivery) Topic Paper (s. 2.39) states that:</p> <p>"The SHMA does not set housing targets. In effect, national policy sets out that development needs should be assessed leaving aside constraints (Stage 1) which is what the SHMA does. This is then brought together with evidence related to land availability, environmental and policy constraints (including Green Belt)"</p> <p>The Housing Policy (Supply and Delivery) Topic Paper also states that:</p> <p>"The Government ... recognised that Local Authorities may not be able to meet their identified housing need in full, for example because of land constraints (such as Green Belt) in their area and it may be that need is better met elsewhere (2.21)</p>

The Government ... in its recent consultations on the Planning Reform White Paper and related changes to the planning system ... (6.23)

... identifies the following factors that will form part of these adjustments (to housing requirement numbers) ..... the extent of land constraints in an area, including ... the Green Belt ..." (6.28)

The Housing Policy (Supply and Delivery) Topic Paper cites the new revised standard method (of the White Paper) in order to arrive at a local housing need to 922 homes pa (6.26). However, the White Paper Consultation document referred to states that:

"The new standard method should ensure that all areas of the country are encouraged to build the homes their communities' need (19)."

Where is the evidence that Dacorum "needs" these additional homes? Particularly as responses received during the 2017 Dacorum consultation were summarised in the Housing Policy (Supply and Delivery) Topic Paper (s. 5.11) as:

"There was significant support from key stakeholders, Town and Parish Councils, individuals, resident action groups and other organisations for protecting the Green Belt from development"

When the Government withdrew its SHMA proposals in December 2020, the Housing Secretary, Robert Jenrick, said in his statement to the House of Commons:

"We heard clearly through the consultation that the building of these homes should not come at the expense of harming our precious green spaces. We also heard views that this need can be better met in existing urban areas".

We understand that when the Government withdrew the August 2020 SHMA it determined both to revert to the previous SHMA and also to the ONS figure for housing need from 2014. Whilst we understand that the Government has stipulated the use of 2014 ONS data, this is contrary to the National Planning Policy Framework which states (s. 31) that all policies:

"should be underpinned by relevant and up-to-date evidence ...."

Far from achieving the Government's objective of saving "our precious green spaces" the net result of the December 2020 change in policy was to increase Dacorum's housing target to 1,023dpa along with an increase in Hertfordshire's target by 19% whilst all other Home Counties targets are reduced from Surrey (-6%) to Sussex (-23%). Using the 2018 ONS data with the pre-August 2020 SHMA by contrast would reduce the target to a far more realistic 497dpa.

In summary:

- We do not believe that Green Belt land should be used for development.
- We urge the Council to challenge both the August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.

### **Urban Growth Capacity**

We are concerned that the 2017 Issues and Options consultation identified the potential for 476 dpa from Urban Growth and that after review this increased in the Development Strategy Topic Paper to c. 600 dpa or 10,954 homes (s.5.12). But in the main plan document (7.7) Urban Growth Areas are only quoted as 5,638 (or 313 dpa).

As the NPPF requires that the Plan fully explores the potential to make effective use of urban land (paras 118 and 137), especially before considering the exceptional circumstances needed for releasing Green Belt land for housing purposes. Clearly the capacity to build an additional 5,000 houses in Urban areas would have a material impact on the plan, whatever the housing target.

### **Delivering the Infrastructure to Support Growth**

Clearly when considering a proposed 25% increase in population the provision of adequate infrastructure is key, but there are only three pages about infrastructure development in the Plan (pp 49 – 52) and the Infrastructure Development Plan is incomplete (10.5). As result it is difficult to know how it is possible to comment.

We have a significant concern with the new transport corridor to the north of Hemel and through the North and East Growth Areas (10.4) linking Leighton Buzzard Road to J8 on the M1 to be used by traffic from Tring and Berkhamsted. The access routes from the A41 are all extremely restricted by single-lane bridges and tunnels and as a matter of some urgency we would like to understand exactly how traffic from Tring and Berkhamsted and the Hemel Garden Communities. Despite the fact that the most direct access routes from the A41 to the new link road are all extremely restricted by single-lane bridges and tunnels, we are concerned that the alternative (south down the A41 to the A4146 junction, north up the A4146, east across the north of Hemel Hempstead and then south to J8 – see the attached map) is significantly longer and will result in increased traffic flows through Great Gaddesden Parish.

Broadly speaking it appears that Hemel Hempstead’s traffic problems are to be exported to Great Gaddesden, Potten End and Berkhamsted. This is unacceptable.

We cannot support a Plan with inadequate information regarding the infrastructure developments required to deliver it.

<b>Spatial Strategy for Growth comment</b>	<p>The plan seems to have fixated on a huge number of homes to be built in Dacorum which is way above that identified by ONS as being required in our area. Why do we need quite so many homes?</p> <p>In Berkhamsted there are plans to increase the housing stock by 25% in the next 17 years which could increase the population of the town by nearly a third. The plan refers to Berkhamsted as an historic market town, which it is and as such is constrained by its geographical and current layout which makes it difficult to increase transport links and other amenities to accommodate such a larger number of people.</p> <p>I agree with keeping development away from villages and broadly support the rejuvenation of Hemel Hempstead through a Hemel Garden City. It makes sense to develop around the business hub of Maylands Avenue where people will be able to live and work.</p> <p>Increasing the housing stock of Tring by 50% seems unbelievably excessive for what is again a small market town.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The Plan suggests that Berkhamsted and Tring should take their 'fair share' of new housing which doesn't take into account the geographic constraints of Berkhamsted in particular and results in massive loss of Green Belt land.</p> <p>Development should be predominately concentrated around Hemel as the natural centre of local employment, transport hub, civic amenities etc</p>

<b>Spatial Strategy for Growth comment</b>	In SP2, 1), d): the reference to additional floor space needs to be balanced against the Authority's ability to promote the active use of existing stock. Whilst not directly in control of vacant units, initiatives to support them being put back into active use should be a focus. For example, grants for refurbishment of retail frontages, rates holidays for new businesses. The allocation of new homes must be balanced against the impact on the locality. For example, the developments in Tring will materially impact the character of the town from those coming to it. The authority should consider, not only in

Tring, a more spatial allocation for new housing, with pockets of smaller developments rather than large swathes of new housing.

<b>Spatial Strategy for Growth comment</b>	I find it very hard to believe that your proposed development plan is based on such a high percentage of Green Belt Land. In my view building over this area should be avoided at all costs: this plan should be totally revised to protect this area and avoid 'joining up' our existing conurbations.

<b>Spatial Strategy for Growth comment</b>	The areas planned for growth do not consider the interaction between the new ways of working that will result from the Covid-19 pandemic, particularly the disconnection of housing to retail and local employment that should be encouraged as a means of revitalising the centres of our communities. Opportunities to live, work and socialise without the need for transportation should be encouraged and placing such a high burden on Hemel Hempstead that will take over 10,600 new homes will impact traffic significantly to access local amenities. It must be far worse as a result of the close proximity to the planned St Albans DC growth area.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number

despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs

<b>Spatial Strategy for Growth comment</b>	I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

<b>Spatial Strategy for Growth comment</b>	<p>I am emailing to express my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038).</p> <p>As a resident, I sincerely hope that DBC will reconsider this plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019 Glover report recommended that the Chilterns should be given National Park Status).</p> <p>The following are my main objections:</p> <p>1 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.</p> <p>2 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements. The main focus for the developers of this land, will be the building of houses which will not be affordable housing or any type of social housing and instead be at the usual high price range of houses in the area. I would very much like to see housing that was ecological and affordable for our young people starting out.</p> <p>3 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. The Council that has a LEGAL duty to protect the AONB and its environs.</p> <p>4 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.</p> <p>5 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.</p>

The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

Whilst we do not disagree with the broad settlement hierarchy in Policy SP3 that underpins Policies SP2 and SDP4, there is a lack of clarity and justification in the Plan that explains how the actual housing requirements for the different elements have been derived.

In particular, it is unclear as to whether the specific housing requirements that are set against each settlement in Policy SP2 have been derived from a 'bottom up' approach of site selection, that has then led to the numbers quoted, or whether

the strategy has started from a notional distribution of the overall requirement of 16,600 homes between the various settlements which has then informed the site selection process.

There is no doubt that Hemel Hempstead is the 'highest order' settlement in the hierarchy, and offers the main opportunities for local employment and higher order services. But the strategy provides for 10,000 homes at Hemel Hempstead and only 2,000 at Berkhamsted, so is it the Council's case that Hemel Hempstead is effectively 5 times more sustainable as a housing location than Berkhamsted, or is it the case the Council has identified more sites for development at Hemel Hempstead? In concentrating so much of the Plan's delivery at Hemel Hempstead on a limited number of sites, this strategy also raises potential issues as it comprises a 'high risk' approach whereby any delay in delivery (in relation to matters such as land ownership, infrastructure provision and joint working) would have significant implications for the Plan as a whole.

Both Berkhamsted and Tring are grouped together in the 'second tier' of the hierarchy, but Berkhamsted is the larger town out of the two, and offers greater local opportunities for employment and service provision than Tring, but Tring has the higher housing allocation. How does the growth strategy account for the difference? The reality again seems to be that the availability of suitable sites substantially drives the Strategy, rather than the other way round.

However, when it comes to the larger villages, and particularly in the case of Bovingdon, it is known that the potential housing delivery from suitable, available and achievable and in the case of Duckhall Farm, deliverable sites exceeds what the Strategy suggests (240 units), as at earlier stages of Plan preparation, the Council has accepted that additional suitable sites exist (as evidenced by the meetings it had with respective developers/landowners in 2019/2020 and, despite its limitations, as remains evidenced by the AECOM Site Assessment Study work). Therefore if the Strategy is effectively being driven by site suitability and availability from a 'bottom up' perspective, rather than a notional 'top down' distribution, why is this approach not being similarly applied at the larger villages as it is for Hemel Hempstead, Berkhamsted and Tring?

The background Topic Paper on the Development Strategy that has been published alongside the Draft Plan states that "Growth is capped in Bovingdon to take into account congestion and parking problems on the High Street, and in particular, restricted scope to expand the primary school." This factor would not constrain development at Duckhall Farm, as it lies within easy walking distance of the key High Street facilities, and traffic from the development would not pass through the High Street when entering/leaving the village for wider trips.

However, as per our separate representation to the Bovingdon Growth Strategy, the point about primary school capacity is simply not correct, as the analysis undertaken by EFM demonstrates, and in respect of the former point, if congestion and parking in the High Street are seen as a material constraint, it is wholly inexplicable as to why the growth strategy for Bovingdon should be allocating the site that is least accessible by walking and cycling, which is furthest from the village centre, and which is therefore most likely to *increase* congestion and parking in the High Street. Again, this wouldn't be an issue with the Duckhall Farm site, as the distance to the school and the suitability of routes is conducive to walking.

Interestingly, the Topic Paper notes that Markyate is a relatively small village compared to Bovingdon and Kings Langley, and is a "relatively unsustainable location" compared to these other two key villages. How does the allocation of 215

new homes to Markyate in the growth strategy compared to 240 at Bovingdon reflect the fact that Markyate is viewed as inherently significantly less sustainable than Bovingdon?

We accept of course that under the SP3 hierarchy, the larger villages should be delivering a smaller proportion of the overall growth than the higher order settlements, but the evidence base does not provide any clear evidence to the effect that there is any material constraint that justifies the levels of growth being quoted, nor is there any internally consistent approach which explains the broad distribution between the tiers.

If the Strategy is indeed being driven by 'bottom up' site suitability, then it is essential that Policies SP2 and SP4 are clear on this and that these unit numbers are not then used in a 'circular argument' to in turn drive decisions about which sites should be allocated. As it currently stands, and as per our separate representations to the Bovingdon Delivery Strategy, the strategy for Bovingdon currently comprises one large (and poorly located) site, and one undeliverable site. The 'bottom up' strategy should identify a mix of deliverable sites to achieve an appropriate contribution from Bovingdon village.

If there is a 'top down' distribution that has guided the number of homes to be delivered in each tier, then this needs to be made clear, and the basis for the distribution set out and justified. If however it is essentially a 'bottom up' approach of site selection that then informs the Strategy, then again this needs to be made clear, and the criteria for the selection process made transparent. Without that explanation, these policies cannot be properly judged as to the soundness of the approach.

Your plan states that the you wish to minimise the requirement for development on green belt land but there is a lot of development on green belt land which will then be lost for ever.

In Berkhamsted by infilling the area between the town and A41 along shootersway the impact of the number of cars trying to get in/out of the town will mean long traffic queues

<b>Spatial Strategy for Growth comment</b>	<p><b>SP1</b> and <b>SP2</b> are Borough perspectives and are not the aspirations of those who live in Berkhamsted and Tring.</p> <p>Why should the towns play a “<i>greater role in delivering growth</i>”, if the constraints of the town have not been considered and growth on the scale proposed will undoubtedly be detrimental to the lives of existing residents, as congestion increases and facilities which are already at capacity are unable to meet the additional demand.</p> <p>This seems an arbitrary statement unsupported by evidence</p> <p>How will development “ enhance the town centre and strengthen Berkhamsted’s function as a key Market town”? There are no proposals to enhance the town centre, or the Market.</p> <p>The town centre cannot expand to provide additional shops and businesses. I have found no study assessing the impact of development on this scale, on already busy town centre facilities, just an assumption that any growth adds to “ the vibrancy” of the town. Growth on this scale may, actually destroy the character of the town rather than enhance it.</p> <p>SP2 mentions new sports facilities, where will they be located? They do not appear to be associated with any of the proposed sites, though the IDP mentions pitches and changing rooms funded totally by developers.</p>

<b>Spatial Strategy for Growth comment</b>	<p>It is interesting to note that the key principles of the Sustainable Development Strategy make no reference to how the strategy responds to its ecological context. Furthermore, the ‘supporting evidence’ for SP2 only refers to the Spatial Hierarchy documents which principally deal with access to services and connectivity. Whilst the Spatial Hierarchy documents are key informants to the spatial strategy, pursuing this in isolation from other key evidence results in the Sustainable Development Strategy being unjustified, notably in how it responds to its environmental context.</p> <p>Noting that survey data from the Chiltern Beechwoods Topic Paper (2020) states that the greatest recreation impact on the natural resources comes from Berkhamsted, the below key principle for a step change in growth is at odds with this:</p>

*'Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations.'*

Whilst acknowledging that a greater role could be played by Berkhamsted and Tring, this has to be balanced against the recreational pressure that additional development in this location would place on the SSSI. The Sustainable Development Strategy should reflect a greater role for Kings Langley (in being the settlement furthest away from the SSSI) as a location that can sustainably accommodate more housing and complement the growth arising from Hemel Hempstead.

At present the Draft Local Plan allocates housing as follows: Tring (2,700), Berkhamsted (2,220) and Kings Langley (275). By comparison, the population of Tring is circa double that of Kings Langley but the Draft Local Plan proposes almost 10 times the amount of housing growth.

Beyond this being a key requirement to ensuring the preparation of a plan that can be found sound, Section 40 of the Natural Environment and Rural Communities Act 2006 also places a duty on all public authorities in England and Wales to have regard, in the exercise of their functions, to the purpose of conserving biodiversity.

Paragraph 7.5 of the Draft Plan states *'We have therefore progressed the Plan on the basis of this new housing need calculation of 922 homes pa (i.e. 16,596 homes over the period 2020-38). We recognise that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this issue under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more.'* As previously noted in response to other questions, the draft plan should meet the requirements for 1,023pa as required by the Standard Methodology in ensuring the provision of a plan that is positively prepared.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>The Housing Growth numbers in the Plan is based on flawed assumptions, Para 5.3 – 5.5 [P30]</p> <p>The proposed housing sites are not Urban land as you say you intend to develop, rather they are Green Belt corridors. 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. They are not near any passenger transport or other services, facilities or employment opportunities.</p> <p><b>SP2 3B</b> Berkhamsted will accommodate growth of 2,200 new homes.</p> <p>The Adopted Core Strategy (2013-2036) para 6.2.8 identified capacity (not “<b>need</b>”) in Berkhamsted of 600. Only eight years later this statement indicates that Berkhamsted will have an additional 1600 homes imposed upon it.</p>

The Town Centre already suffers from congestion and suspect air quality, viz data for Lower Kings Road shows the level of NO2 in some periods exceed the 40micrograms/cm3 limit, albeit that the annual record does not show exceedances. In many respects at its current size and topography the Town has reached the limits of capacity as evidenced by traffic congestion, shortage of school places at primary and secondary levels, GP and associated services, sports facilities and in-town open space. I do not agree that the substantial increase imposed on the Town will enhance the quality of life for residents current or future.

Basically there isn't enough disposable space to build this number of houses.

<b>Spatial Strategy for Growth comment</b>	<p>I am emailing you to express my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038)".</p> <p>The following are my principal objections to developing pristine land which will be lost forever:</p> <p>1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.</p> <p>2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.</p> <p>In addition, I also object on the grounds of failure to consider climate concerns, traffic congestion, increased health, education, water and sewerage requirements and the use of brownfield sites.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Paragraph 5.3 of the “spatial Strategy for Growth” (Footnote 5.p30: Draft Local Plan) states “we know we cannot accommodate all the growth within the urban area, so [...] we do need to release land from the Green Belt”. Also Policy SP2 – Spatial Strategy for Growth (Footnote 6.P 31-32: Draft Local Plan) provides very specific targets for the numbers of dwellings to be built between 2020 and 2038. However, these targets are now highly likely to be too high and the level of land to be released from the Green Belt may no longer be necessary.</p> <p>After the Draft Local Plan went out to consultation on 27th November 2020, the Government announced (Footnote 7. <a href="https://www.gov.uk/government/news/plan-to-regenerate-england-s-cities-with-new-homes">https://www.gov.uk/government/news/plan-to-regenerate-england-s-cities-with-new-homes</a> ) on 16th December 2020 that it will change the formula that calculates housing need with the effect of moving development away from the South East of England and greenfield sites to urban areas of the North and the Midlands (Footnote 8 <a href="https://www.housingtoday.co.uk/news/jenrick-launches-revised-housing-numbers-algorithm/5109565.article">https://www.housingtoday.co.uk/news/jenrick-launches-revised-housing-numbers-algorithm/5109565.article</a> ).</p> <p>Given that 5,945 (35%) of the 16,899 dwellings earmarked in the Draft Local Plan (Footnote 9. Table 2 p37: Sources of Housing Land Supply, Draft Local Plan 2020-2038) are located in the Green Belt, it is almost certain that the housing need for Dacorum will be revised downwards once the Government has updated its formula.</p> <p>Section 13 of the National Planning Policy Framework 2019 (NPPF) (Footnote 10. NPPF Para 137, p41) states that a strategic policy-making authority needs to “demonstrate that it has examined fully all other reasonable options for meeting it’s identified need for development” before it concludes “that exceptional circumstances exist to justify changes to Green Belt boundaries”. Preparation of a Local Plan itself does not amount to exceptional circumstances.</p> <p>If the Draft Local Plan is not updated to reflect the expected reduced housing need the Borough Council will be unable to comply with section 13 of the NPPF as it will be releasing green belt land in excess of the housing need (or, moreover, paragraph 35 of the NPPF (Footnote 11. Plans are only ‘sound’ if they are b) “justified – an appropriate strategy taking into account the reasonable alternatives, and based on proportionate evidence”)).</p>

Indeed, the Draft Local Plan itself recognises “that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more” (Footnote 12. Paragraph 7.5 p35: Draft Local Plan)

Therefore, Dacorum Borough Council should first update the Draft Local Plan to match the updated housing need and only commence the Regulation 19 Consultation once that exercise is complete.

The updated Draft Local Plan would therefore need to amend Policy SP2 and potentially Policy SP3 (Footnote 13 p33: Draft Local Plan.) should “significant development” in Berkhamsted be no longer required to meet the updated housing target. Pages 35-40 would inevitably need amendment.

**Spatial Strategy for Growth comment**

I do believe that tackling environmental issues, regeneration and well being are at the heart of any arguments against concentrated building plans in Hertfordshire.

We need to think of the consequences of such schemes on our resources such as water, green space for nature to flourish and air quality.

Lockdown has taught the working generation that proximity to London is no longer a requirement now that the success of working from home or a local hub is established.

We have an obligation to redress inequality in the UK. Many towns in the North, South West and along our coasts, that have suffered years of neglect, should have funds diverted from the South East building projects in order to attract young people and small businesses to affordable, desirable, refurbished properties, so that communities can once again flourish and thrive.

An overpopulated South East alongside deprived empty shopping centres in overlooked towns up and down the country is an irresponsible response to the future prosperity of the UK.

Progress should be measured by putting the well-being of people living alongside nature in decent, regenerated towns and villages with character that build vibrant communities across the UK.

We need to remind councils and politicians about their obligation to 'Level Up'; to provide a better environment for all across our country; to sustainably transform existing housing, shops and business premises and bring an end to out of town New Build.

It is time to be innovative and make better things happen for everyone now.

With regard to the number of new homes envisaged for Berkhamsted and Dacorum, I feel strongly that the infrastructure will not be appropriate.

I understand that Watford Hospital is only going to be refurbished WITH NO MORE BEDS. How can they accommodate the possible 40,000 to 60,000 more people from the 16,600 new homes, just in Dacorum - you can't get a quart into a pint pot! It has been very difficult to get doctor's appointments in Berkhamsted, even before the virus.

Parking and traffic in Berkhamsted will become even more of a problem with all the new houses, as they will want to access the supermarkets, doctors, schools etc. and Berkhamsted has very narrow roads. Trains have always been crowded, as well as the car park at the station, so that will also present problems. As well as the lack of sufficient infrastructure, we will also ruin the nature of historic old towns like Berkhamsted.

The Government should be levelling up and encouraging businesses to move North, which I believe they have already started with some Government Departments. During the virus, more people have found that they can live further away from where they work.

Please rethink your plan and don't ruin lovely old towns like Berkhamsted and put people in danger and inconvenience from lack of sufficient infrastructure.

<b>Spatial Strategy for Growth comment</b>	SP2 states that "Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel Hempstead in providing more balance to the growth focus .....". This so-called balance is sure to be both costly and difficult and does not sit well with sustainability objectives/requirements for the character of those market towns.

<b>Spatial Strategy for Growth comment</b>	<p>On many levels I believe it fails the residents of Dacorum.</p> <p>The stated housing target is I understand higher than required. The idea of sustainable development in context of the plan is at odds with a sustainable way of life. All services will be stretched to the point life will be more polluted, congested and lack community.</p> <p>The attractiveness for business is based on access to the motorways but this doesn't deliver well paid long term jobs, just more delivery centres.</p>

A more cohesive and strategic plan is needed to account for a large retail area that's in many ways unattractive being of lesser value.  
All round more work required for a credible plan.

<b>Spatial Strategy for Growth comment</b>	There is little actual evidence of 'well-established principles of sustainable development'. There is no provable case for supporting retail development when 'live' shopping is in dramatic decline. Asking that Berkhamsted plays a greater role in delivering growth when the town is already exceeding current targets is a complete dereliction of the council's duty of fairness.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt. The sheer number of houses is excessive, will change the very nature and feel of the town and destroy precious green space. This is not the time to be destroying such a precious resource.

Spatial Strategy for Growth comment	<p>This answer is in respect of <b>GROWTH AREA KL02 LAND AT RECTORY FARM</b>, (I am unsure if I am commenting in the correct area!)</p> <p><b>Firstly I would like to say how confusing this document is and I fear a number of people will be put off commenting on these proposals!</b></p> <p>I totally object to the proposed development on the Green Belt land at Rectory Farm.</p> <p>Kings Langley is an historic village but sadly due to over development is seriously losing its identity as a 'village'.</p> <p>Parking has become a nightmare. Traffic, congestion and pollution is equally bad.</p> <p>Kings Langley roads cannot take any more traffic. There are constant traffic delays on the Hempstead Road as we are near the junction of the M25, often the traffic is at a standstill, it is unacceptable now without adding further traffic.</p> <p>If these 200 houses are built on RECTORY FARM the village will just merge with Apsley and Hemel. We will have little green space around, we will have a totally built up area. One of the reasons Green Belt land was put in place is to prevent this from happening....we will become one big sprawling area of mass development. Also one of Green Belt lands main purpose was 'to preserve the setting and special character of historic towns" Kings Langley is an historic settlement incorporating a site of a Royal Palace, a 12th century church and a 13th century Priory.</p> <p>RECTORY FARM has been neglected for a long time as it was owned privately. The original owners moved away from Kings Langley and sadly part of the land has become unkempt but it is STILL Green Belt land. and could flourish once again with the right attention. When I first moved to Kings Langley some 40 years ago, Rectory Farm was a thriving business with communities getting together fruit picking, it was a place that everyone loved and many people from outside the village brought their families to pick the fruit and vegetables. It was a safe place for families to get together and away from the built up areas. This Green Belt land was invaluable. Should we not be considering using this area again for the community? We should be providing a place where people can come and unwind, relax and enjoy the open space and fresh air. We would have a place where the fragile wildlife would flourish and recover.</p> <p>Once this Green belt land has gone, it has gone forever. What are we doing? Is it not important that we keep open space to enjoy and cherish for our future generations?</p>

Have we not learned anything from the recent issues regarding climate change with flooding and droughts...It is imperative that we should hold onto our Green belt land. Covid has made us realise we need more open space to enjoy and we should NOT be reducing the very little open space we have.

It is an embarrassing fact that the UK only have 13% of woodland, we are the least wooded country in Europe, who have a minimum of 35%

Our Government in celebration of the National Tree week committed to new funding to help reach its tree planting commitment....and yet here we are bulding on Green belt land....it does not add up. They are planting more trees by water and rivers to help to stop flooding, why are we bulding 200 houses next to a river....it is bound to become a flood risk area. A prime example is what has happened across the canal where Three Rivers gave the go agead for new houses to be built. When we had heavy rainfall a few weeks ago the road outside the new development was totally under water, like a river! I do have a photo which i hopefully will be able to submit.

Lastly, what about the impact on wildlife? I have asked several times who was responsible for carrying out the ecology survey?, todote I have had no response.

It is a fact that there is a family of 6 Roe Deer living on Rectory Farm ( I have video footage). There are definitely bats in the sheds which have been seen flying in and out.

Why do we allow these Property Developers to come in, build a development and leave without caring about the consequences of what they leave behind. All they care about is profit. In todays world we should care more about what is important....and that is definitely enjoying our Green Belt land and open spaces.

PLEASE reconsider buliding this development on Green Belt land.

<b>Spatial Strategy for Growth comment</b>	<p>The housing 'requirement' is a Government imposed number which is not evidence based; they are using data from 2014, in fact the current evidence base of housing need is at least 40% less than the 922 quoted in the Local Plan.</p> <p>There is no evidence of Dacorum Borough <b>needing approximately 17,000 houses</b> building over the next 18 years.</p> <p>As a result over 2,000 acres of Green Belt and green field in the Borough are being sacrificed, despite the fact that the Housing Secretary has said that building homes should <b>not come at the expense of harming our green spaces</b>; the NPPF states that the Green Belt should be protected and only used in <b>exceptional circumstances</b>. So why does the Council continue to pursue this sacrifice of Green belt?</p> <p>No mention of protection zones in the Plan.</p> <p>There is a need for a much reduced number of houses and new genuinely affordable houses.</p> <p>There are only descriptions of employment opportunities in Hemel Hempstead with the expansion of the Industrial area.</p> <p>The 'roles' that Berkhamsted and Tring are 'expected' to play are excessive and unnecessary; and without room for the needed infrastructure.</p> <p>Infrastructure has not been specified in the plan and yet it is crucial to the delivery of any development.</p> <p>More comments about development in Markyate can be found in the section on Settlement Hierarchy.</p>

## Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form.

Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms.

**The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.**

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

The Council has failed to provide any evidence to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to explore the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The council's inner settlement plans and their assessment of housing needs is yet to demonstrate any consideration of the implications of these factors.

<b>Spatial Strategy for Growth comment</b>	<p>The projected requirement for the number of new homes is double the level it should be within the borough (and government will take advantage of this overprojection compared with other 'commuter regions'). The projections should be based on 2018 ONS numbers rather than 2014 numbers which would approximately halve the projections across the borough to a more realistic 351-536 built annually across the area.</p> <p>In addition, while I appreciate that Hemel Hempstead is taking the bulk of the development it cannot really be compared with Berkhamsted and Tring. Hemel is a far more modern conurbation around the M25/ M1/ A41 intersections. Being more modern it has wider main roads to take the additional traffic that will result from the additional housing. By contrast, Berkhamsted and Tring are old market towns which are already gridlocked at busy times. With the additional proposed housing being on green belt rather than brown field sites and therefore away from the centres of the towns will stimulate more car use and exacerbate the problem further.</p>

<b>Spatial Strategy for Growth comment</b>	<p>In section 5.1 “To establish a framework for growth we have identified a strategy which has been guided by a number of considerations, stemming from well-established principles of sustainable development together with a number of local considerations.” It is not sustainable to build houses on Green belt land, you are just creating more urban sprawl. No local consideration is taken into account of Berkhamsted in the development plan, the land being developed is far from the centre of the town and large parts are on the top of steep hill side sites. This will only create negative environmental impact on the town.</p> <p>In section 5.2 “Delivering our economic aspirations by providing employment opportunities as well as supporting retail development;” Berkhamsted only has limited employment opportunities and building many new homes will not enhance</p>

the opportunities. Realistically people would drive to the station in town and work in London or drive to neighbouring larger towns for work.

In section 5.2 “Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites;” The only justification given for building on Green Belt land is meeting a target set for development by the government that should be challenged and are not realistic for Dacorum. The strategy admits to having an impact on an area of AONB that is protected. It will be a blighted AONB if this development on **protected** land takes place. Future generations will rightly judge us harshly for the environmental damage and impact that building on Green belt land would create.

In section 5.3 ‘The spatial strategy aims to deliver the significant uplift in growth in a sustainable way across the Borough...We know that we cannot accommodate all the growth within the urban area, so despite our approach to increasing densities and heights, we do need to release land in the Green Belt.’ It is not sustainable to release and build on Green Belt that provides green open space in urban areas. Dacorum does not need to accommodate growth figures that are not set in stone by the government and need to be robustly challenged.

In section **5.5** “The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.” Building on the remaining open spaces and Green Belt in Berkhamsted is an ‘urban intensification strategy’ that will **definitely** detract from the town. This is doesnt ‘manages landscape and Green belt impact’ it is simply maximising the impact on the town. The new proposed developments in Berkhamsted are **not** sustainably close to passenger transport or the town’s facilities. They will necessitate a large increase in unsustainable car journeys.

#### In “**Policy SP2 - Spatial Strategy for Growth**”

Section 3. b. “Berkhamsted will accommodate growth of at least 2,200 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities.”

Building at least 2,200 new homes in Berkhamsted on the outskirts of the town will not enhance the town centre. The town centre is already grid locked with cars during busy periods and building this many houses on the edges of the town will only intensify this situation. Transport in the town will **not** be sustainable and people will not cycle because of the steep hills on which most development will take place. The new homes will be removing significant open spaces from the town and once they are built on you can not get them back.

<b>Spatial Strategy for Growth comment</b>	<p>The housing growth targets for Berkhamsted and Tring will see significant areas of green Belt Land destroyed. The council needs to ensure that if these numbers are to be met they have fully utilised existing available sites particularly those with good transport links and access to a wide range of facilities.</p> <p>To minimise car usage the large increase in houses in Berkhamsted and Tring should be accompanied by an increase in places of work sites be they industrial, office based or other. The plan appears to have a great mis-match of houses planned and planning for local working opportunities in Berkhamsted and Tring. Indeed office and industrial sites are being given up for housing. Additional retail floorspace point 1d in towns may be a thing of the post in a post Covid world.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Numerous local groups have commented on this consultation including Berkhamsted Residents Action Group (BRAG), Berkhamsted Citizens Association, CPRE, Chiltern Society, Berkhamsted Town Council, Dacorum Green Party, Berkhamsted and Tring Labour Party to name a few. <b>I agree with the stance taken by all of these groups.</b> The fact that all these (and there will be others) are providing the same substantive message from the local population to you should demonstrate that these proposals do not have the support of the people. I do not propose to add to your reading burden by rehashing all of their points but I do make the following observations.</p> <p>Aside from being instructed by the Government to build 17,000 new homes what is the obsession with growth? Nature does not work this way, plants, trees, animals and people grow to maturity to a size that evolution has deemed optimal and they stop growing. They Why is it that we think that "growth" is a sensible target at all. Berkhamsted and Tring have already been stretched beyond sensible limits given the historic fabric and culture of these towns. Why compound this even further? I aspire to an enriched social economy not a bigger economy.</p>

The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p> <p>The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach</p>

was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

Buckinghamshire Council welcomes the draft plan's overall approach of meeting Borough's development needs within its own boundary as set out in policies SP2 and SP4. However, it is noted that the plan only contains a small buffer of 300 homes and a high amount of windfall. This risks the need for more housing sites to be allocated or the transfer of unmet need to other areas if suitable sites cannot be located in the Borough. This risk is heightened by the likely increase in housing need revealed in a recent Duty to Cooperate meeting between the two councils. Buckinghamshire Council therefore urges Dacorum Council to continue its approach of meeting its need within its borders as securing unmet housing need in the Buckinghamshire Council area would be challenging given the high level of commitments and allocations around Aylesbury, and the significant level of housing need that will need to be accommodated in the forthcoming Buckinghamshire Local Plan.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“ Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’ s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p>

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

Paragraph 5.2 establishes that key principles behind the strategy include matters such as delivering the requirement to significantly boost housing. However, Landhold Capital is concerned that some of these key principles appear contradictory, in particular seeking to minimise and manage the requirement for development on Green Belt. Given the significant constraint posed by the Green Belt in the Borough and the proposed release of substantial areas of Green Belt through this Plan, it is considered that this principle is not appropriately worded. Furthermore, Landhold Capital considers that the Council has not established an appropriate housing requirement through this draft Plan, and it is suggested that in order to meet the Borough’s actual housing requirement as a minimum, in a sustainable way, will involve the release of further Green Belt at settlements such as Kings Langley. This approach would be supported by Paragraph 138 of the Framework, which specifically states that where it has been concluded that it is necessary to release Green Belt land for development, first consideration should be given to “*land which has been previously developed and/or is well served by public transport*” [emphasis added]. Kings Langley, whilst only a large village in terms of the settlement hierarchy, benefits from an existing train station which Landhold Capital considers should result in further release of Green Belt and allocation for housing through this Plan.

This Chapter goes on to consider the Spatial Strategy through Policy SP2, which confirms that the Local Plan will make provision for ‘*a minimum of 16,596 homes*’. Landhold Capital considers that this requirement is inadequate and does not properly reflect the housing requirement for the Borough.

The South West Hertfordshire Local Housing Needs Assessment (LHNA) published in 2020 established that the housing requirement for the Borough is 1,023 homes per annum, a figure that is based on the Government’s standard methodology. Whilst it is accepted that at the time the Council were finalising this version of the Plan there was some uncertainty regarding the exact housing requirement due to a consultation held on amending the calculation for the standard methodology, with the draft figures resulting from the amended calculation reducing the Council’s housing requirement to 922 dwellings per annum. The Housing Topic Paper confirms that the Council considered it appropriate to use the draft figure rather than the current standard method figure for the purposes of this Plan.

However it is considered that the Council should not have based this version of the Plan on those draft figures, as there was uncertainty regarding the figures provided by the revised calculations and the implications of that for achieving the Government’s objective of boosting housing delivery. Furthermore, given the uncertainty at the time, it is arguable that the Council should have used the higher figure as in any event, the housing requirement represented a minimum figure that the Plan should seek to deliver, and in reality it should be planning to exceed this in order to boost housing delivery as required by paragraph 59 of the Framework.

In any event, the Government subsequently confirmed that the calculation for the standard method reverts to the 2018 methodology, with only minor revisions that would not affect Dacorum’s requirement. Although this was not confirmed until after the start of this current consultation, the implications of it are significant and this could have been avoided if the Council had used the original figure rather than the draft figure proposed at the time. Planning for a higher figure would have also ensured accordance with the Framework, which requires authorities to plan for objectively assessed needs as a minimum, and support the Government’s objectives of significantly boosting the supply of homes.

The implication of an increased housing requirement for Policy SP2 is that the Borough will need to deliver more housing than is currently proposed, which in any event should be considered as a minimum figure that ought to be delivered during the plan period. As a result, it is considered that the Council should review its proposed Spatial Strategy as set out in Policy SP2, and particularly the role that the larger villages will play in this Plan. The strategy as currently proposed seeks to deliver only minimal growth at these three settlements, despite the supporting text at Paragraph 5.6 recognising that the three settlements provide a reasonable level of services and facilities but cites constraints in regard to infrastructure which appears to justify proposing '*only modest levels of growth*'.

In order to meet a higher housing requirement, it is considered that further development opportunities should be explored at these settlements, in particular Kings Langley, as development could help to secure additional and/or improved infrastructure as set out in the Council's Vision for the Plan. The Council had previously considered the allocation of additional sites at Kings Langley in the preceding draft version of the Plan, consulted on in 2017. That version of the Plan considered the allocation of three sites at Kings Langley, including land to the west of the village that demonstrates that growth to the west was considered acceptable and would be appropriate for release from the Green Belt. Kings Langley is considered to represent a highly sustainable location, with the potential for growth to the west that is not constrained environmentally and should therefore feature in the emerging Local Plan in order to ensure that a sound strategy is proposed that will help the Council to significantly boost housing delivery in a sustainable manner.

**Spatial Strategy for Growth comment**

We need more housing. However, the projected requirement for the number of new homes is double the level it should be within the Borough (and government will take advantage of this over-projection compared with other 'commuter regions'). The projections should be based on 2018 ONS numbers rather than 2014 numbers which would approximately halve the projected requirement across the Borough to a more realistic 351-536 built annually.

In addition, while I appreciate that Hemel Hempstead is taking the bulk of the development it cannot really be compared with Berkhamsted and Tring. Hemel is a far more modern conurbation around the M25/ M1/ A41 intersections. Being more modern it has wider main roads to take the additional traffic that will result from the additional housing. By contrast, Berkhamsted and Tring are old market towns which are already grid-locked at busy times. With the additional proposed housing being on green belt rather than brown field sites and therefore away from the centres of the towns will stimulate even more car use and exacerbate the problem further.

<b>Spatial Strategy for Growth comment</b>	<b>Too much housing and not enough of it as truly affordable rentable or rent to buy housing</b> The population growth targets set out in the DLP will dramatically change the character of the area. This is particularly the case for the market towns and large villages. These targets do not seem related to recent developments regarding national population growth and distribution. Nor do they seem to recognise the role of the Government's "levelling up" agenda in increasing demand in the North rather the South of England. From experience of what has actually been built in the last ten years we are doubtful whether enough affordable housing will be built and whether there will be enough rentable housing provided by Housing Associations or the Council.

<b>Spatial Strategy for Growth comment</b>	As a Dacorum resident, I am extremely concerned that the plan imposes massive over-development on our local environment, with irreversible loss of hundreds of 850 hectares of Green Belt land, countryside and urban green spaces. I have outlined my principal objections below:  Flawed data for housing requirement: The Local plan uses 2014 ONS data to calculate housing provision, leading to a 24% increase in housing proposed in Berkhamsted and a 50% increase proposed in Tring. However the 2018 ONS data is both more up to date and indicates a housing requirement that is around half of what is outlined in the plan. These proposed housing numbers must be challenged.  Over-development of greenbelt land, the Chilterns Beechwoods Special Area of Conservation and the Chilterns AONB: Almost all of the proposed development is on Greenbelt land, which is against government policy. Once green belt land

is released for housing, even if the housing requirement is revised down in future, it will be very difficult for the Council to prevent developers building on it.

Potential for brownfield site development: More work needs to be done to identify brownfield sites that could be adapted in the wake of a rapid and seismic shift in working and shopping patterns. The COVID pandemic has dramatically accelerated the trend away from high street retail and office-based working. In the wake of both COVID and Brexit, the government has allowed commercial and office space to be converted to residential. However, the current plan includes a requirement to increase the amount of office space in the borough, based on projections that have been overtaken by the impact of the pandemic. It is vital that the local plan does not proceed based on projections that are already outdated. The potential for delivering housing requirement via converting commercial and office space has not been fully explored in this proposal.

Impact on infrastructure: For Berkhamsted, the plan does not address the impact of such a significant amount of new housing on traffic congestion, education or healthcare provision. There are no significant proposals for improvements to roads or traffic flow, already under significant pressure. There are no significant improvements to public open spaces, particularly when such a large area of existing open space is to be removed. There is no indication of if/how bus routes may be provided. Given the valley setting and the distance of some of the sites from the town centre facilities, a major increase in traffic is inevitable with all the concomitant issues of air pollution, longer journey times and less appeal for cyclists and other road users.

Increase in air and noise pollution: When the A41 bypass was built, the buffer between the road and housing in Berkhamsted was intended to be a 'green lung', absorbing traffic noise and pollution. A large proportion of the proposed housing development is planned on this land.

I urge you to reconsider the proposal, invest in new studies that assess the impact of COVID-19 and Brexit on the borough's requirements, and put out a new consultation based on what Dacorum's community will actually need in the future, rather than on earlier projections that could not have taken into account the dramatic effect of the last 12 months on how we live, shop and work.

<b>Spatial Strategy for Growth comment</b>	Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.  Will we have an opportunity to comment on the sang to Natural England?

<b>Spatial Strategy for Growth comment</b>	<p>As a result of covid-19, there is likely to be a reduction in demand for retail floorspace. There may also be a reduction in demand for office floorspace. Hopefully this will mean you can build more housing on brownfield land and consequently reduce your plans to build on the countryside.</p> <p>As regards Hemel, the town centre area is currently very spread out, going all the way from the Old Town to the Riverside development. I would like it if any shops/businesses/takeaways etc that retain their presence in the town centre post-covid could be consolidated into a much smaller area (eg the Marlowes centre) with most of the current town centre being redeveloped for housing. I think it would also make sense for the "Leisure World" cinemas, restaurants etc at Jarman Park to move to the town centre and you could then build housing on Jarman Park.</p>

<p><b>Spatial Strategy for Growth comment</b></p>	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don’t want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p> <p>Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.</p> <p>To summarise:</p> <ol style="list-style-type: none"> <li>1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed.</li> <li>2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area.</li> <li>3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact.</li> <li>4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).</li> <li>5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.</li> </ol> <p>These are fundamental flaws in the strategy underpinning the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.</p> <p>These points are expanded below.</p> <p><b><u>Incorrect Assumptions for Housing Provision</u></b></p> <p>Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.</p>

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

### **Failure to Provide Adequate Supportive Infrastructure**

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251

/ A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

### **Impact on Green Belt and Other Designated Land**

The Local Plan states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”. This strategic principle is then violated by the declared mission to provide at least 100% of the Council’s self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

<b>Spatial Strategy for Growth comment</b>	<p>Why is it a 'given' that Green Belt land is available to be taken in this way? Talk of <b>minimising the impact</b> on Chilterns AONB and other protected sites is dangerous. What next? Build on the site of the remains of Berkhamsted Castle or areas of Ashridge? This is a travesty and councillors prepared to vote in favour of allowing this should be ashamed of themselves.</p> <p>Talk of regenerating the town centre of HH ignores the impact of the pandemic on high streets across the country. The growth of online purchasing should not be underestimated. John Lewis closing it's Watford shop is a sign of the times to come.</p> <p>The plan talks about regenerating HH as an employment hub. Yet it completely ignores the fact that Berkhamsted and Tring are commuter towns for LONDON! But for the train links to London, the towns would not be the prosperous towns they are now. People will not want to move to these towns without being able to enjoy the beautiful surrounding countryside and views.</p>

<b>Spatial Strategy for Growth comment</b>	<p>This plan proposes that 64% of the new homes will be on green belt land (77% on green field sites). Berkhamsted seems to bear the brunt of this approach with 80% of homes on new green belt sites.</p> <p>It appears that Dacorum BC has incorrectly used housing numbers from the Government's Standard Methodology as a target for housing, despite the fact that the government themselves have said this is not to be taken as a target.</p>

As a result, this plan is based on a false premise: it uses incorrect numbers, with an inaccurate growth strategy at unsustainable locations and thus at the cost of huge swathes of green belt land.

**Spatial Strategy for Growth comment** Where is the understanding within the plan that the location of Tring is adjacent to the Buckinghamshire border and the large and expanding town of Aylesbury. The developments over the border are important in the context of the Dacorum local plan, especially the large provision of warehousing and employment opportunities provided by the Aylesbury expansion. This is expanded upon within the Tring in Transition response.

<b>Spatial Strategy for Growth comment</b>	<b>Over development.</b> Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. Clearly the Berkhamsted development is not aligned to the current strategy.

<b>Spatial Strategy for Growth comment</b>	Finally, I would ask that the Local Plan Consultation be halted and that the plan is redrawn with all needs and targets based on current, up to date estimates.  Green Belt Land should not be considered for use until all other avenues have been exhausted and a critical need established beyond doubt.  Dacorum has a lot to offer both local residents and visitors without dramatically changing the character of our historic local towns, something that this plan, in its present state will do.  I ask you to reconsider your strategy taking in the wishes of the local communities who have already voiced their opposition to the plan.

<b>Spatial Strategy for Growth comment</b>	<p>Firstly I consider that given the short timescales and the challenges with reading complicated documents and huge maps on line - you are not consulting properly and getting the full benefit of public wisdom.</p> <p>Given the Climate Emergency, existing huge pressures on infrastructure and serious problems with loneliness and mental health, I am dismayed that you are intending to increase the number of planned houses so much with no provision whatsoever to build community and enable easy access to essential services - shops, schools, public transport, parks, community centres etc. I am also horrified that with nature really struggling to survive the pressure our population puts on it, you are planning to build homes on green space and green belt. Instead you should be improving the biodiversity of that land and stopping fly tipping and the public damaging the edges of woodland and fields by parking on them.</p> <p>Without proper plans for provision of infrastructure, businesses and retention of green space your proposals will accelerate climate change and create areas of deprivation, crime and isolation. We have more than enough of them in Dacorum already. Particularly in Hemel.</p> <p>Communities need good access to local shops, excellent schools, quality jobs with a variety of business types, attractive parks and green spaces, theatres, cinemas, places of worship, Pubs, restaurants, cafes, places to dance sing and meet up. They barely feature in your plans.</p> <p>Climate change and BREXIT have shown us how vulnerable our food supplies are to drought, flood, trade issues and loss of biodiversity - pollinators in particular. We need to ensure people have access healthy, sustainable, locally grown food - why not use parts of redundant large shops and shopping centres for growing food hydroponically?</p> <p>Please think again and at the very least extend the consultation.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional</p> <p>intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set</p>

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<p><b>Yes / No</b> * <b>Yes</b> * <b>No</b></p>	<p>Yes</p>
<p><b>Spatial Strategy for Growth comment</b></p>	<p>I totally disagree with the planned expansion of homes in the Green Belt in Dacorum. There are NO EXCEPTIONAL circumstances strong enough to support these special areas. The use of green belt land on the outskirts of Kings Langley village at Rectory Farm is totally unnecessary. The DBC brownfield register contains NO SITES in Kings Langley whilst residents know there are plenty that may be repurposed including garage sites, telephone exchange(with less than 5% of the building being used, only the car park is fully utilised). In pursuit of environmental concerns it is essential to minimise the destruction of wildlife habitats.</p> <p>The Rectory Farm land separating Kings Langley from Apsley fulfills a key tenant of Green Belt policy reducing coalescence between communities. It acts as a check to the sprawl of the already over built up areas along the canal. This land should be used to help protect wildlife of all types that live nearby by creating a wildlife corridor along the canal and River Gade.</p> <p>"Providing growth in the villages that reflects their role and character;" - Kings Langley is a village that has seen growth for many years but infrastructure is woefully below what is needed particularly related to road provision. Finding and securing sites brownfield should be the #1 focus. The greenfield areas like Wayside Farm, should stay green as it is part of the character of the village and the green areas prevent KL from becoming one large conurbation with Apsley to the north and Hunton Bridge/Watford in the south.</p> <p>I am very concerned that we are being asked to comment on Dacorum's local plan without sight of the Three Rivers District and the St Albans plan. Both of which will impact Kings Langley disastrously as the draft plans contain sizeable expansions on their extremities adjacent to Kings Langley and Dacorum. Kings Langley is currently creating a Neighbourhood plan that focuses on the needs of the Village and there is no local need established for a 10% increase in housing numbers. The thought that Dacorum have earmarked 200-275 homes for Kings Langley without any knowledge of Three Rivers plans, is irresponsible. Not least because the majority of the village is Green belt, including Rectory Farm. This land is the last green space between Kings Langley and Hemel Hempstead, contributing to the coalescence of both locations, contrary to Green Belt purpose.</p> <p>2020 has taught us how important outside space and green belt is to well-being and people's health. Local parks and open spaces are well used every time the weather is decent, demonstrating the increased need more open green belt space not less! Given we also have no sight of what Three Rivers Council are planning for its part of Kings Langley on the eastern side of the Grand Union Canal.</p> <p>There's no consideration for the impact of COVID on our housing, high streets, or office space, particularly as the latter two will rise due to deaths coupled with working from home. People have proved they can work from anywhere, the South East will become less attractive. Pressure on housing will diminish as people choose to have more space rather than central locations in cities. Office and retail space has to be considered for conversion to housing, if nothing else it would bring the High Streets back to life. Brexit had an estimated impact of reducing the population in England by 1.4m</p>

in 2020, many of them Europeans returning home. We are a smaller population now, than we were 2 years ago, and the demand on housing will be less.

Local infrastructure particularly local roads - already gridlocked at peak times and particularly the Hempstead Road. Simply increasing houses in Kings Langley by 10% when combined with the Nash Mills, Apsley and all other southern parts of HH will be utilising these gridlocked roads to access the M25.

Schools are full with Abbots Langley children who previously went to Kings Langley school are now taking long bus rides to schools in Watford. This increases pollution and compounds environmental concerns. Summer water shortages, and flooding - which we are already seeing in on the eastern side of the Village continue to grow. This green and pleasant lands is likely to become far worse as runoff volumes grow whilst access to water falls due to supply. The wildlife that inhabits the Green Belt will continue to suffer more as concrete, roads and new house take over.

Kings Langley is a historic settlement incorporating the site of a Royal Palace and is still meant to be a village, 200+ houses is a huge increase in population vs existing (10%), and a housing development of that size and scale will be visible from every vantage point. I would also be very concerned about the impact of 200+ houses on road safety on Hempstead Road, which is already an accident blackspot.

It has been many years since I even considered driving to London for meetings and now train services are exceptionally over crowded and pre-pandemic, I have often missed London meetings through the inability to get on the over-crowded trains.

The volume of new housing proposed is too high for each of the sites to accommodate and will overwhelm the infrastructure (current and proposed) for the areas. I am very concerned that this strategy is being driven by economic profit rather at the cost of local community and the natural environment. The transport infrastructure will not sustain this volume of new housing and consideration is not being given to the fact that a significant part of this development is taking place on green belt land which should be protected from development, on the edge of the Chilterns AONB. With climate change and the consequences of this becoming ever more pressing, clearing areas of woodland and wildlife for building will increase the risk of flooding in these areas and heighten the possible impact of climate change.

As a resident of Boxmoor I am concerned by the principle as stated in 5.2 about encouraging substantial increases in heights ... in the most accessible locations. Development must be sensitive to the local character.

It is hard to see the need for additional retail floorspace when Hemel Hempstead has numerous empty shops and we hear that Debenhams and Topshop are both likely to close.

I am against this proposal, as I wish to prevent adjacent towns merging together, to check the sprawl of large built up areas, to assist in protecting the countryside from encroachment and to preserve historic towns.

Additionally, traffic and services (e.g. GP and trains) are already stretched far too thin as things are, further development will completely overload the system. Just leave the land alone.

I am writing to express my objection to the use of green belt land on the outskirts of Kings Langley village at Rectory Farm. Any use of green belt land for housing or industrial development is unnecessary whilst there are brownfield sites and land which can be repurposed to achieve the same goal and minimise the destruction of wildlife habitats.

This particular proposed development site would reduce the boundary between Kings Langley and nearby Nash Mills and put extra strain on the main road through the village which is often very busy anyway. A new, additional junction on this road would inevitably increase the likelihood of congestion and potentially accidents.

"Providing growth in the villages that reflects their role and character;" - this bullet is critical for Kings Langley. It's a village that has seen growth already with the work around Kings Langley Station. I applaud the building on brownfield sites - just what we should be doing. The greenfield areas like Wayside Farm, should stay green as it is part of the character of the village and the green areas prevent KL from becoming one large conurbation with Apsley & Hunton Bridge/Watford. Your point 5.6 makes a sound point that growth levels should be modest

object to the proposed development on the Green Belt Land at Rectory Farm. This land separates Kings Langley from Apsley and is an important check to the sprawl of the already over built up areas along the canal. This land should be used to help protect the kingfishers that live nearby by creating a wildlife corridor along the canal and River Gade.

**Spatial Strategy for Growth comment**

The plan seeks to have Berkhamsted (and Tring) play a much greater role in delivering growth and describes Berkhamsted as being particularly suitable. "Berkhamsted will accommodate growth of at least 2,200 new homes" and "have provided significant new investment into sustainable transport initiatives to increase passenger transport and improvements in walking and cycling connections throughout the town and have delivered a mix of market and affordable housing, new community facilities, including two primary schools and a secondary school, and a hierarchy of open spaces. It also states that it will secure "40% affordable housing on all new dwellings," with larger sites being designed to create and sustain socially inclusive mixed communities.

General comments

- To be particularly suitable for growth would require a modern road structure which can deal with the extra traffic which growth will generate and an infrastructure which has extra capacity built into it, particularly in the supply of primary care, utilities, waste handling and Berkhamsted has none of these. All roads, with the exception of the High Street, are narrow and winding and there is not a through road from the south to the north. It is not realistic to expect Berkhamsted to absorb so many houses without a finalised and acceptable Infrastructure Delivery Plan.
- The topography of Berkhamsted is particularly unsuited to both walking and cycling as a means of getting to and from any of the proposed sites and the town
- How was the proportion of affordable housing established? What evidence is there that socially inclusive mixed communities work?
- No increase in passenger transport for Berkhamsted is described in the plan contrary to the stated intention to do so. The only good bus service is the 500 service on the High Street. The train service is excellent, but parking at the station is frequently full on weekdays.

**Spatial Strategy for Growth comment** 64% of this plan is on Green belt. DBC has incorrectly taken the housing numbers from the Governments Standard methodology as a strict housing target and leads to a growth strategy at unsustainable locations at the cost of lots of the green belt. I think this plan should be reconsidered.

<b>Spatial Strategy for Growth comment</b>	<p>It is incontrovertible that the UK needs more housing, albeit much more at the social housing end of the spectrum. One cannot fail to recognise that Dacorum, along with other planning authorities, will have had a difficult job weighing up all relevant factors in genuflecting to the perceived needs or aspirations of HM Government in terms of its targets for housing growth, all in a climate of change occurring with increasing regularity and sometimes from totally unplanned and unexpected quarters. Examples of such changes, since most of your work on the Local Plan was undertaken, will have been the Government's manifesto aim of "levelling up the country", placing more emphasis on helping economically deprived areas in the North of England and the not readily foreseeable Covid pandemic and its likely impact in creating sizeable spaces in retail shopping centres as more people move to online shopping. One only has to contemplate, for example, what might happen to the Harlequin Centre in Watford even before considering what seems to be happening there with the closure of John Lewis and some other key shops and their knock-on effect, to the Marlowes shopping centre in Hemel Hempstead.</p> <p><b>Should not the changes in shopping habits migrating to greater use of the internet provide more "brown land" than previously contemplated?</b></p> <p>As has been mentioned in the preamble above, before the numbered paragraphs, there is a seismic shift from local shops to online shopping . This started some years ago before the arrival of the pandemic. In our crowded island, we need to utilise any space which becomes available in the centre of towns . One can certainly visualise shops and stores being converted into flats and apartments with the result that shopping precincts can become living areas as well. Your report needs to be updated to reflect this trend.</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>The likely impact on Green Belt land and areas adjacent to Areas of Outstanding Natural Beauty (AONBs)</b></p> <p>Your previous Core Strategy date 2013 stated in words to the effect that :”the open valley sides and ridge-top locations are especially sensitive to new building development in these locations and will not be supported.” This policy must surely be a very high bar to surmount if Green Belt land is now to be developed over. Our local landscapes remain an important recreational, scenically visual and vital breathing space between conurbations. It will amount to an abdication of responsibility by the local authority if development is ordained over areas of attractive landscape comprising part of Green Belt land adjacent to AONBs , a fortiori when there has been talk of a National Park being created in this area of the Chilterns as recommended in the 2019 Glover Report. There is a natural tendency in accommodating additional housing stock to tack on sectors adjacent to existing towns and villages. The danger of that is that of a ribbon-like development of dormitory housing sprawl rather than a self-contained area with a centre properly planned and integrated with small locally-based shopping area. Local government, no doubt greatly assisted by the New Towns Development Commission did this well in the post-war era. Could not such an approach be re-considered in this instance? This would necessarily mean no ribbon development and an essential part of the plan would be to maintain a reasonable distance between that new development and the next village or town. This situation has for a number of years pertained between Apsley and Kings Langley; the need to keep them apart being overlooked by the planners. It would be a travesty if the ancient market town of Berkhamsted with its long line of history were to be linked to Bourne End or Bourne End from Boxmoor and Apsley.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Para 5.2 - <i>'Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites'</i></p> <p>I strongly support this - as did DBC in 2013. However they have turned their back on this in the current plan.</p> <p><b>5.5</b> <i>'The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.'</i></p> <p>I submit that the proposed plans don't in any way meet this requirement. It will have a huge detrimental impact on the Green Belt and siting a vast series of housing estates at the top of a steep hill 3-4km from the town centre is in no way <i>sustainably located close to passenger transport and other services, facilities and employment opportunities.</i></p> <p>I strongly support the submissions made by BRAG relating to this section.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I appreciate that the biodiversity is clear but the emerging plan is not explicit enough in showing just HOW Dacorum will work with developers and other stakeholders to check the loss of Green Belt land, increase biodiversity and meet both National and Hertfordshire's goals for climate change and carbon reduction .</p> <p>The Chilterns AONB and the Green Belt are beautiful areas which, once lost, cannot be regained.</p> <p>There is a good proportion of Green Belt and AONB land in Dacorum.</p> <p>In this time of the pandemic, Nature has been demonstrated to be so important to people and the value that Nature adds to our lives. Other areas and ways round this should and must be considered.</p> <p>On a summer's evening the chance to wander down Marshcroft Lane and stand on the canal bridge listening to the birdsong is a joy to be treasured. We need open spaces and not vacant brownfield areas in the midst of our towns.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The number of homes proposed for building surely should be reduced to well below the target number to reflect the actual need which has been demonstrated.</p> <p>A much proportion of houses and flats should be built on brownfield land or made possible through conversions, in the existing areas of not only Tring but Berkhamsted, Kings Langley, and Hemel Hempstead. There must be a main focus on affordable starter homes</p>

I suspect that this whole project is developer-led as of course it is easier to build on greenfield sites. Do they even know where the sites are? - I would guess not.

<b>Spatial Strategy for Growth comment</b>	I wish to register my strongest opposition to the Local Plan and the number of new house builds being proposed. The housing numbers in the Local Plan across Dacorum are excessive and way above the forecast housing need for the Borough as calculated by the ONS - so why are you proposing this?

<b>Spatial Strategy for Growth comment</b>	<p>After having a close look at the Dacorum plan I was shocked at the level planned building on our green belt. The government was elected on one of their promise’s to protect our green belt, so why this plan is so far removed. It is evident to me that numbers do not add up and impact on the town I live in will be dramatic and irreversible. The South Berkhamsted project did the rounds a few years ago, and for good reason was rejected by Berkhamsted Town, DBC, and the inspector and then the developer took their case to court and lost, and now it finds itself back in the plan with minimal changes, why?</p> <p>Government that shows the policy on Green Belt protection is clear and unambiguous: 1 The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests. 2 In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”. 3 Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Berkhamsted Residents Action Group (BRAG) Draft Response to DBC Draft Local Plan Consultation 1 4 F e b r u a r y 2 0 2 1 P a g e 6   46 Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.” 4 On December 16th 2020 the Government published a response to the recent white paper consultations.</p> <p>With reference to protected landscapes and Green Belt it states “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.” 5 The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.” 6 And further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.” DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that “Any option below the standard methodology would have to be robustly justified” (paragraph 5.8 of The Development Strategy Background Topic Paper). Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, I fail to understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified”.</p>

DBC have seem to mis-understood their responsibilities. Paragraph 136 of the NPPF is clear “Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified’, and not the other way round. Paragraph 19.6 of the Plan does say “In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.’ But, beyond that statement there is absolutely no justification offered, except the Government ‘target’ that isn’t actually a ‘target’. Readers of paragraphs 19.6 and 19.7 in the ‘Managing Development in the Countryside’ section are directed to the Sustainable Development Strategy chapter of the plan for justification, but I am at a loss to see anything in paragraphs 4.1, 4.2, 4.3 or Policy SP1 that could remotely be described as “fully evidenced and justified” as required by the NPPF. Indeed 19.7 also specifically states DBC have “identified those areas on the edge of the main settlements where exceptional circumstances exist”, thus inferring that exceptional circumstance exist for the settlements protected by the specific Green Belt releases. These “exceptional circumstances” are certainly not evidenced.

**Spatial Strategy for Growth comment**

The consideration of office space in these current times needs a review. The majority of companies are now asking and expecting most office workers to carry out a significant amount of their time from home with the majority of companies expecting a down size or change of space due to the lower occupancy. Therefore the plan should consider this change of the new way we work.

<b>Spatial Strategy for Growth comment</b>	The strategy of growth seems to be fundamentally flawed by the excessively high calculation around the housing target. Also the plan to put 4,000 homes released from the Green Belt (the idea of which I had thought was to safeguard the land) when there is a large amount of accessible land around the Maylands and towards St Albans seems to be against all the objectives around sustainability and completely unnecessary.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.</p> <p>Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p> <p>The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would</p>

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

We need more housing. However, the projected requirement for the number of new homes is double the level it should be within the Borough (and government will take advantage of this over-projection compared with other 'commuter regions'). The projections should be based on 2018 ONS numbers rather than 2014 numbers which would approximately halve the projected requirement across the Borough to a more realistic 351-536 built annually.

In addition, while I appreciate that Hemel Hempstead is taking the bulk of the development it cannot really be compared with Berkhamsted and Tring. Hemel is a far more modern conurbation around the M25/ M1/ A41 intersections. Being more modern it has wider main roads to take the additional traffic that will result from the additional housing. By contrast, Berkhamsted and Tring are old market towns which are already grid-locked at busy times.

With the additional proposed housing being on green belt rather than brown field sites and therefore away from the centres of the towns will stimulate even more car use and exacerbate the problem further.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. **Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“ Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’ s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. <b>Spatial Strategy for Growth comment</b>	It is not remotely plausible to increase a town's population by 50% without impinging on its character. In Tring's case the development does not 'minimise' the development of the Green Belt, it relies entirely on doing so, negating the point of having designated it. Population growth on this scale cannot fail to detract from its character and will not enhance the town centre in any shape or form. No account has been taken of pressure on local hospitals. Tring people mainly use Stoke Mandeville which is stretched to the utmost by continuing growth in Aylesbury. Development in Buckinghamshire would not appear even to be mentioned.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing

target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	<p>The phrase "Minimizing and managing the requiremnt for development on Green Belt land and impact on Chilterns AONB anbd other protected sites" is the issue here. To fulfil national sustainability and environmental critera there should be no development on Green Belt. There should be no impact on Chilterns AONB, SSSI etc.</p> <p>The approach is fundamentally flawed. There is an assumption that growth beyond that possible with current planning regulations in urban areas is required. And that this growth must be achieved by expanding urban area rather than by changing planning limits. These tow assumptions are at odds with the views of all the local residents I have talked to and should be challenged. Firstly, I have found no support for any increase in the footprint of Berkhamsted from any local residents. Secondly, the multi-story car park in Central Berkhamsted is a clear example of where urban planning limits can be adapted to improve capacity. There are brownfield sites within Berhamsted, Tring and Hemel Hempsted where #this could be achieved. I think there has been a distortion of the reality of possible existing urban options based upon the undoubted financial benefits to developers of green field development.</p>

<b>Spatial Strategy for Growth comment</b>	While the aim of minimising development on Green Belt is to be applauded, and some of this is achieved by increasing heights of buildings, care should be taken to avoid high buildings around the Station Gateway site. This overlooks Station Moor land and is backed by Roughdown Common, an area of Special Scientific Interest - any development in the area should avoid spoiling the view of or from these areas.

<b>Spatial Strategy for Growth comment</b>	<p>Government has made it clear that the numbers are a starting point only and it is up to Local Authorities to know if local constraints such as Green Belt means that the numbers cannot be delivered. Clearly this is not the case in this proposal, and should be challenged.</p> <p>Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, I fail to understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified”. Paragraph 136 of the NPPF is clear “Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified”.</p> <p>The Draft Local Plan offers no proposals for any growth of employment opportunities in Berkhamsted, thus promoting what realistically will be increased high-carbon travel for work. The vast majority of housing growth is to be sited on valley</p>

side and ridge-top Green Belt land sited at a distance (3-4km) from the town centre and railway station, with steep gradients that will only promote high-carbon forms of travel rather than the stated reference of walking and cycling. It is unclear how the 'historic character' of the town will be protected, and building on the 'outskirts' will significantly increase traffic in the town centre.

Berkhamsted lies in a valley, it's is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process. I believe that given its current size and topography, Berkhamsted has reached its limits of capacity. As conceded by DBC, the town centre already suffers from congestion and poor air quality (especially on Lower Kings Road). Building more edge of town developments on valley side/ridge-top Green Belt locations at a distance (3-4km) from the town centre and railway station to satisfy flawed housing targets is not sustainable in any sense of the word. These plans will not enhance the quality of life for residents current or future.

<b>Spatial Strategy for Growth comment</b>	<p>Brownfield sites should be used before Green belt or green areas within existing developments. The type of housing that is most needed must be built first; rather than allow developers to cherry pick. Your plan does not say what affordable means. To me this would be no more than £250,000 for a starter three-bedroom home with garden and parking. I know they can be built for less than this (as I know someone who three years ago, built a new three bed home on their previously detached home for less than £200,000).</p> <p>You acknowledge that the infrastructure is 'constrained' in the larger villages (Bovingdon, Kings Langley and Markyate); but you plan to build anyway without any plans to improve the infrastructure. These sites should not be built on first, unless there are going to be significant improvements to the infrastructure; although I suspect the developers will want to cherry pick to maximise profits, and try and sugar coat that improvements will be made, when in reality greater pressure will be put on the already strained infrastructure.</p>

<b>Spatial Strategy for Growth comment</b>	The projected numbers of new houses needed are no longer justified by the latest data. The infrastructure of the town, including the proposals, will not be sufficient to support the growth as included in the plan. The removal of Greenbelt land will have a negative impact on the community and generations to come. The justification for removal of Greenbelt land, which never be undone, is not justified by the data. Dacorum Borough Council has incorrectly taken the numbers for new houses from Government as a strict target and will result in unsustainable growth at unsustainable locations.

<b>Spatial Strategy for Growth comment</b>	The projection of housing need locally, based on official population projections - figures from Herts Insight via link on Dacorum website - is much lower than the planned 16,889 homes.

The 2019 Dacorum population is 154.7k, 2041 projection is 177k and the plan runs to 2038. Current homes are 59,983 with density of 2.6 people per household. If an additional 16,889 homes are built, that is a household density of 2.3. Why do Dacorum households would drop by 0.4 people per house in twenty years, when locally that isn't the case and the influx from London is largely couples with or about to have children?

Post-pandemic it is inevitable that significant town centre office accommodation will remain vacant, with a permanent shift towards remote and flexible working, in addition to the closure of some firms. This excess capacity would be best re-purposed into residential dwellings to revive town centres and the pressure on the greenbelt. It would also ensure that existing transport links and other infrastructure could be re-purposed, rather than having to start 'from scratch' in new developments and prevent further hollowing out of our town centres.

**Spatial Strategy for Growth comment**

5.2 There is little evidence of a desire to minimise development on green belt land - most of the proposed development in Tring is on green belt land.

5.5 This makes no sense in the context of the actual plan, which provides for a massive expansion in Tring and Berkhamsted, inevitably changing the character of these towns, both by the sheer increase in population and by siting development away from the current town centres, resulting in a fragmentation rather than a reinforcement of community.

Government numbers are a starting point, not an inflexible end. The borough should be arguing that the numbers need to be adjusted down because of the particular local circumstances, including the inability to build the proposed number of new homes without significant detrimental impact to the green belt and AONB.

<b>Spatial Strategy for Growth comment</b>	It is important to build more affordable homes for families. Having lived through this pandemic it is clear that families need gardens. Housing should not be all about profit but quality of life and developments should be sustainable, trees and green areas should always be incorporated. If building in villages all developments should be in keeping with the locality. No blocks of flats towering over existing homes. Elderly people will not want to live in villages where there is no bus service or shop. They also will not want to live in noisy flats or maisonettes so building this type of housing in villages is completely pointless. People should be provided with affordable homes with gardens.

<b>Spatial Strategy for Growth comment</b>	There is a 24% proposed increase in housing in Berkhamsted (more than 900 homes) and a 50% increase in Tring. Whilst I accept that we must take some share of the new houses within these areas, the outdated housing projections

used by DBC based on the 'mutant algorithm' used mean that the percentages taken in these areas are too great and unnecessary. I urge DBC to challenge the numbers dictated by central government rather than just accepting them.

Also, nearly all the development proposed will be on Greenbelt, which is against government policy. Why is this being allowed? This will not help the future growth of the area or sustainability. A green buffer is needed between the A41 and Berkhamsted due to the increased traffic on this road.

Please can DBC look at Brownfield sites before building on the Greenbelt? Has this been done? If not, why not, and if so, could we please see the results of any studies undertaken?

**Spatial Strategy for Growth comment**

The growth of villages has taken place naturally over centuries. The present proposals suggest the forcing of village growth which does not and cannot take account of natural growth. Such forced growth will devalue and destroy village heritage and the integrity of rural living. There will be no need to destroy any designated Green Belt areas if the development proposals are revised to be more realistic and pragmatic.

If the government stands by its commitment to improve the north of England, the need for the over development of Dacorum will be eliminated.

Spatial Strategy for Growth comment	The draft Plan puts sustainable development at its heart, and contains many strong aspects. Yet it is predicated on the removal of Green Belt land, which based on two serious flaws: an unjustifiably high number of new homes, based on outdated data, and a failure to fully evaluate the the full range of value provided by Green Belt to residents in Dacorum and beyond, including air quality, recreation, physical and mental health and carbon sequestration. In planning for an unnecessary number of homes, the Plan risks removing valuable Green Belt status unnecessarily.

The draft Plan cites 922 homes per year, but the latest minimum number under the MHCLG calculation (16 December 2020) requires this number to increase to 1023 homes per year. Quite unreasonably, this number is based on 2014 ONS housing need data, rather than 2018 data. If ONS projections of housing need in 2018 for Dacorum were to be used, the number would be 355 homes per year. Even applying an ‘uplift’ of 40% in order to allow the government’s approach of improving affordability by increasing the supply of homes, this number would be 499 homes – less than 50% of what is currently required for Dacorum.

Furthermore, the draft Plan takes **no account of the impacts of Covid and Brexit**, which are both likely to create a step change in the way in which people live and work, and so need for domestic and commercial property. It is therefore vital that the Local Plan for Dacorum is revised based on recast socio-demographic projections that take these dynamics into account.

If these numbers are to be substantially revised, then comments received during this consultation may not be relevant to the actual proposals for the Local Plan. Indeed this public consultation process may be rendered invalid, and a new Local Plan subject to a further public consultation.

### **Removal of Green Belt land**

#### **The Local Plan lacks information that justifies the destruction of natural assets in the borough as a result of the strategy envisaged.**

Whilst planning for irrationally high and excessive numbers of new homes, the Local Plan proposes the destruction of Green Belt, without having seriously evaluated the enormous value generated by Green Belt land and other natural assets to the residents of Dacorum.

Green Belt is established as a whole system, rather than a combination of marginal pieces of land. NPPF 136 only permits the removal of Green Belt status *in exceptional circumstances*. The need for new homes is not understood to provide such circumstances. Yet the local Plan does not demonstrate the ‘exceptional circumstances’ that justify the removal of Green Belt – an irreversible move. As eminent economist and government advisor Professor Dieter Helm argues, “Irreversibility places the onus on those who would destroy it to prove that the optimal Green Belt is smaller now than it was when it was created.”

On a personal level, I strongly object to the removal of Green Belt land envisaged by the Local Plan, since these proposals are based on an inflated basis of housing need, no recent investigation of brownfield development potential after Covid and Brexit, and insufficient information of impact. As a result, there is a real danger the Local Plan will result in impacts that run counter to the long term social, climate, sustainability and even economic objectives of the Strategy for Growth itself, and the legally binding Net Zero by 2050 target of central government.

The assessments of Green Belt undertaken for the Plan in Stage 2 Green Belt Review and Landscape Appraisal focuses on its value in terms of formal purposes of Green Belt, and the extent to which development should be tempered by ‘constraints’. This **fails to approach Green Belt as an asset with high and multiple value**: as well as the biodiversity value generated by soils, hedgerows, scrublands, chalk stream habitats, woodland and green corridors – all of which must be accounted for under the Biodiversity Net Gain requirement - Green Belt land is valuable in improving air quality and preventing pollution; it is a significant carbon sink with the potential to grow its carbon storage if well managed; and

it is the source of enormous social and health benefits to local residents, who enjoy using it for social activities and physical exercise – not only in recognised sites of natural value but all green spaces.

Currently, the assessments of Green Belt and spatial planning options used are not aligned: the Sustainability Issues and Objectives within the current Interim Sustainability Appraisal Report of November 2020 are not the same criteria as used in the Green Belt Review and Landscape Appraisal – unsurprisingly as they are undertaken by different consultants at different times. As a result, the considerations of one appraisal may not have been consolidated with the findings of the Green Belt Review of potential sites for development. A common framework and set of metrics is needed.

**It is recommended that a comprehensive and consistent ‘natural capital value’ framework is adopted by DBC.** This would be used to evaluate and capture the economic value of the natural surroundings, including and especially in Green Belt land, in a consistent **baseline assessment of value generated by the natural assets of Dacorum**, and the impacts of the Local Plan clearly laid out in relation to this baseline.

Unless such consistent assessments are undertaken, the true value of our natural assets cannot be understood when considering the merits of the spatial strategy for new housing developments. Nor can DBC understand the relative value of the Green Belt being compromised by the Plan. The Natural Capital approach applies a financial value. Such an approach enables a fair comparison of value loss with value gain, and forces stakeholders to consider the consequences of the trade offs involved with developments.

An example of such a study is provided by the London Borough of Barnet, conducted on a broad natural capital basis in line with the guidance on Corporate Natural Capital Accounting (CNCA), including from the UK Natural Capital Committee and the international Natural Capital Protocol as well as existing CNCA examples.

<https://barnet.moderngov.co.uk/documents/s40941/Appendix%20%20Natural%20Capital%20Account%20for%20Barnet.pdf>

Against this baseline, DBC policy should require all development activities to account for the destruction of a consistent types of value involved – CO2 storage, natural habitats, social and health value – alongside the value new developments would create. The Interim Sustainability Appraisal report has started this process but as noted, it is inconsistent with the appraisal of Green Belt sites.

**If the full value of Green Belt and other green spaces were consistently accounted for, the *net additional value* of the new developments would, in reality, be significantly lower than is assumed in the Plan**, to the detriment in the lifestyle of Dacorum residents. If the very high number of houses slated for Dacorum turn out to be unmatched by demand, the net benefits could in fact be negative.

Publication of the existing financial value contributed by natural assets in Dacorum would be a means of educating residents, council officers, councillors and most importantly developers about the trade-offs involved in building the town's future. Residents could, for example, be consulted on the balance of value in more high-density in-town developments or more low-density developments built on Green Belt. Where new homes need to be built in Dacorum, far more transparent evaluation and far better-informed public consultation of the options available is needed.

<b>Spatial Strategy for Growth comment</b>	<p>I don't know where to begin! You propose to remove vast swathes of green belt land without proven need in the light of all the changes that have occurred in the last 5 years with Brexit and Covid. Every assumption you have made is from a different age! You are planning for ' additional retail floorspace' when the homeshopping / Amazon revolution is decimating companies as big as Arcadia and leading to vast swathes of the high Street laying dormant. The criteria for house building plans you are using are outmoded and based on old data that predates both COVID and Brexit. A recent Bank of America report sees no increases in the workforce in London in the next 5 years due to falls in office based working and Brexit related immigration changes yet you insist on drawing up housing targets based on immigration and working data from another era. You intend to keep office floor space the same when the Covid led home working revolution is decimating the need for office space as proven by falling office rents all over London and the South East. Your planning forecasts and assumptions are totally broken.</p> <p>The release of green belt land is supposed to be only in 'exceptional circumstances'. I do not believe those circumstance exist any more, or at the very least the assumptions underlying them need to be revisited in the wake of Brexit and the home working revolution that has been unleashed by Covid. Berkhamsted and Tring particularly have no need of the ruinous housing targets you have planned. Please revisit your planning assumptions urgently in the light of what has happened to society since 2016.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Tring, Berkhemsted and Hemel all have very different characters, and by trying to fit them into the same strategy to be balanced will change these towns immeasurably.</p> <p>Mention is made of schools and health provisions, but the infrastructure such as water supply and waste water management are not covered. This is an important consideration when trying to make best use of natural resources.</p>

The quoted number of 2,700 new homes for Tring is out of scale with the current size of the town, and the current sports facilities, of which there are a large number, provide more than enough capacity for the current (and future) population. Any expansion of Tring will have an impact on the Chilterns AONB because the town currently sits in a hollow and from a great number of locations in the countryside around the town, the buildings are either hidden or do not impose on the panoramic skyline.

A post-pandemic review of the required office floorspace should be conducted, as well as the need for additional retail capacity, especially when there are a large number of vacant shops in Tring High Street.

**Spatial Strategy for Growth comment**

I believe the strategy for growth needs to be reconsidered in light of Covid and potential changing lifestyles - for example will all the office space still be needed?

Also the plan is an overdevelopment of the area and could adversely affect the smaller towns such as Berkhamsted and Tring - also these areas are unlikely to provide affordable housing.

The whole plan seems like a massive overdevelopment of the area and will spoil what is good about living here.

<b>Spatial Strategy for Growth comment</b>	<p>As mentioned earlier, the town centres of Berkhamsted and Tring already suffer from congestion and suspect air quality, For example, data for Lower Kings Road in Berkhamsted shows the level of NO2 in some periods exceed the 40micrograms/cm3 limit, albeit that the annual record does not show exceedances. In many respects at its current size and topography Berkhamsted has reached the limits of capacity as evidenced by traffic congestion, shortage of school places at primary and secondary levels, GP and associated services, sports facilities and in-town open space. I do not agree that the substantial increase imposed on the Town will enhance the quality of life for residents, current or future.</p> <p>I would also point out that the Housing Growth numbers in the Plan is based on flawed assumptions, Para 5.3 – 5.5 [P30]</p> <p>The proposed housing sites are not Urban land as you say you intend to develop, rather they are Green Belt corridors. 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. They are not near any passenger transport or other services, facilities or employment opportunities.</p> <p>In SP2 3B Berkhamsted will accommodate growth of 2,200 new homes.</p> <p>The Adopted Core Strategy (2013-2036) para 6.2.8 identified capacity (not “need”) in Berkhamsted of 600. Only eight years later this statement indicates that Berkhamsted will have an additional 1600 homes imposed upon it.</p> <p>There is no credible forecast that says this many homes needed or evidence that explains how the environment and infrastructure can cope. The recent years of significant house building in Berkhamsted seem to have gone unaccounted for.</p>

<b>Spatial Strategy for Growth comment</b>	<p>We need more housing. However, the projected requirement for the number of new homes is double the level it should be within the Borough (and government will take advantage of this over-projection compared with other 'commuter regions'). The projections should be based on 2018 ONS numbers rather than 2014 numbers which would approximately halve the projected requirement across the Borough to a more realistic 351-536 built annually.</p> <p>In addition, while I appreciate that Hemel Hempstead is taking the bulk of the development it cannot really be compared with Berkhamsted and Tring. Hemel is a far more modern conurbation around the M25/ M1/ A41 intersections. Being more modern it has wider main roads to take the additional traffic that will result from the additional housing. By contrast, Berkhamsted and Tring are old market towns which are already grid-locked at busy times.</p> <p>With the additional proposed housing being on green belt rather than brown field sites and therefore away from the centres of the towns will stimulate even more car use and exacerbate the problem further.</p>

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council’s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	I am skeptical as to how Tring and Berkhamsted will retain their character and have their town centres enhanced. Land for 4000 homes being released from the Green Belt also appears quite high. However, improvement to transport in Tring, especially to the train station, would be beneficial, and affordable housing is vital. Although, I have been made aware that the housing needs and the minimum to be built do not equate.

<b>Spatial Strategy for Growth comment</b>	Focusing on building on the outskirts of towns means the developments are some distance from the existing transport infrastructure. In particular the railways stations and links to the motorways/main roads. This will lead to more congestion on the roads as traffic tries to fight through.

The proposed link road doesn't seem to link to anything! Traffic from Berko and Tring will need to use narrow and/or single lane roads through the villages to join the link road, thus exporting Hemel's traffic problems to Water End, Great Gaddesen, Potten End etc which are not equipped to deal with more traffic. There is no reference in the Local Plan which explains how the existing routes will cope with the increased traffic volumes.

**Spatial Strategy for Growth comment**

Very concerning:-"maximise the amount of development on previously developed land within existing urban areas but taking this concept much further in Hemel Hempstead by proactively encouraging substantial increases in heights and densities in the most accessible locations".

Definitely seems to encourage tower blocks at Two Waters over looking Boxmoor. Boxmoor , the surroundings and the views has saved our lives during Covid year and needs to be protected from developers aiming at London commuters with London salaries. to quote a previous developer's description "not suitable for elderly and families". Boxmoor is not Hemel Town Centre it is a village.

The principle 'Providing growth in the villages that reflects their role and character' should apply.

<b>Spatial Strategy for Growth comment</b>	<p>I disagree with the approach to growth, in particularly seeking to "maximise urban capacity" in Berkhamsted, which this plan claims will not detract from character. It will do the opposite to everything this plan claims to be trying to achieve. The growth and sites proposed in Berkhamsted, with large soulless estates at the top of steep hills to the south of the town, bought by an affluent car owning population, will simply destroy its character. Everyone will be driving to and from town, in a road network which cannot sustain it. This will pollute and choke Berkhamsted, and undo any hopes of achieving targets around pollution, as well as damaging all the other ambitions for community, employment and the economy, because the town centre will simply become a horrible place to be. This a blunt proposed strategy, chosen for perceived simplicity instead of the reality of actual impacts.</p> <p>I have no doubt of the challenges of enabling housing growth in this area, but this bolt-on solution to Berkhamsted is based on unrealistic assumptions and no real practical ability to deliver the travel instructure/changes on which this development depends. This is a hard challenge, so needs a more considered, complex solution based on growth across a broader range of sites, with grouped infrastructure serving several areas and not retro-fitted, but designed from the outset for sustainability.</p>

<b>Spatial Strategy for Growth comment</b>	5.3 says that 'we cannot accommodate all the growth within the urban area, so [...] we do need to release land in the Green Belt.' However, as I said before, the Government housing numbers are for guidance only - they are not targets - and local authorities should be aware if things like Green Belt mean that these numbers cannot be reached. In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs in which it was confirmed that 'demand for

housing alone will not change Green Belt boundaries'. On 16/12/2020, the Government published a response to the recent white paper consultations. In this response, the following is stated: 'Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made.' Therefore, the number of new homes planned should have been decided with an understanding of the Green Belt boundaries; the Green Belt boundaries should NOT be altered by a set number of homes.

**Spatial Strategy for Growth comment**

I object to the scale of development proposed at Tring. The reasons for adopting the spatial strategy for growth do not seem to recognise that some of the options ruled out (e.g. development of the larger villages and use of brown field sites such as Bovingdon Airfield) through lack of infrastructure, are also applicable when applied to the large-scale development proposed at Tring. Large-scale developments as proposed at Tring but delivered at the larger villages would be beneficial to those communities e.g. provide schools, larger shops, sports facilities.

While the strategy talks about preserving the role and character of villages, the role and character of Tring would change for the poorer with the proposed scale of development.

By focusing more growth on the larger villages and some small scale development in smaller villages it would help the sustainability of those places, and allow the numbers in Tring to be considerable reduced.

<b>Spatial Strategy for Growth comment</b>	<p>We need more housing. However, the projected requirement for the number of new homes is double the level it should be within the Borough (and government will take advantage of this over-projection compared with other 'commuter regions'). The projections should be based on 2018 ONS numbers rather than 2014 numbers which would approximately halve the projected requirement across the Borough to a more realistic 351-536 built annually.</p> <p>In addition, while I appreciate that Hemel Hempstead is taking the bulk of the development it cannot really be compared with Berkhamsted and Tring. Hemel is a far more modern conurbation around the M25/ M1/ A41 intersections. Being more modern it has wider main roads to take the additional traffic that will result from the additional housing. By contrast, Berkhamsted and Tring are old market towns which are already grid-locked at busy times.</p> <p>With the additional proposed housing being on green belt rather than brown field sites and therefore away from the centres of the towns will stimulate even more car use and exacerbate the problem further.</p>

<p>* Yes</p> <p>* No</p>	
<p><b>Spatial Strategy for Growth comment</b></p>	<p>The strategy states:</p> <ul style="list-style-type: none"> <li>- The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.</li> <li>- Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites'</li> </ul> <p>The proposed strategy for Tring would clearly detract from the town's character as it will increase the town's population by over 50% in less than 20 years - over development on a huge scale. It will not minimise the development of the green belt as it represents a major reduction of the green belt land around the town and it would also have a detrimental impact on the Chilterns AONB. It therefore represents a complete disregard for the existing character of the town and the landscape.</p> <p>It is not acceptable to increase a town to this extent. It would make more sense to increase the number of additional homes in Hemel Hempstead where an increase would have smaller effect on a larger town. The council could also choose to develop housing on land around the industrial estate or redevelop under used office space so that less prime agricultural land is sacrificed and so that development would have no impact on the AONB.</p> <p>The development recently agreed by Dacorum already in progress in Roman Park in Tring has resulted in a major blight on the view from the AONB. The first houses have been built right on the skyline of the hill to the west of the town, much higher than all the other neighbouring buildings in Tring. This development has not been done with any sensitivity to the green belt, the character of the town or the AONB.</p> <p>Furthermore, information in the press suggests that the projections for Dacorum's housing needs have been based on old data - if this is correct then the projections must be recalculated before any agreement is given to any further loss of green belt.</p>

<b>Spatial Strategy for Growth comment</b>	<ul style="list-style-type: none"> <li>• Access to Berkhamsted and Northchurch centres is extremely limited, via a small number of single-track country lanes. Widening these lanes would involve significant habitat destruction as hedgerows and field boundaries are destroyed.</li> <li>• Additional traffic will inevitably use Granville Road as a cut-through to avoid an increasingly congested high street. The road is already used this way, and should be speed limited to 20mph. As this worsens, the danger to children and pets from traffic will increase, and the effects of air pollution (recently cited in court as a cause of death for the first time) will become more serious.</li> <li>• The housing development will place a large green area under concrete. I believe this presents a risk of flooding and ground saturation for the south side of Granville Road, which experiences run-off from the higher ground, as the ground will no longer be able to absorb heavy rainfall. This will worsen as the climate changes and becomes wetter in winter.</li> <li>• In future summer drought conditions, which are certain to increase, the extra demand for water caused by the new development will contribute to depletion of the area's internationally important chalk streams.</li> <li>• The direct pollution caused by the construction of the new developments will be significant, in the form of dust and particulate matter, noise, and emissions from heavy vehicles.</li> <li>• I am concerned that this temporary pollution and the permanent pollution caused by new housing and associated vehicle movements will be concentrated in our valley location.</li> <li>• The habitat destruction that will be caused by the proposed Northchurch developments alone will be devastating. The area around Bell Lane is rich with hedgerow wildlife, including endangered species like hedgehogs and dormice. Similarly, the proposed development along the canal would destroy a habitat for kingfishers (many people walk the canal towpath in Northchurch just to see these beautiful birds - they will not survive the proposed development), herons and numerous other species that value the wet habitat and proximity to the canal. This would also destroy a wildlife corridor that runs along the canal.</li> <li>• Both the proposed Northchurch developments will spoil the enjoyment of the countryside for local people and visitors. In our case, it will push the countryside further away from our children. Walkers on the other side of the valley along the public footpath between Norcott Hill and the B4506 (part of the Ashridge estate) will no longer see a rural view of a relatively undeveloped Chiltern valley, they will see an urban sprawl . Walkers along the canal will find themselves walking first alongside a building site and then yet another housing development, instead of dense vegetation rich in wildlife.</li> </ul>

<b>Spatial Strategy for Growth comment</b>	<p>The strategy for growth does not take into account the 2018 ONS figures which revise the need for housing down to a third of the original figures. There has been much discussion at central government level including the Communities Minister on the reduced need for housing.</p> <p>This is particularly the case in the south east and the original plan for huge growth all around London does not reflect current needs or government strategy. Jobs and government departments are going North in line with the levelling up strategy and that is where the increase in housing is needed.</p> <p>Dacorum needs to revise its growth plans rather than compromise Green Belt land and build more houses than are needed in an area where even 'affordable housing' is beyond the pocket of those in need.</p> <p>Given its distinct identity and size and distance from Berkhamsted amenities and transport Northchurch needs a similar plan to that of large villages such as Kings Langley where limited growth is planned, given its smaller size and rural nature.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The definition of affordable homes is not concrete enough. Specifying quality should be built in to definitions. If the council requires social housing this should be made clear, so that developers know what sort of community they are involved in: the Martindale development (on a former school site) allowed 5 houses for commercial sale, the rest were for social need.</p> <p>Allowing taller blocks in Hemel Hempstead, for example, just increases footfall and needs to be seen in terms of need and sustainability of sites. The criteria for development must always factor in the most up to date assessment especially in terms of environment.</p>

<b>Spatial Strategy for Growth comment</b>	the sites at the top of Swinggate Lane and to the south of upper hall park are not well positioned. They are too far from the town centre and all journeys from these sites will be by car so increasing already heavy traffic in the town. People will not cycle as the hills are too steep and it is too far to walk to the shops and too hilly to carry food etc back. There will be increased traffic and increased need for parking. These sites also form an important leisure facility for local residents and are very regularly used for walking, dog walking , running etc. Green field spaces are environmentally necessary and should be retained. There is limited opportunity for employment in Berkhamsted so new residents will have to commute by car or train into Watford or London.

<b>Spatial Strategy for Growth comment</b>	<p>The Council has a 2030 net zero commitment. Policy SP5 seeks to grow employment through the borough's close position to the M1 and M25 motorways. This contradicts the council's own net zero commitment as well as the UK's 2050 net zero commitment.</p> <p>— Too much of the housing proposed in Northchurch is at the top of steep hills, far from the train station or employment in Berkhamsted. These sites are therefore highly likely to attract two car families, as journeys to shops, work and doctors'</p>

appointments will require cars. This is not sustainable and does not take account of the responsibility to address climate change.

— The policies do not take into account the impact of the Covid pandemic. The changes in lifestyle necessitated through the move towards home based and remote working, and increased flexibility towards home/work balance have not been properly taken into account.

— The plan does not take into account the likely increase in empty retail or office space in town centres as a result of the Covid changes, missing a once in a generation opportunity for change.

<b>Spatial Strategy for Growth comment</b>	<p><b>Policy SP2 ‘Spatial Strategy for Growth’, para 3c (Page 31)</b></p> <ul style="list-style-type: none"> <li>‘Tring will accommodate growth of at least 2,700 new homes.’ This is not sustainable, and appears to be in breach of the NPPF definition of ‘sustainable development’. It represents at least a 55% increase in the size of Tring, by far the largest growth in Dacorum. It is well above the evidence-based proportion for Tring based on population growth as amended by Government ‘affordability’ formula (evidenced in the September 2020 SW Herts Local Housing document).</li> </ul> <p><b>Policy SP2 ‘Spatial Strategy for Growth’, section 5.7 (Page 31)</b></p> <ul style="list-style-type: none"> <li>I’m not convinced by this point. The size of a village or town is not necessarily the only factor to be considered in determining how sensitive it is to substantial change. It feels like other areas were not included simply because</li> </ul>

there were not the resources in DBC to properly consider these. IF that is the case then PLEASE....ask for help. We are all in this together, but it doesn't feel that way.

- *'Tring will accommodate growth of at least 2,700 new homes.'* This is simply not sustainable, and likely in breach of the heart of NPPF which is 'sustainable development'. It represents at least a 55% increase in the size of Tring, by far the largest urban growth across Dacorum envisaged by the Plan. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by Government 'affordability' formula (evidenced in the September 2020 SW Herts Local Housing document).

In addition, the Plan presents no evidence that development will enhance the town centre or strengthen its function as a key market town in the Borough.

- We are not convinced by this. The size of a village or town is not necessarily the only factor to be considered in determining how sensitive it is to substantial change. If other locations have poorer access and public transport, and/or a general lack of employment opportunities, supporting services or facilities, then arguably these are exactly the places that should see development and improvements.

**Spatial Strategy for Growth comment**

Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	The plans for Tring and Berkhamsted will definitely change them, from Market towns, to an extension of Hemel Hempstead. These are meant to be small towns and do not have the infrastructure to cope with the massive expansion of houses from these developments.

Additionally, spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Government Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt. This is damaging for the climate and the environment around us, something we need to take serious care of.

<b>Spatial Strategy for Growth comment</b>	This is an awful way of getting a response from ordinary citizens. The document is over long and unreadable. It is ridiculous and irresponsible that this is happening during such an unprecedented crisis for our country. I can't believe that this is legitimate.  Now all I can say is that I endorse the CCG submission and question your motives at this time.

<b>Spatial Strategy for Growth comment</b>	<p>Also for Tring the doctors surgery's are already under pressure. Waiting times for appointments are long and trying to make appointments via telephone can be notoriously difficult.</p> <p>Further developments will again already make a stretched service even more stretched and again mean worse access for the residents. Again not sustainable.</p> <p>Overall the infrastructure and services of Tring cannot cope with these proposals and these developments themselves are not sustainable in their nature.</p> <p>Before any further developments (houses) the current provision of services both doctors and especially schools need improving. If new houses are to be built the schools and other infrastructure must be built first. As we have seen past promises of improved services and job opportunities have not materialised - just look at what was promised at the west side of town originally and what is resulting. I believe additional homes are now being built at the expense of other things.</p>

Overall, I do not support the over development of Tring, which these proposals most certainly do!

<b>Spatial Strategy for Growth comment</b>	There appears to be a drive for Berkhamsted and Tring to support growth in Dacorum, primarily through increased housing, where these are both fundamentally different towns to Hemel. Hemel as a new town has many flaws, and suffers much deprivation, but does offer significant business potential as opposed to berkhamsted and Tring which are small, residential market towns. to suggest that they should do more in delivering Dacorum plan misses the point that Dacorum is a very diverse group of towns. Developing to align with Hemel as opposed to improving Hemel itself is a flawed objective, and gives too little consideration to the green belt and what it was put in place to achieve.

<b>Spatial Strategy for Growth comment</b>	In Berkhamsted this is all concentrated in predominantly one area. It will significantly increase congestion in an already congested high street. I would say Berkhamsted is relatively constrained in infrastructure also.  You are supposed to need 'exceptional circumstances' to justify building on Green Belt. It's there to stop urban spread. There is not evidence of 'exceptional circumstances' here.

<b>Spatial Strategy for Growth comment</b>	Your proposal includes the building of housing - 64% of which will be on the Green Belt (77% on Greenfield), including 2,200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from the Governmnets Standard Methodology as a strict housing target. There are numerous examples of where the Government state that it is not a TARGET). This has lead to a growth Strategy and plan at unsustainable levels and locations at the cost of swathes of the Green Belt. The reference to Berkhamsted and Tring providing more balance to the growth is ridiculous given the small high-street and the green-belt that woul dhave to be sacrificed to deliver this plan.

<b>Spatial Strategy for Growth comment</b>	Town such as Hemel Hempstead, Berkhamsted and Tring cannot not grow sustainably. Take for instance train travel to London - the trains are standing room only from Berkhamsted at peak times already - adding thousands of new homes will only increase that congestion, it is unlikely people living in Hemel will be able to board most peak trains.

<b>Spatial Strategy for Growth comment</b>	5.6 Because public transport is poorer in the smaller villages this is a reason to not develop them?

Surely to continually develop exiting towns only is unfair and unbalanced as they get bigger you use this as justification to keep making them bigger. surely a balance way of planning wouod be to considering improving services and facilities in places where this is not currently available would be fairer. This would stop reduce the requirement for peopple to travel into already congested town centres.

So much has changed during 2020 is they way of thinking and planning still valid?

Tring station car park was full by 7am in the morning and the mid evening bus sparodic will this be improved, or is it now being assumed that everyone will be working from home?

**Spatial Strategy for Growth comment** The demands of tring are very high indeed , 2700 when compared to 2,200 in berkhamstead. This is supposed to be a small town not a city! No resident in tring thinks this will enhance the town centre - they think in fact it will be overcrowded, there will be a strain on services, there will be increased traffic. no places to park and most importantly the identity and atmosphere of the town centre will be lost and changed for the worse. Residents want this to remain a small town, not a place where you dump an unfair amount of your housing allocation. This is a historic town with its own character and you are going to trample it.

<b>Spatial Strategy for Growth comment</b>	I am wholly against the following stated strategic principle in the Local Plan (Section 5.2): 'Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel

Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations.'

The intention to 'accomodate growth of at least 2,200 homes' is a 25% increase for Berkhamsted which will irreversibly change the character of the town. Berkhamsted will no longer feel like a unique and peaceful market town on the edge of the countryside but will head towards feeling like any other highly populated bustling large and highly urbanised town in the South East. It will no longer be such a pleasant and attractive place to live. Furthermore, sacrificing so much Green Belt to achieve the target is criminal - especially when Berkhamsted is surrounded by AONB.

<b>Spatial Strategy for Growth comment</b>	<p>The growth proposed for Tring is completely disproportional to the existing population, compared to other towns. And with Tring being an historic market town, there is little ability for the town to cater for something like a 50% increase in population and road users. Traffic flow is chaotic at times already. I can't possibly imagine the High Street, or Brook Street, for example with a 50% increased capacity!</p> <p>The proposal is completely counter intuitive to the strategy of 'Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites'. That's exactly what the proposal for Tring does!</p>

<b>Spatial Strategy for Growth comment</b>	My main focus in answering this relates to Tring as this is the area I am most familiar with. The plan states that ' <i>Tring will accommodate growth of at least 2,700 new homes.</i> ' This is simply not sustainable, and likely in breach of the heart of NPPF which is 'sustainable development'. It represents at least a 55% increase in the size of Tring, by far the largest urban growth across Dacorum envisaged by the Plan. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by Government 'affordability' formula (evidenced in the September 2020 SW Herts Local Housing document). In addition, the Plan presents no evidence that development will enhance the town centre or strengthen its function as a key market town in the Borough.

<b>Spatial Strategy for Growth comment</b>	For Hemel Hempstead to grow by over 10,600 new homes will put horrendous strain on the roads and infrastrcuture. If average wages are £34,000 and houses are £450,000 average it doesn't take a genous to know most people working in Hemel will live in cheaper areas and most people who can afford to live here will have to work closer to London. Commuter choas will be the reality after these plans are fulfilled.

<b>Spatial Strategy for Growth comment</b>	I do not believe current proposals adequately protect the green belt. Brownfield sites have not been considered sufficiently. having lived in the borough for 35 years, I consider that there are numerous areas which should be redeveloped before using excessive green belt.  I believe that the requirement for new homes is out of date being based on old statistics and new statistics do not support this level

I am particularly concerned that plans will be seriously detrimental to the roads in the area of Water End which has recently seen some improvement from the new weight limit

## Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

Reference the Sustainable Transport Strategy for Tring

Page 72 - "Due to COVID-19 lockdown restrictions, on-site observations for the challenge audits have been replaced by desktop checks using on-line tools. A series of Google Streetview photography images are presented in this chapter which were obtained during the audits." This is not a robust enough assessment to determine the transport challenges that a 55% growth in houses, people and cars will provide to the town of Tring, without an on the ground assessment the local plan is not ready for consultation.

Page 114 - "The evidence analysis and challenge audits along the interactions identified a range of potential issues affecting how the transport network is used in Tring. It would not be feasible or cost effective to address all the issues identified. Some characteristics of the town, most notably its more historic and physically constrained network of roads in the centre of the town

and the remoteness of the railway station, will continue to create barriers for people making trips on foot or by bike as there may be fewer opportunities to introduce high-quality interventions." Without an assessment of impact of not being able to deliver high quality interventions the local plan is not ready for consultation.

Page 114 - "The proposed Local Plan developments on the edges of the town (TR02 and TR03) in the case of East of Tring will pose a significant challenge in encouraging sustainable travel behaviour." Without an assessment of impact of not being able to change travel behaviour the local plan is not ready for consultation.

Page 114 - "A wider range of measures had been considered however in some cases it has been determined that there is insufficient space within the highway boundary to provide an acceptable solution, or there are safety concerns which would be too difficult to overcome." Without an assessment of impact of not being able to deliver acceptable solutions the local plan is not ready for consultation.

Page 146 - "The Sustainable Transport Study deliberately avoids putting forward large-scale, expensive and complex infrastructure such as new road links and junctions, and major new public transport routes. The evidence which has been used to inform the development of this study, including the County Council's transport model COMET, does not indicate that there is a requirement for." I strongly object to the assumption that a 55% increase in homes, people and cars can be accommodated through only the introduction of cycle paths and pedestrian crossings. A more robust and independent assessment of the road infrastructure requirements for Tring is required to avoid the town becoming gridlocked. Without a more robust transport assessment the local plan is not ready for consultation.

Page 146 - "The nature of funding infrastructure is uncertain." Do we have a commitment from Hertfordshire CC and Dacorum Borough Council that the sustainable transport initiatives suggested in this report will be fully funded by them where developer contributions are not sufficient to privately fund the initiatives? Without a commitment to fund the infrastructure the local plan is not ready for consultation.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in

planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August 2020) prepared in this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. **At** Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring

to an existing infrastructure already stressed. Furthermore the lack of a clear plan for future infrastructure to support the development in Tring is a serious oversight in the Local Plan.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to the proposal of some 3400 new homes to be built around the small peaceful village of Long Marston.</p> <p>Having been a resident of Long Marston for over 17 years now I have seen an increase of traffic trough our village that the road system simply can't cope with.</p> <p>The roads are constantly peppered with potholes from large lorries that the roads cannot take and the speed at which traffic travels through is simply not safe.</p> <p>I live on the cross roads opposite the pub and the amount of cars abusing the long straight roads in and out of the village is rediculous.</p> <p>The roads in and out of the village can hardly cope with the lorries coming through on a daily basis up to the airfield, there is categorically no capacity for any more, which a development of this size would bring in spades.</p> <p>I have seen the village flood numerous times, how can it cope with another 3400 homes??</p> <p>The school is not big enough to accommodate more children and the parking at school run times is already mad enough.</p> <p>The village has one small pub, and no other facilities. The church would not be able to cope with extra people either.</p> <p>The village would be irreversibly changed for the worse, ultimately turning it in to a town.</p> <p>There simply isn't enough in the area to cope with such a huge development.</p> <p>It would inevitably devalue all the properties in the village too.</p> <p>I urge you to consider the lives of the residents of Long Marston and think how it would affect you if this was proposed on your doorstep.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I would like to voice my oppositions and concerns on the current 'Emerging Strategy for Growth 2020 - 2038'. This is based on a number of objections that will have a personal impact on my family, me and my community.</p> <p>Firstly we moved to area because it is in an area of outstanding natural beauty (protected green belt land). We have brought our children up with knowledge of the local countryside and we walk, run and explore the area local to us every day. This proposed development will impact our daily lives greatly and I am concerned for the mental well-being of my family and some of our more elderly community. During this horrible pandemic we've been restricted in our attempts to care for a number of individuals and I'm acutely aware that several are in the dark to the extent of the impact on the local area, environment and their daily life.</p> <p><b>Destroying the feel and way of life for my local community</b></p> <p>Community is something that I feel very strongly about and something that Berkhamsted and Tring currently prides itself on.</p> <p>Recent mass developments in both Aylesbury and Hemel Hempstead is already threatening to swallow up both Tring and Berkhamsted market towns in to mass suburbia.</p> <p>The proposed growth strategy will completely change the community feel of these market towns that I want my family to grow up in.</p> <p>In the light of recent events (Brexit and CoronaVirus) and trends in the retail sector, the government has announced a new approach to promotion of redevelopment and changes to the way our urban land is used, in particular the reconsideration of how much, and which existing retail, industrial and commercial land and premises can be more efficiently and sustainably used in a different <b>way</b>.</p> <p>I'm aware that in December 2020 several MP's were successful in shifting the housebuilding emphasis to brownfield urban sites in the West Midlands and northern England, away from rural and semi-rural communities in the South East.</p> <p>In October 2020, former Prime Minister Theresa May called the plans "ill-conceived", while ex Foreign Secretary Jeremy Hunt accused the government of risking "undermining" local democracy by pressing ahead. Therefore, I'm aghast that these plans are still under consultation.</p>

The now-expanded permitted development rights allow commercial space to be converted to residential (as well as adding additional storeys on top) without need for planning permission  
This new opportunity appears to have been ignored in the preparation of the proposed plan.

**Spatial Strategy for Growth comment**

I wish to object to the draft local plan which is based on inaccurate and out of date population projections.  
I am sure some additional housing is needed next decade but not the vast amount that is projected for Berkhamsted and Tring. The housing proposed will totally change the historic character of the area.  
I would also say the majority housing proposed 4/5 bed homes is not what is needed. What is needed is more social rent housing and 2 and 3 bed family homes.  
  
I do not think the case for using green belt land for housing is well made. Again this seems a weak giving into large housing developers who know they can make more money for greenfield sites.  
There is weak or no planning for the necessary infrastructure to support the massive and unnecessary increase in housing in the plan. There is also no employment strategy so the additional housing provision will need employment elsewhere  
.  
In terms of the need to plan for net zero carbon I do not think this draft plan supports it in anyway.  
Finally the impact of the pandemic may well impact on the need for development in London and the south east so it may be tie. To take a step back wait for the outcome of the census this year and base plans on more realistic projections.

<b>Spatial Strategy for Growth comment</b>	<p>We strongly disagree with the plan for the type and number of additional houses in Berkhamsted and Tring. Although we accept the need for the provision of new properties, the plan is misconceived as a significant amount of green belt will be lost plus the fact that it will put a considerable strain on the current and future planned infrastructure.</p> <p>It appears that the volume of houses proposed in the Berkhamsted and Tring area is disproportionate to the number of new homes in the whole of Dacorum. This proposal needs revisiting in order to get the support of the local community.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I watched last night debate with Cllr. Lara Pringle and was also made aware last week of a proposed development near Bourne End that would see 800 and 1100 new houses built in 2 separate but very close developments. Looking at the proposed sites, I am horrified at the amount of the Green Belt that would cease to exist. You can't just get rid of it and plonk nearly 2000 houses in its stead: this is national heritage, national property and as an elected person, you should insure that land is protected, not sold so developers can fill up their pockets ! I am not into politics: I am not Tory or Labour, let alone Lib Dem but I can see who's working for the best outcome for the people and who isn't. I am appealing to you as a citizen of Hertfordshire.</p> <p>I left Harrow where I lived for 27 years and came here because the quality of life seemed much better. Even living next to Bourne End Mills Industrial Estate didn't bother me compared to how Harrow had developed. I saw the upheaval created by the development of the Eastman Kodak factory (The Eastman Village) where 2000 new homes were built and it's not something I'd wish on my worst enemy. Despite all the precautions you may take, all the facilities you may offer, it will never go smoothly, it will the end up in disappointment and bitterness.</p> <p>Please, do not do this to Dacorum: I understand people need homes but there are plenty places that won't need councils to destroy a massive part of the Green Belt. Do not turn Herts into a place where nature consists of small manufactured greens with plastic cows. If not for our sake then do it for our grandchildren's future.</p> <p>Thank you for your time.</p>

<b>Spatial Strategy for Growth comment</b>	As a resident of (address removed) I am concerned at the development proposals that are being put forward. I appreciate that we need more housing & I have taken part in planning workshops in the past. My concern at the moment is that people need to be able to attend meetings & see the proposals in reality rather than trying to view everything online. I would ask that you consider extending the consultation process so that when we emerge from lockdown we are able to engage properly with the process as it is so important.

<b>Spatial Strategy for Growth comment</b>	<p>I am most concerned about the future planning for the Dacorum area, which has been outlined in the Dacorum Local Plan.</p> <p>The plan specifies an excessive number of houses for the designated individual areas. In addition there will need to be an increase of building for the creation of extra local services.</p> <p>The proposals would include a significant population increase. Can the Borough support this?</p> <p>There is a further loss of Green Belt areas which should not be permitted. We have already lost significant 'green' areas. Since the Covid lockdown, it is likely that all local planning will need significant reconsideration. I urge you to consider this.</p>

development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council' s inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

In response to the draft local plan entitled 'Dacorum Local Plan 2020-2038 Emergency Strategy for Growth Consultation', I would like to register my objections as follows:

The proposals to build on the green belt contradict government guidelines which state that there needs to be strong proof that building on the Green Belt is absolutely necessary before Green Belt land can be released. This has not been shown.

The housing projections are based on out-of-date and non-area-specific statistics.

There has not been enough scrutiny of potential brown field sites for development, thereby avoiding impact on Green Belt land. Research has shown that Covid 19 has changed behaviour meaning more town centre development is possible, but this has not been taken into account.

There are too many houses, yet no evidence in the plan that there will be enough social and affordable housing. We need to be building the right houses in the right places for local people - not supporting developers to create expensive housing that will benefit them.

Not enough care has been taken to protect the local ecology - the demand for water with this increased housing will damage the aquifer and the internationally recognised chalk streams.

The plans are not carbon neutral and conflict with commitments to tackle climate change.

<b>Spatial Strategy for Growth comment</b>	<p>I wish to record my concerns/opposition to the proposed Draft Local Plan 2020-2038</p> <p>I am extremely concerned about the proposals made in the proposed Draft Local Plan.</p> <p>Whilst I appreciate that new homes have to be built to meet the housing demand.</p> <p>The proposals included in this plan are in my opinion are excessive.</p> <p>My main concern is that too much of the Green Belt will be lost to accommodate this excessively high number of new homes. This will change the character of the area, especially Berkhamsted and Tring.</p> <p>The proposed increase in housing will greatly increase the area's population and consequently increase the pressure on an already strained health service. Doctors, Dentists and Hospitals.</p> <p>I am also concerned that the services industry providing the electricity, gas, water and sewerage systems will not be able to cope with the housing numbers proposed in the plan.</p> <p>I have lived in Berkhamsted all my life and am now 65 years old. I have seen Berkhamsted and the surrounding area change dramatically during my lifetime and not all of the changes have been to the benefit of the area, which is a great shame.</p> <p>I fully support the views of the Berkhamsted Citizens Association and the Berkhamsted Residents Action Group in their opposition to the proposed Draft Local Plan 2020-2038.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations</p>

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

The plan fails to take into account the ongoing and future effects of the Covid pandemic in terms of peoples' working habits i.e. the number of people working from home and not having the necessity for easy access to railway transport facilities and also the current demise of high street retail facilities which altogether is likely to result in large amounts of town centre retail and office accommodation which could be repurposed for housing oviating the need for encroachment on the green belt. The plan is clearly out of date.

<b>Spatial Strategy for Growth comment</b>	<p>Whilst I support the need to increase housing, this needs to be done in a sustainable way and to preserve the greenbelt. The plans to increase housing in the area by 16,600 new homes is completely excessive to what the projected need is. The latest ONS data available projects 6051 new homes by 2038 - 64% fewer than this plan projects. I therefore object to the proposed plans and would like this email put forward to the decisions board.</p> <p>There is already a high demand for services such as traffic needs, schools and healthcare in the Dacorum area. The plan does not commit to any level of sustainability in its sustainability targets.</p>

## Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust.

Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. - I object to the proposals in the consultation because the proposals to build on the green belt are wrong.
- I understand that there needs to be proof that building on the Green Belt is absolutely necessary before Green Belt land can be released. This has not been shown:
  - The housing projections are based on out-of-date statistics
  - The needs of local people have not been prioritised over the needs of developers
  - There has not been enough scrutiny of brown field sites
  - CV19 has changed behaviour meaning more town centre development is possible - this has not been taken into account
  - There are too many houses, yet not enough social and affordable housing - we should be building the right houses in the right places for local people - not giving a green light to urban sprawl
  - Not enough care has been taken to protect the local ecology - the demand for water will damage the aquifer and the internationally recognised chalk streams
  - The plans are not carbon neutral and conflict with commitments to tackle climate change
  - The houses proposed will encourage people to use cars as they are not near employment or transport hubs.

<b>Spatial Strategy for Growth comment</b>	I acknowledge that more homes are needed nationally but greenbelt land should not and does not need to be used to provide the additional homes required. There are many brownfield sites across the UK desperate for regeneration and

there are signs (post Covid) that we will have a lot of office space standing empty creating additional opportunities for more affordable accommodation. Further exploration of the location of these sites should be carried out – and developed first.

Let's not kid ourselves that this process is going to create affordable housing. Developers on land around Berkhamsted because of the large prices which executive homes can attract. They are not interested in meeting the accommodation and services needs of the local community.

The Plan in Dacorum takes the easy way out – focussing on simply taking up large swathes of green belt land without looking further and differently. The numbers are simply unrealistic and Dacorum should push back on the housing targets, concentrating more and more homes in the South East is simply not sustainable and does nothing to help investment in the UK as a whole. What is more, increasingly there is less reliance on needing to be close to London.

I wanted to add my name to the list of local residents who are against the local plan. I agree we need to build additional housing and the part of the plan that covers development of existing run down, derelict, disused buildings and areas will be of great benefit to the local area, but I whole heartedly reject building mass housing sites on fields and green belt. The amount of homes planned seems completely disproportionate to the area and such a massive increase it can only negatively impact the town. Main roads running into Hemel including the London Road, and St Albans road are already often jammed with traffic at peak times, we are losing our hospital, we do not have enough doctors surgeries or NHS dentists already to support the local area. The town car parks are often already full at weekends, and the station car park (while I understand has plans for expansion is also impossible to park in if using during the day).

I welcome regeneration and exciting about the majority of planned sites and changes to the town moving forward, it's just the green belt land and fields that I reject.

<b>Spatial Strategy for Growth comment</b>	(5) Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted, of which 80% will be on new Green Belt releases, and 150 at Grange Farm in Bovingdon which would cause further residential sprawl of the village away from it's "village roots" around the High Street and out towards Ley Hill. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	<p>The plan for Tring to have at least 2700 new homes is not sustainable. As above ,the 55% increase in the size of Tring is by far the largest within the plan for Dacorum and is likely to impact greatly on wildlife and biodiversity by destruction of hedgerows and other habitats, wildlife corridors and by the increase in population, cars, and pollution. The plan to create new spaces for wildlife conservation and nature reserves is completely contra to the loss of widespread open countryside and land which contributes to the AONB and Green Belt land.</p> <p>We are in a climate emergency. I strongly believe that the plans should require builders to use low carbon schemes and renewable energy. The words used in the plan are to ‘encourage’ and ‘stand along’ these aims. As economics will always be the driver for development companies, these need to be mandated not ‘encouraged’ to ensure that they are used.</p> <p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p>

## Spatial Strategy for Growth comment

This plan appears to accept and support growth that is far in excess of estimated population increase. It follows on from this basic assumption in all the excessive and disproportional plans for Tring. It reads as a developers plan (based on economics) rather than providing a forward looking vision for the 21st century, in the context of climate emergency. I agree with the Grove Fields Residents Association responses to the local plan in relation to the following:

- Housing need must be calculated through an objectively assessed needs assessment.
- Reverting to a strategy based on Hemel Hempstead taking on the vast majority of housing (following objective assessment of need) would provide the appropriate socioeconomic and physical infrastructure for development. It would allow greater opportunity for using brownfield sites and reduce the cumulative effects on the Green Belt and AONB's.

I agree with the Tring in Transition group in their proposals below:

### 'On Dis'nc've Developments and Vision for the Future

The need for 'disAncAve' development is menAoned several Ames in connecAon both with the natural and built environments (e.g., 'All seClements will have retained their separate and disAncAve idenAAes informed by proposals that were shaped by a detailed understanding of place.'

– Overarching Vision, page 22).

It is not clear how this will be either defined or agreed for Tring, which is arguably the most disAncAve seClement in Dacorum in terms of natural seQng, social and economic history. Neither is it clear how this will be given 'teeth' in order to proacAvely shape development.

There is a real opportunity here for Dacorum to create an exemplar Plan and an opportunity to work with local groups sooner rather than later.

In the absence of a working definiAon, Tring in TransiAon has created an iniAal descripAon of what makes Tring disAncAve to help shape what we would expect to see in the final version of the Plan. This highlights our unique heritage and locaAon, including:

- A Rothschild legacy of forward-thinking development, respect for the environment, bold and challenging designs and soluAons.
- A strong heritage of local renewable energy with significant wind and waterpower.
- A locaAon surrounded by more than 50% of Dacorum's SSSIs, extensive AONBs, as well as extensive hedgerows and other wild places.
- A service-oriented, agricultural, market legacy and a tradiAonal desAnaAon locaAon to visit, meet, relax and socialise.

### 2. '21st Century Market Town'

To address the need for growth, enhance the exisAng town centre and correct assumpAons apparently carried over from previous planning exercises (traceable back to the 1990s).

We proposed taking a lead from exisAng '21st-century market town' schemes successfully being deployed in Yorkshire, Stroud etc. In summary, this includes recognising the limited need for new town centre retail space; acknowledging that

central supermarkets are more damaging environmentally than those designed to limit travel and traffic congestion; and acknowledging changing employment patterns and social norms (this is especially true for Tring).

- Replace proposals for significant new retail space and encourage more food, experiential, social, entertainment and 'desirable' spaces etc.
- Revisit plans for a central supermarket (which will only add to issues with existing traffic hot spots) and recognise the patterns of use from those living in villages to the north of Tring. (Depending on revisions to developments – this could well be at the Bulbourne side of town.)
- Remove proposals for warehousing and large industrial units on the Dunsley Farm site and build on Tring's heritage as a service-oriented market town by building smaller, more flexible workspaces that reflect rapidly growing local/home-working patterns.
- Revisit plans for Tr06/Brook St: prioritise schemes from the High Street, encouraging food, social and 'desirable' spaces.
- Recognise that Dunsley Farm is better suited to residential home development than light industry – meeting both social and employment needs.

### 3. 'Linked Wildlife Corridors'

To address pressures on local green spaces, SSSIs, biodiversity and Green Belt loss.

The definitions of open spaces, green spaces, green buffers and wildlife corridors need to be more explicit. They are a consistent cause of confusion and question in the Plan. There is a need for all of these, but given the high number of SSSIs around Tring, AONBs, the Beechwood SAC, etc. there is an opportunity to establish a country-leading if not world-leading scheme where defined wildlife corridors are proactively established around the entire perimeter of the town, through new developments and onwards to local nature reserves etc.

- Implement joined-up wildlife corridors through and around all new developments.
- Explicitly plan to proactively link all SSSIs via wildlife/green corridors.
- Provide managed public access through a new network of paths.
- Provide an opportunity for the various organisations managing local wild spaces (Woodland Trust, National Trust, Wildlife Trusts, Chiltern Society, Rothschild Estates etc.) to work together with the Council to design and build this. (An initial poll of these organisations indicates a strong willingness.)
- Recognise NPPF requirement that any Green Belt development requires explicit mitigation and improvement on other Green Belt land. (The inclusion of green and open spaces in existing Green Belt parcels earmarked for development does not count towards this.)

### 4. 'Sustainable Energy Use'

To address county and national carbon targets and to reinvent Tring's legacy of renewable energy use. We acknowledge statements about going beyond current government guidelines on new housing insulation. This sounds good but will already be superseded by more demanding targets before we are halfway through the term of this Plan. We are also aware that developers have pushed back with statements like 'we don't find a market for solar panels' etc. These are, frankly, irrelevant and should be entirely disregarded.

Developments around Tring have a clear and new opportunity to embrace the highest possible standards that can be mandated (if not higher):

- All new developments built to highest possible standards of carbon neutral build and energy efficient operation.
- Renewable energy targets, inclusion of solar systems in new homes etc. (regardless of any developer pushback) should be explicitly mandated.
- See our detailed response to SP24 etc.'

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemet Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	I am in strong disagreement with the plan for the type and number of additional houses in Berkhamsted and Tring. Although I do accept the need for the provision of new properties, the plan is misconceived as a significant amount of green belt will be lost plus the fact that it will put a considerable strain on the current and future planned infrastructure. It appears that the volume of houses proposed in the Berkhamsted and Tring area is disproportionate to the number of new homes in the whole of Dacorum. This proposal needs revisiting in order to get the support of the local community.

<b>Spatial Strategy for Growth comment</b>	I object to this plan on the basis of the unreasonable % increase in housing on the towns of Berkhamsted and Tring. It is too much of an increase in dwellings with insufficient additional infrastructure planned. Doctors abs schools are already struggling and unable to cope with immediate local demand.

Furthermore, It would also caused irreversible change to the character of these market towns and the green belt space around them. The impact to wildlife of this plan is not acceptable. Building on brownfield sites should be prioritised before green belt.

**Spatial Strategy for Growth comment** 16,000 homes in the area cannot currently be supported with local infrastructure. Booking a doctor's appointment at my local practice typically involves waiting a month to be seen, local schools are already heavily oversubscribed and traffic/parking already at its peak in most areas. We have recently applied to infant schools in the area, with those within anywhere close to walking distance having 2-3 applicants per place already. When it comes to secondary schools, children in previous years have been sent to Westfield in West Watford - where are these potentially thousands more kids meant to be educated?  
Up to date figures should be used to greatly reduce the housing figures.

<b>Spatial Strategy for Growth comment</b>	I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm. I support the need for a local plan and accept the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements).

Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth. I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt. Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing with regards to the development of Dacorum housing currently in consultation, which I was completely unaware of until Friday 26th February at which point I found out it is only in consultation until today, Sunday 28th February. In addition most people I have spoken to were also unaware. I have not received any information which I believe was supposed to come through residents doors.</p> <p>I object to the proposed plans and would like this email put forward to the decisions board. Whilst I recognise the need to increase housing, there also has to be a balance to preserve the green belt space. The plans do not seem to match the requirements and are indeed excessive. Moreover there is already a high demand for services such as schools and healthcare in our area however no commitment as to how this is going to be managed with the increasing pressure the proposed volume of new houses would bring.</p> <p>With a significant volume of people being unaware of such proposals, I feel this urgently needs reconsideration.</p>

<b>Spatial Strategy for Growth comment</b>	With reference to the above local plan, I am writing to complain about the proposed overall loss of Green Belt and trees throughout the Dacorum area, but in particular Kings Langley. The Dacorum plan consists of the loss of 850 hectares of Green Belt land. The proposal is for the development of 16,899 properties. This figure is wrongly based on outdated data from 2014. If more up to date data were to be used, this figure would reduce by half i.e. a figure of 8,000! The choice of development on protected Green Belt, contravenes the policy that land can only be removed from Green Belt, in exceptional circumstances. There are no exceptional circumstances, if the total number of properties was lowered to 8, 000 and more brownfield sites were identified for regeneration. In addition to this, in view of the demise of the retail market, there are now many retail sites that could be repurposed for housing i.e. Debenhams in Hemel town centre. The Green belt was set up to protect the character of villages and settlements and put in place to prevent those areas merging into adjoining towns , therefore becoming one giant urban sprawl. The proposals to further develop land at Rectory Farm puts Kings Langley village in jeopardy of joining up to Apsley and Hemel Hempstead.

I urge you to reconsider development on Green Belt. Once the land has been lost to housing, our wonderful stretches of greenery , fields ,trees and wildlife, that provide us and future generations, such comfort and enjoyment , will be lost for ever. Please think again and explore different options.

**Spatial Strategy for Growth comment**

Re Local Housing plan for Dacorum  
We strongly disagree with the plan for the type and number of additional houses in Berkhamsted and Tring.  
Although we accept the need for the provision of new properties, the plan is misconceived as a significant amount of green belt will be lost plus the fact that it will put a considerable strain on the current and future planned infrastructure. It appears that the volume of houses proposed in the Berkhamsted and Tring area is disproportionate to the number of new homes in the whole of Dacorum.  
Berkhamsted is already overpopulated based on the current roads and local amenities, water pressure is fluctuating and it seems that you are trying to cram in as many houses as possible regardless of quality of life for all current and future residents of this town.  
We have seen through the pandemic how much everyone uses the green spaces that we have and how much they are needed for both physical and mental health in the area.  
This proposal needs revisiting in order to get the support of the local community.

<b>Spatial Strategy for Growth comment</b>	<p>The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.</p> <p>*Dacorum Growth &amp; Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan</p> <p>The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.</p> <p>Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning &amp; Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.</p> <p>I am commenting on all sites here: 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty. Although the Council states that a key objective is "minimising and managing</p>

the requirement for development on Green Belt land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant harm to the Green Belt and AONB. It also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.

**Spatial Strategy for Growth comment**

As a young person who would be looking to buy their first house in the upcoming years, I am struggling to see how this development would decrease house prices or make it easier to get on the property ladder for first time buyers. I feel as though I would not be able to find a house in my hometown of Berkhamsted as I am not eligible for affordable housing schemes but would also not be able to afford a regularly priced house in the area. By increasing the number of houses in Dacorum does not guarantee a reduction in market value and would largely cater to middle class people who are already on the property ladder and would likely be able to afford living in Dacorum already. As a Dacorum resident I feel this would do nothing to increase diversity in the area and would be unlikely to draw in younger people to replace the ageing population of Dacorum.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	<p>I <b>strongly object</b> to the Strategy for Growth plans for the following reasons:</p> <ul style="list-style-type: none"> <li>• Too many houses - DBC should challenge the government's numbers. Incorrectly calculated, more than double numbers required, unreasonably high.</li> <li>• Green belt land! Protected! Should not be built on!</li> <li>• Substantial increase in traffic (due to building in area where cars are required) and therefore pollution</li> <li>• Current infrastructure will not cope with substantial increase in traffic, it is already struggling with tailbacks along Shootersway and that is before current development at Bearroc park is complete.</li> <li>• Negative effect on mental health of current residents and new residents as overdeveloped, not enough green space, pollution, traffic tailbacks, unpleasant place to live</li> </ul>

- Negative effect on health of current residents and new residents due to pollution, lack of green space to exercise in
- Detrimental effect on wildlife if green spaces taken away
- Unsuitable location for houses right next to busy A41 - noise, pollution.
- No effective traffic solutions eg alternative entrance to A41 to alleviate traffic along Shootersway and roads off (Darrs, Durrants, Kings road). More traffic lights and roundabouts will not work.
- Roads next to school (St Marys C of E Primary School) are too busy already and children and parents walking along these roads do not feel safe.
- Schools in area such as Greenway School are oversubscribed already.

I strongly object.

As residents of Potten End village we wish to object strongly to the proposed plan - we already have a large amount of high speed traffic travelling through our village which have resulted in a number of accidents close to the school. The proposed housing increases in the Berkhamsted / Northchurch and Tring areas will drastically increase the through traffic as through Potten end is the most direct route to the M1. The increase in traffic will destroy village life - our children will no longer be able to safely walk to the green or the village shop as water end road will become too dangerous for them to cross.

<b>Spatial Strategy for Growth comment</b>	<p>Following on from my response via the Internet (I am not sure it worked successfully) I have also written below. I am a resident of Markyate, concerned for our local community but also across the Borough.</p> <p>Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth.</p> <p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p>

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

<b>Spatial Strategy for Growth comment</b>	I would ask you all to consider the long term effect this plan will have on our community. I will keep this short as you will have had many responses. We do need housing and a key consideration should be what do we want our community to look like in the future. Simply building houses will not be the answer, we need infrastructure to be considered first; water supply, sewerage, schools, transport etc. Please think carefully as your decisions will impact us long after you have retired from your present positions and our children and grandchildren will have to bear the consequences.

<b>Spatial Strategy for Growth comment</b>	<b>Green belt grab insupportable and unjustifiable</b> If implemented, these damaging proposals would result in the loss of <b>a massive 850 hectares of the Green Belt, the wider countryside and urban green space</b> for development.  There is ample basis for arguing that land constraints such as Green Belt preservation may be used as a justification for lowering housing numbers as derived from central government calculations. The Council should challenge both the

August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.

Furthermore, it is not clear that the It is not clear that the NPPF requirement for the Plan to fully explore the potential to make effective use of urban land (s. 118 and s.137) before releasing Green Belt land has been met.

**Housing type developer-led, rather than needs-led**

It is of great concern to me that in practice the prime consideration in site selection appears to be land availability rather than appropriateness or sustainability. This has led to many of the larger swathes of Green Belt that are earmarked for development being at some distance from town centres, employment hubs and public transport.

I am also concerned about the very low number of social housing units included in the DLP, as distinct from “affordable”, which are often at 80% market rates.

**Spatial Strategy for Growth comment**

I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection. In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.

**Spatial Strategy for Growth comment**

Please take this email as my formal response - ie Objection - to the Dacorum Local Plan (2020-2038) Emerging Strategy for Growth Consultation.

As a resident, I implore DBC to reconsider this plan which imposes massive over-development on an already near-capacity environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019 Glover report recommended that the Chilterns should be given National Park Status). Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.

The following are my principal objections:

1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.

2 Over provision of housing. The council has not used up-to-date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares of Hertfordshire Green Belt land, countryside and urban green spaces in order to build 16,596 new homes.

<b>Spatial Strategy for Growth comment</b>	6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

<b>Spatial Strategy for Growth comment</b>	(5): Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. <b>DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.</b>

<b>Spatial Strategy for Growth comment</b>	<p>With regards to the Dacorum Local Plan I would like to make some observations. I have been assured by local councillors that responses by email will be considered.</p> <p>As an overview first, I feel that the Dacorum local plan includes a massive amount of building and I sincerely question whether this enormous level of development is justified. The green spaces between and within the existing Dacorum communities are responsible for making this area a nice place to live. Taking away these green spaces to such a degree will irrevocably change the character of many areas and instead create an unappealing urban sprawl. Some areas of town centre development make good sense, using land whose use has changed or evolved over the years but other parts of the plan, HH01/02/21/22 in particular, in my opinion constitute large scale green belt vandalism. Within all of the proposed areas care must be taken to preserve the trees and hedgerows which not only provide habitats for wildlife but are also vital in slowing climate change and have natural advantages as windbreaks and noise breaks for residents. Promises to plant new trees are absolutely not the same as the vital role already established plants play. The proposal includes many thousands of new dwellings. Whilst I understand the need for some new housing, I have to question expansion on this scale, and I believe that the plan is not simply catering for natural growth of the Dacorum population but will encourage movement of new people to the area. It is a shame that we should potentially ruin many areas of beautiful green space for the sake of accommodating people who are yet to even live in Dacorum.</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>Headline numbers preposterous and unsustainable</b></p> <p>The most problematic aspect of this plan, and from which many of the other problems flow, is the headline growth number – a total of 16,000 new homes, representing a staggering 25% increase in the population. The algorithm used to calculate the new housing target of 922pa has already been discarded by central government. It has been replaced by an even more dubious target that relies on ONS growth figures from 2014, even though these have been shown to be incorrect and have been superseded by 2018 figures. Had the calculation used more recent population projections, the housing targets for Dacorum would be half the amount proposed in this DLP. Apart from everything else that is problematic about bogus numbers, this error renders the DLP at odds with NPPF s.31 which states that “all policies should be underpinned by relevant and up-to-date evidence”.</p> <p>There is little evidence, apart from some mutant algorithm, to justify these huge jumps in the population. Where is the evidence that Dacorum “needs” this level of additional homes?</p> <p>Given that the Government has withdrawn the housing needs methodology on which the Plan is based, that the revised methodology uses out of date data, and that the Government has stated that its projected building numbers are not a target, why has the Plan not been withdrawn until there is some clarity of what Dacorum’s housing need is?</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>Green belt grab insupportable and unjustifiable</b></p> <p>If implemented, these damaging proposals would result in the loss of a massive 850 hectares of the Green Belt, the wider countryside and urban green space for development.</p> <p>There is ample basis for arguing that land constraints such as Green Belt preservation may be used as a justification for lowering housing numbers as derived from central government calculations. The Council should challenge both the August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.</p> <p>Furthermore, it is not clear that the It is not clear that the NPPF requirement for the Plan to fully explore the potential to make effective use of urban land (s. 118 and s.137) before releasing Green Belt land has been met.</p> <p>Surely the role of the high street and local retail/ employment needs to be considered very more carefully in the light of new work practices. I would ask that the local plan be revised.</p>

<b>Spatial Strategy for Growth comment</b>	Adding this many houses in a valley-ed area will inevitably create a lot more car journeys, which will not help with the council's commitment to climate change. I also don't see how building on this scale will see DBC becoming net zero by 2030. Since Dacorum Borough Council declared a climate emergency more than a year ago, I don't see how this plan does anything to help with that.

<b>Spatial Strategy for Growth comment</b>	I cannot see any reason for Green Belt to be used for so much of this plan. Where is the justification? I want my children to be able to enjoy the green spaces we moved here for – so I do not agree with this strategy. I believe there to be not enough evidence for precious Greenbelt on or bordering the AONB to be used for housing, this needs to be stopped.

The pandemic has taught us that more than ever we need our green space – we live in Northchurch and love what it offers for us, wildlife and nature – we do not want to see this precious resource destroyed for the sake of needless housing.

**6/ Do you have any comments on the sustainability of the proposal?**

I believe there to be water supply issues already in this area, and I would not want the important chalk aquifer to be utilised for this. The ecology of the chalk streams is of international significance. As such the plan is unsustainable. There also doesn't seem to be enough provision of infrastructure – there is already incredible strain on roads, public transport, doctors, schools – so how will all of this work under this plan. As I said above I do see the need for a new school, but I am unconvinced that all possible sites have been analysed for a new school.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to object to Dacorum local planning emergency strategy.</p> <p>My objections are that the projected number of houses way exceed local demand. This plan will be detrimental to local residents being able to afford these houses as they will be marketed to people outside of Dacorum who have the ability to buy houses at inflated prices. The only beneficiaries will be the developers. The area can not sustain such a big influx of houses as we have no infrastructure such as schools, doctors, dentist and a hospital to support. The existing roads can not cope with the traffic at the moment so will not cope with this amount of planned houses.</p> <p>The loss of the green belt is horrendous and we are just being surrounded by concrete. Dacorum is being used as an overflow for London and soon there will be no separation between Dacorum and London.</p> <p>By agreeing to such large over development the councillors are letting down the people of Dacorum who they are meant to represent. This development being considered looks like the councillors are more concerned with towing party lines</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am emailing you to express my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038).</p> <p>As a resident, I implore DBC to reconsider this plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019</p>

Glover report recommended that the Chilterns should be given National Park Status). Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.

The following are my principal objections:

1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.

2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

<b>Spatial Strategy for Growth comment</b>	<p>I have read your reports on this matter and I do NOT agree that 16,000 houses should be in the plan as this seems too high a figure. Markyate is part of the Dacorum and we have already seen a lot of new houses built on the edges of the village and the infrastructure will not cope with even more houses and people living in the area. Jobs need to be created first.</p> <p>The A5 road is already clogged with traffic during the busy periods and the main high street will not cope with increased traffic and there is no room to widen roads and exits in and out of the village. We also have the increased traffic for the London/Luton airport who want to increase the capacity of the flights in and out of the area. This will impact on the M1 motor ways and the A5 and outwards to the airport. If you read the plans on the airport expansion not all the workers working, there, will or have been employed from this area. So, housing will not always be needed to support this business. There also should be a corridor for the increased planes taking off and landing to and from Luton airport as there will be a low quality of life for the people living directly under the flight path north and south of the village. It is already intolerable at times to have the windows open when it is in fully operational.</p> <p>The green belt around the village must be protected as it protects the shape and size and character of the village and towns in the area to prevent them all emerging in to one long sprawl of a town area. Green spaces have been a boom during these covid times and have been valuable during this time for exercise and also a barrier for the covid virus. People in the village have not been going to the big towns to shop and are trying to stay at home to stop the spread. A natural barrier for future pandemics!!</p> <p>The worst hit has been the overcrowded areas of the country and the local towns. There will also be in the future, more, brown field sites as this pandemic have more people working from home. This, I think will continue in the future times when the virus is under control.</p> <p>The plan does not include a proper plan for the infrastructure for the hospitals, Watford is too far to get there and there are no direct transport links to Watford, police stations schools.</p>

**Spatial Strategy for Growth comment**

Having reviewed your strategy for the Dacorum Growth Plan I feel compelled to register my deep concerns over proposals to the UK Government to build up to 16,000 new homes in the local area. This will likely increase the local population by up to 60,000 people with significant impact on the environment and an overwhelming impact on infrastructure already strained by recent development. A possible 40% growth in population is shocking and an ill-planned development would have a devastating long term effect on a quality of life.

In Berkhamsted ,with existing population of approximately 18,000 , you propose an extra 2,200 homes with a possible increase of residents of 8,000+. A potential 42% population increase would undoubtedly have disastrous consequences for the area. Having lived here happily since 1986 and witnessed the deterioration both to the environment and our local infrastructure caused by existing developments, it is a frightening prospect.

<b>Spatial Strategy for Growth comment</b>	<p>I am strongly against the plans for development of new houses in the Dacorum Local Plan.</p> <p>Given that the Local Plan is until 2038, how does Dacorum begin to establish the number of houses required when:</p> <ul style="list-style-type: none"> <li>• The government formula for establishing the number of new houses seems to be unclear. (<i>Dacorum Local Plan</i>)</li> <li>• The birth rate has fallen to 1.68 children per family when it needs to be 2.1 to keep population numbers stable i.e the population will fall (<i>ONS</i>)</li> <li>• The <i>Migration Observatory</i> looked at a number of different estimates done of the irregular migrant population since 2001. These put the figure as low as 120,000 or as high as 1.3 million.</li> <li>• The impact of Brexit on the population.</li> <li>• The impact of Covid 19 on population size particularly amongst the elderly.</li> <li>• The impact of Covid 19 on working and travel patterns.</li> <li>• The impact of Covid 19 and Brexit on the High Street and out of town shopping precincts (which could be treated as brownfield sites if shopping patterns change).</li> </ul> <p>What is meant by “objectively assessed” in “<i>The Council has set out to develop a strategy which, as far as possible, accommodates its objectively assessed development needs. For housing, based on the most up to date information provided by Government, this constitutes 922 dwellings per annum, or 16,596 homes over the Plan period. The Council has made provision for 16,865 dwellings to provide a buffer. For employment the emerging growth strategy proposes 116,500 sqm of additional employment (industrial) space to be provided across the Borough. (Dacorum Local Plan).</i></p> <p>Given the factors outlined above and “objective assessment” cannot be possible. If this is the Government’s objective assessment Dacorum’s electorate and council tax payers should rightly ask why Dacorum is disadvantaging local communities at the behest of Central Government. Who is Dacorum answerable and accountable to? It seems the answer is ‘<i>The Masterplan will be prepared by the Council and adopted as an SPD working in collaboration with key partners and landowners and be subject to community and stakeholder involvement.</i>’ - so developers and landowners take precedence over those that live and vote here. Community involvement comes as a poor third or fourth place.</p>

Dacorum cannot forecast its housing needs and allocations under current circumstances and should not, in any case, be solving London's dysfunctional and frequently dishonest housing issues.

There is no justification for 'Dacorum ... preparing a positive plan that is seeking to meet as much of our **objectively** assessed needs as we can. For housing, we are making a **bold** commitment to significantly increasing the supply of land to deliver 922 dwellings per year, more than double the number (430 dwellings per year) in the previous Core Strategy. In addition to this, we are releasing additional land from the Green Belt around Hemel Hempstead (as part of the Hemel Garden Communities programme) to meet longer term development needs.'

Bold indeed! Objective?

*(All quotes in italics from the Dacorum Local Plan)*

If houses are needed, they should not be provided for the well-off from London but to provide affordable housing for local people.

It is also unconvincing that:

*The Growth Strategy for Berkhamsted and Tring will seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.*

<b>Spatial Strategy for Growth comment</b>	<p>How is it possible to create “<i>A clean, safe and enjoyable environment: e.g. including policies that seek to protect open spaces and other environmental assets in the Borough.</i>” (Dacorum Local Plan)</p> <p>It is inconceivable that the 20,839 new homes envisaged in the Dacorum Local Plan (including the 500 ‘windfalls’ and the 4000 to be built after 2038 plus the ‘<i>The potential for unmet housing need arising from Watford</i>’ and ‘<i>The delivery of Hemel Garden Community which is a joint growth initiative between Dacorum, St Albans and Hertfordshire County Council and the Local Enterprise Zone Partnership</i>’ is consistent with ‘<i>a particularly sensitive environment in Dacorum in the shape of the quality of our protected landscapes (including the Chilterns AONB) and the presence of the Chilterns Beechwoods SAC. ENV</i></p>

*Making effective use of urban land can also help reduce the pressure on the natural environment by limiting the overall scale of greenfield development. New developments can also play their role by: linking to existing green networks, creating new and varied green spaces, and promoting opportunities for biodiversity and nature conservation.*

There is no chance of Dacorum 'Protecting the character of the wider countryside and the value of protected / important sites as far as possible (such as important landscapes, heritage and biodiversity and avoidance of areas at high risk of flooding)'. Though "as far as possible" is hardly reassuring and leaves wriggle room for failure.

And that:

*The natural environment is one of the Borough's greatest resources and encompasses the landscape of the countryside and green infrastructure within towns and villages, helping to give Dacorum its strong sense of place. It provides a diverse range of benefits to people, nature and the economy, supporting the health and wellbeing of residents, biodiversity, food and energy production, flood control, pollution and much more.*

And that Dacorum's housing plans are consistent with:

*National policy places great importance on sustainable development's role in protecting the natural environment for the present and the future, placing it within the three overarching objectives of economic, social and environmental. New policy to be introduced in England through the forthcoming Environment Bill will aim to restore wildlife habitats, improve air and water quality, and deliver a 'net gain' in biodiversity. It will also make provision to introduce long term, legally binding environmental improvement targets for air quality, resource efficiency and waste reduction, biodiversity and water, by 2022.*

*This will take into law the vision of 'A Green Future: Our 25 Year Plan to Improve the Environment' (2018) which sets out national plans to help the natural world to thrive. To achieve these goals it introduces the principle of biodiversity net gain, and of creating green towns, through stronger standards for the delivery of new green infrastructure and tree planting. In the wider landscape. It aims to enhance the beauty of natural heritage and expand woodland cover.*

*Development should be designed around existing components of the ecological network, and seek to improve, enhance and connect these features with the wider network (NPPF paragraph 174). Developments will also be expected to include a variety of forms of biodiversity within the built environment, such as street trees, wildflower rich verges and swales, living roofs and walls, hedgerows, and sustainable drainage systems designed to enrich biodiversity.*

Dacorum is making heroic assumptions around:

*In Dacorum special consideration needs to be given to:*

*the quality of the groundwater supplying the chalk aquifer;*

*the maintenance of higher quality agricultural areas and the sand and gravel belt;*

*limiting the effects of noise and air pollution along major routes (i.e. road, rail and aircraft from Luton Airport);*

*retaining tranquil parts of the Chilterns Area of Outstanding Natural Beauty and Boarscroft Vale; limiting light pollution, especially in the Chilterns AONB and the rural parts of the Borough; the risks associated with Buncefield Oil Terminal; and*

*ensuring that development land affected by ground contamination is safe and suitable for its proposed use so as to protect human health and the wider environment. The provision and long-term management of a minimum buffer between development and irreplaceable habitats, such as ancient woodland and veteran trees, and hedgerows will be required in line with national standing advice, guidance and recognised good practice. Wherever possible, hedgerows should be retained. Where hedgerow loss is unavoidable, new hedgerows should be created.*

*(All quotes in italics from the Dacorum Local Plan)*

**How does Dacorum's Local Plan relate to:**

### **Defra: A Green Future: Our 25 Year Plan to Improve the Environment**

- *Restoring 75% of our one million hectares of terrestrial and freshwater protected sites to favourable condition, securing their wildlife value for the long term.*
- *Creating or restoring 500,000 hectares of wildlife-rich habitat outside the protected site network,5 focusing on priority habitats as part of a wider set of land management changes providing extensive benefits.*
- *Taking action to recover threatened, iconic or economically important species of animals, plants and fungi6, and where possible to prevent human- induced extinction or loss of known threatened species in England and the Overseas Territories.*
- *Increasing woodland in England in line with our aspiration of 12% cover by 2060: this would involve planting 180,000 hectares by end of 2042.*
- *We will conserve and enhance the beauty of our natural environment, and make sure it can be enjoyed, used by and cared for by everyone. We will do this by:*
- *Safeguarding and enhancing the beauty of our natural scenery and improving its environmental value while being sensitive to considerations of its heritage.*
- *Making sure that there are high quality, accessible, natural spaces close to where people live and work, particularly in urban areas, and encouraging more people to spend time in them to benefit their health and wellbeing.*

- *Focusing on increasing action to improve the environment from all sectors of society.*

*We will:*

- *Help people improve their health and wellbeing by using green spaces including through mental health services.*
- *Encourage children to be close to nature, in and out of school, with particular focus on disadvantaged areas.*
- *'Green' our towns and cities by creating green infrastructure and planting one million urban trees.*

*(Quotes in italic from Defra's 25 Year Plan)*

**How does the Dacorum Local plan relate to:**

**Chilterns AONB Management Plan 2019-24**

- *Legislation has made it clear that natural is not just the look of the landscape, but includes the landform and geology, the plants and animals, the landscape features and the rich history of human settlement over the centuries'*
- *Panoramic views from and across the escarpment interwoven with intimate dip slope valleys and rolling fields*
- *Nationally important concentrations of chalk downland, extremely diverse in flora and fauna and home to some scarce and threatened species. Once extensive, the downland now only covers 1% of the AONB mostly in small fragments.*
- *One of the most wooded landscapes in England, with 23% woodland cover concentrated in the central and southern areas; 56% of the woodland is Ancient, a particularly rich, distinctive and prominent feature, including the Chilterns Beech Wood Special Area of Conservation; a significant assemblage of box, juniper and beech yew woods; together with many veteran trees and relict areas of wood pasture*
- *Significant ancient hedgerows, hedgerow and field trees, orchards and parkland weaving across farmland that covers approximately 60% of the Chilterns*
- *A dense network of 2000km of rights of way; two National Trails, the Ridgeway and Thames Path; notable regional routes such as the Chiltern Way and the Chilterns Cycleway An impressive quality and quantity of ancient routeways and sunken lanes including the Ickniel Way, part of the Ridgeway National Trail, considered the oldest road in Britain*
- *Relative tranquillity and peace on the doorstep of ten million people, probably the most accessible protected landscape in Europe; relatively dark skies, of huge value to human and wildlife health; unspoilt countryside, secret corners and a surprising sense of remoteness*

*The Chilterns AONB faces unprecedented pressure.:*

- *Highly desirable area, commutable to London*
- *Unprecedented housing and infrastructure*
- *growth within and in the setting of the AONB*
- *Construction of HS2 through the Chilterns at its widest point*
- *Airport expansion and increased over-flying*
- *Creeping suburbanisation and gentrification*

- *Lack of affordable housing*
- *Erosion of character*
- *Increased noise, air and light pollution*
- *Habitat severance, degradation and loss*
- *Less enjoyable to visit*
- *New building designs not locally distinctive*
- *Housing even less affordable for local community*

*The Chilterns saw major losses in area of characteristic habitats and landscape features over the course of the 20th century including Chalk grassland 54% lost, Commons, greens and heaths 43% lost, Ancient woodland 9% lost*

*It is clear that action that is more effective is needed – for example, landscape scale conservation initiatives that go beyond existing wildlife sites – if we are to halt and reverse these declines.*

*Housing and transport infrastructure and changes in land use continue to leave a legacy of habitat fragmentation.*

*Examples include:*

- *severed hedgerows;*
- *culverted chalk streams;*
- *small, isolated islands of chalk grassland;*
- *ancient woodland or traditional orchard habitat isolated within intensively managed arable land.*

*The 25 year Environment Plan contains ambitious proposals for net environmental gain in relation to impacts of development, and the need to minimise impact of development on and provide net gains for biodiversity is enshrined in government policy (National Planning Policy Framework). Yet there is no proven delivery mechanism to secure net gain at the point where development impacts on the AONB or its setting.*

*It is a place for relaxation, exploration and inspiration, offering a rich cultural heritage, contact with nature, a sense of place and numerous opportunities for leisure, recreation and learning. However, there is low awareness of the Chilterns and the benefits it provides to society and as a visitor destination. Its value is not fully realised, in particular its contribution to peoples' health and wellbeing. In addition, communities and businesses do not always recognise and value the importance of their role as custodians of this heritage.*

*(All quotes in italic from the Chiltern AONB 5 year plan.)*

## Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development

rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

As a Berkhamsted resident I am writing to express my opposition to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, in particular the massive proposed development in the countryside and the impact this will have on the Community and the Environment.

The overall impact on the environment and infrastructure, including traffic congestion, water supply and waste water disposal, will be felt across the whole borough and beyond.

In particular I am extremely concerned about:

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.

<b>Spatial Strategy for Growth comment</b>	<p><i>Climate emergency</i></p> <p>We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not.</p> <p>It is very important that the recognised Climate Emergency acts both as a driver and brake to the plans. This plan as it stands prioritises housing construction over the Climate Emergency.</p> <p>The expectation that Tring will accommodate at least 2700 new homes is not sustainable. As above, the 55% increase in the size of Tring is by far the largest within the plan for Dacorum and is likely to impact greatly on wildlife and biodiversity by destruction of hedgerows and other habitats, wildlife corridors and by the increase in population, cars, and pollution.</p> <p>Statements are made about planning for a low carbon future but insufficient detail is given on how it would be achieved. Part of the policy is '<i>encouraging on-site renewable and low carbon energy sources on development sites, and stand along renewable energy or low carbon schemes</i>' (Policy SP10, p100). In the climate emergency, encouragement is not sufficient and is likely to be largely ignored in deference to economics. There must be stringent requirements made of developers to use green technologies, and net zero carbon emissions. The Local Plan should have a commitment to all new homes being certified zero carbon and sustainable in order to address the climate emergency. The knowledge and technology to make good affordable zero carbon sustainable homes exists and the Local Plan should prioritise this.</p> <p>There are admirable aspirations included within the plan about creating new spaces for nature conservation or Local Nature Reserves, however this should not be at the expense of losing widespread open countryside and land which contribute to the AONB and Green Belt land. This would completely defeat the purpose! The plan should be detailed about how protection and enhancement of habitats and green and blue infrastructure would be achieved.</p>

**Spatial Strategy for Growth comment**

This plan appears to accept and support growth that is far in excess of estimated population increase. It follows on from this basic assumption in all the excessive and disproportional plans for Tring. It reads as a developers plan (based on economics) rather than providing a forward looking vision for the 21st century, in the context of climate emergency.

*Duty to Cooperate with other Local Councils*

As above, there is no evidence that this duty has been met as part of this plan, and indeed it appears as a protocol to be done after planning has taken place rather than as an integral part of the plan. As Tring is bounded on two sides by Buckinghamshire, cross boundary impacts are considerable.

This is required as part of objectively assessing need before then using Green Belt land to meet thus identified needs.

<b>Spatial Strategy for Growth comment</b>	<p>I have lived in Berkhamsted for over 25 years and I oppose the Dacorum Local Plan - Emerging Strategy for Growth. The assumptions on which this proposal is made are flawed and based on old data. Any decision must be made on accurate data.</p> <ol style="list-style-type: none"> <li>The data and maths being used to calculate the number of homes needed is demonstrably inaccurate. The current plan agreed back in 2017 requires the building of 430 houses a year and the ONS data has <u>reduced the number of dwellings it calculates will be needed by more than 50%</u> since then down to 355. The government has used an algorithm to turn the ONS number of 355 into 1,023 dwellings. Lets' all remember for a moment how tragically inaccurate and destructive the algorithm used to calculate exam grades was. This algorithm is similarly inaccurate and the number of proposed houses should be urgently revised downwards to a number that is backed by the data.</li> </ol>

- 2 This plan will build on the Green Belt and impact on AONB. Destroying our green space ignores the most recent research done during the pandemic which clearly demonstrates how valuable green space and nature is to our community's mental health and well being.
- 3 There is no clear detail on how public amenities such as water and sewage will cope with all this additional development.
- 4 There is no explicit detail as to how Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet national and Hertfordshire's goals for climate change and carbon reduction.
- 5 A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

**Spatial Strategy for Growth comment**

In response to the draft local plan entitled 'Dacorum Local Plan 2020-2038 Emergency Strategy for Growth Consultation' I would like to register my objections as follows:

- I object to the proposals in the consultation because the proposals to build on the green belt are wrong.
- I understand that there needs to be proof that building on the Green Belt is absolutely necessary before Green Belt land can be released. This has not been shown:
  - The housing projections are based on out-of-date statistics
  - The needs of local people have not been prioritised over the needs of developers
  - There has not been enough scrutiny of brown field sites
  - CV19 has changed behaviour meaning more town centre development is possible - this has not been taken into account

— There are too many houses, yet not enough social and affordable housing - we should be building the right houses in the right places for local people - not giving a green light to urban sprawl

— Not enough care has been taken to protect the local ecology - the demand for water will damage the aquifer and the internationally recognised chalk streams

— The plans are not carbon neutral and conflict with commitments to tackle climate change

— The houses proposed will encourage people to use cars as they are not near employment or transport hubs.

— The increased populations in Tring and Berkhamsted will mean more traffic travelling along Northchurch High Street, leading to congestion, increased pollution, health problems, road safety concerns — this will be bad for the mental and physical health of our residents and future generations.

**Spatial Strategy for Growth comment**

I am emailing you to express my objection to the proposed development outlined in Dacorum Borough Council’s document entitled “Emerging Strategy for Growth (2020 – 2038). As a resident, I implore DBC to reconsider this plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019 Glover report recommended that the Chilterns should be given National Park Status). Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.

The following are my principal objections:

- 1 Over development of protected green belt land, the Chiltern’s AONB and the Chiltern’s Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.
- 2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850

hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

**Spatial Strategy for Growth comment**

Houses will be accommodated 3-4km from the town centres, a distance away from "passenger transport and other services, facilities and employment opportunities". Paragraph 19.6 of the Plan does say "In Dacorum, we consider that

there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.’ What are the "exceptional circumstances" which justify such ruination?  
 BRAG have demonstrated that DBC is building a massive oversupply of housing compared to ONS estimates. Why?  
 As BRAG states :  
 “Statement 2 in SP2 starts “The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring”. BRAG is concerned about this wording as in its current form it suggests that ‘investment’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring. Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum’s coffers for funding investment elsewhere. With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong.”  
**Other key points:**  
 23.119 accepts that “congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.  
 The new developments in Berkhamsted and Tring are so far from transport of other amenities that they cannot be justified sustainably - walking and cycling are not solutions.  
 Developers find Berkhamsted much more attractive than Hemel Hempstead so that people can move into Berkhamsted rather than satisfying local need which is surely what the Planning Strategy should be about. The Planning Strategy is more about building high rateable value properties that providing what the residents actually want.

<b>Spatial Strategy for Growth comment</b>	<p>I am wring in response to the Dacorum Borough Council (DBC) Local plan.</p> <p>I am very disappointed to read that the Council is proposing to build so many new homes over the next 18 years - this is not residents want and will have a major impact in the area.</p> <p>This proposal to build 16k new house over the next 18 years will clearly result in the loss of valuable green belt land .</p> <p>Please explain why the Council has used outdated data from 2014 and not the most data from 2018 which halves the number of homes needed to be built?</p> <p>Your plan concerns me greatly as building large numbers of new homes requires the appropriate infrastructure and your plan does little to address this and will place a high burden on the current infrastructure. It is not just about building homes – public services such as schools / healthcare / travel options all need to be carefully considered.. Pre COVID-19 pandemic, roads during rush hour were massively congested causing driver stress and pollution. You cannot just build homes and not consider the wider implications ..</p> <p>The COVID-19 pandemic this past year has clearly shown that green open spaces are invaluable for people’s health and well-being and your plan to build so many new homes will destroy people’s access to green areas.</p>

<b>Spatial Strategy for Growth comment</b>	<p>My comments are as follows:</p> <ul style="list-style-type: none"> <li>- It would be helpful to clarify what the drivers are for the additional housing to be put into the area. Without understanding the background, it seems that the area has accepted a difficult target without any balancing or limiting arguments.</li> <li>- There appears to be minimal attention paid to the preservation of the Green Belt. Indeed, it needs to be demonstrated that a distinctive Green Belt is being maintained around individual towns - I would call it the Duncan Sandys test. Failure to do this will ensure that communities merge into an amorphous mass of London extensions, with all the disadvantages of soulless societies. Without question, it feels that there is a continuing erosion of towns' Green Belts and there needs to be demonstrable criteria applied to avoid this happening.</li> </ul>

<b>Spatial Strategy for Growth comment</b>	<p><b>5.2 et seq The Green Belt</b></p> <p>The Plan talks of “minimising and managing the requirement for development on the Green Belt” but tacitly does everything to promote such development by inflating housing need numbers and not being creative in identifying and bringing forward brownfield sites. The principle of Green Belt and AONB land being released “only in exceptional circumstances” is breached on the grounds of expediency; surely a Green Belt is most required when pressures from developers are at the greatest. The lesson of history is that a resolute defence of the Green Belt would divert development pressure to brownfield sites that will benefit generations to come who will not be faced with wall to wall concrete over great swathes of the Borough.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Whilst I understand the need to increase housing, this should be done in line with the level of need and in a sustainable way that preserves the valuable greenbelt land and it's habitats. The plans to increase housing in the area by 16,600 new homes is completely excessive to what the projected need is. This growth in household numbers is a 25% increase over the current housing stock. This would irrevocably change the character of our towns and villages. The latest ONS data available projects 6051 new homes by 2038 - 64% fewer than this plan projects. I therefore object to the proposed plans and would like this email put forward to the decisions board.</p> <p>There is already incredibly high demand for services such as traffic needs, schools and healthcare in the Dacorum area. In addition, the plan does not commit to any level of sustainability in its sustainability targets which is unacceptable. A booklet through a few doors and some information on the website is insufficient to inform all residents of Dacorum, to serve a fair and just consultation, especially during these challenging times.</p>

<b>Spatial Strategy for Growth comment</b>	<p>— Too much of the housing proposed in Northchurch is at the top of steep hills, far from the train station or employment in Berkhamsted. These sites are therefore highly likely to attract two car families, as journeys to shops, work and doctors' appointments will require cars. This is not sustainable and does not take account of the responsibility to address climate change.</p> <p>— The policies do not take into account the impact of the Covid pandemic. The changes in lifestyle necessitated through the move towards home based and remote working, and increased flexibility towards home/work balance have not been properly taken into account.</p> <p>— The plan does not take into account the likely increase in empty retail or office space in town centres as a result of the Covid changes, missing a once in a generation opportunity for change.</p>

<b>Spatial Strategy for Growth comment</b>	<p>4/ Do you have any specific comments about any of the delivery strategies?</p> <p>—The delivery strategies rely on the release of Green Belt land. There is no justification for the release of this land. The housing target is not a true reflection of objectively assessed need for the area. The Green Belt across the Borough is really important to people who live here now, but also for future generations. It is our duty to preserve the Green Belt in perpetuity. This plan fails in this duty and I cannot support this.</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>Paragraph 5.7</b></p> <p><u>Transport</u>. The county council supports the approach in transport terms, regarding the avoidance of significant developments to the smaller villages and wider countryside. As public transport is raised here as critical to sustainable transport, the most significant concern is in relation to the development sites proposed in south and west Berkhamsted. They are remote from existing bus services and it is difficult to see, if these sites come forward in the usual manner, how adequate service improvements could come forward. Therefore, it is difficult to see how these sites can be made as sustainable as possible. HCC would welcome further discussion and development of a strategy and policy to ensure all new development sites have good accessibility to public transport so it is a real choice for the journeys people make and want to make.</p> <p>In that context, a number of the development sites also mention the need for pedestrian and cycle improvements, but not public transport improvements. Additional general wording stating the need for bus infrastructure and service improvements should be added in order to ensure that it is clear that these things will need to be delivered to make sites</p> <p><b>Policy SP2: Spatial Strategy for Growth</b></p> <p><u>Transport</u>. The county council welcomes that the majority of new growth and investment will be concentrated in sustainable locations such as in Hemel This will encourage the use of sustainable modes of transport. With this in mind, HCC would like to see more emphasis placed on sustainable transport enhancements and improvements to connectivity within and surrounding Hemel Hempstead as this aligns with the policies in HCC's LTP4 and the text should be updated accordingly to reflect this.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I would like to start by noting how difficult and time consuming it is to attempt to respond via your portal. This really should be simplified with lay people in mind.</p> <p>I am writing to note my objections to the local plan, the main one being that the number of homes planned is ridiculously high. Even without the buffer figures, 16,596 homes over the next 18 years, or 922 per year is a phenomenal number, this is twice the level of building this area has ever seen.</p> <p>The calculation of this number appears to be based on outdated models and should be updated to give a more realistic target, especially in light of the huge and long lasting changes to work and living that COVID and Brexit have brought about.</p> <p>Working remotely has become the norm and many companies have shut down their offices and/or moved to smaller premises which indicates that this change won't be short lived. We could easily end up with areas and communities ruined for the sake of housing that is unneeded, unwanted and totally inappropriate for the way people live.</p> <p>Even if this weren't the case, the current plan does not really address the need for affordable family housing in the area. Giving mandatory numbers will encourage developers to throw up small flats totally unsuitable for the needs of residents.</p> <p>The loss of green belt land is particularly concerning as once gone it is gone forever. I don't believe the current circumstances meet the criteria of 'exceptional circumstances' which should be the only reason to release designated green belt land for development. Losing such large swathes will seriously impact the environment and habitats.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth.</p> <p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p> <p>Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.</p> <p>This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.</p> <p>The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools &amp; residents parking.</p> <p>I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment &amp; Rural Communities Act 2006.</p>

<b>Spatial Strategy for Growth comment</b>	<p>If the latest figures were accepted it would result in a reduction in the annual housing target and help to reduce the 922 per annum figure in Dacorum’s draft Local Plan. The previous Local Plan housing target was set at 430; the current draft Local Plan target will result in a level of growth that can only be achieved with significant development of the Green Belt and this will be higher than previous Dacorum achievements and furthermore we believe cannot be sustained.</p> <p>The current national housing targets are too high and there needs to be a more even distribution with less emphasis on London and the Home Counties. The current housing target (subsequently increased to 1,023 per annum) generated by standard housing methodologies produces a figure well in excess of the Office of National Statistics projection of housing need based on their latest (2018) figures.</p> <p>Failure to meet the Government’s targets will mean Dacorum being penalised under the Housing Delivery Test for <i>housebuilders’ failures</i> to build enough homes, by being forced to release more Green Belt land for development. The more developers miss the Council’s housing target, the more land Dacorum will be forced to release for development. A lower, more realistic target is far more likely to be achieved and consequently negate any demand to release further Green Belt land in the Borough. However, developers should be equally concerned that forcing the Borough to release more land for development will have a long-term, negative impact on their relations with the Council, which should be avoided.</p> <p>The Borough’s current reliance on Green Belt development to achieve its targets also runs counter to the Government’s response to the local housing need proposals set out on 16th December 2020 in which it stated “... <i>that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places</i>”. The Campaign for Rural England (CPRE) have also consistently pointed out that housing developments on Green Belt are invariably too expensive for those looking for a first home and do nothing to address the needs of younger people and families trying to put a roof over their heads.</p> <p>Therefore, Green Belt development will do nothing to address the Borough’s housing needs. It will also undermine one of the aims of the latest version of the Kings Langley draft Neighbourhood Plan (January 2021), namely “Providing homes in the parish that are financially accessible to younger people, especially young families and those stepping onto the property ladder for the first time”.</p> <p>If unrealistically high local housing targets are intended to increase the supply of housing for young people, the question needs to be asked as to how inflated house prices on Green Belt sites will help achieve this? We believe it will not.</p> <p>Similarly, what chance have Dacorum of meeting the commitment made at their Council meeting in January 2021 “to build on the positive work of previous years and continue work directly to develop homes for social rent and to seek further opportunities with partner registered providers to accelerate the delivery of new social rent homes”. Developers will clearly be unwilling to increase the proportion of social rent housing on land where they have been obliged to pay a premium.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Policy SP2 – The proposed housing target of 16,596 (922 per annum) is excessively high and, in particular, the increases in housing at Tring and Berkhamsted would have significant impacts on the character of those towns, as well as destroying significant areas of Green Belt. In view of the proposed changes to the planning system and the methodology for assessing housing needs, the Council must seek to reduce these numbers. This would be consistent with the Government’s ‘levelling up’ agenda, reducing housing in the south east and increasing housing in the north. In a borough with the majority of the area designated as Green Belt or AONB there must be scope to reduce the housing numbers. The Government has yet to publicise how the methodology could be amended to allow for this. As it stands, the Borough has a higher housing target than some of the cities in the north. In an area with national designations and aspirations to become a National Park, this cannot be acceptable.</p> <p>Bullet point 1d seeks to create additional retail floorspace. At the present time, the long-term impacts of Covid-19 on the retail industry are unclear, but with online shopping increasing further units may not be required. We suggest this is reviewed at the next stage in the plan process and some of the sites could potentially be considered for housing in the urban areas.</p> <p>7.5 – 7.6 – The annual target of 922 homes is excessively high when compared to the 433 required in the previous Local Plan. In such a highly constrained district, this increase is not achievable without significant loss to the Green Belt and open space in and around the towns. This number must be reviewed when the Government decides how to take forward its proposed planning reforms. If the numbers can be significantly reduced, then most of the proposed Green Belt sites could be taken out of the Plan and housing development more concentrated within the urban areas. If the Green Belt sites are not required to meet reduced housing numbers, then exceptional circumstances would be unlikely to exist to remove land from the Green Belt. We would expect this issue to be addressed in detail in drawing up the next version of the Local Plan.</p>

<b>Spatial Strategy for Growth comment</b>	<p>As residents of Dacorum (Felden) we have the following observations on the local plan.</p> <p>We recognise the need for increased housing and are not unsympathetic to the challenge faced by Dacorum Borough Council (DBC). A number of the proposed areas for development are clearly appropriate. However our overriding concerns are:</p> <ol style="list-style-type: none"> <li>1 a) to avoid the redesignation for development of any land that is currently designated as Green Belt</li> <li>2 B) preferentially to use brownfield sites and to avoid utilisation of undeveloped land even if not currently designated as Green Belt</li> <li>3 C) to ensure development is consistent with the surrounding area in particular avoiding high rise developments. Particular care must be taken to protect and enhance the areas adjacent to Boxmoor Trust land. The Kodak Tower has been refurbished but was and remains an eye sore. This mistake must not be repeated.</li> </ol>

<b>Spatial Strategy for Growth comment</b>	<p>As residents of Dacorum (Felden) we have the following observations on the local plan.</p> <p>We recognise the need for increased housing and are not unsympathetic to the challenge faced by Dacorum Borough Council (DBC). A number of the proposed areas for development are clearly appropriate. However our overriding concerns are:</p> <ol style="list-style-type: none"> <li>1 a) to avoid the redesignation for development of any land that is currently designated as Green Belt</li> <li>2 B) preferentially to use brownfield sites and to avoid utilisation of undeveloped land even if not currently designated as Green Belt</li> <li>3 C) to ensure development is consistent with the surrounding area in particular avoiding high rise developments. Particular care must be taken to protect and enhance the areas adjacent to Boxmoor Trust land. The Kodak Tower has been refurbished but was and remains an eye sore. This mistake must not be repeated.</li> </ol>

<b>Spatial Strategy for Growth comment</b>	These new plans cannot go ahead, it will completely distort the town, we need to rebuild the town after this virus and I don't think by just building all out of the town and in fact making it worse. Let's get the council working with the residents. Please.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing with regard to the outdated planning proposals of your Local Plan and the need to understand the already stretched resources of the local area.</p> <p>I'm a resident of Kings Langley and have witnessed the terrible traffic jams, dangerous parking(in particular Red Lion Lane) due to over development, and inadequate consideration of brown field sites when considering new housing this threatening development of irreplaceable green belt land. The huge increase in people working from home will surely lead to an increase of unused commercial buildings which could be converted and reused as residential development.</p> <p>The conjoining of towns through development of such areas as Rectory Farm is against government guidelines. The recent terrible lockdown and pandemic has seen an exponential use of, and appreciation and need for, green spaces such as Wayside Farm and surrounding fields.</p> <p>We must do everything we can to protect our open spaces not just for ourselves, but for future generations, for helping keep our air clean, and also for our wildlife. The over burden on water supplies must also be considered as the chalk aquifers which could be exploited, are a desperately important natural resource(Natural Environment and Rural Communities Act 2006), which though invisible to our everyday lives, are paramount to the well being of what we do see around us.</p> <p>I hope you take these matters incredibly seriously. You are the guardians of our local environment and communities and must do everything in your power to protect, and not exploit them.</p>

<b>Spatial Strategy for Growth comment</b>	<p>As a resident of Dacorum for the past 29 years, I have watched with distress as our standard of living in this town has gone down as the population increases without the necessary increase in services, notably provision of basic medical care and water pressure.</p> <p>In response to the draft local plan entitled 'Dacorum, Local Plan 2020-2038 Emergency Strategy for Growth Consultation' I would like to register my objections as follows:</p> <ul style="list-style-type: none"> <li>— I object to the proposals in the consultation because the proposals to build on the green belt are wrong.</li> <li>— I understand that there needs to be proof that building on the Green Belt is absolutely necessary before Green Belt land can be released. This has not been shown</li> <li>— The needs of local people have not been prioritised over the needs of developers</li> <li>— There has not been enough scrutiny of brown field sites</li> <li>— CV19 has changed behaviour meaning more town centre development is possible - this has not been taken into account</li> <li>— There are too many houses, yet not enough social and affordable housing - we should be building the right houses in the right places for local people - not giving a green light to urban sprawl</li> <li>— Not enough care has been taken to protect the local ecology - the demand for water will damage the aquifer and the internationally recognised chalk streams</li> <li>— The plans are not carbon neutral and conflict with commitments to tackle climate change</li> <li>— The houses proposed will encourage people to use cars as they are not near employment or transport hubs.</li> <li>— The increased populations in Tring and Berkhamsted will mean more traffic travelling along Northchurch High Street, leading to congestion, increased pollution, health problems, road safety concerns — this will be bad for the mental and physical health of our residents and future generations.</li> </ul>

<b>Spatial Strategy for Growth comment</b>	<p>The consultation period commenced from 27th November until today. I do not read social media or buy a local paper so was unaware of the consultation period until some groups leafleted my home and I received a document through the door from Dacorum BC in the last few weeks.</p> <p>Much has changed in the world let alone the area covering Dacorum, since the Plan was drawn up. I feel it is impossible to comment on a plan that does not now take into account the effect of the Brexit Deal the Government secured at the end of December 2020. Before this date we had no idea what we would secure and how this would affect us all over the coming years. By the middle of February 2020 I realised what was happening in Italy would eventually affect us. None of us knew then to what degree and how it would re-shape the way we live our lives in the future. On the 16th December 2020 the Housing Minister, Robert Jenrick revised the housing numbers algorithm, placing the emphasis on growth and investment in the North and the Midlands, as it prepares to launch a revised planning formula for calculating housing need. The government said it was sticking to the target of building 300,000 homes a year, but it would now be prioritising brownfield sites and urban areas.</p> <p>As a resident of Tring, I cannot see how your outdated plan is fit for purpose in March 2021 taking the above into consideration.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to let you know that I am extremely concerned about the proposed housing developments contained in the 'Dacorum Borough Council Emerging Strategy for Growth' and the irreparable negative impact that this will have on our local community and the environment. I would like to register my objection to these plans.</p> <p>I understand that there is a need for housing, particularly affordable homes, however, I am particularly concerned about the following:</p> <p>Congestion/pollution - The year-on-year increase of houses on the proposed Green Belt sites and the distance from the towns will mean home owners will have to use their car to either get into town or to the station. The centres of Berkhamsted and Tring are already heavily congested and polluted at peak times. The negative impact of pollution caused by car emissions is well documented (A study Kings College Hospital in 2018 estimates that air pollution has been responsible for causing up to 36,000 deaths per year).</p> <p>Building on Green Belt - nearly all the development is on Green Belt and the council has ignored national planning policy contained in NPPF and statements by ministers that Green Belt should not be developed 'except in exceptional circumstances' -the COVID pandemic has confirmed that people need green spaces for mental and physical wellbeing. DBC should not be taking the easy option of building on Green Belt and should look at further Brownfield sites to protect our countryside.</p> <p>Number of houses - DBC should challenge the proposed housing numbers dictated by central government rather than just accept them. The council are using outdated housing projections from 2014 (Pre-COVID, pre-Brexit and pre-HS2). The number of houses needed should be based on a new evaluation. The plan is also at odds with the recent government statements to address the balance between north south divide. COVID has demonstrated that people can and will work from home in the future - there is no need to live within striking distance of London anymore.</p> <p>This is an opportunity for DBC to be seen as imaginative, forward-thinking and to come up with a truly sustainable and environmentally considerate plan that will benefit future generations. However, this plan takes the easy option to just concrete over Greenbelt that benefits the developers rather than the local community. Health and well-being are paramount and this local plan will make life worse for everyone and will push Berkhamsted and Tring beyond their limits.</p>

**Spatial Strategy for Growth comment**

Please take this email as my formal response to Dacorum’s Local Plan (2020-2038) Emerging Strategy for Growth.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum’s green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don’t have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough’s chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don’t believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

<b>Spatial Strategy for Growth comment</b>	<p>It is extraordinary thought that as we enter the 2021 it is being suggested that we can build on green belt. This is shocking. The effect of the environment when as a population we should be doing everything we can to preserve our natural environment. I understand the need for new houses but these should be on brownfield sites. I believe that this is being done for maximum profit. A developer can build far more cheaply on a greenfield site and in Berkhamsted will then sell the house for 5 times as much as anywhere else. I do not believe that this proposal is for the benefit of local people who still will not be able to afford this new house.</p> <p>My general comments about building on greenbelt land and the environmental impact also apply to Tring.</p> <p>As we come to a very unsettled year post COVID we have seen a huge change in people working from home, with many firms considering no longer having commercial office. It has been widely reported that this will leave many commercial spaces empty. It is imperative that we use these empty resources before we develop on a greenbelt site.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am emailing you to express my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038)".</p> <p>As a resident, I implore DBC to reconsider this plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt. Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.</p> <p>The following are my principal objections:</p>

- 1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.
- 1 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.
- 1 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.
- 1 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

<b>Spatial Strategy for Growth comment</b>	<p>I am emailing you with my objection to the proposed development outlined in Dacorum Borough Council's document entitled "Emerging Strategy for Growth (2020 – 2038).</p> <p>As a resident, I ask DBC to reconsider the plan which imposes massive over development on an already stressed environment, with severe implications for the integrity of the Green Belt and our status as an AONB (in fact the 2019</p>

Glover report recommended that the Chilterns should be given National Park Status). Our countryside is precious and finite and it is therefore critical that land is not lost to development unnecessarily.

The following are my principal objections:

1 Over development of PROTECTED green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs. How can it be acceptable to build houses on an area protected from development. What exactly is the point of assigning areas to green belt and then just throwing up houses on them and in doing so destroying areas that promote wildlife, destroying much needed farmland and destroying natural heritage.

2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, which again does not take into consideration climate issues, education provision and healthcare requirements. This town cannot accommodate such growth in population. The schools in Berkhamsted are already oversubscribed, not even taking into consideration the new houses already being developed off Shootersway.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

I request that the above points are taken into very serious consideration.

**Spatial Strategy for Growth comment**

Finally, , in a letter from the Department of Communities and Local Government, dated June 2016, the then Minister of State for Housing and Planning, Brandon Lewis, states that: “. . . Green Belt boundaries should be adjusted only in exceptional circumstances, through the Local Plan process and with the support of local people.” I am sure the weight of evidence you will receive to this consultation will prove that you do not have the support of local people. In the same letter the Minister states: “We have been repeatedly clear that demand for housing alone will not change Green Belt boundaries”. However, it is very clear from this consultation that the proposed Green Belt releases are driven entirely by the requirement to allow the development of more housing across the Borough.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.</p> <p>I support the need for a local plan and accept the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements).</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to express considerable concern and to formally object to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth. The detrimental impact on the environment and infrastructure, including traffic levels, water supply and waste water disposal, will be felt across the whole borough and beyond.</p> <p>The scale of the proposed increases in the number of houses to be built is excessive and goes beyond the most up-to-date ONS projections. The plans are based on 2014 ONS numbers which are now outdated. I believe that the plans should have been withdrawn and reconsidered in the light of this new data, as has been called for by many.</p> <p>In addition, I am extremely concerned about:</p> <ul style="list-style-type: none"> <li>the impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns</li> </ul>

- impact on Beechwoods Special Area of Conservation
- failure to address climate emergency issues – in particular, the Plan will not deliver legal commitments related to environmental protection and addressing climate change
- impact on infrastructure and quality of life for the local community who will suffer the impacts of traffic congestion, further decreases in air quality, and severe pressure on local services, facilities and green space
- likely water and water waste disposal issues and damage to chalk streams
- the lack of brownfield regeneration proposals
- lack of true affordable housing and social inclusion measures
- the conflict with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

This Plan should be withdrawn and revised using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the strategy. It is vital that new development is planned intelligently and with an eye to the real challenges of the future

I wish to register my strong objection to the New Dacorum Local Plan (to 2038).  
I object on the following grounds:

. Building on green belt

- . Too much additional pressure on already overloaded local infrastructure, oversubscribed schools and traffic.
- . Number of proposed houses is excessive and well above ONS's calculation of the forecasted housing need for Dacorum.
- . The impact on West Berkhamsted is disproportionate and does not take into account the recent major developments which have already occurred in the area (Bearroc),
- . It will have an unacceptable negative impact on pollution levels, road safety, local ecology and the health and wellbeing of the local residents.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

**Spatial Strategy for Growth comment**

In summary I can say I am appalled at the frighteningly ballooning size of the District in general and Berkhamsted in particular which would result from implementing the proposals in the Emerging Strategy for Growth.

The proposals are not justified by the evidence of need, and are ill-balanced, with massive tracts of housing unsupported by compensating investment in all the services that make life bearable - traffic and mobility infrastructure, and public services that need to be embedded where people live.

The calculations of housing need have been made based on out of date demographic information and by using poor housing need algorithms and should be revised in line with the latest evidence, which show a smaller need. This will be even more the case as the pandemic changes the nature of the location of work and living patterns.

The proposals mean a vast and unnecessary take is made of Green Belt land, and this will be very damaging to the amenity and environment for Berkhamsted and for the Area of Outstanding Beauty. The scale of development should be severely reduced to reflect the importance of maintaining the quality of the Green Belt and AONB.

The volume of housing and sites that result (at an additional 35% in Berkhamsted) is a massive overdevelopment, and ill balanced by investment in infrastructure, such as water supply and waste disposal, and community amenities.

The proposals will robustly advance the day when continuous ribbon development is experienced from Watford to the other side of Berkhamsted.

The Government has made clear there is **NO justification** to more than very limited housing and population growth if otherwise it does irretrievable damage to the jewel of British environmental policy making, the Green Belt. There is never a time when it is heroic to destroy the quality of life for a vast number of residents in the Borough.

**Housing numbers**

- 24% increase in housing proposed in Berkhamsted (more than 900 houses) 50% increase proposed in Tring
- Council using outdated (2014) housing projections. Half of this number needed in reality (using more recent ONS data from 2018).

- DBC *should* challenge the proposed housing numbers – which are dictated by central Government, rather than just accept them.

**Housing distribution**

- Hemel, Berkhamsted and Tring are all expected to take their ‘fair share’ of housing proposed. Each of these settlements have their own issues and constraints (topography-how hilly it is/valley, congestions, lack of public transport, lack of safe cycle ways, etc.) However, DBC seems to just be looking at the numbers – and not taking these vital issues into account.

<b>Spatial Strategy for Growth comment</b>	<p>The housing numbers proposed in the Dacorum Local Plan are completely unsustainable. The South East of England which includes Dacorum is the most densely populated part of the British Isles, as well as being the driest part. Where are the water supplies for a large increase in population to come from, especially at a time of increasing volatile weather patterns because of climate change. These ideas of such a population expansion make a mockery of a zero-carbon economy and would lead to a large increase in pollution caused by increased traffic movements and other factors. According to council sources only one third of the housing increase would lead to an encroachment into the Green Belt. If that is the case why not lower the proposed increase and give maximum protection to the Green Belt. Green Belt land is essential for the physical and mental well being of the people of Dacorum. Proposed plans for building up to the boundary of the Chilterns Area of Outstanding Natural Beauty shows a complete lack of respect for the beauty of the natural landscape and for the people who live in the area and for those who visit. Lastly who are these houses for? Would they be built for those who really need them such as people on low income? If they are not then this seems to me like a ploy for people to make money for example, Developers, Land Owners and maybe second homes for some. What Dacorum and other parts of the country need is for a majority of new build houses to be social but I can appreciate this goes against the prevailing economic ideology.</p>

<b>Spatial Strategy for Growth comment</b>	1) The wholesale release of precious greenbelt sites is not justifiable. By this I refer to the overall housing target. 16,899 is a figure far in excess of 2018 ONS predicted requirement for the area, far higher than our current level of building and even more out of scope with the Borough's infrastructure to accommodate. It is difficult to objectively consider releasing greenbelt protection when there is no justifiable need. The absurd situation where no current councillor or council officer can justify the need other than to say it complies with a government policy is made even worse when that same government flips and U-turns on major policies several times a week. I accept that to deliver a satisfactory home to everyone in the country will require some building on undeveloped land, but I do not believe we need to build this amount of homes in this area in this space of time. This is evidenced by the amount of new homes and retirement units built in Berkhamsted over several years that still sit vacant - because they are out of the price range of most local people to purchase.

<b>Spatial Strategy for Growth comment</b>	<p>I would like to respond to the planning proposals for the Dacorum area.</p> <p>I strongly feel that these developments will be detrimental to the environment, particularly in the cases of Berkhamsted and Tring.</p> <p>Berkhamsted is already spoilt by traffic congestion and parking problems. Tring will be the same if these plans go ahead. These are small market towns with distinctive characters, both of which will be completely spoilt by over development.</p> <p>I also have a problem with any building developments on green belt land. Surely it is in our best interest to protect these areas. How long will it be before Tring becomes a suburb of Aylesbury?</p> <p>I realise that we have a shortage of housing stock, but there must be better places to develop than around small towns and villages which do not have the infrastructure to support large developments where the risk is to ruin the environment for all concerned.</p> <p>I am not a resident of any of the areas to be significantly affected, but nevertheless feel that the issue is too important to be ignored.</p>

<b>Spatial Strategy for Growth comment</b>	On the plan itself I also have some objections. At the top level this plan was devised before the recent government changes to planning guidance and does not seem to have been amended as a result. As part of the 'levelling up agenda' we should be looking at developing more places to live and work in the North of the country rather than further developing the already overcrowded South East. Secondly it does not take into account changes in lifestyles as a result of the pandemic. It is very likely that more people will be spending at least part of the week working from home in the future, rather than commuting every day, and therefore proposed housing density should be reduced to allow people the space they need. We know that people are valuing garden space more now than in the past, and yet this plan agrees to an increase in permitted housing density. This will result in developers building houses that do not properly meet people's needs.

<b>Spatial Strategy for Growth comment</b>	(5) Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt

releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

Green belt; The proposal to overthrow current Green Belt and adjacent AONB land and use it for development is completely at odds with the Government and Public policy, and Local wishes, of sustaining and where practical improving, the Environment for future generations. Those houses that really are proven to be required should be located only on Brownfield or where there is existing development. The current Government Policy on Greenbelt is at clear and demonstrable odds with its other stated objectives and as such should not be unquestionably followed.

Review of housing requirements; Should the review of requirements really identify that there is, and will be, a requirement of the size currently envisaged the Establishment of a new Garden City or equivalent elsewhere in Hertfordshire, with purpose built road and rail connections would facilitate the design and layout of an optimum housing and infrastructure, could minimise pollution and other environmental issues.

<b>Spatial Strategy for Growth comment</b>	<p>I wish to register my objection to the draft local plan on the following basis:</p> <ol style="list-style-type: none"> <li>1 It is based on ONS data from 2014 as opposed to 2018. Algorithms have their place but should not be relied upon to produce beneficial outcomes. The growth is required as the government wishes to increase the London commuter belt rather than being a response to local needs.</li> <li>1 The proposed growth areas on Green Belt land enable developers to carry on as usual which is to throw up dozens of poorly designed, low quality boxes. Due to the speculative nature, these houses make poor use of land through having no basements and little loft space due to prefabricated roofs.</li> <li>1 Due to their locations, they will continue to encourage car use with most households having at least two cars. There was a recent council house development in Norwich which won an award due to putting the local environment and way of living at its heart. There is no chance of this happening with such outmoded models. It is quite easy to predict that the infrastructure required will not be put in place and solutions will be required for the problems created.</li> </ol>

**Spatial Strategy for Growth comment**

The Plan does not achieve the objective it sets itself because growth will be accommodated 3-4km from the town centres. These, by definition are located at a distance away from "passenger transport and other services, facilities and employment opportunities". Paragraph 19.6 of the Plan does say "In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.' But, beyond that statement there is absolutely no justification offered, except the Government 'target' that isn't actually a 'target'.

Indeed 19.7 also specifically states DBC have “identified those areas on the edge of the main settlements where exceptional circumstances exist”, thus inferring that exceptional circumstance exist for the settlements protected by the specific Green Belt releases. These “exceptional circumstances” are certainly not evidenced.

BRAG have demonstrated that DBC is building a massive oversupply of housing compared to ONS estimates. Why? What is the justification?

DBC have underestimated the number of windfall developments by 56% this despite the likely impact of change of use as a result of different working patterns following on from the pandemic. The cost is 850

hectares of irreplaceable Green Belt land. It’s almost as though the

Council want to join up all the towns in a ribbon development to deprive them of their individual identities and their countryside.

As BRAG states :

“Statement 2 in SP2 starts “The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring”. BRAG is concerned about this wording as in its current form it suggests that ‘investment’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring. Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum’s coffers for funding investment elsewhere. With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong.”

It’s also unjust.

Other key points:

23.119 accepts that “congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.

The new developments in Berkhamsted and Tring are so far from transport of other amenities that they cannot be justified sustainably; walking and cycling are not solutions.

The numbers proposed by DBC as a whole across the Borough are flawed.

It worries me that the Plan has a target of 'at least 2,200 new homes' for Berkhamsted and Northchurch. The adopted Core Strategy identified growth of 1,180 homes over that plan's 25-year lifespan, which equates to 47.2dpa. In reality, Berkhamsted has contributed to the Dacorum's new housing stock at a rate of 61.9dpa – in other words completions have out-performed the target by 31.2% in Berkhamsted while new housing stock in Hemel Hempstead has fallen behind the town's target by 9.3%. Much of this can be explained by developers' demand to build in Berkhamsted rather than satisfying need, i.e. Berkhamsted growth is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process. Another injustice. Besides which, if the housing was affordable then there would not be so much pressure to build in Berkhamsted. Developers are building not for the people who live here but from people moving in from outside the area. This represents a failure to implement the existing Plan and meet existing needs of people living in the area.

<b>Spatial Strategy for Growth comment</b>	There are too many houses (already over 16000) and where they are being built no consideration is being given to local residents.

- As an example, the Pix Farm Lane 'Bellway Development' has resulted in large articulated lorries using the narrow Chaulden Lane, disrupting locals, walkers, causing traffic chaos and destroying verges and local wild life. The Bellway site over the past few weeks has been digging a white lime or cement powder into the ground. The fumes get onto your lungs when walking near the site!

There is far too much Loss of greenbelt land

There is a Negative impact on environment as highlighted in the example above but also in removal of wildlife habitats and removal of local beauty spots

There is a lack of appropriate infrastructure - Schools, no hospital and roads locally are already under severe stress

I am also concerned that the planning for schemes such as this are seemingly waived though, bulldozing the opinions of local residents. Recent schemes, initially rejected, are simply presented again after a short period, over and again, until finally gaining approval when the original objections still apply.

This all really does raise the question of whether there is a vested interest. The councillors are elected to serve by locals , for the locals and should be acting on our behalf.

Please take this email as my formal response to Dacorum’s Local Plan (2020-2038) Emerging Strategy for Growth.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum’s green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don’t have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough’s chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

I am writing to express my concern and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, especially the proposed development in the countryside and how this will affect the Community and the environment.

In particular I am extremely concerned about:

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation
- Over-provision of housing

- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England.
- Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

—The delivery strategies rely on the release of Green Belt land. There is no justification for the release of this land. The housing target is not a true reflection of objectively assessed need for the area. The Green Belt across the Borough is really important to people who live here now, but also for future generations. It is our duty to preserve the Green Belt in perpetuity. This plan fails in this duty and I cannot support this.

<b>Spatial Strategy for Growth comment</b>	Delivery Strategy – flawed windfall calculations and projections leads to a faulty delivery strategy that prioritises building on Green Belt, especially surrounding Berkhamsted and Tring, over brownfield and urban development (contrary to NPPF), while holding back the bulk of the Hemel Garden Communities allocation for after the Plan is illogical. The Berkhamsted Delivery Strategy is clearly developer led and offers no protection to Green Belt or infrastructure improvements for issues that already exist.

<b>Spatial Strategy for Growth comment</b>	I object to the housing plan on the grounds that it is disproportionate in the totals for each of the areas - Hemel Hempstead, Berkhamsted and Tring - and that the formula that has created these high target numbers is fundamentally flawed (see here: <a href="https://www.building.co.uk/news/jenrick-abandons-mutant-housing-algorithm-to-focus-on-urban-development/5109569.article">https://www.building.co.uk/news/jenrick-abandons-mutant-housing-algorithm-to-focus-on-urban-development/5109569.article</a> ).

Dacorum, in conjunction with MHCLG, should revise the numbers and the plan and they should be significantly lower. Furthermore, in any revision there should be much more detail provided on infrastructure assessments and improvements (eg traffic, clean air and capacity of schools, GPs and social care etc) and how they will be provided, including through Section 106 agreements.

The existing green belt and recreational locations, including all school playing fields should be protected and any development must prioritise brownfield locations or sites within existing built on areas. Where development is permitted in any future plan over this timescale, it should be clearly set out which sites are priorities in next 5-10 years and which will only be developed in the longer term (ie after this time).

There should be full economic assessments of where people will work, including impacts on travel and public transport as well as a comprehensive local economic development plan for Dacorum as a whole. This should include appropriate liaison and joining up with other local authorities and a clear understanding of where housing and local development strategies are complementary. This should include neighbouring boroughs and also major employment/economic centres nearby such as London and Milton Keynes. This is particularly important given the proximity of Dacorum to these locations (and its distance/isolation from other parts of Hertfordshire including the main centres within Herts CC).

Lastly, any developments that are permitted to take place within such a revised plan, should prioritise affordable housing and homes with the highest environmental standards. Plans should demonstrate how they will contribute to national and local 'net zero' targets not just through building standards, but also through energy usage and reduced car use including for commuting, access to schools, local recreational facilities etc).

The following are my principal objections:

1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.

2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

The current quotas are not sustainable and I feel strongly that DBC are simply choosing the easy targets without given due consideration to an innovative approach.

The encroachment on green spaces is unacceptable. We are already seeing the loss of amenity greens and garage spaces to fulfil quotas resulting in the destruction of important green areas. These are valuable to people's mental well being and this will result in communities being locked into bleak, concrete jungles as the trees and green spaces are being torn down. This was not the vision of the New Towns and whilst I appreciate that times have changed and demand

for housing has grown council need to be mindful about what drives people to settle in Hemel Hempstead and it's surrounding areas.

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	—The delivery strategies rely on the release of Green Belt land. There is no justification for the release of this land. The housing target is not a true reflection of objectively assessed need for the area. The Green Belt across the Borough is really important to people who live here now, but also for future generations. It is our duty to preserve the Green Belt in perpetuity. This plan fails in this duty and I cannot support this.

<b>Spatial Strategy for Growth comment</b>	<p>We would like to join you in registering our strong opposition to the large number of new houses being imposed by government on Dacorum. This is a rural area, and the numbers being imposed are out of balance with the local infrastructure and the green belt which protects the quality and character of the area.</p> <p>Main roads in Dacorum become congested in normal times: tens of thousands of additional journeys will cause gridlock.</p> <p>The area is significantly adversely affected by noise pollution from Luton Airport, and this is entirely the wrong place to build additional homes.</p> <p>The whole nature and quality of rural villages would be changed by substantial additional development.</p>

We join you in opposing this inequable and unreasonable imposition.

**Spatial Strategy for Growth comment**

I wish to register my objection to the proposed plans based upon:-

1 The excessive number of houses proposed in the area of Chilterns AONB - accept some new housing needed but this is too much and will have a negative impact on the character of the town.

2 Loss of 850 hectares of Green Belt land in Dacorum -

3 Increase in Dacorum's population by about 20%. At, conservatively, two people per house an increase of over 30,000 people in a population of about 150,000

4 The threat to Ashridge from excessive recreational use

5 Additional traffic on existing and new roads

6 Lack of infrastructure to cope with additional demands e.g. GP, schools etc

7 Effect on water supply and water waste on the fragile Chiltern chalk streams

- Over-provision of housing, a large proportion largely unaffordable to locals, only encouraging the commuter out of London
- Failure to address climate emergency issues in that even current building guidelines do not go far enough to encourage eco-friendly, low carbon footprints
- Impact on infrastructure and local community as detailed above
- Likely water and water waste disposal issues and damage to chalk streams. With water utility's not statutory consultees, the pain will be felt for years before a solution is found
- The lack of brownfield regeneration proposals
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny
- The plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.</p>

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamsted, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

The Spatial Strategy for Growth plan cites regional housing demand to support its vision for more homes than the area can sustain. It will personally affect my family's ability to maintain our health in the local countryside and contribute to my neighbourhood's already increasing traffic congestion and pollution. This increase in particulate pollution, already a menace, is set to increase substantially due to this plan - partly because of its neglect of basic research in urban planning, but partly because of its deliberate avoidance of the cross-regional implications of multiple development projects.

The latest data suggests the regional housing target should be 400-500 dwellings per year, but your target is around 1000 per year due to the council's decision to use outdated 2014 ONS figures. Despite this inflated figure, based on flawed data, the plan apportions only 10% of that new stock for affordable/social housing, which runs contrary to logic and ethics.

Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield). DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

There are huge questions over whether DBC is fulfilling its obligation under the National Planning Policy Framework (NPPF) to protect the Green Belt, the boundaries of which "*should only be altered where exceptional circumstances are fully evidenced and justified*" (NPPF, paragraph 136).

SP2 (“Spatial Strategy for Growth”) and SP3 (“The Settlement Strategy”) are not agreed.

- The NPPF requires that “These policies do not recognise DBC’s obligations under the NPPF to protect the Green Belt and preserve Green Belt boundaries, and to conserve and enhance Areas of Outstanding National Beauty. These policies are based on a misunderstanding of para 11 of the NPPF, that a planning authority must “make every effort to meet the housing, business and other development needs of an area” (“Dacorum Local Plan (2020 - 2038) Emerging Strategy for Growth”, page 35). This is not what para 11 of the NPPF says, where obligations are subject to significant qualifications re Green Belt land and Areas of Outstanding Natural Beauty. The Town and Country Planning Act should be consulted for DBC to appreciate the misunderstanding.

The NPPF requires that “*Great weight should be given to conserving and enhancing landscape and scenic beauty in [...] Areas of Outstanding Natural Beauty, which have the highest status of protection*” (NPPF, paragraph 172). DBC is thus under a legal obligation to take account of (and not only pay lip service to) paragraph 172 of the NPPF and to the CCB Management Plan when designing local plans which are within or which affect the Chilterns AONB. More generally, it is noted that DBC's proposals come at a time when the Glover Report (commissioned by DEFRA, 2019) have recommended that the Chilterns AONB should become England's next National Park, making development which adversely affects the area at odds with national policy. (DEFRA Landscapes Review, final report;

[https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/833726/landscapes-review-final-report.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/833726/landscapes-review-final-report.pdf)

- Dacorum's own currently applicable Adopted Core Strategy states that: "*development will not be supported where it has an adverse impact on the sensitive open valley sides and ridge top locations*" (Dacorum Adopted Core Strategy, 2013, paragraph 21.6 ).
- Obligations under the NPPF are also to protect and enhance biodiversity – relevant to, for example, the impact that the proposed level of housing growth in the area will have on protected chalk streams;
- The proposed level of housing supply growth in the borough will place unacceptable strain on local infrastructure and resources, some of which (e.g. train services) are outside DBC's control, and will exacerbate already high levels of traffic congestion.

(b) more fundamentally, the very nature of the plan and its wanton destruction of Green Belt countryside which cannot be justified.

Within the document, the role of Green Belt is described as "To assist in safeguarding the countryside from encroachment .... To check the unrestricted sprawl of large built-up areas". Green Belt designation has played an essential role in successfully protecting our environment and the health and well being of our local communities for many decades. It is needed now more than ever. Today, we are becoming painfully aware of the desecration of our countryside and the precipitous fall in biodiversity we are experiencing. We face an enormous challenge to halt and reverse this degradation, and maintaining the sanctity of the Green Belt is essential to it. The Council is only allowed to amend Green Belt Boundaries in "exceptional circumstances". This document fails to prove why current circumstances should be regarded as exceptional. The proposed development is exactly what Green Belt was designed to prevent, ie a council taking the least creative and most damaging route to fulfil its housing requirements by building excessively on virgin land.

<b>Spatial Strategy for Growth comment</b>	<p>Whilst I understand the need for more housing stock as well as genuinely affordable housing, I believe that these plans dramatically exceed what is needed, the type of housing that is needed and the sheer volume considering the environment that is considered.</p>

The various built-up conurbations that make up Dacorum have a distinct greenbelt-buffer between them all which makes this a happy place to live. Much of the proposed development is located within the buffer zones between the towns and in between the A41 and towns. This was used as a noise and pollution buffer zone which segregated a polluting A road from the towns and its inhabitant.

I would like to comment on the follow issues.

- Pretty much all proposed development will be on Greenbelt. – this goes against current Government policy not only building but on the climate crisis too.
- Brownfield/greyfield sites should be considered. This has been done across the country at former power stations (Rugely) and old Armed Forced bases amongst other sites.
- We have seen in recent years the need to maintain and increase the eco-system and for the natural world to thrive. Removing this habitat is adding to this problem now and for future generations.
- There are widespread and mainstream calls to rewild our green areas, plant more trees, create bigger natural eco-systems to help our carbon emissions. All of these plans go against that.

**Spatial Strategy for Growth comment**

I need to express my extreme concern - and objection to - the proposals contained in the Dacorum Borough Council Emerging Strategy for Growth.

In particular, the huge proposed development in the countryside and the impact this will have on the local Community as well as the Environment.

The overall impact on the environment and infrastructure, including increased traffic congestion, a strain on water supply, and waste water disposal, will be felt across the whole of Dacorum and further afield.

Specifically, I am extremely concerned about:

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns
- Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

**Spatial Strategy for Growth comment**

I would like to register my concern at the Dacorum local plan, a leaflet was posted through my door recently and I have previously attended meetings regarding the plan and local developments.

The figure of 922 homes to be built per annum is a huge amount. Of these I understand 315 will be affordable housing. This is unacceptable. We should be looking to provide homes for those on our housing register, not providing homes for those looking to move out of, or closer to London. I am very much in favour of a diverse community and don't think everyone should work locally but we need people to be committed to our communities, our towns, our open spaces – presumably all reasons they want to move into the area.

Hemel is a town in Hertfordshire, not a suburb of London. We need to retain our open spaces and green belt land. Our family has grown up playing in Gadebridge Park, walking along the canal, across Boxmoor and up to Roughdown Common. Wherever we have lived in Hemel has been close to open spaces, the housing estates have provided large greens for children to play safely along with nearby play parks, in Nash Mills we also had a 'little wood' nearby.

All of these places will start to disappear if we continue with this current plan. I note the statistics used aren't current and have surely been affected by both Covid and Brexit. We should look again at the numbers required using current data – we have a census coming up in a few weeks. We should look to develop our brownfield sites – the industrial estate and town centres to include housing of a good size, with green spaces and local facilities.

I hope Dacorum BC will look again at this plan.

**Spatial Strategy for Growth comment**

I am writing to express my concern at the high and unnecessary number of houses proposed in the Dacorum local plan. I understand that the numbers used to inform the plan are flawed and are not based on recent information. Too many

houses are planned and are not required. Also the development does not take the impact of societal changes resulting from Covid 19. Changes in shopping and working means that commercial buildings will need to be repurposed. Fewer people will commute to London as jobs become more home based and people can therefore afford to move further away from London and commute occasionally. They will not choose to live in Dacorum which is expensive given its proximity to London. The smaller number of housing needs could be met from existing brown Field sites rather than encroaching further into our towns and villages. Repurposing buildings would achieve greater environmental benefits and assist with climate change.

The negative impact on the green belt, the character of the villages and towns from the volume of the proposed housing will be substantial. These areas benefit from green space providing areas of sanctuary for wild animals and insects, recreation and peace for locals and visitors. Each village and town has its own character which comes from being distinct, separate and spaced from one another. We are faced with a sprawling mass of concrete and humanity. The natural water sources will not be able to cope. The infrastructure will not be able to cope. The traffic passing through these areas, including generated from residents already overwhelm streets, car parks and make for significant congestion.

The Local plan is not reasonable nor will it achieve its stated aims. Its impact is negative and the basis on which the proposals have been made must be reviewed and the numbers adjusted substantially downwards.

<b>Spatial Strategy for Growth comment</b>	<p>These plans will have a catastrophic impact on the local community and the amazing surrounding countryside and will impact on the safety of pedestrians and motorists. They are not based on the latest up to date information, no consideration has been taken on the impact of the pandemic, or on climate change, data sourced is out of date and there is a notable lack of flexibility by the council to keep up with this latest data. Also the process has not been inclusive and pushing ahead with the plans in the last year during significant periods of lockdown is irresponsible.</p> <p>The plan and strategy must be reconsidered immediately.</p>

<b>Spatial Strategy for Growth comment</b>	<p><u>(5) Spatial Strategy for Growth</u> The massive proportion of growth in development of new homes appears to be incorrectly taken from Governments Standard Methodology as a strict housing target NOT an updated figure on the amount of growth previously assessed by the Council and the ONS. This could lead to over supply in the Dacorum area encouraging people to move into the area, without local employment opportunities. The types of homes that will be built here will be attractive to developers as it is a high cost area (particularly South Berkhamsted) so the houses built are in the wrong place and the wrong type. See the recent development at Bearoc Park to get an idea of what is likely to be built.</p>

<b>Spatial Strategy for Growth comment</b>	(5) Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	The Plan has not looked at sites within Tring which could be sustainably developed e.g. office space ( in the light of more home-working ) and retail space( in the light of the report that 25% less retail space will be needed in the future). Increasing the number of houses in Hemel Hempstead would be a more sustainable option because it would avoid the necessity of commuting from Tring, where there are fewer jobs.

The infrastructure supporting Tring's current population is under strain. The proposed increase in housing would put added strain on all resources to the extent that they would not be sustainable.

**Spatial Strategy for Growth comment**

**OBJ – GRO, GRBT, LAND, DTC**Chapter 5 on the spatial strategy 'key principles' in paragraph 5.2 is opposed, mainly for the reasons set out in response to Question 1. Up to date evidence is not shown for the massive proposed growth of Hemel Hempstead, Berkhamsted and Tring, or to promote growth of villages set in the Green Belt, or that there is 'a requirement for development on Green Belt'. Protected 'sites' are referred to, but these should include protected 'designations', not just sites.

Similarly, there is insufficient evidence to justify 'significant uplift in growth' (paragraph 5.3), and for the statement that 'we know' growth cannot all be accommodated in the urban areas, when the amount of development has yet to be determined.

The proposed extensions to Hemel, Berkhamsted and Tring, and the farther north-eastward extension of Hemel (paragraph 5.4 and repeated in paragraph 5.8 in the context of Hemel Garden Communities (HGC)) are strongly opposed. Any cross-boundary projects such as HGC should not be promoted ad hoc across local authority boundaries in separate development plans, but through an additional joint plan if both authorities can justify its promotion.

<b>Spatial Strategy for Growth comment</b>	<b>Greenbelt invasion</b> As our lives have become busier so has the importance of Green Belt. Its value on health and wellbeing can't be undervalued. Green Belt are areas where wildlife flourishes, where improved air quality is found and nature reigns. Without these areas, land becomes just one continuous man-made development. Rain water has nowhere to seep into the ground and there is no end to the long term environmental impact that it will have. The law says we can only build on the Green Belt if it has been proven necessary but no one has proven this. Developing the Brown Field sites is surely a much better solution and way forward instead of encroaching on Green Belt. Once Green Belt is built on it is lost forever.

**Spatial Strategy for Growth comment**

I am writing to express my concern and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, in particular the massive proposed development in the countryside and the impact this will have on the Community and the Environment.

The overall impact on the environment and infrastructure, including traffic congestion, water supply and waste water disposal, will be felt across the whole borough and beyond.

In particular I am extremely concerned about :-

- Increased traffic through Berkhamsted and Potten End (already overwhelmed) due to vehicles wishing to access the A41, B440, and M1
- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation.
- Over-provision of housing.
- Failure to address climate emergency issues.
- Impact on infrastructure and local community.
- Likely water and water waste disposal issues and damage to chalk streams.
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny due to much of the year having been spent in lockdown.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

<b>Spatial Strategy for Growth comment</b>	Delivery Strategy – flawed windfall calculations and projections leads to a faulty delivery strategy that prioritises building on Green Belt, especially surrounding Berkhamsted and Tring, over brownfield and urban development (contrary to NPPF), while holding back the bulk of the Hemel Garden Communities allocation for after the Plan is illogical. The Berkhamsted Delivery Strategy is clearly developer led and offers no protection to Green Belt or infrastructure improvements for issues that already exist.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to state my opposition to the plans to build 16000 homes in the next 18 years within the Dacorum Borough as set out in its Local Plan Consultation.</p> <p>It should go without saying but in case a reminder is needed, the potential destruction of huge areas of green belt land is very obviously damaging to wildlife, the local environment and therein the population who live in the nearby area. As people have been confined to their immediate surroundings during the pandemic, the benefits of spending time in nature are more apparent than ever. If people are not able to experience this in their local area they will be forced to travel to other areas that are protected. As you can see the loss of this green belt land is not just in and of itself but will potentially have an impact on other protected areas through people being forced into travelling further afield to experience nature.</p> <p>While development of the local surrounds is both necessary and desired, this also requires an investment in the existing infrastructure that would facilitate that increase.</p> <p>With the plan providing no indication of investments in transport links, better road conditions, maintenance and or renovation of existing property or housing and support for the small businesses in the local economy, it would appear that the focus of Dacorum Borough Council appears to be directly on the private profit to be made from these excessive housing developments and has nothing to do with improving prospects for either current or future residents.</p> <p>Though I live in Aston Clinton which by definition is not part of Dacorum Borough, our village already suffers with a huge amount of heavy goods traffic as it acts as a thoroughfare between Tring, Aylesbury and High Wycombe. The prospect of 18 years of concentrated housebuilding and the subsequent increased pollution, traffic and disruption is also among my concerns.</p> <p>As stated before, I am not opposed to all development in the local area; however, if the proposed solution is to just throw vast amounts of new (unaffordable) housing at the problem, I must state my objection to it.</p> <p>As a compromise, I must ask the council to at least halve the number of proposed houses being built at a minimum and invest the remaining money into the rest of the Borough, as previously outlined. This would at least mean the new residents would be assured a better quality of life and the current residents would also benefit from the investment into the local economy. Most importantly, with the effects of climate change becoming ever more apparent, it will considerably lessen the impact on the environment and protect what is left of the green belt land in the local area.</p>

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	I am very concerned about the apparent use of green belt land for more housing. Given the fact that the Government has done a u turn on building houses on green belt this plan already seems outdated and so needs to be updated to reflect this change. I would like to understand what exceptional circumstances the council feel mean that development on greenbelt land that is adjacent to areas of outstanding natural Beauty such as next to Tring is acceptable.

<b>Spatial Strategy for Growth comment</b>	<p>We are writing to object to the plan for development in Dacorum for the following reasons:</p> <p>The number of houses proposed for development per year until 2038 is based on figures produced in 2014, we understand that this proposes a figure of 1,023 houses being built in the area. These figures are now outdated and we're superceded by ONS figures produced in 2018 which only proposed 355 houses per year built. The government figures given need to be challenged by yourselves on this basis. In addition, the figures derived are not the objectively assessed for our area.</p> <p>Secondly, green belt has been defined as land that can only be developed upon in exceptional circumstances. Despite the statement in the plan, the simple need for extra housing cannot be defined as exceptional.</p>

Thirdly, resources cannot support the extra houses currently and there is nothing in the plan that states how this will be resolved. In particular, water extraction is at the maximum it can support without the extra supply that will be needed for these developments.

Fourthly, there has been insufficient effort to locate brownfield sites in preference to releasing greenfield sites for development.

Fifthly, the proportion of social housing proposed is far too low in comparison with the waiting list of 7,000 awaiting housing. It should be ensured that housing meets the needs of the people looking to be housed locally.

We are also concerned that there has been insufficient publicity of the plan to ensure that people know what is happening. It is apparent that a significant number of people did not receive a copy of the plan in the post. We did not receive one and had to request it very late on in the available time for consultation because we were unaware of it.

Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". The same should be done for Dacorum.

Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth. I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

**Spatial Strategy for Growth comment**

My Parents moved to HH from London in the 50s.

They were part of the 'New Town' idea - satellite towns around London to accommodate families from London and possibly it's slums.

They loved their new life in the 'country' along with my brother and sister both under 10 years old. They knew that no matter what, as this town was surrounded by 'green belt' it would always stay a small town in the countryside- what better way to provide a good life for your children and future generations?

They had a shiny new hospital built, shops, schools, parks, doctors surgeries... it was idyllic for them.

My sister has since told me how the original Hemelites hated the newcomers and what they did to their small town... ripping down buildings and 'developing' areas.... I do not blame them and can empathise with them completely.

One only has to look on Facebook to read how people now mourn the loss of such beautiful buildings and places... and cannot understand why places like Berkhamsted, Tring and St Albans have retained their charm and character managing to remain pretty, yet functional places to live.. they love the community we have but are sad for the loss of the beautiful town we could have been...

Hemel is now soulless. I was born in 1964, and I grew up in Hemel Hempstead- I loved my town yet as the years have passed I am more and more disillusioned with the planner's poor decisions- I do not understand what you are trying to do to our town?

History is repeating itself but now, it's not the beautiful old buildings being ripped apart it's our beautiful green belt- our surrounding countryside, our green space that my parents were told would ALWAYS be protected. Their legacy is being trampled on, they came here for a new life for themselves and their children yet, now I am saddened to find I don't want this awful town for my children and grandchildren, or indeed myself... as soon as we are able we are leaving Hemel because the town planners do not listen or are not interested in what the people of Hemel Hempstead want.

We need schools, a hospital, pretty little shops, department stores, proper police station.... the list is endless yet DBC charged extortionate rent/rates and plan more housing in a town with absolutely no infrastructure to support it. Yes I am aware that HCC and other government bodies are responsible for done of these things but building more housing will only add pressure onto the already crumbling infrastructure... and Dacorum BC, it's councillors, it's MPs should all be focused on fighting on behalf of their townfolk to retain the green belt, stop new buildings planning and improve/reinstate the facilities we do desperately need.

I do not understand why or how anyone would feel it is in anyone's interests to build more housing on our greenbelt land when it cannot support properly those already living in the town.

Please reconsider this terrible plan, the town is dying and you are killing it off.

I do not support the plans and object to the programme 100%.

Let's try to make Hemel Hempstead a nice place to live - together. Please do not destroy my parents legacy.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to OBJECT in the strongest possible terms to the proposals in the Dacorum Borough Council Emerging Strategy for Growth. This is going to have a huge and irreversible impact on protected green belt land in an area of outstanding natural beauty - shame on you.</p> <p>The government has acknowledged that the formula needed to calculate the necessary number of houses is incorrect and yet there has been no attempt by you to review the necessary provision in light of this. In addition the levelling up agenda is focussed on a greater need for house building in the North than the South of England, so why has the local plan not subsequently been adjusted downwards in terms of the number of proposed houses to reflect this. COVID has also had a significant impact on the number of people travelling into London for work and it is widely acknowledged that this will continue as a longer term trend, so the need for houses within commutable distance of London is likely to reduce rather than increase.</p> <p>Why is there so little brownfield regeneration as part of the plans - building on protected AONB green belt is environmental desecration.</p>

<b>Spatial Strategy for Growth comment</b>	<p>In response to the draft local plan entitled 'Dacorum Local Plan 2020-2038 Emergency Strategy for Growth Consultation' I would like to register my objections as follows:</p> <p>I object to the proposals in the consultation because the proposals to build on the green belt are wrong. The proposal is for too many houses and would result in a 50 percent increase in the population of Northchurch. This is not feasible given the topology and built status of the area and needs to be withdrawn and rethought.</p> <p>The housing projections are based on out-of-date statistics. The current projections are not based on the most recently available statistics and moreover the most recent statistics, which would provide for a much smaller growth in housing, do not account for the ongoing increased seasonal mortality to be anticipated from Coronavirus and its variants, nor for the impact of reduced immigration from Europe due to Brexit. To proceed with any of the building and in particular any changes to infrastructure would be reckless under these circumstances, especially considering the unique and protected nature of the ecological environment in Northchurch. The proposed plan should be withdrawn, rethought, re-drafted and re-presented with all known issues taken into consideration.</p> <p>— I understand that there needs to be proof that building on the Green Belt is absolutely necessary before Green Belt land can be released. This has not been shown:</p> <p>— The housing projections are based on out-of-date statistics</p> <p>— The needs of local people have not been prioritised over the needs of developers — There has not been enough scrutiny of brown field sites</p> <p>— CV19 has changed behaviour meaning more town centre development is possible - this has not been taken into account</p> <p>— There are too many houses, yet not enough social and affordable housing - we should be building the right houses in the right places for local people - not giving a green light to urban sprawl</p> <p>— Not enough care has been taken to protect the local ecology - the demand for water will damage the aquifer and the internationally recognised chalk streams</p> <p>— The plans are not carbon neutral and conflict with commitments to tackle climate change</p> <p>— The houses proposed will encourage people to use cars as they are not near employment or transport hubs.</p>

— The increased populations in Tring and Berkhamsted will mean more traffic travelling along Northchurch High Street, leading to congestion, increased pollution, health problems, road safety concerns — this will be bad for the mental and physical health of our residents and future generations.

**Spatial Strategy for Growth comment**

The following are my principal objections:

1 Over development of protected green belt land, the Chiltern's AONB and the Chiltern's Beechwoods Special Area of Conservation. In addition I would remind the Council that it has a LEGAL duty to protect the AONB and its environs.

2 Over provision of housing. The council has not used up to date figures to calculate housing need. Using the most recent official government projections, from 2018, should result in a housing need calculation that is around half of that currently proposed in the plan. As a consequence of using the older 2014 ONS data, the proposed plan will destroy 850 hectares (the equivalent of approx. 1,214 football pitches) of precious Hertfordshire Green Belt land, countryside, and urban green spaces to build 16,596 new homes.

3 Failure to address climate concern issues. Local Plans are legally obliged to contain evidence-based carbon reduction targets and ensure these targets are then central to their new planning policy. The proposed plan does not meet these obligations.

4 Impact on infrastructure. The plan as proposed does little to address the improvements in infrastructure required to support the increase in housing. It ignores issues such as traffic congestion, education provision and healthcare requirements.

5 Water supply and waste water. The level of new housing proposed will put a severe strain on water supplies in the Dacorum area especially during dry summer months. Until new water supplies are available from elsewhere in England, which will not be until the 2030s, the only option would be to extract additional water from the chalk aquifer which in turn would damage the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. In addition the proposed plan makes no mention of how improvements in wastewater and sewerage infrastructure will be funded and the time period for their completion. If this is not addressed potential pollution of watercourses, especially in times of storm, is extremely likely.

6 Brownfield regeneration. In the light of recent events (Covid and Brexit) and trends in the retail sector, the government allows commercial and office space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan.

**Spatial Strategy for Growth comment**

The Spatial Strategy for Growth plan cites regional housing demand to support its vision for more homes than the area can sustain. It will personally affect my family's ability to maintain our health in the local countryside and contribute to my neighbourhood's already increasing traffic congestion and pollution. This increase in particulate pollution, already a

menace, is set to increase substantially due to this plan - partly because of its neglect of basic research in urban planning, but partly because of its deliberate avoidance of the cross-regional implications of multiple development projects.

The latest data suggests the regional housing target should be 400-500 dwellings per year, but your target is around 1000 per year due to the council's decision to use outdated 2014 ONS figures. Despite this inflated figure, based on flawed data, the plan apportions only 10% of that new stock for affordable/social housing, which runs contrary to logic and ethics.

Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield). DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures, which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our Green Belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's Green Belt. Green Belt land helps protect the shape, size and character of towns and villages, preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities, which have increased due to the pandemic, with more people working from home.

Spatial Strategy for Growth  
80% of the new dwellings in Berkhamsted are proposed to be built on new greenfield Green Belt releases. As mentioned above, the methodology behind Dacorum's estimated dwellings is questionable at best, taking no account of the actual windfall numbers in recent years. Such development would lead to too many of the wrong type of houses being built in the wrong places - damaging the Chilterns AONB and destroying acres of farmland for ever.

<b>Spatial Strategy for Growth comment</b>	<p>Requirement for additional Housing.</p> <p>The basic assumption that there is very substantial demand for additional housing in Dacorum, is based on a flawed model. We have recently had 2 major changes which will fundamentally change the demand calculation.</p> <p>Firstly, the pandemic has changed the way in which many of us work. There is no evidence that additional housing will be linked to a significant increase in the number and size of local businesses to justify a large increase in housing, so the assumption is that the housing will be provided for people who are commuting, to locations with substantial business requirements. The likelihood is that the demand for city centre office space will decline substantially, so why would commuters who no longer need to commute choose to live in the more expensive locations. Close commuter links will no longer be a significant factor, so you need to re-think where your demand is coming from.</p> <p>Secondly, the “native “ population is not increasing. Young people are now having their children later, and there is greater emphasis on women having equal rights to a long and fulfilling work life. The increase in population increase has been based on the emphasis in immigration and the families that follow. We now have a specific government policy to control immigration and limit it to where there are job requirements. The pandemic has resulted in a substantial increase in</p>

unemployment, and this will result in a situation where emphasis will be on re-training U K residents to match job vacancies with a significant impact in immigration.

In view of these recent events, any plan should release the minimum area of green belt, pending a further informed assessment of demand generally when the consequences of recent events can be properly assessed.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

<b>Spatial Strategy for Growth comment</b>	<p>Green belt is meant to prevent towns coalescing, and encourage renewal of town centres but release of Green belt once relinquished is irreversible. Once land is released for housing, even if the number is revised down in future, it will be very difficult for the Council to prevent developers building on it. If we resist the incorrect target, then we will probably not be forced to release greenbelt, or at least a very reduced amount.</p> <p>Land which is currently green belt absorbs carbon through its soil and vegetation. When we release this for house building we start at a major disadvantage in trying to meet our carbon reduction targets. On top of all of this many of the developments proposed are outside of town, and we run a serious risk of creating car dependent communities which damages the UK's 2050 Net zero target enormously.</p> <p>The pandemic has made us all realise how much we need our open spaces, and this plan proposes to damage our AONB and other natural assets.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Additionally I'm concerned at the loss of green belt space, that I personally enjoy and feel should be protected from endless building. The biodiversity of the area will be greatly effected within an area of outstanding natural beauty. The government should instead encourage more even distribution of population centres around the UK.</p> <p>The global pandemic has irreversibly changed people's work habits. This should be taken into account as a new factor, with people now able to live and work outside the south east. Dacorum council should delay the consultation and factor in the population impact of the pandemic - such as changes in working habits. I do not feel creating such a long term plan, with so much uncertainty mid-pandemic, is a wise approach.</p> <p>I'd like Dacorum council to reconsider the methodology used for the increases, as I understand from local councillor Stevens, it may be based on out of date ONS housing estimates. I'd also suggest awaiting the census results from this year.</p> <p>Again I'd want to make clear my whole hearted objections to this proposal and wish for reconsideration of the scale to better acknowledge Berkhamsted and its unique challenges around space.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I emphatically object to draft Policy SP2, as it is not fit for purpose in its current form.</p> <p>Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wher ein the majority is located within the Green Belt, cannot be justified in planning terms. The Council h as failed to justify this target as a requirement</p>

against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation.

The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of actual 'need' in an area.

It is only after consideration of the level of 'genuine need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate this was appropriate so as to reduce impact on infrastructure.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council’s inner settlement plans and their assessment of housing needs.

The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify</p>

development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment** My wife and I would like to protest against Dacorum's Draft Local plan.

We are concerned about the LOSS of 2,000 ACRES OF GREEN BELT and open spaces and the effect on the Chilterns Area of Outstanding Natural Beauty. Building on this scale would increase POLLUTION and have an adverse effect on the CLIMATE.

We feel there is an OVERPROVISION OF HOUSING based on out of date targets. The local Plan should be based on 2018 figures which suggest a housing target of 500 houses per annum. AFFORDABLE STARTER HOMES should be a PRIORITY.

There would be an INCREASED STRAIN ON THE LOCAL INFRASTRUCTURE, water and sewerage, road usage, parking, schools and medical practices.

There has been an UNDER ESTIMATION OF BROWN FIELD POTENTIAL.

We STRONGLY OBJECT to Dacorum's local Plan.

<b>Spatial Strategy for Growth comment</b>	Nobody is denying that the nation requires housing. However, I object to the volume of housing planned for Dacorum – specifically in those areas where Green Belt land will be used as building sites.  Planning Data Planning targets for Dacorum are based upon out of date housing projections from the Office for National Statistics (ONS), meaning the uplift for new dwellings is artificially high.

Subsequently, this inflated number is in part responsible for the huge amount of Green Belt that is due to be released for housing as part of the Dacorum Local Plan.

Releasing Green Belt next to commuter towns within easy reach of London will not provide the housing that we desperately need for local people, rather we will experience a further influx of people moving out of London in search of cheaper property prices. I would suggest that the 'need' to build on Green Belt is being driven by developers – keen to build premium, high-margin 'executive housing' providing scenic views of the Chilterns.

#### Environmental

Digging-up Green Belt land on which to build housing would be a sin. Once it's gone – it's gone. Dacorum's towns are entwined with the Green Belt and the biodiversity it provides. It is what defines the region. There are few towns where you need to cross a meadow containing grazing cattle in order to access the railway station. To build a 6-8 storey apartment block overlooking the Station Moor would be reprehensible.

#### Post-Covid.

Apart from the need to use ONS data that is actually up to date, we need to reassess the data to look at the changing landscape of the country – and the demands placed upon it.

The Covid pandemic has already negatively impacted the way the country does business – a change which will in all likelihood mean that more offices countrywide will sit empty as companies re-evaluate how they function and more people work from home. Coupled with the impact on retail – with the nations high streets unlikely to recover, utilising green belt for housing is a folly. We should be looking to renew & re-energise more of our town centres by turning them over to housing, meaning we can reuse existing brownfield sites and bring more people into the town centres – which otherwise are destined to turn into ghost towns.

<b>Spatial Strategy for Growth comment</b>	<p>Number of houses in the local Dacorum Plan and government target:  The numbers used by Dacorum Borough Council are based on old ONS data. Newer more appropriate data is available, but the council has failed to relook at the numbers and are therefore hugely overestimating the number of houses the area needs. Correct estimates suggest in the region of 355 houses are needed in Dacorum per year almost a third of the target set by the council of 922. Furthermore, local restrictions, greenbelt and circumstances have not been considered. The governments figures are a guide not a target but Dacorum are treating the starting point (from which local authorities should assess local circumstance) as a strict target and are using it as an excuse to eat away at greenbelt with developer lead proposal. Greenbelt should be protected for all but “exceptional” circumstances. Confused and fudged numbers are not exceptional circumstances.</p> <p>Furthermore, the developer lead plans do not provide the affordable housing that is needed in the area, and only serve to create houses for people of affluence which completely defeats the point of the targets.</p> <p>In summary I would like to see the Council, scrap the existing plan, rework it based on latest ONS data, with a focus on protecting green belt and developing brown field sites instead. This would create a more realistic and productive plan that would not strain resource in the local area, immeasurably impacting the character of the towns of Berkhamsted and Tring’s green borders and gateways.</p>

<b>Spatial Strategy for Growth comment</b>	<p>From what I can see, the numbers are incorrect, based on incorrect information and targets. We need some affordable housing but not all the other houses proposed. Currently, much affordable housing is poky, unattractive and inadequate, and plans need to include checks and safeguards to ensure they have adequate space, gardens, kitchens and parking. The council must protect green belt land and put higher priority on the environment and wildlife. Building 'sustainable' housing while trashing the local environment is counterproductive. Wildlife and nature is vital for our own well being and mental health, as well as the benefit of the environment. Currently there is stress on local beauty spots due to pressure of numbers. We need many more local new walks/ cyclepaths, areas of beauty eg woods, lakes, meadows, wild thickets, hedgerows, playgrounds etc and you should look to create these integrated into all plans, which should also link up as a network for nature, the wildlife corridors that we need.</p> <p>Local developers are ripping out trees and hedgerows and local thickets and the council needs to stop this and protect our natural heritage.</p> <p>The borough has a really lovely character and the environmental heritage must be preserved. The council should only be looking to build housing where absolutely necessary for local need according to the most up to date information.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Care for villages and village identity – I am extremely worried about the loss of culture, being and identity of our villages and towns. This is not right. Residents of these places have worked over many years to develop their communities and this plan, in one fell swoop, destroys those existing identities. This will have a significant effect on the mental health and well-being of residents. In turn loss of identity and a sense of being is likely to lead to poor behaviours at best, and an increase in crime at worst.</p>

To avoid this, it is my opinion that it would be preferable to build one whole new town for the bulk of housing and development need, allowing for a total new infrastructure to serve that town. This could be supported by some small developments to the existing towns and villages, rather than destroy the existing. There must be many single houses on large plots, that could create another house or two or three; such small developments will not destroy the village/town identity and will have little impact on infrastructure.

My final point is about the lack of cohesion in the plan. It seems to me that you have chopped Dacorum up into chunks and made plans for each chunk. Whilst this is understandable and necessary, it must also be looked at as a whole. For example, with LA3 and the potential plans for Bulbourne Cross, Berkhamsted and Hemel Hempstead are merging into one, and Bourne End as a village with its own identify will cease to be.

Housing Delivery –Climate Change and Sustainability – you talk about the need to reduce carbon emissions and I totally support this aim. However, it seems to me that the housing plan proposed, in particular, is completely in conflict with these objectives. To achieve the housing plan, you are decimating the greenbelt, felling trees and hedgerows and I cannot support this approach. You MUST look at more innovative ways of achieving your aims, and avoid using the green belt. With current reduction in need for office space, you should be looking to use more brownfield sites.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing

target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

I write to add my objections to your latest, incredibly short-sighted development plans for Hemel Hempstead.

- Given the almost daily warnings of what we are doing for our environment and its consequential effect on our planet surely we should be taking care of our Green Belt land – not building on it

And

- Having very recently left the EU – for obvious reasons, we need to RETAIN our much needed farming land and, once again, not build on it.

How can destroying the ancient hedges of single-track and narrow roads of Bell Lane and Darrs Lane, to build over the green fields of Northchurch be a good idea?</p> <p><b>The outrageous overprovision of housing, based on outdated data and with an appalling lack of regard for Affordable housing.</b></p> <p>1 Impact on Green Belt, the Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC)</p> <p>85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty. Although the Council states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant</p>

harm to the Green Belt and AONB. It also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.

#### 1 Overprovision of housing

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, CPRE Hertfordshire has serious concerns regarding the sheer scale of proposed development. In our view, the Council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.

We also acknowledge that recent Government guidance on calculating housing need has been, at best, confusing. CPRE has been campaigning locally and nationally against the nonsensical algorithm method for calculating housing need. We firmly believe that housing need should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has based its calculations on the outdated 2014 based ONS data which, in our opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

#### 1 Underestimating potential brownfield regeneration opportunities

The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.

#### 1 Over-reliance on aspirational growth strategies and partnerships which have not been subject to public consultation and scrutiny.

The Emerging Strategy for Growth appears to be based on selective strategy documents\* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.

\*Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan

#### 1 Implications of withdrawal of St Albans Submission Local Plan

The Strategy assumes that large areas of Green Belt land east of Hemel Hempstead and in St Albans District will be allocated for residential and employment development as part of the Hemel Garden Communities project. The St Albans Submission Local Plan has recently been withdrawn from Examination as the Inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead (5,500dw) in Dacorum must be called into question if there is any doubt about the future viability of the Garden Communities project as a whole.

<b>Spatial Strategy for Growth comment</b>	During these Covid Times it would appear that local Council is taking extreme liberties with people's ability to show their opposition to activity which is being perpetrated under the radar.

Why is it necessary to ravage greenbelt land in areas such as Tring, Berkhamstead Bovingdon etc. Why is Greenbelt land now no longer considered sacred, when for years much has been lauded about its important place in society.

You cannot build on Greenbelt land if there is strong opposition or is that what you are relying on. Lack of opposition, treat us all like mushrooms and pass legislation during your zoom lock-in.

There is only one reason that our green and pleasant land is being raped and pillaged by you YES YOU!!!!!!Greed.

We need a new hospital yet we are ignored but you are quite comfortable in planning thousands of homes in Dacorum and incredulously IGNORE the need for a central hospital for West Herts.

Covid may have played into your hands but there are ways and means for the 'minions' to upset your golden apple cart.

If there had been public meetings you would be IN NO DOUBT that people who are living the areas affected ARE NOT HAPPY.

If the public are not able to show their frustration and opposition to these proposals in a way that demonstrably shows their opposition then this is unconstitutional and undemocratic.

I speak for my family friends neighbours. WE OBJECT TO THESE PLANS.

<b>Spatial Strategy for Growth comment</b>	<p>The housing element of the Plan is based on unrealistic target figures. The use of 2014 ONS data has, perversely, been continued, when later information is available. Even this later information does not take account of expected changes in demand for housing following Brexit and the lasting impact of the covid pandemic on working patterns and hence housing need. A Plan of this nature needs to be based on rational forecasts, not on unsubstantiated political targets.</p> <p>The Plan calls for large areas of Green Belt land to be sacrificed for housing. National policies make it clear that the desire to build housing is not an 'exceptional circumstance' which justifies the loss of Green Belt land. In this regard, of specific interest to me, is the inclusion of Rectory Farm, Kings Langley ('Growth Area' KL02), the development of which, as part of the previous Local Plan, was rejected by the Plan Inspector. The Plan should focus more on developing brownfield sites.</p> <p>Dacorum has declared a 'Climate Emergency'. Presumably this means that the Council is committed to preserving and enhancing 'natural' resources, in order to reduce 'climate change'. It is very difficult to see how concreting over large areas of Green Belt land is consistent with this policy.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am a local resident in Northchurch and moved to the area given its rural nature and views over Green Belt (which I and the government want to protect). To ruin this will be to ruin the whole environment we live in and bring consequences we cannot reverse when we realise the error of our ways. Now is the time to protect where we live .. not suffer death by a thousand cuts to our beautiful and healthy environment.</p>

Dacorum is blessed with significant areas of Green Belt countryside, and market towns rich in history. Those towns and countryside offer significant amenities and benefits to residents. However, it is also an area which lacks significant infrastructure. There is no large hospital within the borough; the train service into London is already at capacity (Appendices to Interim Sustainability Appraisal Report, p.76 - see [https://www.dacorum.gov.uk/docs/default-source/strategic-planning/dacorum-local-plan-interim-sustainability-appraisal-report-appendices-november-2020.pdf?sfvrsn=6abe09e\\_4](https://www.dacorum.gov.uk/docs/default-source/strategic-planning/dacorum-local-plan-interim-sustainability-appraisal-report-appendices-november-2020.pdf?sfvrsn=6abe09e_4)), there are air pollution concerns (Appendices to Interim Sustainability Appraisal Report, p.22.), schools are full, and roads are increasingly clogged.

THE WHOLE LOCAL PLAN IS BASED ON THE WRONG NUMBERS.

The main justification for proposing to release such large areas of land from the Green Belt appears to be the numbers of houses required for Dacorum to build per year, as assessed under the government's 'standard methodology'. Yet the methodology appears to not agree with the National Planning Policy Framework (NPPF), in that it is not based on the most recent population data (using 2014 instead of 2018 figures) and leads to perverse results: Dacorum - an area with no large hospital or arts venue - has a higher assessed housing need than large cities such as Hull, Stoke, Reading or Wolverhampton. By contrast, the Campaign For The Protection of Rural England Hertfordshire (CPRE Herts) has assessed that a more realistic estimate of Dacorum's annual housing need is between 351 and 536 per annum (CPRE Herts review of DBC draft Local Plan,

<https://www.cpreherts.org.uk/planning/local-plan-responses/item/2645-dacorum-proposed-local-plan-has-unnecessarily-high-impact-on-the-green-belt>) – significantly fewer than the 922 dwellings per annum proposed in the draft Local Plan.

DBC overstate the housing need. The South West Herts Local Housing Needs Assessment Final Report - September 2020, a study by G.L. Hearn covering St. Albans and Dacorum, says on page 5: "Recommendation: There is no requirement for the Councils to increase the number of homes they plan for to support local economic growth."

There is therefore no reason or need for Green Belt to be ruined and these plans should be stopped immediately.

The government itself has acknowledged the inevitable impact of the pandemic on housing requirements (for example, increased remote working may well mean that more brownfield sites become available for housing), and confirmed in December 2020 that "meeting housing need is never a reason to cause unacceptable harm" to the Green Belt (Government December 2020 housing need consultation outcome). Rather, the standard methodology provides only a "starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made"; "it does not override other planning policies, including [...] our strong protections for the Green Belt".

The approach adopted by DBC in its current consultation appears to jump the gun: sites are included within the draft Local Plan in order to meet the numbers, with the consequence that the sites are slated for release from Green Belt, rather than it being first decided whether any release of land from the Green Belt is warranted.

SP2 ("Spatial Strategy for Growth") and SP3 ("The Settlement Strategy") are not agreed.

o The NPPF requires that "These policies do not recognise DBC's obligations under the NPPF to protect the Green Belt and preserve Green Belt boundaries, and to conserve and enhance Areas of Outstanding National Beauty. These policies are based on a misunderstanding of para 11 of the NPPF, that a planning authority must "make every effort to meet the

housing, business and other development needs of an area” (“Dacorum Local Plan (2020 - 2038) Emerging Strategy for Growth”, page 35). This is not what para 11 of the NPPF says, where obligations are subject to significant qualifications re Green Belt land and Areas of Outstanding Natural Beauty. The Town and Country Planning Act should be consulted for DBC to appreciate the misunderstanding.

The NPPF requires that “Great weight should be given to conserving and enhancing landscape and scenic beauty in [...] Areas of Outstanding Natural Beauty, which have the highest status of protection” (NPPF, paragraph 172). DBC is thus under a legal obligation to take account of (and not only pay lip service to) paragraph 172 of the NPPF and to the CCB Management Plan when designing local plans which are within or which affect the Chilterns AONB. More generally, it is noted that DBC's proposals come at a time when the Glover Report (commissioned by DEFRA, 2019) have recommended that the Chilterns AONB should become England’s next National Park, making development which adversely affects the area at odds with national policy. (DEFRA Landscapes Review, final report; [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/833726/landscapes-review-final-report.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/833726/landscapes-review-final-report.pdf))

o Dacorum's own currently applicable Adopted Core Strategy states that: "development will not be supported where it has an adverse impact on the sensitive open valley sides and ridge top locations" (Dacorum Adopted Core Strategy, 2013, paragraph 21.6 ).

o Obligations under the NPPF are also to protect and enhance biodiversity – relevant to, for example, the impact that the proposed level of housing growth in the area will have on protected chalk streams;

o The proposed level of housing supply growth in the borough will place unacceptable strain on local infrastructure and resources, some of which (e.g. train services) are outside DBC’s control, and will exacerbate already high levels of traffic congestion.

Residents have every reason to be outraged and angered by the proposed Local Plan, which rides roughshod over legal protections for the Green Belt and the AONB, and will be hugely harmful for local quality of life. It is difficult to avoid the conclusion that DBC has (wrongly) treated the current government's aspirations to increase the national housing stock as an injunction, and failed to take account of the very great weight that it is required, under national planning policy, to give to the protection of the Green Belt and the AONB, for the benefit of current residents of the borough and indeed future generations.

<b>Spatial Strategy for Growth comment</b>	<p>My family have been residents in Dacorum for over 40 years. My wife and I lived in Hemel Hempstead and Berkhamsted, while my son and his family live in Hemel Hempstead. I have recently retired from employment as the Strategy Director for a large international company which is one of the major employers of people living in Dacorum; this job has given me an insight into the motivation of people and businesses in the area. I have followed the discussions regarding the development of our community with great interest.</p> <p>Of the various documents which I have read, I find that the response provided by the Berkhamsted Residents Action Group is the best reflection of my views.</p> <p>I wish to note some specific points, as noted below.</p> <ol style="list-style-type: none"> <li>1 The bulk of the Draft Local Plan refers to new homes in Dacorum. The proposed total of over 16,000 new properties represents a massive increase over that put forward in the agreed 2013 Core Strategy. This increase requires the use of a substantial amount of "Green Belt" land. There does not appear to be any specific justification for this number of homes in terms of such factors as an increasing number of jobs in the area, nor is there any significant reference to the infrastructure required to support the massive increase in people who would live in our community.</li> <li>2 The lack of analysis and planning for future employment patterns in the area is a major omission, particularly in 2021 following the effects of the pandemic.</li> <li>3 The evidence is that the rise in population and housing demand in the area in recent years has been due to people commuting into London. The outcome of the current pandemic is likely to be an increase in home working and an increase in on-line shopping, both of which will result in more people coming into the region and staying in their home communities. The rise in the number of people generally milling around in the towns and the green areas in the past months has been noticeable, as has the deterioration in the local paths and bridleways. This trend will inevitably have its impact on the quality of life and will, indirectly, lead to increasing demand for local services and maintenance of the outdoor facilities (including roads and car parking in the green areas).</li> <li>4 The choice of locations for building development has a significant bias towards green field sites, many of which are on the higher parts of the region. This presents a significant increase in the demand for fresh water to reach points above the natural water table of the area, requiring increased power. None of this seems to match the growing aspirations for a Green Planet.</li> <li>5 The constrained valley siting of Berkhamsted will create additional problems for the transportation infrastructure around the region. Suggestions that many of the sites will have access to the A41 acknowledges the fact that the Plan is based on the previous assumptions regarding people living in dormitory towns in the area whilst working</li> </ol>

outside the region. As noted previously, some of the current assumptions need to be reconsidered in the light of the nature of society post-COVID-19.

- 6 The belief that people will walk or cycle from new development areas into the town centres is somewhat flawed. Observing behaviour in the past months, there have been many leisure cyclists and walkers, but very few of these have shopping bags. It is inevitable that more cars will be used. Assuming that these gradually become dominated by electric drive vehicles, the Plan makes no reference to providing infrastructure for charging these vehicles either in the town centres or in the new developments.

In summary, I feel that the Draft Local Plan is based on the incorrect assumption that the region needs a massive increase in its housing stock. There is no evidence presented to support this assumption, and the changing patterns of life following the COVID-19 pandemic would change any assumptions. Now is the time to take stock of the changes required, paying particular attention to what the future might hold and need, not what the patterns of the past suggested. Pressing ahead with the Draft Local Plan at this time will be viewed as an ill-considered act, putting at risk our beautiful region for the initial benefit of out-of-area land developers. A far-sighted review focused on the interests of the people and planet, coupled with implementation of some of the ideas of the 2013 Core Strategy, would surely be seen as the appropriate (and popular) response at this time of major changes to the status quo. This is the time to show imagination and adaptability, not dogmatic adherence to old business models.

**Spatial Strategy for Growth comment**

I'd like to vehemently express my objection to the house building plan in Dacorum for the following reasons:

- inadequate provision for expansion of services to accompany the extra houses including:
- schools - there already are not enough spaces
- broadband BT network is already over stretched
- roads are already too busy and dangerous

- lack of cycling provision in safe lanes in Dacorum
- parking is already inadequate
- pollution in for example Berkhamsted high street already exceeds national safe levels - how will this be minimised?
- traffic in town centres and bypass
- the bypass exits at Berkhamsted and Boxmoor are dangerously short and with more traffic will be even more so
- train station and train capacity especially going in and out of London
- providing a sports centre in and attempt to compensate for a lack of the above is not adequate

**Spatial Strategy for Growth comment**

We object to the building on the green belt. Why can't new housing developments be restricted to brown sites. Once the green belt is encroached upon it is gone forever.

We need green spaces in our community. When Hemel Hempstead was originally designed it was with green spaces in almost every road, now you are even thinking of squashing houses into garage spaces. Please think again on this matter. We understand that new housing is needed - what about converting shops into flats like the old Kodak building. More people are shopping on line so some retail space has been empty for years. Rather convert retail/ industrial space into housing.

I hope you take the above into consideration.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to wholeheartedly object to the plan for 16,000 homes which proposes to bring about a hugely negative impact in the area in which I live and work and raise a family and will see a devastating effect on local environment, wildlife, village character and life, commuting, roads and traffic and loss of green belt land.</p> <p>I object to these proposals on the following grounds:</p> <ol style="list-style-type: none"> <li>1. That the data and modelling being used for numbers of 16,000 houses is outdated. Using 2018 data, and not 2014 data would half the number of housing. Why is 2014 data being used?</li> <li>2. A loss of 850 hectares of green belt is completely unacceptable. Our green belt land should be protected and in these unprecedented times, the benefits of green belt land for mental and physical health have been a lifeline to individuals and families.</li> <li>3. Climate change - we live in a time where a climate emergency is upon us and this plan does not address the damage that will be caused and the irreversible implications that such housing numbers have.</li> <li>4. Water supply - we do not have enough water and so using supplies from the chalk water aquifer damages our rivers which are classified under the Natural Environment and Rural Communities Act 2006.</li> <li>5. Brown Belt - I would like to see proper investigation into the use of adequate brown belt land that can be used for housing needs.</li> </ol>

<b>Spatial Strategy for Growth comment</b>	<p><b>Water supply and waste water disposal</b></p> <p>The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer which in turn would cause further damage to the Borough's precious chalk streams. New supplies of water are not likely to be possible until after 2030.</p> <p>Geographers say there are only 210 true chalk streams anywhere in the world and the Chilterns is home to 9 of these rare and precious habitats. The siting of housing must not be allowed to degrade these special places.</p>

The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This would take many years to complete, and be extremely expensive as well as disruptive to affected communities.

**Spatial Strategy for Growth comment**

The plan exceeds the total requirement laid down by central government.

The Developer-led nature of these plans means that there are insufficient guarantees that issues of sustainability and infrastructure will be properly addressed.

In the event that all sites do come forward, there is no indication in the plan as to which areas will see fewer houses built to reflect the reduced demand.

The plan contains a disproportionate number of new homes in Tring. This is out of character for the market town and surrounding area. Given Tring's setting within an AONB it is difficult to see how this scale of development can be described as sustainable.

<b>Spatial Strategy for Growth comment</b>	<p><b>Context</b></p> <p>DBC launched the consultation despite recent government acceptance that the algorithm figures being used to justify growth need are flawed and they will be reviewed. I wrote to my Berkhamsted MP Gagan Mohindra, and he responded confirming that this is an issue he is taking up with Ministers. He is one of a number of Home Counties conservative MPS who are unhappy with the situation on numbers. DBC should be challenging the figures with support from local politicians or not, not just blindly accepting the figures and rolling over, seeing increased revenues from council and business rates as the prize they crave. Arguably, half the number proposed is sufficient see ONS data from 2018.</p> <p>I have been a resident of Dacorum for @25 years and I care very deeply about the plans to build and develop on the precious commodity, being the AONB and green belt.</p> <p><b>Overall impact on Dacorum</b></p> <p>Looking at the population stats. of @155k, an increase of nearly 52k based on @17500 new dwellings means a population uplift of @30%. Most of this build will be on green belt and in close proximity to the Chilterns AONB.</p> <p>There is already substantial build agreed and with the proposed numbers the borough will become urban rather than rural in nature. As most of this new build is on green belt, any requirement to replace green belt will use up the rural area and maybe the AONB.</p> <p>As well as the obvious environmental impact, there will be physical and impacts on the AONB. Because of covid the AONB has seen a sharp rise in visits by people seeking open space and outdoor amenity, I have heard complaints from friends and neighbours trying to access both Ashridge and Wendover woods about the sheer volume of cars and people making it impossible to visit and park.</p> <p>Once the additional local residents and their vehicles are added to this then there will be serious management issues for the AONB, which as we are well aware is not a National Park, although this must become a prerequisite. What guarantees can the council and government give that this unique landscape will be protected and maintained for the</p>

future? Who will manage the influx of people and the impact on the environment? The National Trust who own and manage Ashridge are strapped for cash.

Most of the build will be to the north and east of Hemel Hempstead (11688), Berkhamsted (2230) and Tring (2730). All areas are close to the AONB, and the impact on these towns needs to be considered. Little recognition seems to have been taken of the topography, we are basically talking about a series of valleys and therefore any development on the top of the slopes is going to have a visual impact for many miles.

A new link road is proposed east to west in north Hemel, so traffic issues and noise, visual impact etc. are inevitable. The whole character of the Borough will be changed.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

**Spatial Strategy for Growth comment** Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

**Spatial Strategy for Growth comment**

I am writing to you with some thoughts on the **Dacorum Local Plan (2020 - 2038) Emerging Strategy for Growth.**

In para 2.3 of the document, you state that: “One of the major challenges for the Borough is delivering a step change in the level of housing growth as required by the Government. This will be far above what has been delivered in the past...”

This trope of ever-continuing growth is echoed throughout the Plan. It would appear to go against the ONS household predictions as published in 2014, 2016 and 2018 (see attached extract from their reports) which imply a **decrease** in growth in Dacorum. Furthermore, it appears that the figures relied on in the Plan are based on outdated estimates from 2014, which were even higher than those in 2016, so the downward trajectory is considerably more pronounced. Quite how this selective reading of the figures can be allowed to proceed is baffling, to say the least.

Figure 2 on P.38 shows the Housing Trajectory 2020 – 2038. A useful comparator would have been the Housing Trajectory for the years leading up to 2020: was the amount of housing actually delivered during that time below or above expectations? And, if the latter, why are future plans not being curtailed, quite apart from the point in my previous paragraph? Again, there is an unwillingness to address the errors of the past.

I realise that Covid is mentioned towards the end of the Plan, but it will plainly have a lasting effect on how and where people live. I suggest that it may well make many of the projections in the Plan specious, if not totally invalid. Unfortunate timing, perhaps, but something that needs to be addressed before rushing headlong into something that will out of date before it has even started.

Overall, the Plan appears to take accelerated growth in the South-east in general, and Hertfordshire in particular, as a given. With the government talking about “levelling up” and trying to encourage growth in other parts of the country, this would seem to be going against national policy.

Accordingly, I believe that a major re-think is required on the areas of the Plan which I have touched on. Others will doubtless have made comments on different parts of the document.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to express my extreme concern and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, in particular the massive proposed development in the countryside and the impact this will have on the Community and the Environment.</p> <p>The overall impact on the environment and infrastructure, including traffic congestion, water supply and waste water disposal, will be felt across the whole borough and beyond.</p> <p>In particular I am extremely concerned about:</p> <ul style="list-style-type: none"> <li>- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation</li> <li>- Over-provision of housing</li> <li>- Failure to address climate emergency issues</li> <li>- Impact on infrastructure and local community</li> <li>- Likely water and water waste disposal issues and damage to chalk streams</li> <li>- The lack of brownfield regeneration proposals.</li> <li>- The proposed use of green belt land, which should be protected for future generations.</li> <li>- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.</li> </ul>

- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

I reiterate my strong objection to the Dacorum Local Plan, which not only has not been available for scrutiny by the wider population of Dacorum due to the Covid-19 lockdowns, but is based on data that seems out of kilter for the new normal which will be a reality after the pandemic is beaten.

I urge a rethink and wider consultation with all sectors of the local population.

The homes must be affordable. Building sustainable housing does not mean it becomes unaffordable. We welcome the commitment to genuinely affordable housing to be included in developments but believe affordable needs to be properly defined in the plan and must contain an adequate proportion of social housing. We call for the 40% minimum affordable homes objective to be enforced across the Borough.

We call for the 40% minimum affordable homes objective to be enforced across the Borough

<b>Spatial Strategy for Growth comment</b>	<p>Please take this email to register my objection and concerns to the proposals in the Dacorum Borough Council Emerging Strategy for Growth. In particular the large-scale proposed development in countryside and rural settings, the associated impact this will have on the local communities' rural and semi-rural environments, in addition to Environmental impacts.</p> <p>The plan does not accurately acknowledge or propose mitigation for increases in infrastructure, traffic congestion, water supply and disposal, and will be felt across the whole borough and beyond.</p> <p>In particular I am extremely concerned about:</p> <ul style="list-style-type: none"> <li>- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation.</li> <li>- Over-provision of housing &amp; subsequent impact on infrastructure and local community. In particular the scale of developments in Tring, Northchurch and Berkhamsted, and the assumed sublimation of Northchurch as "West Berkhamsted".</li> <li>- Reliance of out of date and inaccurate data to support the proposed volume of house builds per annum, latest ONS demonstrating far less need, and the apparent lack of consideration to both gradient or access to many of the sites particularly in Berkhamsted and Northchurch.</li> <li>- Developments that will not meet actual requirements (affordable or accessible homes) but will add urban sprawl and requirement for more vehicles to access amenities from edge of town (especially, Tring so remote from the actual town centre &amp; Northchurch developments atop steep sided single-track roads).</li> <li>- Quality of these developments – if we take as recent examples Bearroc Park in Berkhamsted and Roman Park in Tring these demonstrate a lack of vision or cohesion to their market town settings, and in both cases clearly rely on resident's use of cars to access amenities. A trend that looks set to continue.</li> <li>- Further impact and damage to the chalk streams, particularly the Bulbourne.</li> </ul>

- The Plan is out of date and at odds with government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East – and even if that doesn't happen the train services for commuters were in a woeful state prior to Covid.

- Additionally, I object to the manner in which this consultation has been conducted during the Covid lockdown with the resulting lack of visibility or opportunity to engage for so many residents. Sending posted leaflets with cartoon representations of these developments in the days before closing the consultation is risible.

<b>Spatial Strategy for Growth comment</b>	<p><b>1 Impact on Green Belt</b></p> <p>We need to be sensitive to the fact that the town sits within protected green belt and beautiful countryside, which is home to much wildlife and an area of outstanding natural beauty. By adding so many new houses, our town is at risk of becoming over-crowded and polluted for the people and wildlife who already reside here. The walks into our local countryside have never been more important for our mental health and well-being than during the lockdown periods of 2020 and 2021 and the proposed green belt sites across the town have been accessed by thousands daily during this period, when we have relied on staying local and getting out into our green spaces.</p> <p>The trees along the edge of the A41 also act at a 'green lung' for Berkhamsted – protecting the residents from both the noise and the pollution of traffic on the A41. Many of the proposed sites also sit high up at the top of the town and would therefore require new residents to drive everywhere to access the town's facilities, causing more traffic and pollution. A higher proportion of new homes should be built on brownfield land.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional</p> <p>intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set</p>

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>We would like to record our opposition to the proposed housing development planned for Dacorum.</p> <p>We have reviewed the documents issued for this development and it would appear that this is a strategy which was developed before the COVID19 pandemic and does not reflect the major changes in society which are currently happening as a result.</p> <p>One of the key changes in lifestyle is that people are no longer commuting into an office every day. Technology has enabled many people to work from home and the indication is that they will continue to do so after the pandemic has receded. There could no longer be the need to have access to London as workers are not restricted to living close to train routes or the South East of the country. There has already been a reduction of the number of people living in London and a growing trend to take advantage of cheaper housing in other parts of the country. There may no longer be a demand for expensive homes close to the capital in the coming years.</p> <p>Secondly the pandemic has shown that people need green spaces. It is extremely disappointing that all of the proposed developments are on Green Belt land. In normal circumstances this would be an environmentally destructive strategy, but in the current situation local green space has also become a vital lifeline to many people living in Dacorum's towns. The impact on mental health of the pandemic has yet to be assessed but the importance of green spaces for people has been clearly shown to have to lasting societal benefits, and we believe that this has proved that all efforts should be made to preserve and protect the Green Belt for the people of Dacorum.</p> <p>We believe that this proposal should be halted until a review of the impacts of the pandemic on society has been fully understood. Now is not the time to be embarking on an environmentally destructive building programme in Dacorum. At the next election we will be voting for the party that can recognise needs of the population of Dacorum and not continue with a dogmatic, unconsidered approach to building and its impact on the environment.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Please take this email to register my objection and concerns to the proposals in the Dacorum Borough Council Emerging Strategy for Growth. In particular the large-scale proposed development in countryside and rural settings, the associated impact this will have on the local communities' rural and semi-rural environments, in addition to Environmental impacts.</p> <p>The plan does not accurately acknowledge or propose mitigation for increases in infrastructure, traffic congestion, water supply and disposal, and will be felt across the whole borough and beyond.</p> <p>In particular I am extremely concerned about:</p> <ul style="list-style-type: none"> <li>- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation.</li> <li>- Over-provision of housing &amp; subsequent impact on infrastructure and local community. In particular the scale of developments in Tring, Northchurch and Berkhamsted, and the assumed sublimation of Northchurch as "West Berkhamsted".</li> <li>- Reliance of out of date and inaccurate data to support the proposed volume of house builds per annum, latest ONS demonstrating far less need, and the apparent lack of consideration to both gradient or access to many of the sites particularly in Berkhamsted and Northchurch.</li> <li>- Developments that will not meet actual requirements (affordable or accessible homes) but will add urban sprawl and requirement for more vehicles to access amenities from edge of town (especially, Tring so remote from the actual town centre &amp; Northchurch developments atop steep sided single-track roads).</li> <li>- Quality of these developments – if we take as recent examples Bearroc Park in Berkhamsted and Roman Park in Tring these demonstrate a lack of vision or cohesion to their market town settings, and in both cases clearly rely on resident's use of cars to access amenities. A trend that looks set to continue.</li> <li>- Further impact and damage to the chalk streams, particularly the Bulbourne.</li> </ul>

- The Plan is out of date and at odds with government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East – and even if that doesn't happen the train services for commuters were in a woeful state prior to Covid.

- Additionally, I object to the manner in which this consultation has been conducted during the Covid lockdown with the resulting lack of visibility or opportunity to engage for so many residents. Sending posted leaflets with cartoon representations of these developments in the days before closing the consultation is risible.

**Spatial Strategy for Growth comment**

I am writing to express my extreme concern and objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth, in particular the massive proposed development in the countryside and the impact this will have on the Community and the Environment.

The overall impact on the environment and infrastructure, including traffic congestion, water supply and waste waterdisposal, will be felt across the whole borough and beyond.

I am extremely concerned about:

- Impact on and loss of Green Belt land, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation
- Over-provision of housing
- Failure to address climate emergency issues
- Impact on infrastructure and local community
- Likely water and water waste disposal issues and damage to chalk streams
- The lack of brownfield regeneration proposals.
- Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny.
- The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East.

**Spatial Strategy for Growth comment**

I write as a resident of Berkhamsted.  
 I would like to submit the following comments and observations to the above consultation.  
 The Emerging Strategy for Growth 2020-2038 (the Strategy) is a critically important proposal that will impact the local residents, the wider community, and our national legacy for generations to come. It is incumbent on us all to take a long-term, community-wide view and recognise the responsibilities of the stewardship role that we have inherited.

1 The strategy within the proposal is almost entirely dependent on the reallocation of Green Belt land, especially around Berkhamsted, to residential housing. This is detrimental to the environment and is wholly wrong.

- 2 The irreversible removal of Green Belt land is also unnecessary as it is based on flawed assumptions.
- 3 It is also contrary to national policy, the legal duties of Dacorum and contradicts the objectives of the Strategy itself. The NPPF guideline states that Green Belt land should only be permitted if there are exceptional circumstances and these must be justified. The document does not provide any credible justification for such exceptional status. There has been insufficient consideration given to the use of alternative brownfield sites and existing urban areas. There has also been insufficient consideration given to existing areas of Dacorum with better developed (or potential for development of the necessary) supporting infrastructure.
- 4 Under the proposal Berkhamsted, which is already recognised by Dacorum as possessing insufficient infrastructure currently, will face decades of problems until the infrastructure catches up with the proposed enlargement, if indeed this will ever be realised.
- 5 The number of new homes target is excessive, unsustainable, and based on an ill thought through national government policy which by its own admission is flawed and still under review, having already been fundamentally revised even within the period of this consultation.
- 6 The proposal appears to accept without challenge the arbitrary new build target from central government. It is incumbent on Dacorum representatives to critically examine the target and challenge it as robustly as possible. There have already been successful challenges from other authorities and via the courts.
- 7 The volume of new builds allocated to Berkhamsted and the surrounding Green belt land is wholly out of proportion to the history, nature, geography and supporting infrastructure. If not revised it would increase the number of dwellings in an historical market town by 24%!!
- 8 I refer you to the submission by CPRE Hertfordshire which demonstrates that based on more recent data the annual requirement is dramatically reduced from c922-1022 to c341-356.
- 9 Moreover, the policy of building increasingly large number of properties in the south east of England directly contradicts the government policy of 'levelling up' the United Kingdom and will only mean the 'North -South divide', with the associated damaging over-concentration of jobs, opportunities, transport, and environmental challenges in the south east, will be compounded not improved.
- 0 A high priority for the region and Berkhamsted in particular, should be to provide affordable housing and while this is referenced in the proposal, history and reality shows that in Berkhamsted, developments fail to include sufficient affordable housing – despite promises at the planning stage- and any developer contributions are redirected to other areas or infrastructure. Hence the aspiration is illusory.
- 1 The employment-generation proposals are under-developed. This is concerning for two reasons; the lack of ambition and planning by Dacorum will mean less economic growth and fewer opportunities for young people and secondly; the consequential further unhealthy concentration of towns like Berkhamsted into almost exclusively dormitory towns for London commuters.
- 2 There is no reference to the Glover Report commissioned by DEFRA which recommended the Chilterns AoNB become England's next National Park. This needs to be taken into consideration.

I conclude by restating Dacorum's own statistics which must be borne in mind:

- 85% of Dacorum is rural.
- 60% is Green Belt.
- 33% is within an AONB.

Dacorum and all its residents have an environmental duty and social responsibility to protect this unique area. It would be wholly wrong to permanently damage the region by responding to a short-term political initiative that may be revised or reversed. We should not and cannot prioritise an unchallenged and flawed need assumption for an excessive amount of housing over the protection of this Green Belt.

I respectfully ask Dacorum to reflect on the comments submitted by so many residents and organisations and revise the proposal before the pre submission Plan is submitted.

**Spatial Strategy for Growth comment**

The scale of increase in development considered for Tring is excessive, illustrating that the Local Authority has inadequate understanding of the highly distinctive character of Tring as a small, attractive market town.

Within the section delivering development around Tring it is developer-led, with input from the local authority lacking authoritative detail. The plans show a lack of understanding of the highly distinctive character of Tring town and the surrounding area, together with its current state and future needs.

Developer-led development is seen by local authorities as the cheapest way of providing development with only lip service paid to sustainability. This provides the local community with housing and infrastructure that the developer wishes to provide at a profit for their shareholders - not the development that a community deserves and this approach to development growth is not value for money if it does not deliver what is necessary to ensure a sustainable future.

The excessive scale of development exceeds even the government guidelines, which are currently being revised downwards, as widely reported in the media. Hence a 55% increase in housing for a small market town is totally inappropriate, given its setting within the AONB, and surrounded by Green Belt land. There can be no meaningful sustainable development strategy that will address the issues resulting from such a large increase. Whilst acknowledging that there is a need for development in Dacorum the draft plan is a wholly inadequate response to the challenges faced by the need for sustainable development. The plan lacks coherence, given that pressures from the existing population on the environment and its biodiversity are already causing adverse impacts. A large increase in human pressure will result from the DBC proposals and further deterioration on the local environment. The plan lacks the strength needed to address adverse impacts, both from current levels of stress on the environment and increased future impacts. This draft plan is governed by a developer-led strategy which will fail to deliver the necessary, but much reduced, sustainable growth that Dacorum and especially Tring deserve.

**Do you have any specific comments about the sustainable development strategy?**

—The local plan says very little about sustaining villages; We want vibrant self-sustaining villages that are not just dormitory settlements.

— This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan.

— Northchurch has not been recognised at all. It has been called West Berkhamsted instead.

— The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology.

— There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

We currently have no hospital, functioning police station or sufficient schools &amp; residents parking.</p>

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

**Spatial Strategy for Growth comment**

The Plan does not achieve the objective it sets itself because growth will be accommodated 3-4km from the town centres. These, by definition are located at a distance away from "passenger transport and other services, facilities and employment opportunities". Paragraph 19.6 of the Plan does say "In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.' But, beyond that statement there is absolutely no justification offered, except the Government 'target' that isn't actually a 'target'.

Indeed 19.7 also specifically states DBC have "identified those areas on the edge of the main settlements where exceptional circumstances exist", thus inferring that exceptional circumstance exist for the settlements protected by the specific Green Belt releases. These "exceptional circumstances" are certainly not evidenced.

BRAG have demonstrated that DCB is building a massive oversupply of housing compared to ONS estimates. Why? What is the justification?

DCB have underestimated the number of windfall developments by 56% this despite the likely impact of change of use as a result of different working patterns following on from the pandemic. The cost is 850 hectares of irreplaceable Green Belt land. It's almost as though the Council want to join up all the towns in a ribbon development to deprive them of their individual identities and their countryside.

As BRAG states :

“Statement 2 in SP2 starts “The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring”. BRAG is concerned about this wording as in its current form it suggests that ‘investment’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring. Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum’s coffers for funding investment elsewhere. With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong.” It’s also unjust.

Other key points:

23.119 accepts that “congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.

The new developments in Berkhamsted and Tring are so far from transport of other amenities that they cannot be justified sustainably, walking and cycling are not solutions.

The numbers proposed by DBC as a whole across the Borough are flawed. It worries me that the Plan has a target of ‘at least 2,200 new homes’ for Berkhamsted and Northchurch. The adopted Core Strategy identified growth of 1,180 homes over that plan’s 25-year lifespan, which equates to 47.2dpa. In reality, Berkhamsted has contributed to the Dacorum’s new housing stock at a rate of 61.9dpa – in other words completions have out-performed the target by 31.2% in Berkhamsted while new housing stock in Hemel Hempstead has fallen behind the town’s target by 9.3%. Much of this can be explained by developers’ demand to build in Berkhamsted rather than satisfying need, i.e. Berkhamsted growth is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process. Another injustice. Besides which, if the housing was affordable then there would not be so much pressure to build in Berkhamsted. Developers are building not for the people who live here but from people moving in from outside the area. This represents a failure to implement the existing Plan and meet existing needs of people living in the area.

<b>Spatial Strategy for Growth comment</b>	<p>A lot of the new developments will be in "greenfield growth areas" and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough</p> <p>Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.</p>

<b>Spatial Strategy for Growth comment</b>	The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation

of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.

\*Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan

The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.

Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning & Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.

<b>Spatial Strategy for Growth comment</b>	<p>I oppose the Dacorum Borough Council local plan of major development of houses and new road within the area for the following reasons:</p> <p>The huge impact this proposal for development will place on green belt and areas of outstanding natural beauty that cannot be replaced, and also the surrounding villages this would destroy in its wake, with new roads that will bring even more traffic, leading to an enormous increase in pollution levels.</p> <p>The year 2021 is the United Nations climate conference in Glasgow. The Government, and O.B.C must be seen to set an example by protecting and nurturing all these areas, not only for ourselves but for future generations.</p> <p>After this most difficult year, one lesson we have all learned is how vitally important green belt and areas of outstanding natural beauty are for the mental health and wellbeing of everyone.</p> <p>This proposal simply must not go ahead.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust.</p> <p>Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan</p>

in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement for a plan, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered.

The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead. The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs

<b>Spatial Strategy for Growth comment</b>	<p><b>Green belt grab insupportable and unjustifiable</b></p> <p>If implemented, these damaging proposals would result in the loss of <b>a massive 850 hectares of the Green Belt, the wider countryside and urban green space</b> for development.</p> <p>There is ample basis for arguing that land constraints such as Green Belt preservation may be used as a justification for lowering housing numbers as derived from central government calculations. The Council should challenge both the August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.</p> <p>Furthermore, it is not clear that the It is not clear that the NPPF requirement for the Plan to fully explore the potential to make effective use of urban land (s. 118 and s.137) before releasing Green Belt land has been met.</p> <p><b>Housing type developer-led, rather than needs-led</b></p> <p>It is of great concern to me that in practice the prime consideration in site selection appears to be land availability rather than appropriateness or sustainability. This has led to many of the larger swathes of Green Belt that are earmarked for development being at some distance from town centres, employment hubs and public transport.</p> <p>I am also concerned about the very low number of social housing units included in the DLP, as distinct from “affordable”, which are often at 80% market rates.</p>

<b>Spatial Strategy for Growth comment</b>	<p>What is proposed does not stand up under scrutiny with regard to sustainability. The promises made sound impressive, but what will happen in reality.</p> <p>I believe development on this scale in the greenfield locations proposed is in itself unsustainable.</p> <p>Climate change is a reality. The UK has an ambitious and admirable target to reduce carbon emissions. Once again the issue of the scale of development arises here. The very fact of building on this scale will create high levels of carbon emissions. The loss of green spaces and increased volume of traffic will have a negative impact on air quality. There will be loss of habitat for wildlife.</p> <p>I agree with your statement that, "Development can help to mitigate and adapt to the impacts of climate change, through sustainable design and construction and reducing the need for travel, particularly by car." However, many of the sites proposed are remote from town centres and would result in increased traffic in already congested towns.</p>

<b>Spatial Strategy for Growth comment</b>	1 Green Belt – During the pandemic the ability to take walks or go cycling locally within an Area of Outstanding Natural Beauty (the Chilterns) has been a life saver for many residents. It is likely that this appreciation of the local green belt will continue to be appreciated. To suggest that we should build houses on these areas – a precious resource – is difficult to support. With the perceived changes following the pandemic to shopping habits and working practices, current office and shop spaces should be utilised before encroaching upon the Green Belt because once it has been lost it will be lost forever. If demand still exists, then the Green Belt should only be used as a second priority rather than a first priority.

<b>Spatial Strategy for Growth comment</b>	This plan delivers growth all right. Growth in housing, traffic, congestion and emissions. But it makes no specific provision for growth in local employment, passenger transport, education or sustainability. It is fundamentally a one-dimensional plan that neglects all the other elements of growth. By ignoring or making smooth, glib statements that pay lip service to passenger transport and employment local to the proposed new housing development sites, this plan promotes

increased high-carbon travel. It fails to balance the new housing proposals against the need to protect the town's historic setting.

The headline target of 'A minimum of 16,596 homes' is based on the Government's method of calculating housing 'need' for an area: however, this is not a strict target set by Government. These numbers CANNOT be used to take land out of Green Belt – they do not represent "exceptional circumstance". There are many reasons why this target is flawed. For example, Paragraph 9 of the 2017 DCLG "Planning for the right homes in the right places: consultation proposals" states that "Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest."

All of these environmental designations apply to the proposed development area. I have personally observed wild orchids, nesting buzzards, ancient trees and bluebell woods, and nesting skylarks in these proposed development areas - in the past week alone. These rare and unique habitats, once lost, will be gone forever.

In general, my opinions are in broad agreement with the arguments set out by the Berkhamsted Residents Action Group as set out in their associated submission dated 22 February 2021.

In particular, I agree with their statement:

'We, the Chiltern Society, Chiltern Countryside Group (CCG), Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens Association and Tring in Transition as the 'One Voice' Alliance, oppose the 'Dacorum Local Plan - Emerging Strategy for Growth' because:

- 1 Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of how Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction
- 1 The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes

1 A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting

General Comment

A general comment with regards to the proposed sites as pointed out by the CPRE The Country Side Charity : 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty. Although the Council states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their selfassessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant harm to the Green Belt and AONB.

<b>Spatial Strategy for Growth comment</b>	Brownfield sites should be prioritised for housing and only when developers have utilised all these spaces should our Greenbelt areas be considered. Developers have historically preferred green space due to the greater multipliers of financial return they bring but the Council should defend these natural resources for their existing residents.

<b>Spatial Strategy for Growth comment</b>	I cannot support this plan and object heavily to this proposal as the delivery of the strategies rely on the release of Green Belt land. There is no justification for the release of this land. The housing target is not a true reflection of objectively assessed need for the area. The Green Belt across the Borough is really important to people who live here now, but also for future generations. It is our duty to preserve the Green Belt in perpetuity.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional</p> <p>intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set</p>

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>As per my statements above I consider the proposed development at Long Marston to be unsustainable. It is an area that will flood if 3000 homes are constructed and the existing road infrastructure around the site is already overloaded. There will be a detrimental impact on the surrounding roads in the adjacent Buckinghamshire villages including Wing, Wingrave, Aston Clinton and others including Pitstone and Ivinghoe.</p> <p>There is also the impact of the development on College Lake, Wilstone and Startops Reservoirs.</p>

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. <b>Spatial Strategy for Growth comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. This would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.</p> <p>I support the need for a local plan and accept the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate</p> <p>thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.</p> <p>Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan, as recommended by national planning guidance. This draft Local Plan fails to demonstrate a pathway to local zero carbon or enhancements to biodiversity. The plan is unambitious and does not commit to any level of sustainability in its sustainability targets. The proposed plan has clearly prioritised house building growth over considerations for the climate emergency. Several local authorities in England (e.g., Greater Cambridge, Reading and Liverpool City) have developed integrated local plans that take account of climate change, biodiversity, well-being and social inclusion. Beyond some fine words, there is no evidence in the proposed Local Plan of a viable action plan to deliver such an approach.</p> <p>We must ensure the Local Plan commits to all new homes to be certified zero carbon and sustainable in order to address the climate emergency.</p> <p>I call for:</p>

? The number of new houses proposed in the plan to be substantially reduced.

? Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, each new major development area.

? An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.

? Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.

? Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage. We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. We have the knowledge and technology to make good affordable zero carbon sustainable homes. The Local Plan must prioritise this.

<b>Spatial Strategy for Growth comment</b>	<p>In relation to the proposed sites, the volume of housing proposed to be built in Tring is too high and involves the destruction of large areas of local green space. Over the past year, this area has proved invaluable to local residents as an opportunity to access quiet and open green spaces and to lose this would have a huge impact on local residents and for many lose the reason why they chose to live in Tring in the first place. There is also a disproportionate volume of development proposed in Tring with approx. 55% growth compared to approx. 20% in Berkhamsted and Hemel Hempstead.</p> <p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. <b>Spatial Strategy for Growth comment</b>	I wish to object to the local plan in its present form for the following reasons:-

- Unless there is a demonstratable need for the proposed houses this proposed figure must be reduced to a more acceptable level, not just use of a “mutant” algorithm to pick a number out of the air. In any event in view of the high proportion of AONB and green belt land we need to concentrate on affordable starter homes.
- The plan is not clear enough as to how the Borough will work with developers and other stakeholders to mitigate loss of green belt and meet goals for climate change and biodiversity.
- The focus must be moved on to the use of brownfield sites in the main centres of Hemel Hempstead, Tring and Berkhamsted rather than sacrifice the green belt (which should only be used in exceptional circumstances).

Please include this in the consultation process.

**Spatial Strategy for Growth comment** The use of green belt land is wrong. The council should be looking for brown field sites. These should be used build affordable housing. There are clearly too many of the wrong type of homes in teh plan which in my opinion must be led by the developers rather than a structured approach to affordable housing.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to submit my response to the Local Plan. I welcome the opportunity to contribute to this consultation and hope that you listen to my response and to that of other respondents, and look forward to seeing the revised Local Plan once all points raised are properly addressed.</p> <p>The Local Plan is clearly not fit for purpose for many reasons, with two being foremost.</p> <ol style="list-style-type: none"> <li>1 The increased housing numbers are based on outdated information, which leads to an unacceptable and irreversible impact on our natural heritage. The Local Plan must be re- drawn based on more recent information and with more respect for the Green Belt, Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC).</li> <li>1 The Local Plan must define the practical steps necessary to meet the DBC declaration of a climate emergency, and lay out how DBC will contribute to the UK meeting our international legal commitments to reducing emissions. At present, the Local Plan admits to the options being put forward having a negative impact on climate targets, which is the opposite of what is legally and morally</li> </ol> <p>The revised Local Plan must be based on evidence that is itself subject to public scrutiny. The current plan relies on aspirational growth strategies<sup>1</sup> and has led to a bias in the plans which must be addressed.</p>

In addition to the above, there are a number of other key considerations that need to be addressed when the Local Plan is re-drafted.

Thank you again for the opportunity to respond to this consultation. I look forward to DBC taking account of all the points raised.

Note that more detail on the points above is given on the following pages.

**Spatial Strategy for Growth comment**

- **Key developments**, generally I am concerned that existing communities are not at the heart of this emerging strategy, we already have examples of grid locked roads, neighbour disputes relating to parking issues, if these plans come forward we need to see the infrastructure in place to ensure the smooth flow of traffic. We need to see enhance parking spaces to enable residents to enjoy the peace of their own homes. Let alone hospital, schools, public transport and measures to reduce the impact of climate change.

<b>Spatial Strategy for Growth comment</b>	<p>The plan is based on housing targets derived from the out of date housing projections from 2014 instead of the projections from 2018 which are much lower. It is completely unsustainable to destroy greenbelt based on incorrect figures. The NPPF says that green belt should only be used when absolutely necessary and all brownfield sites have been considered.</p> <p>The plan has not considered the more central brownfield site in Gossoms End which was originally earmarked for an unwanted 4th supermarket.</p> <p>The plan does not allocate a high enough proportion of affordable housing. This will result in the building of a smaller number of larger unaffordable properties which do not meet the demand. These larger properties occupy more land than affordable properties and thus waste green belt unnecessarily.</p> <p>The 2017 Emerging Core Strategy identified the areas of green belt between Darrs Lane and Bell Lane as essential to preserving the character of Northchurch as a rural village.</p> <p>The extra water run off from the impermeable surfaces in new developments will damage the River Bulbourne which is one of the few remaining chalk streams in the world. These chalk streams are naturally fed by clean water filtered through the chalk and are damaged by the dirty run off from developments.</p> <p>The sites south of Shootersway and between Bell Lane &amp; Darrs Lane are far from the centre of Berkhamsted. This will create even more traffic through Northchurch which is already a pollution hotspot. Developments need to be near to railway stations.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I support the submissions of the Chiltern Countryside Group (CCG) and the Grove Fields Residents Association (GFRA) on this question.</p> <p>I believe the Local Plan fails to fulfil DBC’s statutory obligation under the Countryside &amp; Rights of Way Act 2000 s85 to ‘protect and enhance the [Chilterns] AONB’. The permanent destruction for development of large swathes of the Borough’s Green Belt adjoining the AONB and thus its setting, will certainly not be enhancements for the AONB.</p> <p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>The Ministry for Housing, Communities and Local Government stated: ‘Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes are most appropriately located. In doing this they should take into account their local circumstances and constraints.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set</p>

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamsted, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

I do not accept the vision for the market town of Tring as being sustainable when vast swathes of Green Belt, some top quality agricultural land, would be irretrievably lost to development of large housing estates outside the settlement's present boundaries nor the view that Tring should bear a more substantial loss of Green Belt than other areas within the Borough.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

## Spatial Strategy for Growth comment

I disagree with the proposed Sustainable Development Strategy because:

- it proposes a massive development programme of both housing and employment space that is not justified by need, that would remove 746 hectares of land from the Green Belt, and that would result in large-scale car-dependent urban sprawl;
- it proposes development in unsustainable locations on the edge of existing towns (Hemel, Berkhamsted and Tring) where development will impact negatively on the setting of the Chilterns AONB which is contrary to national policy;
- the proposals assume "Hemel Garden Communities" concept is warranted and should be taken forward, but there has never been a public consultation on the concept;
- the proposals assert that Berkhamsted and Tring must take on significant growth in housing numbers but this is not justified by the Council's calculations of housing need which rely on out-dated data and a flawed algorithm;
- it fails to sufficiently take into account the most sustainable form of development which is the regeneration and recycling of previously-developed, or brownfield, In particular, it fails to take into account the historical rate of 'windfall' housing delivery of 306 dwellings per annum (2006-2019) and 322 dwellings per annum (2017-2019) and the likelihood that this figure will rise even further due to the impact of the pandemic and of expanded permitted development rights for converting office and retail space to residential use;
- it fails to propose sufficient mitigation of the Climate Emergency, including failure to recognise the carbon sequestration benefits of the 746 hectares of Green Belt land and 104 hectares of greenfield land that are proposed to be built upon;
- it fails to sufficiently plan for existing let alone future infrastructure needs, particularly those needed for greener transportation including cycling lanes which are woefully absent around the Borough, and safe pedestrian pavements, footpaths and road crossing points for walking: many existing paths and pavements are blocked by parked cars, or are only wide enough for one person, and road crossing points are absent altogether at many locations around the Borough, making it difficult to go about one's everyday life on foot;

- it fails to plan for major utilities infrastructure upgrades that have been recognised for many years such as both clean water and waste water (sewerage) provision, and flood control including in town centre locations at Berkhamsted (including at the rail station);
- it fails to plan for sufficient community facilities and services beyond a nod to having some "open space" in new residential developments; community facilities means having safe and accessible indoor places for residents to socialise, hold meetings, exercise and come together to pursue common interests, and safe and accessible outdoor places for exercise and recreation for both children and adults;
- it fails to recognise the environmental damage to the Chilterns AONB and the Chilterns Beechwoods SAC from over-use by the large numbers of people walking and exercise there; this is at least in part due to the insufficient open space in town centres such as Berkhamsted.

<b>Spatial Strategy for Growth comment</b>	<p>Water supply and waste water disposal</p> <p>The proposed housing developments will put a huge strain on the water supplies to Dacorum and as such, there would be no other option but to extract additional water from the chalk aquifer. This in turn, would greatly further damage the Borough's precious chalk streams.</p> <p>The unrequired growth the Strategy proposes, would require substantial improvements to the current infrastructure of the town in order to improve transport (which will once again impact on the carbon footprint of the town) and treat wastewater and sewage.</p> <p>In summary, the town is not equipped to take this level of development unless huge and expensive improvements are made.</p>

## Spatial Strategy for Growth comment

### Representation to Spatial Strategy for Growth (SP2) and the Housing Strategy (SP4)

Whilst we do not disagree with the broad settlement hierarchy in Policy SP3 that underpins Policies SP2 and SDP4, there is a lack of clarity and justification in the Plan that explains how the actual housing requirements for the different elements have been derived.

In particular, it is unclear as to whether the specific housing requirements that are set against each settlement in Policy SP2 have been derived from a 'bottom up' approach of site selection, that has then led to the numbers quoted, or whether the strategy has started from a notional distribution of the overall requirement of 16,600 homes between the various settlements which has then informed the site selection process.

There is no doubt that Hemel Hempstead is the 'highest order' settlement in the hierarchy, and offers the main opportunities for local employment and higher order services. But the strategy provides for 10,000 homes at Hemel Hempstead and only 2,000 at Berkhamsted, so is it the Council's case that Hemel Hempstead is effectively 5 times more sustainable as a housing location than Berkhamsted, or is it the case the Council has identified more sites for development at Hemel Hempstead? In concentrating so much of the Plan's delivery at Hemel Hempstead on a limited number of sites, this strategy also raises potential issues as it comprises a 'high risk' approach whereby any delay in delivery (in relation to matters such as land ownership, infrastructure provision and joint working) would have significant implications for the Plan as a whole.

Both Berkhamsted and Tring are grouped together in the 'second tier' of the hierarchy, but Berkhamsted is the larger town out of the two, and offers greater local opportunities for employment and service provision than Tring, but Tring has the higher housing allocation. How does the growth strategy account for the difference? The reality again seems to be that the availability of suitable sites substantially drives the Strategy, rather than the other way round.

However, when it comes to the larger villages, and particularly in the case of Bovingdon, it is known that the potential housing delivery from suitable, available and achievable and in the case of Duckhall Farm, deliverable sites exceeds what the Strategy suggests (240 units), as at earlier stages of Plan preparation, the Council has accepted that additional suitable sites exist (as evidenced by the meetings it had with respective developers/landowners in 2019/2020 and, despite its limitations, as remains evidenced by the AECOM Site Assessment Study work). Therefore if the Strategy is effectively being driven by site suitability and availability from a 'bottom up' perspective, rather than a notional 'top down' distribution, why is this approach not being similarly applied at the larger villages as it is for Hemel Hempstead, Berkhamsted and Tring?

The background Topic Paper on the Development Strategy that has been published alongside the Draft Plan states that “Growth is capped in Bovingdon to take into account congestion and parking problems on the High Street, and in particular, restricted scope to expand the primary school.” This factor would not constrain development at Duckhall Farm, as it lies within easy walking distance of the key High Street facilities, and traffic from the development would not pass through the High Street when entering/leaving the village for wider trips.

However, as per our separate representation to the Bovingdon Growth Strategy, the point about primary school capacity is simply not correct, as the analysis undertaken by EFM demonstrates, and in respect of the former point, if congestion and parking in the High Street are seen as a material constraint, it is wholly inexplicable as to why the growth strategy for Bovingdon should be allocating the site that is least accessible by walking and cycling, which is furthest from the village centre, and which is therefore most likely to *increase* congestion and parking in the High Street. Again, this

wouldn't be an issue with the Duckhall Farm site, as the distance to the school and the suitability of routes is conducive to walking.

Interestingly, the Topic Paper notes that Markyate is a relatively small village compared to Bovingdon and Kings Langley, and is a “relatively unsustainable location” compared to these other two key villages. How does the allocation of 215 new homes to Markyate in the growth strategy compared to 240 at Bovingdon reflect the fact that Markyate is viewed as inherently significantly less sustainable than Bovingdon?

We accept of course that under the SP3 hierarchy, the larger villages should be delivering a smaller proportion of the overall growth than the higher order settlements, but the evidence base does not provide any clear evidence to the effect that there is any material constraint that justifies the levels of growth being quoted, nor is there any internally consistent approach which explains the broad distribution between the tiers.

If the Strategy is indeed being driven by ‘bottom up’ site suitability, then it is essential that Policies SP2 and SP4 are clear on this and that these unit numbers are not then used in a ‘circular argument’ to in turn drive decisions about which sites should be allocated. As it currently stands, and as per our separate representations to the Bovingdon Delivery Strategy, the strategy for Bovingdon currently comprises one large (and poorly located) site, and one undeliverable site. The ‘bottom up’ strategy should identify a mix of deliverable sites to achieve an appropriate contribution from Bovingdon village.

If there is a 'top down' distribution that has guided the number of homes to be delivered in each tier, then this needs to be made clear, and the basis for the distribution set out and justified. If however it is essentially a 'bottom up' approach of site selection that then informs the Strategy, then again this needs to be made clear, and the criteria for the selection process made transparent. Without that explanation, these policies cannot be properly judged as to the soundness of the approach.

**Spatial Strategy for Growth comment**

*Policy SP2 – Spatial Growth*

The Emerging Local Plan seeks to deliver a minimum of 16,596 homes, or 922 homes per annum. The Government's recent publications of the new housing figures (December 2020 revised methodology) identifies a need of 1,023 new homes per annum in the Dacorum Borough. This totals 18,414 new homes to be delivered over the 18 year lifespan of the Plan. As such, it is considered that the extent of housing sought to be delivered over the emerging Plan period is insufficient and does not meet the full extent of need derived by the new methodology. For this reason, the policy is not considered to be 'sound'.

At point '2' of the policy, it states '*large scale development outside of the outside of the towns and large villages will be restricted.*' For clarity, it should be defined what 'small scale development' constitutes, whether it is a threshold of number of units or an assessment against the existing settlement size for example. This would provide more certainty regarding whether a proposal would be in accordance with Policy SP2.

At point 'f' of the policy, it states '*elsewhere in rural areas, housing development will be strictly limited. This is likely to be small-scale incremental development and should be principally in line with Policies SP11.*' As per the point above, 'small scale development' should be defined to avoid ambiguity.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p>

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	It is very worrying that you are considering green areas in and around the towns which are such valuable open spaces for the general population to enjoy. Eroding so many areas will have an undeniable influence on the character of the individual towns and villages. Inflicting large housing estates on so many open spaces will change the nature of the market towns and villages for ever. It is also worrying that you are considering areas which are clearly on flood plains,

and whilst you mention that mitigating measures will be taken, are no lessons learnt from seeing so many houses under water during the recent heavy spells of prolonged and heavy rainfall? - which seems to the new weather patterns now with the effects global warming is having on climate change.

<b>Spatial Strategy for Growth comment</b>	Policy SP2 – Spatial Strategy for Growth: TRDC supports Policy SP2 in its aim to direct development towards the largest and most sustainable settlements of Hemel Hempstead, Berkhamsted and Tring. More modest growth in the smaller settlements of Bovingdon, Kings Langley and Markygate is supported given the relative size, sustainability and local infrastructure provision in these settlements. Three Rivers supports the strategy of increasing densities in urban areas (subject to character and other site-specific factors) in order to protect greenfield sites as far as possible and to sustainably situate development in urban areas which generally have better access to services and transport.

<b>Spatial Strategy for Growth comment</b>	<p>The development strategy appears to just be led by the availability of sites presented to the council by landowners with no attempt to prepare a strategic plan based on analysis of real projected need, only the government targets which don't take account of local circumstances (large proportion of Green Belt and AONB, community need) It is surely only after objectively assessing the local level of need alongside these local constraints that the actual land required to be provided for the planned need can be ascertained.</p> <p>The current strategy simply looks like a developer/profit-led one and cannot in any way be described as 'sustainable'.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I am commenting on all sites here: 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty.</p> <p>Although the Council states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”, it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant harm to the Green Belt and AONB. It also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.</p>

**Spatial Strategy for Growth comment**

This Plan is all about development at any cost with scant regard to its effects on the environment and on existing settlements and residents.

The Plan is clearly **NOT** sustainable. With significant changes to priorities and attitudes arising as a result of Covid-19, climate change, biodiversity loss and sustainable transport, there is a need for a much more ambitious vision. There is a need to have specific strong commitments to maintaining and enhancing the Green Belt and the Chilterns AONB (possible future National Park) to maximise their benefits to the local environment and enhancing people's lives. It is simply **not** acceptable to allow major housing development and then try to create urban green space to compensate for the loss of natural open countryside. This will **not** maximise biodiversity net gain nor wildlife enhancement.

In relation to the Chilterns Beechwoods SAC, **no** impact should be permitted as a result of new development. It is **not** acceptable to allow impacts and then try to mitigate them. The vision needs to be more definitive and not take a vague 'as far as possible' approach to protecting the local environment.

Given the exit of Britain from the EU there is added emphasis on becoming more self-sufficient – especially in food production. Yet the developments around Hemel Hempstead and Tring will result in the loss of good quality agricultural land. This will further affect climate change and biodiversity.

The Plan fails to take into account the recent Government announcements to revise their housing targets, possibly downwards, due to reduced immigration and falling birth rates. This Plan goes against Government announcements about 'levelling up' and encouraging more development in cities in the north of England in order to protect rural areas in the south east.

The Borough is highly constrained by Green Belt and AONB, yet most of this new build will be on the Green Belt and in close proximity to the Chilterns AONB. There are already substantial new housing developments agreed on former Green Belt land under the existing Local Plan, and with the proposed additional developments the Borough will become urban rather than rural in nature. The devastation of the Green Belt around Tring, Berkhamsted and Hemel Hempstead which abuts the Chilterns Area of Outstanding Natural Beauty (AONB) is significant, with the loss of over **880ha** of Green Belt land. There is no clear attempt to mitigate this. The Chief Executive of the Wildlife Trusts has recently said: *'We live in one of the most nature depleted countries in the world, which is why we have a big ambition to protect 30% of land and sea for nature by 2030'*. The Prime Minister, Boris Johnson, is a fan of rewilding, and Dacorum Borough Council should be ashamed that the protection and enhancement of the environment and wildlife in the Borough is taken so casually. It is not sufficient to 'take into account' sensitive views, landscapes and protected environmental sites. These need to be robustly protected and enhanced through the creation of extensive buffer zones and establishing substantial habitat links between isolated wildlife sites.

Covid-19 has changed the face of how we work, shop, play and travel. This has not been taken into account, another indication of a very poor and unsound Plan. No account has been taken of the Council's own consultation 'Learning from Lockdown' which investigated how people's behaviours have changed during the Spring Covid 19 Lockdown and *'how we can learn from this, moving forwards towards a greener future...'* Dacorum has not learnt!

The collapse of the retail sector and the increase in people working from home will result in a glut of commercial properties which can be converted into residences. At the present time, the long-term impacts of Covid-19 on the retail industry indicate that online shopping will continue even when the lockdown and various restrictions have been lifted. This has been encouraged by the government with a change in the permitted development legislation, yet the Plan seeks to create additional retail floorspace! This is a complete joke. Many businesses have ceased trading, leaving a considerable number of empty properties. Therefore, use of these for residential purposes will reduce the number of new-build dwellings resulting in the retention of the Green Belt, yet only **23%** of housing development is proposed on brownfield sites – hardly a sustainable approach! Therefore, this policy must be reviewed.

One of the consequences of the COVID-19 lockdowns is that Dacorum has seen a sharp rise in visits by people seeking open space and outdoor amenity, with a vast increase in the volume of cars and people visiting Ashridge and other public open spaces. With the loss of some 850 ha of Green Belt and greenfield land, the pressure on the remaining open space will be intense. As well as the obvious environmental impact on the land and its flora and fauna, there will be physical and visual impacts on the AONB. Once the additional local residents and their vehicles are added to this there will be serious management issues for the AONB which maybe designated a National Park under the Glover Report. There appear to be no plans to safeguard this unique landscape, with development proposed up to its boundary in some cases. The Government, if not Dacorum, is taking the plight of the AONB seriously as in their February 2021 consultation on changes to the National Planning Policy Framework, is proposing to add a specific reference to the impact on the settings of AONBs into paragraph 172.

There are 59,938 households in the Borough at present, with 15,658 new ones planned in just 17 years – a 26% increase, with a population increase of some 30% in a very limited time span! The Council has taken the 'one size fits all' approach with merely tacking on largescale developments around the edges of the three main towns with little concern about the effect that the massive increase in building and population will have on the existing towns and their residents. Little recognition seems to have been taken of the topography, especially Hemel Hempstead and Berkhamsted – both built in river valleys which have steep sides. Therefore, not only will any development on the slopes have a visual impact for many miles, but they can hardly claim to be sustainable. Development on the fringes of towns will be some considerable way from existing facilities and transport hubs which are on the valley floor, resulting in more traffic, congestion on existing roads, disturbance, noise and pollution. Given the steep slopes and distance from facilities, walking and cycling is not an easy option, and there is little or no public transport to these areas. The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt land in Dacorum.

A new link road is proposed east to west in North Hemel Hempstead, so traffic issues such as noise, pollution, disturbance, visual impact are inevitable. This road will take traffic from the proposed new development called 'Hemel Hempstead Garden Communities' through the countryside which is AONB, through rural villages and across narrow bridges which already suffer from existing traffic. This new road is only required because of the proposed amount of development on the edge of Hemel Hempstead, but its consequences will be far reaching and severely detrimental to the surrounding areas well beyond the proposed boundaries. These are not even considered in this Plan. Yet, as the way people will live their lives after the pandemic with a drop in commuting and day to day travel, there will no longer be a need for a sizeable new link road.

The whole character of the Borough will be changed. The small market town of Tring is expected to absorb a 20% increase in residents, bolting a new “village” onto it with little attempt to integrate with the existing historic

town. Berkhamsted, also an historic but larger market town, has a proposed increase of around 10% on top of the new Bearroc developments of over 200 new houses, which is already creating traffic issues along Durrants Lane and Shootersway given that it is located on the ridge and some way from the town centre and station. Hemel Hempstead will virtually join with Redbourne which the very function of the Green Belt aims to prevent, and it is already being extended into Green Belt with two large developments (land west of Hemel Hempstead and Marchmont Farm) adding some 1450 dwellings in the next couple of years.

It is commendable that the Council aims to be carbon neutral by 2030 and has an aim for a biodiversity net gain of 10%, this Plan will certainly NOT deliver it! It fails to prioritise restoration, enhancement and creation of wildlife habitats across the Borough to reverse biodiversity decline in any meaningful way. The Borough contains internationally important chalk streams, Beech woodlands and chalk grasslands which should be acknowledged and their conservation prioritised, instead of being merely a vague and meaningless afterthought.

Keeping Green Belt land green and open makes a positive contribution to the fight against climate change. Climate Change will be exacerbated with more and more development on greenfield land away from community facilities and transport hubs and the Council has clearly not learned from their own Lockdown survey of the way that life has irreversibly changed. It is ironic that in virtually all development sites there is mention of wildlife corridors, green and blue corridors and public open space, but they are building on exactly those areas. So how can there be an increase? There is no reference to the habitat that has been and will be lost and how the Plan intends to make a significant contribution to habitat recovery. The Council needs to commit to improving the resilience of the local environment to climate change, yet it still intends to build on known floodplains and water meadows.

The strategy must include an objective to reduce land removed from the Green Belt to an absolute minimum, and exceptional circumstances must be clearly demonstrated. The Council sees the use of the Green Belt as an easy option, and it should not bow to pressure from the house building companies that own the land. The Council should be distinguishing between housing need and housing demand, and arguing against the inflated housing figures or perhaps the reason they don't is because they get income from developments?

The proposed housing target of over 800 per annum is excessively high when compared to the 433 required in the previous Local Plan. In such a highly constrained district, this increase is not achievable without significant loss to the Green Belt and open space in and around the towns and, in particular, these increases would have significant impacts on the character of Berkhamsted and Tring and the people who currently live there. It is bizarre that as it stands, the Borough has a higher housing target than some of the cities in the north. In an area with national designations and aspirations to become a National Park, this cannot be acceptable. In view of the proposed changes to the planning system and the methodology for assessing housing needs, the Council **must** seek to reduce these numbers and not just accept them as a fait accompli. This would be consistent with the Government's 'levelling up' agenda, reducing

housing in the south east and increasing housing in the north and if the Green Belt sites are not required to meet reduced housing numbers, then the argument of exceptional circumstances would be unlikely to exist.

## Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

The plan must ensure adequate Social Housing, which is net zero in operation, as defined in our answer to question 1.

The plan must allow for an increase in electrically powered transport and roads must be designed to encourage walking and cycling.

<b>Spatial Strategy for Growth comment</b>	<p>re Policy SP2:  Re 1: The minimum of 16, 596 homes is a gross overestimate, and based on outdated data on requirements. In any event, these cannot be delivered without contravening legal duties to the Green Belt, Chilterns Area of Outstanding Natural Beauty and Chilterns Beechwoods Special Area of Conservation.  The new housing that is needed is truly affordable homes, but not 16,596 homes.  Also there should be a recognition that the area is already over-developed, and that new growth should be focussed in other parts of the country, where it is needed.</p> <p>Re 3c: "Tring":  The growth proposed and the resultant infrastructure required would change the character of Tring completely, and put intolerable pressure on its green spaces, and the Chilterns Beechwoods SAC and the AONB. The infrastructure is already inadequate, and dealing with this issue would be sufficient development for the town, and its role in providing services for nearby villages.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I'm writing to object to The Local Plan proposal which destroys the green belt in order to build more housing. There's no point to a 'greenbelt' if it's built on anyway, and given the climate emergency I can't understand why this has been a proposed option. Also, I only found out about the plan via Facebook - there hasn't been enough publicity through means such as leaflets in the post.  No need to reply, I simply wanted to state my objection as one of the many others who are opposed.</p>

**Spatial Strategy for Growth comment**

1 The Emerging Strategy for Growth is based on outdated information (ONS 2014) instead of ONS 2018 data, which has now become outdated due to the pandemic and Brexit, especially as a recent article in The Times claims the UK population has decreased over the past 2 years. In addition, the new Conservative Government

under Boris Johnson is planning significant changes such as moving more activities to the Midlands and the North as well as significant environmental policies to reduce carbon emissions, the environmental impact of housing, traffic, flooding and water/waste water supply. None of these are reflected in the Dacorum Local Plan. Therefore, given the above, we believe that the Emerging Strategy for Growth figures need to be updated to reflect the current and revised future situation not the past.

<b>Spatial Strategy for Growth comment</b>	<p>DBC are using out of date projections and figures that do not effectively reflect the true demand, the figures are falsely inflated.</p> <p>The current quotas are not sustainable and I feel strongly that DBC are simply choosing the easy targets without given due consideration to an innovative approach.</p> <p>The encroachment on green spaces is unacceptable. We are already seeing the loss of amenity greens and garage spaces to fulfil quotas resulting in the destruction of important green areas. These are valuable to people's mental well being and this will result in communities being locked into bleak, concrete jungles as the trees and green spaces are being torn down. This was not the vision of the New Towns and whilst I appreciate that times have changed and demand for housing has grown council need to be mindful about what drives people to settle in Hemel Hempstead and it's surrounding areas.</p> <p>Most people are attracted to the area because of its proximity to transport links coupled with the fact that, unlike London, there is still a large proportion of green areas. These green spaces are not just in the surrounding villages but also acting as separation between the large neighbourhood estates throughout Hemel Hempstead. But by bit Infill building is closing these valuable green corridors. The impact on people but also the wildlife is irreversible. The wildlife have no where to go, the mature trees are being ripped out and we are seeing unprecedented issues with flooding caused by the amount of building taking place. I live in a very green area of Hemel Hempstead on the edge of town and we do not have sufficient water pressure to the extent that every Summer for the last two years my tap runs dry at 6pm at night. The water company have confirmed that they cannot supply enough water to meet demand when everyone comes home from work! This is 2021 in a modern road in a large town. How can we even consider building at these numbers without any significant investment in infrastructure.</p> <p>I try to visit family in Apsley on a weekend, I would be interested for council to look at traffic feasibility studies. It takes over an hour to move through the 3.5 miles at lunchtime on a Saturday. This is the result of poor planning decisions and inadequate road links- how do council feel that adding to this issue would not cause even more pressure and strain?</p> <p>The plan includes unacceptable impact on our green corridors and villages. There is no consideration for the current climate emergency or the impact on biodiversity. In times of rapid decline of natural species and habitat the plan makes sobering reading. The use of green belt land as a suggestion is criminal and another example of the lack of constructive consideration of alternative schemes. I am astounded by your proposal to ignore and blatantly disregard the historic value of our surrounding villages and settlements. Houses need to be provided and efforts needs to be made to hit your</p>

government quotas but why would you consider obliterating our villages ? There can be absolutely no reasonable excuse to drop hundreds of houses (and the associated chaos that building brings with it) in to villages or small market towns that can't cope with their existing traffic issues.

Selecting a field on the edge of a village or small market town is lazy and lacks real knowledge of exactly what people require to live happily and healthily through such challenging times. People have settled here to appreciate the natural world that we are lucky to have, often travelling in horrific conditions to a high rise office in the city, working 14 hours or more to come back to a home where they find peace and green spaces to enjoy in their limited free time- not to find it takes them an hour to navigate the traffic to go and get their food shopping. Imagine waking up to find that the green space that you and your family valued as a welcome sanctuary was destroyed and you now had a huge estate in its place.

I am astounded that in times of such mental health crisis and with such public awareness of the importance of green space Dacorum Borough Council have ignored all of these resources and feel that it is appropriate to ignore the wealth of research available. There is no adequate consideration of the climate emergency and no tangible understanding of the purpose of the original 'green belt' as a buffer to protect and preserve the identity of our areas, this prevention of urban sprawl has been disregarded in this plan.

The pandemic has changed the way that people work and the way our high streets will need to adapt. DBC have a real opportunity to look at the ways in which town centre and brown field sites can be regenerated. Towns do not need multiple charity shops or empty units, these could all be repurposed into affordable housing units.

Dacorum Borough Council you have a real opportunity to do something groundbreaking and innovative- be brave, don't use the easy route of urban sprawl and green belt grab....have the courage to withdraw this plan and come back to the drawing board with a truly collaborative approach. St Albans have been brave enough to revisit their plan, you are our elected representatives so please listen to us. You may have less responses than expected but perhaps that is a reflection of how disengaged people are. You have the responsibility to engage and help your residents to have a real say in the future of this town, change is inevitable but it takes a brave and determined number of individuals to make that change for the better rather than making an irreversible error that could blight this town for our future generations. Is that the legacy you wish to leave?

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to you in order to take part in the current consultation process for the Borough's Local Plan 2020 – 2038, 'Emerging Strategy for Growth'. I am writing to formally record my OBJECTIONS.</p> <p>I am copying in our Member of Parliament, Mr Gagan Mohindra MP, to help to bring to his attention the level of concern within his constituency regarding the proposals contained within the Local Plan. I am also copying in my Parish Councillor, Cllr Lara Pringle by way of information.</p>

Others with greater technical knowledge and expertise than I, will have already recorded their specific objections in more detail, but I am writing to formally add my voice to their concerns regarding:

**The Local Plan’s devastating impact on our precious Green Belt**, the Chilterns Area of Outstanding Natural Beauty and the Chilterns Beechwoods Special Area of Conservation;

**The outrageous overprovision of housing, based on outdated data and with an appalling lack of regard for Affordable housing** plus a failure acknowledge the National Planning Policy Framework which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB;

**The huge impact on overstretched infrastructure** that the proposed increase in housing will have, including the burden on already overstretched medical services.

**The burden on our local Water supply and sewage disposal systems.** The precious River Bulbourne, a nationally important chalk stream and one of only 210 chalk streams in the world is already under threat, as is our overburdened chalk aquifer;

**The woeful failure to address climate emergency issues** despite DBC itself declaring a climate emergency.

I have lived in Northchurch Parish for over 20 years and I believe it is our duty to help protect for future generations the wild areas, Green Belt and the waterways that make this part of Hertfordshire such a special place.

It seems that Boris Johnson’s ‘Build Build Build’ rhetoric has been forced upon Dacorum Borough Council who has had to spring in to action, working with out-of-date data, the outfall of an appalling algorithm, to provide a Local Plan that, as a result is ill-conceived and poorly thought-through. How can destroying the ancient hedges of single-track and narrow roads of Bell Lane and Darrs Lane, to build over the green fields of Northchurch be a good idea?

I am hoping that as our MP, Mr Mohindra will hear the voices of your constituents and challenge Government and the proposals within the Local Plan.

As you say on your website:

*“My sole focus now is to represent the constituents of South West Hertfordshire and as a legislator, to scrutinise, support and hold the government to account in the days, months and years to come. “{Ref: <https://www.gaganmohindra.org.uk/about-gagan-mohindra>]*

Thank you for taking note of my Objections to the Local Plan 2020 to 2038.

<b>Spatial Strategy for Growth comment</b>	Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

This is because my son died tragically, and I have kept going to encourage my grandson Jordan to take over the High Street shop. This has worked out, and if he took full responsibility from this January.</p> <p>Naturally I am keen that he is able to succeed, which is why I write this report.</p>

### Dacorum Local Plan

I am in receipt of your local plan. 2020 to 2038

First of all, I would like to congratulate the team that put this document, together.

It has been well thought out and is well presented.

It is very helpful to have a long term Plan, thus avoiding a disorganised development in bits.

It is appreciated that you are under Government instructions to provide additional dwelling, so you do not require too much negativity.

I am pleased to see greater consideration is being given to cycle paths.

Opening up your plan to page 6. My first reaction was that the expansion of housing of 2731 was excessive. It is too high a % on the existing. I therefore turned to page 16 to find out where such development would occur.

#### Spatial Strategy for Growth comment

**Housing Requirement and Supply:**

Minimum Housing Needs:

Part 1a of Policy SP2 outlines that the plan will make provision for a minimum of 16,596 homes in the plan period (2020 - 2038). That equates to 922 dwellings per annum (dpa), which DBC states reflects the Borough's Local Housing Need (LHN).

However, when calculating DBC's 2021 LHN in accordance with planning practice guidance (PPG), it is calculated at **1,025dpa**. That updated position should be taken into consideration immediately, with the 'Housing and Economic Needs Assessment' PPG stating that changes in LHN should be taken into consideration up until the plan is submitted for examination. Thus, the plan should make provision for a minimum of 18,450 dwellings in the plan period.

Notwithstanding that, BHL welcomes DBC's specific reference to the quantum, whilst now superseded, being a minimum value. Indeed, that reflects the NPPF's imperative that "*plans should, as a minimum, provide for objectively assessed needs for housing and other uses*" (paragraph 11) and "*be prepared positively, in a way that is aspirational but deliverable*" (paragraph 16b).

**Spatial Strategy for Growth comment**

- 1 Overall: the Emerging Strategy is not fit for purpose:
  - It starts from an unsound target for housing numbers which is incorrectly presented as a fait accompli;
  - It is based on proposed use of Green Belt land, which is intended only as a last resort in exceptional circumstances and specifically when other options are exhausted, which DBC have not done;
  - In proposing development of Green Belt land, Dacorum Borough Council (DBC) incorrectly judge the balance of benefits vs harm by variously downplaying or ignoring harms, and / or proposing spurious and incomplete mitigation;
  - It proposes disproportionate, unjustified and poorly evidenced development in and around Tring;
  - Throughout, it appears that DBC is attempting to disguise essentially political decisions through technical argument; and in any case, the technical argument is variously absent; incomplete; and / or incorrect.

## Unsound target for housing numbers

- 1 **The Emerging Strategy uses an a priori unsound assessment of housing need.** 16,596 was generated using guidance based on the White Paper of August 2020. This was out for consultation at the time and has not yet been passed into law. The Emerging Strategy acknowledges this at 5: *“However, the Government is proposing changes to the standard method in its recent consultations on the Planning Reform White Paper and related changes to the planning system. We have therefore progressed the Plan on the basis of this new housing need calculation of 922 homes pa (i.e. 16,596 homes over the period 2020-38). We recognise that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this issue under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more.”* But **this is disingenuous: it is impossible to take a sound judgement on constraints against a starting figure that is in doubt, given that both aspects inform each other.**
  
- 1 **The Emerging Strategy incorrectly conflates "housing need" with "housing requirement" and presents it as a fait accompli.** 16,596 is an "unconstrained assessment of housing need" but not a "housing requirement figure" [gov.uk 2a-001-20190220]. There is no *obligation* to fulfil 16,596 (but many good reasons not to, if it requires Green Belt land):
  - Housing requirement figures should be established *against constraints* including policies under National Planning Policy Framework (NPPF) pa11 footnote 6 [gov.uk 3-002-20190722]
  - Footnote 6 policies include restrictions on Green Belt development unless under exceptional circumstances. NPPF para137 "exceptional circumstances" include when other options are exhausted: *“Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.”*
  - Housing requirement figures show the extent to which need can be met once constraints are considered (NPPF para 65). There is no statutory obligation to meet standard method need, as long as the ground work has been done. There is no statutory obligation to release Green Belt land to meet need (especially if the harm done by releasing the land exceeds the benefit of the new housing);
  - (3-025-20190722) *“If insufficient land remains, then it will be necessary to investigate how this shortfall can best be planned for. If there is clear evidence that strategic policies cannot meet the needs of the area, factoring in the constraints, it will be important to establish how needs might be met in adjoining areas through the process of preparing statements of common ground, and in accordance with the duty to cooperate. If following this, needs cannot be met then the plan-making authority will have to demonstrate the reasons why as part of the plan examination.”*

- 1 The existing (pre-White Paper) Standard Method for calculating housing need works on the ONS sub-national population projections. These are increased by an affordability adjustment that aims to counteract historic undersupply. This means that the figure produced by the Standard Method is already not only a reflection of actual population growth [i.e. it is an idealised figure, correcting for historic imbalance]. This underlines the importance of considering exceptional circumstances and constraints when looking at Green Belt land, in order to balance ideal housing delivery against the harm caused by overriding constraints.
  
- 1 **DBC fail to prove exceptional circumstances, through a failure to exhaust other options:**
  - No evidence that brownfield opportunities in Hemel Hempstead have been sufficiently explored. For example, there could potentially be redevelopment of unused retail and commercial (brownfield) sites;
  - DBC has failed to make proper robust assessment of brownfield sites within the boundaries for the existing settlements of Tring and Berkhamsted, which it is required to do by Government, before proposing release and development of Green Belt outside present urban perimeters.
  - There has been no evidenced position provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken so as to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites
  - Insufficient analysis of contributions from conversions & enhanced permitted development rights
  - No identification of cooperation with the adjoining Local Authorities of Hertfordshire, Buckinghamshire and Bedfordshire in order to explore whether housing need can be met there instead. The NPPF specifically stipulates a “duty to co-operate” between adjoining Local Authorities.
  
- 1 **DBC fail to show that they have taken sufficient account of constraints, which would in all likelihood reduce the number.** See below for extensive comments on specific options and site proposals in which DBC have not taken sufficient account of constraints.
  
- 1 **DBC have, without sufficient justification, also put themselves at odds with the direction and intent of national government policy.** By unnecessarily pressing ahead while the White Paper was out for consultation, DBC have - thus far – been unable to take account of national government policy set out in the Written Ministerial Statement of 16 Dec 2020, which follows public objections to the White Paper. The WMS refocuses policy on building in urban areas, supporting levelling up and regenerating brownfield sites, thereby protecting Green Belt land - unlike DBC’s approach of unnecessarily choosing to build on Green Belt land. In addition, the government's response to the White Paper consultation reiterates that "We should be clear that meeting housing need is never a reason to cause unacceptable harm to [protected land and Green Belt]".

- 1 **A lower housing requirement figure could have been justified and *not* required Green Belt land.** For example, 10,000 houses would represent 15% growth, which is above the ONS SNPP projection of 9%, and therefore would go some way to countering historic undersupply, but would not entail consideration of Green Belt land.
  
- 1 **DBC have therefore taken a political decision to retain the highest figure, prioritising that rather than prioritising environmental protections - but without making this explicit in order to allow residents to judge it on its own merits.**
  
- 1 **It is possible DBC have done this in order to fulfil an unexplicit vision for the borough which relies on an artificially high housing needs number.** This is signalled in the [Sustainability Appraisal Interim report p47](#):  
*“Significant growth is also planned for the market towns of Berkhamsted and Tring, which will enable the delivery of new infrastructure, including sustainable transport schemes, new primary and secondary schools, local/community centres, enhancements to health facilities and significant new open spaces. This growth is necessary to consolidate these towns’ respective roles as the most sustainable locations outside of Hemel Hempstead, ensuring that the necessary infrastructure is in place to support existing and future communities while maintaining the vitality and viability of the town centres.”* This suggests that DBC are targeting a high housing number, building on Green Belt land, *in order* to secure funding for new infrastructure. This is unacceptable for two reasons:
  - It is reverse logic. Infrastructure should follow housing need, not dictate it artificially;
  - If DBC wishes to propose growing Tring and Berkhamsted, it should make this an explicit proposal for consultation with residents of those towns and surrounding villages, not hide it as a by-product of an alleged need to meet an inflated target.

**Spatial Strategy for Growth comment**

The Draft Dacorum Local Plan Regulation 18 consultation document seeks comments on the emerging vision, policies and evidence base in working towards adopting a sound Local Plan. This section provides justification for the allocation of land at Bulbourne Park for new development in the forthcoming Local Plan and responds to particular questions of relevance posed by the Council as part of the consultation questionnaire.

Under the Sustainable Development Strategy, draft Policy SP2 sets out that for the period 2020-2038 provision will be made for a minimum of 16,596 homes. The majority of this will be delivered at sites in and around Hemel Hempstead (10,600 homes), with Berkhamstead accommodating at least 2,200 homes and Tring providing for 2,700 new homes. Some smaller levels of growth are also proposed in the large villages of Bovingdon, Kings Langley and Markyate. Further detail on the strategy to deliver housing is included at draft Policy SP4.

Significantly, the housing need figure included in the draft Local Plan equates to 922 dwellings per annum (dpa), rather than 1,023dpa as required by the standard method for calculating housing need set out by the Government. This lower figure is derived from the Government's proposed revisions to the standard method announced in August 2020. However, since then, the Government has decided not to proceed with the proposed changes and rather revert back to the previous version of the standard method calculation for housing need, but with an uplift of 35% for the 20 largest cities and urban areas. Dacorum is not impacted by this uplift but should be seeking to meet the housing need figure of 1,023dpa. This would therefore require the LPA to identify land for at least 18,414 homes over the Plan period (an additional 1,818 dwellings). It is therefore imperative that draft Policy SP2 is amended to meet this higher housing need figure to ensure that the Plan is in accordance with NPPF paragraph 60. Consequently, the Council will also need to identify further sites for housing allocations to meet this increased need, as set out below.

**Unmet Need**

In addition to its own housing needs, as part of its Duty to Co-operate, Dacorum is required to assist in accommodating any unmet need in neighbouring areas where it is practical and consistent with achieving sustainable development. To this end, the draft Local Plan identifies at paragraph 1.32 that there are potential unmet needs in Watford. Watford is currently preparing a new Local Plan and the latest draft includes a supply of 714dpa against a standard method requirement of 787dpa (a shortfall of 73dpa, or 1,314 dwellings over the Plan period of 2018-2036). The other authorities in the South West Hertfordshire HMA (Three Rivers and Hertsmere) are at earlier stages of their Local Plan preparation and therefore it is not clear if unmet needs exist, however if they do Dacorum will be required to assist in meeting them.

Unmet needs in London are also widely acknowledged to be considerable and growing, with the soon- to-be adopted London Plan including an annual target of approximately 52,000dpa compared to a standard method requirement of 93,000dpa. This means there is a shortfall of approximately 41,000 dwellings every year that London is unable to deliver, whilst historical delivery rates also indicate that the lower housing target will not even be met. Therefore, areas such as

Dacorum within the wider south-east and which have strong migration and commuting links to London will face increasing pressure to meet these outstanding needs.

It is essential that Dacorum identify sufficient land to accommodate these unmet needs so that the Plan can be considered as positively prepared in accordance with paragraph 35 of the NPPF. Identifying these sites now through the local plan process rather than through planning applications and appeals will also ensure that sustainable development can be delivered in accordance with the Council's vision and spatial strategy.

### **Housing Supply**

As set out above, Dacorum should be seeking to identify land for at least 18,414 homes over the Plan period. However, it should be recognised that this is a minimum housing requirement, and the LPA should seek to identify land for more housing beyond this requirement, particularly when it is likely that there will be unmet need from neighbouring authorities. Not only will this ensure choice and flexibility in the supply should some sites not come forward as anticipated, but it will accord with the Government's objective to significantly boost the supply of housing as set out in paragraph 59 of the NPPF.

Significantly, with the current proposed housing requirement and supply set out in the Plan, if even a small proportion of the allocated sites do not come forward as anticipated, there will be a shortfall in supply. As set out in Table 2 of the draft Local Plan, the identified supply includes land to deliver only 303 additional houses above the 16,596 dwelling requirement (c.2% uplift). However, it is considered that at a minimum a 10% buffer should be applied to the requirement, although any increase on this would ensure greater flexibility to meet housing needs. Dacorum should therefore be identifying land for 20,255 dwellings over the Plan period.

In addition, the Council will be unable to demonstrate a five-year supply of housing upon adoption of the Local Plan as the draft Plan includes a five-year housing land supply of just 5.1 years. Meanwhile, the housing trajectory included at Figure 2 includes a number of years of the Plan period (particularly at the beginning and end) where the lower target of 922 dwellings will not even be met. It is therefore key that additional housing sites are identified in the emerging Local Plan to be able to demonstrate a five-year housing land supply and that the requirement can be met over the Plan period as required by the NPPF. In particular, smaller sites are supported in the NPPF as they can *"make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly"* (paragraph 68). They can also contribute to providing affordable housing in the short- to medium-term and addressing market housing affordability.

In terms of identifying sites, the spatial strategy is focused too heavily on delivery of housing in Hemel Hempstead. More specifically, 63% of the total identified housing supply is proposed here, the majority of which comprises new Garden Communities and urban extensions. Whilst it is acknowledged that a proportion of housing should be delivered in the

most sustainable settlement in the borough, relying on such a large proportion here (10,600 dwellings as set out in draft Policy SP2) does not provide enough flexibility in the supply, should there be any issues with these sites coming forward. Similarly for Tring, 81% of the 2,700 homes proposed from Tring are expected to come forward from large-scale strategic allocations.

Large scale developments often have long lead-in times linked to the preparation of a Supplementary Planning Document that will need to be in place before any approvals are granted. The submission and determination of planning applications would need to follow this and given the scale and complexity of the schemes and the associated legal agreements. This could be expected to take a considerable time. Reserved matters applications would also need to be progressed, and pre-commencement conditions discharged before a start on-site would be achieved. Furthermore, infrastructure delivery will be pivotal in determining timescales. As such it is considered unlikely that sites such as that at North of Hemel Hempstead Growth Areas (HH01) could begin delivering homes in 2028/29. Furthermore at Tring, the allocations of New Mill and East of Tring are required to be planned together as part of a comprehensive development and this will inevitably give rise to delays compared to if they were delivered separately whereby one site cannot come forward without the other. However these sites are anticipated to come forward from 2025/26 and 2027/28 respectively.

A greater range of sites of varying sizes and location should therefore be allocated within the draft Local Plan to ensure that Dacorum can meet its housing needs across the whole Plan period. Without this flexibility, there will be too much reliance on these larger sites that are more likely to be delayed by issues before any houses can be delivered on site, such as preparation and consultation on masterplans and design codes, provision of infrastructure and viability.

Small sized sites which can be brought forward in the early part of the plan period should be identified to contribute to providing housing need including affordable housing, addressing issues with the housing trajectory and providing additional flexibility.

In order to address this shortcoming, it is essential that additional sites are allocated within the Plan to bolster the supply in the early part of the plan period and ensure that a five-year land supply both exists on adoption, and can be maintained.

<b>Spatial Strategy for Growth comment</b>	<p>1 In paragraph 1.30 of the Growth Strategy, there is a clear acknowledgement of the legal “duty to cooperate” introduced by the Localism Act 2011 and confirmed in its Statement of Compliance Document. This places a legal duty on local planning authorities to engage constructively, actively and on an ongoing basis with their neighbouring authorities and other bodies about cross boundary issues. KL&amp;DRA welcomes the work that the Borough Council has done so far with neighbouring authorities, and the initiative to prepare a South West Hertfordshire Joint Strategic Plan. Completion of the document, however, and thus compliance with the legal requirement to meet and fulfil the duty to cooperate is not expected for about two years and it is unlikely that it will be fully adopted by all five authorities by the end of 2023. With this in mind, KL&amp;DRA considers that the timetable for the submission of the Dacorum Local Plan, as described in paragraph 1.24 and Figure 1 of the Growth Strategy, is premature and needs to be revised. In KL&amp;DRA’s view, in order to meet and fulfil the Duty to Cooperate, it is essential that the preparation of the two documents is run in parallel, to be presented for public examination simultaneously</p> <p>1 Engagement with other authorities has taken place on strategic matters in South West Hertfordshire (as stated in paragraph 1.32). One of the key issues listed is the potential unmet housing needs of Watford. At the more local level, however, KL&amp;DRA is concerned that there has been insufficient consideration of the role and function of Kings Langley, which remains a vibrant compact village, delivering a high quality of life for local residents and businesses, whose natural, historic and built heritage has been conserved, particularly in the context of its setting in the wider sub This needs to be addressed.</p> <p>1 Both the Borough and Parish boundaries are tightly drawn – to the east by the Grand Union Canal and to the south by the M25. This is clearly acknowledged in paragraph 23.167 of the Growth Despite this, and the statement that the Borough Council works closely with Three Rivers District Council to ensure a “consistent settlement-wide approach”, it is concluded that “we can only plan for the Dacorum part of the village.”</p> <p>1 The above statement is disappointing and suggests that the Growth Strategy does neither appreciate nor acknowledge fully the cross-boundary potential for development. A request should be made to Three Rivers District and St Albans Councils through the Duty to Cooperate, for any residential development to contribute towards the overall housing and employment needs of Dacorum Borough Council. In paragraph 23.176, it is stated that “<i>While there are reasonable levels of employment in the village, most of this is located in Three Rivers, which this Council</i></p>

*has no planning control over.”* Although the strategy includes proposing a site (KL03) for employment uses at Sunderland’s Yard, Church Lane, there is no specific reference to potential sites for employment and housing which are in Three Rivers but adjacent to the village.

**Spatial Strategy for Growth comment**

1 KL&DRA is aware that Three Rivers District Council is preparing a draft Local Plan, which will be published under Regulation 18 for consultation in May-July 2021. Undoubtedly, this will highlight the acute pressures in Three Rivers with regards to housing supply and the threat to the Green As with the other local authorities in South West Hertfordshire, the District Council will be seeking to maximise the areas of brown field land for housing development. In that respect, KL&DRA draws attention to the fact that an area of 30 hectares to the east of the Grand Union Canal is referred to by Three Rivers District Council as the Kings Langley Employment Area (KLEA). This represents over 60% of that Council’s Brown Field Register, and it is clear that the authority has a policy of converting employment sites in the KLEA to housing. More generally, KL&DRA would also refer to several specific employment sites which have recently been lost in Three Rivers. These include Astra Zeneca, West Herts College, Stannah

House, and Primrose Hill (two sites). Conversion of many of these sites for housing, particularly in the KLEA, would increase pressures on infrastructure and services, much of which would be felt in the Kings Langley area.

- 1 To illustrate the above point, KL&DRA has prepared a map, which is attached to this statement as Appendix 1 - this shows the relationship between the village and the respective local authority areas. The map shows in green the sites which were included by Dacorum Borough Council for the Issues and Options consultation in 2017. In orange are depicted the areas within Three Rivers which have been put forward by landowners and developers for consideration under the recent "Call for Sites" exercise. The map clearly shows the potential for large scale development to the east of Kings Langley.

**Housing numbers**

- The Council is using outdated (2014) housing projections. Half of this number (or fewer) are needed in reality. The whole Local Plan should be based on the more up to date ONS data from 2018. DBC must challenge the proposed housing numbers rather than just accept them. This is a fundamental error and will render any planning actions based on this flawed plan highly vulnerable to judicial review.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust.

Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

Paragraphs 5.1 to 5.8  
DBLP broadly supports the Spatial Strategy. However, in terms of the key principles behind the strategy set out in paragraph 5.2, concern is expressed about the “minimising and managing” the requirement to release Green Belt land. Given the need in the Standard Method to accommodate 1,023 dwellings per annum, it is simply unavoidable that the Plan will not release Green Belt land for development. Whilst the political sentiments of minimising such release are understood, the Plan is designed to direct development in the Borough throughout the lifetime of the Plan. Given the magnitude of development required and the need for releasing such land, references to ‘minimising and managing’ the release of Green Belt land is unhelpful. Furthermore, it conflicts with paragraph 5.3 which recognises the aim of the Spatial Strategy to deliver a “significant uplifting growth”.

In paragraph 5.6, DBLP support the role of Large Villages and equally support the recognition that Markyate is a Large Village that provides a reasonable level of services and facilities. In Development Strategy terms, this would make it a suitable location for additional housing growth and meet the requirements of paragraph 78 of the NPPF.

Policy SP2 – Spatial Strategy for Growth

There is a concern that the Plan’s housing target set at a minimum of 16,596 homes over an 18-year Plan period is not meeting the requirements of the revised Standard Method. This then raises the inevitable question of whether the Plan is sound or not. Whilst DBLP’s land at Markyate is allocated for housing development to help deliver the Spatial Strategy (as recognised in Part 3 of the policy), there is still the basic need to ensure that the policy is compliant with national guidance regarding housing provision. Alternatively, the policy needs to justify why the Standard Method figure is not used as per the “Housing and economic needs” Section of the NPPG.

**Spatial Strategy for Growth comment**

The Draft Dacorum Local Plan Regulation 18 consultation document seeks comments on the emerging vision, policies and evidence base in working towards adopting a sound Local Plan. This section provides justification for the allocation of land at Bulbourne Park for new development in the forthcoming Local Plan and responds to particular questions of relevance posed by the Council as part of the consultation questionnaire.

Under the Sustainable Development Strategy, draft Policy SP2 sets out that for the period 2020-2038 provision will be made for a minimum of 16,596 homes. The majority of this will be delivered at sites in and around Hemel Hempstead (10,600 homes), with Berkhamstead accommodating at least 2,200 homes and Tring providing for 2,700 new homes. Some smaller levels of growth are also proposed in the large villages of Bovington, Kings Langley and Markyate. Further detail on the strategy to deliver housing is included at draft Policy SP4.

Significantly, the housing need figure included in the draft Local Plan equates to 922 dwellings per annum (dpa), rather than 1,023dpa as required by the standard method for calculating housing need set out by the Government. This lower figure is derived from the Government’s proposed revisions to the standard method announced in August 2020. However, since then, the Government has decided not to proceed with the proposed changes and rather revert back to the previous

version of the standard method calculation for housing need, but with an uplift of 35% for the 20 largest cities and urban areas. Dacorum is not impacted by this uplift but should be seeking to meet the housing need figure of 1,023dpa. This would therefore require the LPA to identify land for at least 18,414 homes over the Plan period (an additional 1,818 dwellings). It is therefore imperative that draft Policy SP2 is amended to meet this higher housing need figure to ensure that the Plan is in accordance with NPPF paragraph 60. Consequently, the Council will also need to identify further sites for housing allocations to meet this increased need, as set out below.

### **Unmet Need**

In addition to its own housing needs, as part of its Duty to Co-operate, Dacorum is required to assist in accommodating any unmet need in neighbouring areas where it is practical and consistent with achieving sustainable development. To this end, the draft Local Plan identifies at paragraph 1.32 that there are potential unmet needs in Watford. Watford is currently preparing a new Local Plan and the latest draft includes a supply of 714dpa against a standard method requirement of 787dpa (a shortfall of 73dpa, or 1,314 dwellings over the Plan period of 2018-2036). The other authorities in the South West Hertfordshire HMA (Three Rivers and Hertsmere) are at earlier stages of their Local Plan preparation and therefore it is not clear if unmet needs exist, however if they do Dacorum will be required to assist in meeting them.

Unmet needs in London are also widely acknowledged to be considerable and growing, with the soon- to-be adopted London Plan including an annual target of approximately 52,000dpa compared to a standard method requirement of 93,000dpa. This means there is a shortfall of approximately 41,000 dwellings every year that London is unable to deliver, whilst historical delivery rates also indicate that the lower housing target will not even be met. Therefore, areas such as Dacorum within the wider south-east and which have strong migration and commuting links to London will face increasing pressure to meet these outstanding needs.

It is essential that Dacorum identify sufficient land to accommodate these unmet needs so that the Plan can be considered as positively prepared in accordance with paragraph 35 of the NPPF. Identifying these sites now through the local plan process rather than through planning applications and appeals will also ensure that sustainable development can be delivered in accordance with the Council's vision and spatial strategy.

### **Housing Supply**

As set out above, Dacorum should be seeking to identify land for at least 18,414 homes over the Plan period. However, it should be recognised that this is a minimum housing requirement, and the LPA should seek to identify land for more housing beyond this requirement, particularly when it is likely that there will be unmet need from neighbouring authorities. Not only will this ensure choice and flexibility in the supply should some sites not come forward as anticipated, but it will accord with the Government's objective to significantly boost the supply of housing as set out in paragraph 59 of the NPPF.

Significantly, with the current proposed housing requirement and supply set out in the Plan, if even a small proportion of the allocated sites do not come forward as anticipated, there will be a shortfall in supply. As set out in Table 2 of the draft Local Plan, the identified supply includes land to deliver only 303 additional houses above the 16,596 dwelling requirement (c.2% uplift). However, it is considered that at a minimum a 10% buffer should be applied to the requirement, although any increase on this would ensure greater flexibility to meet housing needs. Dacorum should therefore be identifying land for 20,255 dwellings over the Plan period.

In addition, the Council will be unable to demonstrate a five-year supply of housing upon adoption of the Local Plan as the draft Plan includes a five-year housing land supply of just 5.1 years. Meanwhile, the housing trajectory included at Figure 2 includes a number of years of the Plan period (particularly at the beginning and end) where the lower target of 922 dwellings will not even be met. It is therefore key that additional housing sites are identified in the emerging Local Plan to be able to demonstrate a five-year housing land supply and that the requirement can be met over the Plan period as required by the NPPF. In particular, smaller sites are supported in the NPPF as they can *“make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly”* (paragraph 68). They can also contribute to providing affordable housing in the short- to medium-term and addressing market housing affordability.

In terms of identifying sites, the spatial strategy is focused too heavily on delivery of housing in Hemel Hempstead. More specifically, 63% of the total identified housing supply is proposed here, the majority of which comprises new Garden Communities and urban extensions. Whilst it is acknowledged that a proportion of housing should be delivered in the most sustainable settlement in the borough, relying on such a large proportion here (10,600 dwellings as set out in draft Policy SP2) does not provide enough flexibility in the supply, should there be any issues with these sites coming forward. Similarly for Tring, 81% of the 2,700 homes proposed from Tring are expected to come forward from large-scale strategic allocations.

Large scale developments often have long lead-in times linked to the preparation of a Supplementary Planning Document that will need to be in place before any approvals are granted. The submission and determination of planning applications would need to follow this and given the scale and complexity of the schemes and the associated legal agreements. This could be expected to take a considerable time. Reserved matters applications would also need to be progressed, and pre- commencement conditions discharged before a start on-site would be achieved. Furthermore, infrastructure delivery will be pivotal in determining timescales. As such it is considered unlikely that sites such as that at North of Hemel Hempstead Growth Areas (HH01) could begin delivering homes in 2028/29. Furthermore at Tring, the allocations of New Mill and East of Tring are required to be planned together as part of a comprehensive development and this will inevitably give rise to delays compared to if they were delivered separately whereby one site cannot come forward without the other. However these sites are anticipated to come forward from 2025/26 and 2027/28 respectively.

A greater range of sites of varying sizes and location should therefore be allocated within the draft Local Plan to ensure that Dacorum can meet its housing needs across the whole Plan period. Without this flexibility, there will be too much reliance on these larger sites that are more likely to be delayed by issues before any houses can be delivered on site, such as preparation and consultation on masterplans and design codes, provision of infrastructure and viability.

Small sized sites which can be brought forward in the early part of the plan period should be identified to contribute to providing housing need including affordable housing, addressing issues with the housing trajectory and providing additional flexibility.

In order to address this shortcoming, it is essential that additional sites are allocated within the Plan to bolster the supply in the early part of the plan period and ensure that a five-year land supply both exists on adoption, and can be maintained.

**Spatial Strategy for Growth comment**

The local infrastructure cannot sustain this rapid and extensive development. It appears the government is planning on the increased revenue from the development of housing and businesses to fund infrastructure growth. That has been seen to cause problems in the past and lessons should have been learned by now. The schools, transport, water supply, water treatment, roads, and emergency services are all strained at the moment so planning to increase housing and businesses to the extent detailed, before any basic infrastructure is even started, is a shameful waste of opportunity and money on this study.

<b>Spatial Strategy for Growth comment</b>	endorse the comments of the CCG & the other organisations within the 'One Voice' Alliance which oppose the DBC Local Plan 2020-38 on the following grounds:-  1 Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of how Dacorum Council will work with developers and other stakeholders to mitigate  Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction.  1 The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes.  2 A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and

Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

**Spatial Strategy for Growth comment**

Do you have any specific comments about any of the delivery strategies?

—The delivery strategies rely on the release of Green Belt land. There is no justification for the release of this land. The housing target is not a true reflection of objectively assessed need for the area. The Green Belt across the Borough is

really important to people who live here now, but also for future generations. It is our duty to preserve the Green Belt in perpetuity. This plan fails in this duty and we cannot support this.

<b>Spatial Strategy for Growth comment</b>	<p>Policy SP2</p> <p>“At least 2,700” houses in Tring is simply not sustainable, because it represents a huge 55% increase in the size of Tring. Additionally the sustainability assessment appears to have overlooked the cumulative impact of such huge growth, instead seemingly considering Tr01, Tr02 and Tr03 separately. The sustainability aspect of the big growth in car numbers, and their impact, appears to be overlooked given that in Tring around 5,000 extra cars are likely (based on current number of cars per household)</p>

<b>Spatial Strategy for Growth comment</b>	<p>1 <b>Overall: the Emerging Strategy is <u>not fit for purpose</u>:</b></p> <ul style="list-style-type: none"> <li>• It starts from an unsound target for housing numbers which is incorrectly presented as a fait accompli;</li> <li>• It is based on proposed use of Green Belt land, which is intended only as a last resort in exceptional circumstances and specifically when other options are exhausted, which DBC have not done;</li> <li>• In proposing development of Green Belt land, Dacorum Borough Council (DBC) incorrectly judge the balance of benefits vs harm by variously downplaying or ignoring harms, and / or proposing spurious and incomplete mitigation;</li> <li>• It proposes disproportionate, unjustified and poorly evidenced development in and around Tring;</li> <li>• Throughout, it appears that DBC is attempting to disguise essentially political decisions through technical argument; and in any case, the technical argument is variously absent; incomplete; and / or incorrect.</li> </ul> <p><b><u>Unsound target for housing numbers</u></b></p> <p>1 <b>The Emerging Strategy uses an a priori unsound assessment of housing need.</b> 16,596 was generated using guidance based on the White Paper of August 2020. This was out for consultation at the time and has <u>not</u> yet been passed into law. The Emerging Strategy acknowledges this at 5: <i>“However, the Government is proposing changes</i></p>

to the standard method in its recent consultations on the Planning Reform White Paper and related changes to the planning system. We have therefore progressed the Plan on the basis of this new housing need calculation of 922 homes pa (i.e. 16,596 homes over the period 2020-38). We recognise that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this issue under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more.” But **this is disingenuous: it is impossible to take a sound judgement on constraints against a starting figure that is in doubt, given that both aspects inform each other.**

- 1 **The Emerging Strategy incorrectly conflates "housing need" with "housing requirement" and presents it as a fait accompli.** 16,596 is an "unconstrained assessment of housing need" but not a "housing requirement figure" [gov.uk 2a-001-20190220]. There is no *obligation* to fulfil 16,596 (but many good reasons not to, if it requires Green Belt land):
  - Housing requirement figures should be established *against constraints* including policies under National Planning Policy Framework (NPPF) pa11 footnote 6 [gov.uk 3-002-20190722]
  - Footnote 6 policies include restrictions on Green Belt development unless under exceptional circumstances. NPPF para137 "exceptional circumstances" include when other options are exhausted: “*Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.*”
  - Housing requirement figures show the extent to which need can be met once constraints are considered (NPPF para 65). There is no statutory obligation to meet standard method need, as long as the ground work has been done. There is no statutory obligation to release Green Belt land to meet need (especially if the harm done by releasing the land exceeds the benefit of the new housing);
  - (3-025-20190722) “*If insufficient land remains, then it will be necessary to investigate how this shortfall can best be planned for. If there is clear evidence that strategic policies cannot meet the needs of the area, factoring in the constraints, it will be important to establish how needs might be met in adjoining areas through the process of preparing statements of common ground, and in accordance with the duty to cooperate. If following this, needs cannot be met then the plan-making authority will have to demonstrate the reasons why as part of the plan examination.*”
  
- 1 The existing (pre-White Paper) Standard Method for calculating housing need works on the ONS sub-national population projections. These are increased by an affordability adjustment that aims to counteract historic undersupply. This means that the figure produced by the Standard Method is already not only a reflection of actual population growth [i.e. it is an idealised figure, correcting for historic imbalance]. This underlines the importance of

considering exceptional circumstances and constraints when looking at Green Belt land, in order to balance ideal housing delivery against the harm caused by overriding constraints.

**1 DBC fail to prove exceptional circumstances, through a failure to exhaust other options:**

- No evidence that brownfield opportunities in Hemel Hempstead have been sufficiently explored. For example, there could potentially be redevelopment of unused retail and commercial (brownfield) sites;
- DBC has failed to make proper robust assessment of brownfield sites within the boundaries for the existing settlements of Tring and Berkhamsted, which it is required to do by Government, before proposing release and development of Green Belt outside present urban perimeters.
- There has been no evidenced position provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken so as to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites
- Insufficient analysis of contributions from conversions & enhanced permitted development rights
- No identification of cooperation with the adjoining Local Authorities of Hertfordshire, Buckinghamshire and Bedfordshire in order to explore whether housing need can be met there instead. The NPPF specifically stipulates a “duty to co-operate” between adjoining Local Authorities.

**1 DBC fail to show that they have taken sufficient account of constraints, which would in all likelihood reduce the number.** See below for extensive comments on specific options and site proposals in which DBC have not taken sufficient account of constraints.

**1 DBC have, without sufficient justification, also put themselves at odds with the direction and intent of national government policy.** By unnecessarily pressing ahead while the White Paper was out for consultation, DBC have - thus far – been unable to take account of national government policy set out in the Written Ministerial Statement of 16 Dec 2020, which follows public objections to the White Paper. The WMS refocuses policy on building in urban areas, supporting levelling up and regenerating brownfield sites, thereby protecting Green Belt land - unlike DBC’s approach of unnecessarily choosing to build on Green Belt land. In addition, the government’s response to the White Paper consultation reiterates that “We should be clear that meeting housing need is never a reason to cause unacceptable harm to [protected land and Green Belt]”.

**1 A lower housing requirement figure could have been justified and *not* required Green Belt land.** For example, 10,000 houses would represent 15% growth, which is above the ONS SNPP projection of 9%, and therefore would go some way to countering historic undersupply, but would not entail consideration of Green Belt land.

1 DBC have therefore taken a political decision to retain the highest figure, prioritising that rather than prioritising environmental protections - but without making this explicit in order to allow residents to judge it on its own merits.

1 It is possible DBC have done this in order to fulfil an unexplicit vision for the borough which relies on an artificially high housing needs number. This is signalled in the [Sustainability Appraisal Interim report p47](#):  
*“Significant growth is also planned for the market towns of Berkhamsted and Tring, which will enable the delivery of new infrastructure, including sustainable transport schemes, new primary and secondary schools, local/community centres, enhancements to health facilities and significant new open spaces. This growth is necessary to consolidate these towns’ respective roles as the most sustainable locations outside of Hemel Hempstead, ensuring that the necessary infrastructure is in place to support existing and future communities while maintaining the vitality and viability of the town centres.”* This suggests that DBC are targeting a high housing number, building on Green Belt land, in order to secure funding for new infrastructure. This is unacceptable for two reasons:

- It is reverse logic. Infrastructure should follow housing need, not dictate it artificially;

If DBC wishes to propose growing Tring and Berkhamsted, it should make this an explicit proposal for consultation with residents of those towns and surrounding villages, not hide it as a by-product of an alleged need to meet an inflated target.

MAIN OBJECTION

- My primary objection is to the number of proposed new houses in DBC particularly to those on irreplaceable precious Green Belt. Once lost green spaces are gone forever.

- I do not believe your statement that ‘We have large number of houses we need to build in next 18 years’. This is being forced on a semi-rural area by Central Government.
- It is unacceptable and is a knock-on from London’s overpopulation and housing problems. The number must be reduced with concentration on brownfield sites.
- The deceptively attractive colour brochure sent to many residents failed to indicate just how many houses are proposed!
- Climate Emergency: Many of the council’s high ambitions to minimise increase in global warming in our locality will go out the window if this number of houses is built.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of

further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

The scale of development right across Dacorum is quite clearly excessive and disproportionate. There is a housing need; everyone recognises that but increasing the size of a small market town like Tring by 50% cannot possibly be the answer.

<b>Spatial Strategy for Growth comment</b>	<p>I think the number of homes planned is too many especially as there is a prodominant bias for using Green Belt Land. Communities are being over run and swamped with new housing without major improvements in the existing infrastucture to cope with the new residents or thought to old historical settlements. The total number of houses year on year is too high and does not address local housing needs for housing suitable for retired, both couples and single, single care leavers, those with Learning disabilities who need support, to mention just a few. I also think that any housing built should be as sustainable as possible, include solar, rain water harvesting and economic heating systems.</p> <p>While encouraging sustainable travel is a must, it should also be recognised that for many public transport will not work for many reasons. Any new developments need to have realistic parking so that it does not cause chaos both in the development and the surrounding area. Major modes of long range transport like the railway should have adequate parking and safe cycle storage. Tricks like providing a cycle park as pary of a development that is then scavenged back into the development as a dwelling once complete should not be granted, Cycle paths need to be fit for purpose and traffic slowed on our urban roads to 20mph to allow safe cying and walking.</p>

**Spatial Strategy for Growth comment**

I am writing as a local resident to express my severe concerns regarding Dacorum Borough Council's proposed local plan.

Whilst I recognise that Dacorum may be compelled to contribute its share towards the government's house building target of 300,000 dwellings per annum, the published plan foresees a scale of development across the principal towns that will dramatically change them and their surroundings and involves a wide-ranging re-designation of Green Belt land for development.

- I believe it is entirely inappropriate to proceed with a consultation on a new local development plan for Dacorum at a time when:
    - We are in the midst of a debilitating COVID-19 pandemic:
      - Making a proper and open public consultation impossible and leaving the vast majority of residents entirely uninformed, not to mention disenfranchised
      - And which will doubtless have a profound impact on local businesses, employment and the housing market for some years to come
    - The government has changed national policies for assessing housing need, meaning that the basis of the proposed plan is fundamentally flawed
  - The plan places insufficient emphasis on brownfield development, but crucially also involves the irreversible loss of huge tracts of Green Belt land, particularly around Tring and Berkhamsted, and seriously imperils the setting of the Chilterns AONB
    - Whilst threatening to overwhelm Tring and Berkhamsted, putting great strain on our communities and their already overloaded infrastructure (viz. water supplies, congested roads and oversubscribed schools)
  - The proposed level of development (1023 dpa) is nearly three times the 2018 ONS projection of housing need (355 dpa) - and still double the number arrived at based on the government's "standard method" (497 dpa)
    - Moreover, none of the statistics that have been considered to date take any account of the impact of the COVID-19 pandemic
  - It should also be emphasised that so-called "windfall" developments have made a substantial contribution towards the annual increase in dwellings in Dacorum in recent years (average 306 dpa over last 14 years)
    - The impact of the COVID pandemic on businesses in town centres could well lead to a further increase in these windfall numbers over the coming years, as properties are repurposed from retail/office space to residential usage
- 
- On no account should we be countenancing such a wholesale sacrifice of local Green Belt land, particularly in these most uncertain of times
    - Brownfield sites should be prioritised for development, and these could be supplemented with smaller releases of land agreed in close consultation with local residents

- I urge DBC to redraw the plan based on achieved housing densities and to set its housing targets based on the most up-to-date projections of housing need - at the same time also reinforcing its commitment to delivering much needed affordable housing.
  - And put this out to proper consultation to all local residents in the next 12-18 months
- It would be prudent to factor in a facility to review the plan after say 5 years
  - By which time we should have an altogether better steer as to the extent that town centre properties are being repurposed as we emerge from the COVID-19 pandemic and local businesses and commuters have established enduring and sustainable“new normal” working practices.

**Spatial Strategy for Growth comment**

Do you have specific comments about any of the Delivery Strategies?

They are too vague.

Without mentioning it, the plan will rely heavily on developers. They are notoriously devious in exploiting situations for profit rather than the common good. The plan delivery strategy needs to explain how the authority will control this aspect.

It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement for a plan, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered.</p>

The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead. The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.n

The plan must ensure adequate Social Housing, which is net zero in operation, as defined in my answer to question 1.

The plan must allow for an increase in electrically powered transport and roads must be designed to encourage walking and cycling.

<b>Spatial Strategy for Growth comment</b>	<p>Chalk streams are a globally rare habitat and in this country are protected by the Water Framework Directive.</p> <p>The River Gade is one of three chalk streams that flow through the Borough. It rises from the aquifer close to Hudnall approximately 6 miles north of Hemel Hempstead. The Upper Gade Flyfishers and Conservation Association (UGFCA) maintains stretches of the Gade downstream of Great Gaddesden. We observe on an almost daily basis the effect on the riverine habitat of the varying flows in the river and in particular the stagnation and weed growth when, as has too frequently been the case over the past decade or more, the springs feeding the river have ceased to flow.</p> <p>All potable water consumed in the Borough is supplied by abstraction from the aquifers, (the River Colne catchment area) and there are no out of area supplies. The aquifers are fully charged at this time after wet winters in 2019/20 and 2020/21 but they are continually at risk from variable weather patterns and extraction such that in the past the Borough's chalk streams have dried up. In 2017 the River Bulborne dried up, flow in the Gade was very low and the Tring reservoirs were at their lowest levels that could be recalled. In 2019 flow was at its minimum and the Ballingdon Farm measuring borehole (for the Mid Chilterns Chalk aquifer and close to where the Gade historically rises) recorded its lowest August groundwater level since records began in 1975.</p> <p>The draft Plan sets out a number of policies on biodiversity and environmental protection, combating climate change and attaining carbon neutrality, which we support, but the essence of the Plan is the target to build 16,889 new homes and provide 20 hectares for employment growth over the Plan period. This growth rate at 922 new homes per annum (dpa) is more than double the rate set under the existing Plan, the 2013 Core Strategy, (430dpa) and will increase the Borough's population by at least 25%.</p> <p>The draft Plan is silent on how this growth in homes, population and employment is to be supplied with water. Policy DM33 states "avoid the need to abstract water from the ground, in particular the Rivers Ver, Gade and Bulborne catchments", but in the main is concerned with pollution and offers no supply solutions. The water supply company Affinity have had to agree a reduction in abstraction with the Environment Agency. They have a long term plan which requires major investment in building new water storage capacity and moving water from other areas of the country,</p>

however the benefits will not be available until the 2030's. In their 2019 Water Resources Plan they commit to continue making changes to improve the chalk streams but how they can achieve this without infrastructure to supply more water whilst reducing abstraction is not explained

CPRE Herts have submitted detailed analysis of the water supply and waste water disposal position which we acknowledge and fully endorse. They point out that chalk rivers are classified as priority habitats under Section 41 of the Natural Environment and Rural Communities Act 2006. The National Planning Policy Framework affords protection for priority habitats under paragraphs 174 and 175.

The UGFCA recognises there is a housing need in the Borough and that a long term Plan is required but, while we are not joining the discussion on the right method of calculating the Borough's housing need, it is clear that the draft Plan targets cannot be delivered without major infrastructure investment. This must be in place before the growth takes place or significant damage to natural habitats and the environment will result. This will be against the Borough's own policies, those of Central Government and indeed the law. In the circumstances we oppose the Plan's growth targets which must curtailed at least until the essential infrastructure is in place and protection of the environment and our precious natural habitats is guaranteed.

**Spatial Strategy for Growth comment**

The Local Plan's spatial strategy aims to deliver the significant uplift in growth in a sustainable way across the Borough, seeking out opportunities to regenerate Hemel Hempstead. Elsewhere, DBC are looking to accommodate growth that supports the long-term function of the towns and villages and that delivers sufficient growth to provide much needed investment in infrastructure.

The strategy therefore focuses growth in and around the most sustainable settlements in the Borough, principally Hemel Hempstead, Berkhamsted and Tring through utilising urban land as well as through extensions to each settlement, which is an approach welcomed in principle and aligns with NPPF. Hemel Hempstead's growth will be focused through much greater urban intensification and the expansion of the town will be focused to the north and east of Hemel Hempstead, with land removed from the Green Belt to meet longer term needs.

The large villages of Bovington, Kings Langley and Markyate are relatively constrained in terms of local infrastructure and therefore, the strategy proposes only modest levels of growth in these settlements.

Highways England acknowledges that scale of growth for Hemel Hempstead will have an impact on the SRN, as will the proposals for Kings Langley due to the existing congestion towards the M25 J20.

The Local Housing Needs Assessment has helped DBC understand what their housing requirement. However, it is understood that the Government is proposing changes to the standard method in its recent consultations on the Planning Reform White Paper and related changes to the planning system. The plan has therefore been progressed on the basis of this new housing need calculation of 922 homes per annum (i.e. 16,596 homes over the period 2020-2038). DBC recognises that there are uncertainties over using this as their housing figure and state that they will keep this issue under review as they progress to the next stage of the Plan and make any necessary adjustments. Highways England agree with this approach and recommend that the inputs to the COMET modelling are updated and the models re-run as appropriate, as/ when the number/ location of houses (and jobs) is amended.

<b>Spatial Strategy for Growth comment</b>	<p>The Borough's current reliance on Green Belt development to achieve its targets also runs counter to the Government's response to the local housing need proposals set out on 16th December 2020 in which it stated "... <i>that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt.</i></p> <p><i>We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places</i>". The Campaign for Rural England (CPRE) have also consistently pointed out that housing developments on Green Belt are invariably too expensive for those looking for a first home and do nothing to address the needs of younger people and families trying to put a roof over their heads.</p> <p>As a result, Green Belt development will do nothing to address the Borough's housing needs. It will also undermine one of the aims of the latest version of the Kings Langley draft Neighbourhood Plan (January 2021), namely "Providing homes in the parish that are financially accessible to younger people, especially young families and those stepping onto the property ladder for the first time".</p>

<b>Spatial Strategy for Growth comment</b>	I am commenting on all sites here: 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty. Although the Council states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant harm to the Green Belt and AONB. It also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.

<b>Spatial Strategy for Growth comment</b>	Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan.

Dacorum Borough Council declared a climate emergency more than a year ago, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>My objection to the Emerging Strategy for Growth for Dacorum (ESGD) concentrates on Tring because I live close to it and because the proposed changes to this town are so substantial. Nevertheless, the broad sweep of the proposals for Dacorum as a whole seem excessive in scale and ambition for a borough whose development potential, as the strategy paper notes, is limited by the fact that 60% of its land is protected either by AONB or Green Belt status. Development on this scale also runs counter to the council's environmental ambitions, especially in the light of the climate emergency declared in 2019.</p> <p>More specifically, I would like to raise the following points:</p> <ul style="list-style-type: none"> <li>o The overall ESGD plan adds 16,600 homes by 2038. There are currently 64,570 households in Dacorum. This development will thus increase that number by 25.7%. Clearly there will be further population growth over the period, but surely not on this scale? Indeed, the latest UK birthrate data indicates that the fertility rate is below the replacement rate. The level of immigration has also declined substantially. While there is unquestionably a need for more housing, especially affordable housing, such extensive building over the next 18 years may not be necessary. More than that, why the need to extensively compromise the fabric of a borough notable for its beauty?</li> <li>o The ESGD makes much of its ambitions to protect the environment, not least because the declared an environmental emergency in 2019. Inviting substantial increases in the population of a borough is surely not the way to achieve this. The typical CO2 emissions of a UK individual is 12.7 tonnes pa (Pauprint, verified by Mike Bernese-Lee), while the impact of building a two bedroom cottage is 80 tonnes (Mike Berners-Lee). This proposal will obviously create a major emissions impact.</li> <li>o Clearly there is a genuine demand for homes, but extensive building is not the only solution. The council could acquire housing from the existing stock to rent out, it could jointly buy properties with first time buyers, it could convert unused office and retail space post-pandemic and it could try to discourage the practice of leaving homes unoccupied.</li> </ul>

o The ESGD states that, “We have known for some time that the level of growth we need to plan for will be significantly higher than before (up from 430 dpa in the Core Strategy) and whilst the final figure from the Government may be adjusted again we expect this to remain a substantial number.” As a lay resident I do not know what 430dpa means, but presume it is suggesting that the borough find space for the development of a very significant numbers of houses. The ESGD acknowledges that the Chilterns AONB, “is a national landscape designation shared only by relatively few other authorities across the country.” (There are only 34 AONBs in England). Furthermore, there are potential plans to turn the area into a National Park, and according to the Council for the Protection of Rural England (CPRE), Dacorum’s Growth Strategy will undermine this ambition. So...

o Given that Dacorum is rare for being designated an AONB, why the imperative to build so substantially on the land in between, and release Green Belt? This development will clearly compromise the character and quality of life in the borough, not only for its residents but also for the wildlife, woods, flora and fauna. The gradual filling in of all the areas between these protected areas, and some of the protected areas themselves, is not the way to preserve the character and ecology of Dacorum.

o The ESGD’s proposed development of Green Belt runs counter to the Government’s own guidelines (16/12/20: “*that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.*” The Ministry of Housing, Communities and Local Government has itself said that its projected housing numbers “*are not a target*”.

### Questions

o Why is not possible for the council to object to the level of development being imposed upon it by the government? The council has been elected by local residents to reflect their interests, and should surely defend those if the requirements of a national plan threaten to significantly damage the character and make-up of an unusual borough. More than that, attractive towns such as Tring and Berkhamsted are important not only for those that live in them but the wider country, forming an important strand of its character.

O Exactly what is the “emergency” that makes it ok to release Green Belt for development?

o What is the process if there is overwhelming resistance to the proposals from borough residents?

I have not repeated the objections fielded by the Town and Parish Councils of Dacorum (<https://www.berkhamstedtowncouncil.gov.uk/uploads/tp-1821-draft-letter-to-dbc.pdf> ) but I fully concur with them, especially as 95% of respondents to the 2017 consultation objected to development on this scale.

<b>Spatial Strategy for Growth comment</b>	<p>We are horrified by the Draft Plan 2020 which provides for the excessive increases in the population and number of houses to be built over the Plan period 2020 -2038. We cannot agree to this as the projections by ONS do not support the increase planned for.</p> <p>Adopting the proposals in the Draft Plan results in substantial incursions into the Green Belt, including sites on the edges of Berkhamsted<sup>1</sup>, with adverse impact on parts of the AONB. The impact of Covid 19, will mean that large numbers of shops and office premises will be asking for change of use to residential, this has not been taken into account.</p> <p><sup>1</sup> The Draft Plan refers Berkhamsted with Northchurch</p> <p>To restate much of our reply to the 2017 Reg18 ‘consultation’, future development of Berkhamsted should be consistent with the Core Strategy [2006 – 2031] adopted as recently as September 2013. The house building rates and the Green Belt releases around the market towns that were suggested in some options (<i>to the 2017 proposals</i>) are a significant departure from existing policies in the Core Strategy. Adopting an option that requires large Green Belt releases around the market towns would mean that the Settlement Hierarchy described in the Core Strategy will have been abandoned notwithstanding what is asserted in the Draft Plan. The Core Strategy must carry significant weight in the development of the Local Plan.</p> <p>We note the Statement by the Minister of State Robert Jenrick of 16th December 2020 on the recent consultation (Changes to the Planning System Aug 2020) :</p> <p><i>“There were many consultation responses which did not fully recognise that the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for housing in an area. It is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It is crucial</i></p>

*that planning is more certain and more transparent, so we will explore how we can make this clearer through our longer-term planning reforms, including considering the right name for this approach.*

*There is widespread support for ensuring enough homes are built across England to ensure the needs of our communities are met. We heard clearly through the consultation that the building of these homes should not come at expense of harming our precious green spaces. We also heard views that this need can be better met in existing urban areas.”*

This conflicts with the proposed releases of Green Belt in the Draft Plan to meet the proposed allocation of housing, especially on the edge of the major settlements, across the Borough.

Moreover, in a letter from the Department of Communities and Local Government, dated June 2016, the then Minister of State for Housing and Planning, Brandon Lewis, states that:

*“ . . . Green Belt boundaries should be adjusted only in exceptional circumstances, through the Local Plan process and **with the support of local people.**”*

### **YOU DO NOT HAVE THE SUPPORT OF LOCAL PEOPLE.**

In the same letter the Minister states:

“We have been repeatedly clear that demand for housing alone will not change Green Belt boundaries”.

***However, it is very clear from this consultation that the proposed Green Belt releases are driven entirely by the requirement to allow the development of more housing across the Borough.***

There are many examples that could be used, but we have limited ourselves to highlighting just six examples of guidance issued by Central Government that shows the policy on Green Belt protection is clear and unambiguous:

- The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the
- In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”.
- Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.”
- On December 16th 2020 the Government published a

response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states, “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”

- The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”

- It further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately. In doing this they should take into account their local circumstances and constraints.”

DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that “*Any option below the standard methodology would have to be robustly justified*” (paragraph 5.8 of The Development Strategy Background Topic Paper).

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, we fail to understand why DBC Planning felt unable or unwilling to make a case that can be “*robustly justified*”.

Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.

We note that the urban capacity of Hemel Hempstead has been revisited in light of recent statements from Central Government on the opportunity to increase building heights in suitable locations. We question whether enough weight has been given to the prospective changes to town centres following the COVID19 crisis with many premises likely to be converted to include dwellings.

The current household build rate per annum in Berkhamsted is nearly twice that targeted. At the current rate most of the estimated target capacity will have been deployed by 2020 (11 years ahead of target) while the rest of Dacorum lags behind target. Such disparities within Dacorum must be taken into account when assessing development numbers and site options going forward.

Infrastructure deficits are now evident across the Borough and only the provision of housing on large sites can deliver the necessary supporting infrastructure without detrimentally impacting on existing settlements. Notwithstanding, contributions from Developers’ S106 and CIL will not meet the full cost of investment in local infrastructure: that will require new Government funding without which residents will continue to suffer the adverse effects of infrastructure deficits.

The blanket assumption that large-scale growth makes delivery of infrastructure easier is misplaced – it will depend on the site and the viability. In the Dacorum Strategic Infrastructure Study [Feb. 2011] this is clearly stated:

*“By contrast there are certain types of infrastructure that are more sensitive to the location of demand. Ideally, these types of infrastructure should be located close to the population that they are intended to serve as the extent of the area that they serve (in other words their “catchment”) is very local.”*

It is manifestly the case that the infrastructure of Berkhamsted is not fit for purpose in relation to current needs let alone any future housing development of the scale proposed by this Draft Plan.

We refer in particular to:

**Town Centre Junctions and congestion; with** only one crossing in the town centre, HCC transport studies are clear there is no scope for new roads or widening in central Berkhamsted. The traffic lights perform at 'over capacity' at busy periods.

**Water and Sewage capacity;** with the need to maintain the unique chalk streams in the area, the Environment Agency has capped abstraction from the local aquifer at current levels. The Sustainable Assessment identifies the need for additional capacity for the Borough as early as 2031.

**Medical and Social Care;** the Plan makes no provision for additional local GP services, nor for Social or Dementia Care in Berkhamsted. We recognize that these services are not the remit of the Planning Authority but adequate and sound Public Health provision must not fall between the cracks of HCC/CCG/PHE.

**Schools:** we note the potential provision of new Primary Schools, while a new 6FE Secondary School is posited on Site BK 06 in Northchurch. Capital Funding to build the school is unlikely to be sourced from a single development: additional revenue funding will be needed until its roll can attract funding to be sustainable. This must be identified in the IDP.

**Infrastructure Development Plan:** The Draft Plan references 'Masterplans' to guide development of major sites. Notable for their absence are proposals that link or integrate the sites with the host community viz roads/walking/cycling/footpaths together with prospective costs which must be included in the respective IDP.

<b>Spatial Strategy for Growth comment</b>	<p>We fail to be convinced that Berkhamsted and Tring should be developed to the extent proposed for 2021-2038: the capacity to absorb the growth of over 24% and 50% sustainably is questionable. Appending HH01 and HH02 to the existing urban network is likely to prove to be the more sustainable solution.</p> <ol style="list-style-type: none"> <li>1 Reconsider the allocations [which in any case we dispute as being justified see <b>Q 7</b>], and defer the release of BK01 from the 2021 – 2038 plan</li> <li>2 Re phase the implementation of HH02 to bring forward to 2021 – 2038</li> </ol> <p>This would bring forward some 4,000 homes which will be better located for employment opportunities.</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>Chilterns Beechwood Special Area of Conservation (SAC)</b></p> <p>The final Local Plan should give great weight to the protection of Chilterns Beechwood SAC. The site is particularly sensitive to traffic-related air pollution and recreational pressures, which are both predicted to increase as a result of planned development in the surrounding Authorities. We welcome the inclusion of the separate <i>Policy DM31 – Chilterns Beechwoods Special Area of Conservation</i>, which reflects the uniqueness of the SAC. <i>Policy DM31</i> should define ‘major’ and ‘minor’ developments to allow for consistency of application across the plan period.</p> <p><b>Air Quality/Pollution Impacts:</b> The Local Plan indicates a housing delivery target of 16,596 units by 2038. Whilst the contribution of this new development to air pollution impacts on the SAC is partially dependent on the chosen spatial development strategy, without effective cross-boundary cooperation with other Boroughs, it is unlikely that a likely significant effect on the SAC can be ruled-out. Natural England agree with the conclusions of the Habitats Regulations Assessment (HRA) screening opinion produced alongside the issues and options stage which concluded that a Likely Significant Effect (LSE) on the SAC cannot be effectively ruled out.</p>

Natural England advises that one of the main issues which should be considered in the plan and the SA/HRA are additional nitrogen emissions as a result of increased traffic generation from developments, which can damage the SAC. The effects on local roads in the vicinity of any proposed development on nearby designated nature conservation sites (including increased traffic, construction of new roads, and upgrading of existing roads), and the impacts on vulnerable sites from air quality effects on the wider road network in the area (a greater distance away from the development) can be assessed using traffic projections and the 200m distance criterion followed by local Air Quality modelling where required. We consider that the designated sites at risk from *local impacts* are those within 200m of a road with increased traffic [Footnote 1: The ecological effects of diffuse air pollution (2004) English Nature Research Report 580 Design Manual for Roads and Bridges Volume 11, Section 3 Part 1 (2007), Highways Agency], which feature habitats that are vulnerable to nitrogen deposition/acidification. APIS provides a searchable database and information on pollutants and their impacts on habitats and species. Our guidance on how to assess road traffic emissions under the habitat regulations can be found here.

Natural England would welcome discussion on the Habitats Regulations Assessment (HRA) of the plan, especially in relation to any transport and air modelling work that may need to be undertaken to inform the HRA.

**Recreational Impacts:**

There is a growing pressure now on Chilterns Beechwoods SAC, arising from recreational pressure. The SAC is an attractive, accessible and open area of semi-natural habitat for recreation, especially walking and dog walking. With increasing residential development focussed towards Hemel Hempstead, Berkhamsted and Tring, close to the SAC they will experience further pressure from people using the designated site for recreation.

New housing within close proximity to Chilterns Beechwood Special Area of Conservation (SAC) has the potential to result in an increase in recreational pressures, such as:

- Contamination – including dog fouling, litter and spread of plant pathogens
- Trampling/wear – loss of vegetation, soil compaction, erosion, damage to trees from climbing
- Harvesting – removal of fungi and wood from the beech forests

We look forward to continuing the discussion with Dacorum Borough Council to assess the impact of recreational impacts at Chilterns Beechwoods SAC.

**Spatial Strategy for Growth comment**

**Strategic Comments**

It will be important for development within Dacorum to be aligned with any necessary sewerage infrastructure upgrades required to support growth. It is noted that the housing figures in the consultation document are based on the revised housing methodology consulted on by the Government in 2020. Following the decision by the Government not to progress the revised housing methodology it is understood that the housing figures in the Local Plan may increase. Thames Water are keen to work closely with the Local Planning Authority to understand the location and phasing of development so that the impacts on sewerage infrastructure and the capacity of sewage treatment works can be understood.

Dacorum is served by a number of sewage treatment works (STWs) including Maple Lodge STW within Three Rivers District Council and a number of smaller STWs located around the district. While development in areas that drain to Maple Lodge STW are unlikely to result in any issues, development in the catchment of smaller STWs may require upgrades ahead of development being occupied. It is therefore important to understand the location and phasing of development so that any necessary upgrades can be planned and delivered. This may require housing allocations in areas draining to STWs that require upgrades to be phased later in the local plan period.

**Site Specific Comments**

A high level review of the proposed site allocations has been undertaken and comments are appended to this letter for information. It will be important to further review any changes to housing allocations or the scale of development and timing of delivery to ensure that development is aligned with any necessary sewerage network or sewage treatment work upgrades.

<b>Spatial Strategy for Growth comment</b>	<p><b>Housing Need and Housing Land Supply</b></p> <p><u>Minimum Housing Need</u></p> <p>The Council have made an error in setting out a housing requirement based on the application of the Local Housing Need (LHN) Standard Methodology published as part of the consultation ‘Changes to the current planning system’ by the Government on 6th August 2020. Since the publication of the Emerging Strategy for Growth, it has been confirmed that the LHN Standard Methodology set out in the August 2020 consultation will not be adopted and instead, the previous LHN Standard Methodology will be utilised, but with an uplift of 35% for the 20 authorities in England with the largest proportion of the city or urban centre’s population.</p> <p>The implication of this approach is that the Council have used assumed a base housing requirement of 923 homes per year, instead of the correct figure of 1,023 homes per year. This results in the Emerging Strategy for Growth catering for a minimum of 16,595 homes instead of the required minimum of 18,414 homes up the year 2038. This equates to a shortfall of some 1,819 homes. This is a significant shortfall which will have to be rectified prior to publication of the Pre-submission Version (Regulation 19) of the Dacorum Local Plan (2020-2038) being subject to further consultation.</p>

### Future Methodology Changes

The LHN Standard Methodology calculation factors in affordability ratios. New affordability ratios are due to be published in March 2021 which will need to be taken into account in the next iteration of the Local Plan which may have an impact of increasing the minimum housing need further for the Borough.

Although we are not aware of any further changes to be introduced prior to the preparation of the Pre- submission Version, it will be important that the Council does not pre-empt the formal introduction of any revision or new figures and works to the LHN Standard Methodology in place at the time the Local Plan is prepared.

### Unmet Housing Need from Elsewhere

It is acknowledged that the Emerging Strategy for Growth is seeking to meet Dacorum Borough's housing need within its administrative boundary, which is laudable. However, it is also important that the Council give consideration towards the need to meet unmet housing needs elsewhere, even if the Council do not feel it is possible for the Borough to absorb further growth from elsewhere.

Not only is this a practical point, with the issue needing to be considered with neighbouring authorities as part of a 'constructive, active and ongoing process' to ensure the duty to co-operate can be satisfied, it is also a factor which could drive the housing requirement for the Borough up further.

In particular, the area's strong links with London, with increasing migration over the last 10 years, means that Dacorum Borough is likely to be affected by the inability of London to meet its own housing need. The London Plan anticipates delivery of some 52,000 homes per year moving forward, significantly below the need of London, but also well above the historically delivery rates of around 33,000 homes per year.

Without the Dacorum Local Plan (2020-2038) making an allowance to meet London's unmet housing needs, it is likely that the migratory links between the two areas will lead to a negative impact on the affordability of housing in the area.

### Housing Land Supply

As noted above, due to the use of the incorrect LHN Standard Methodology for establishing the minimum housing need, the Emerging Strategy for Growth will already fail to deliver the level of housing required in the area.

However, in addition to this shortfall of some 1,819 homes, the development strategy also builds in insufficient flexibility and contingency on the housing land supply side for the Local Plan to be considered robust. Currently, the Emerging Strategy for Growth includes just a 2% buffer in housing land supply (303 homes – paragraph 7.128). This level of contingency is wholly insufficient, both in percentage terms and as an absolute number.

It is common for Local Plans to build in at least a 10% contingency on the housing land supply side to allow for unexcepted delays in the delivery of sites, changes in site capacity, under delivery of windfall, etc. In some cases, the buffer is 20%. The need for such a buffer depends on the risk associated with the overall strategy, the particular nature of the sites proposed for allocation – with larger, more complex sites justifying the need for a larger buffer in supply, and the step change in delivery being sought, which in Dacorum is significant given the current adopted Local Plan (Core Strategy) target of 430 and recent delivery rates averaging around 544 homes over the last three years. This suggests the need for a buffer nearer to 20%.

The implication of a 10% buffer on top of the minimum housing need of 18,414 is that the Dacorum Local Plan should plan for the delivery of 20,255 homes. A 20% buffer would mean the Local Plan planning for 22,097 homes. These figures suggest that the planned housing supply in the Local Plan is between 3,355 and 5,197 homes below where it needs in order for it to be robust.

This is a significant shortfall which can only be rectified by the additional sites being identified across the Borough for housing allocations in the Local Plan.

The second part of the housing land supply equation is the need to ensure that supply is not backloaded and that on adoption, the Council will be able to demonstrate a deliverable five-year supply of deliverable housing land is in place. This means that any additional sites need to be capable of delivery early in the plan period, suggesting the need for deliverable small to medium sized sites to be identified as opposed to large, strategic sites with long lead in times and significant infrastructure requirements. As discussed further below, our clients land at Berkhamsted falls into this category.

**Policy SP2 – Spatial Strategy for Growth**

DBC's objective to provide a minimum of 16,596 homes throughout the plan period is supported and it is considered that the Site can assist in ensuring this target is met.

The primary focus of strategic growth and investment being in Hemel Hempstead is also supported. It is agreed that Hemel is the most appropriate place across the borough for intensification through increased heights and densities. The objective to ensure that development coming forward in the existing urban area should ensure that previously developed land is optimised is also supported. The Site is a clear example of sustainably located previously developed land and we would therefore expect DBC to support proposals which seek to make the most efficient use of it, as is required by the NPPF (2019).

The policy states that DBC will aim to achieve ‘*no net loss of office floorspace from 2025 onwards*’. Given the current pandemic and its lasting impacts, it is considered unreasonable to include such a prescriptive target within emerging planning. The pandemic has and will continue to result in a modal shift in behaviours relating to how people and businesses choose to operate. It is noted that the Foreword makes reference to the Covid-19 pandemic and that DBC have already completed a considerable amount of supporting work in the Evidence Base documents, but arguably the biggest change which has come to light during the pandemic is working patterns and this should be accounted for in new planning policy.

The NPPF (2019), Section 6 states that planning policies should ‘*set criteria, or identify strategic sites, for local and inward investment to match the strategy and to meet anticipated needs over the plan period*’ and also ‘*be flexible enough to accommodate needs not anticipated in the plan, allow for new and flexible working practices (such as live-work accommodation) and to enable a rapid response to changes in economic circumstances*’. The proposed wording in this respect is not considered in accordance with these requirements of the NPPF (2019). Whilst we understand that a protectionist approach to employment land is not unreasonable, there must still be flexibility or an ability to allow controlled change as part of the planning balance.

The policy needs to take a multi-dimensional approach considering factors such as market signals, quality of accommodation and marketing routes with reasonable timeframes to allow the planning balance to be applied. The Site in this case has been marketed since February 2020 and has not received suitable interest from any office occupier. The approach should allow for market-led policy rather than a policy-led market.

An amendment could be to instead include a figure based on the latest relevant Evidence Base documents; however this is likely to encounter similar issues relating to the pandemic as set out above (i.e. the difficulty with currently forecasting accurately). It is therefore proposed that the policy wording is instead amended to read ‘*an appropriate level of office floorspace in accordance with the latest demand figures*’.

<b>Spatial Strategy for Growth comment</b>	You cannot build this number of houses taking 2000 acres of green belt and consider that a sustainable development. This will mean all the individual villages will be eaten up in an urban mass with only token green spaces in between them. It will have a big impact on the Chilterns AONB, completely ruining the area.

<b>Spatial Strategy for Growth comment</b>	<p>I object to the Local Plan especially in regard to the following:</p> <p>The NPPF allows local authorities to restrict the scale of development due to other planning restraints including impacts on greenbelt and areas of outstanding natural beauty</p> <p>NPPF purposes:</p> <ol style="list-style-type: none"> <li>1 checking urban sprawl</li> <li>2 to prevent neighbouring towns from merging</li> <li>3 safeguarding the countryside</li> <li>4 preserve the setting and character of historic towns</li> <li>5 urban regeneration by the use of and recycling of derelict and other urban land and well served by public transport</li> </ol> <p>I don't believe the Vision set out in the Local Plan is sympathetic to the aims of the NPPF. Except what they believe to be a central government requirement builds 16,596 new homes over the next 18 years. The method of determining these numbers has disproportionately affected Dacorum and the numbers and the method by which they were arrived at should</p>

have been challenged. Particularly that the figures have been based on out of date ONS figures, when more recent ones are available.

The number of houses proposed for Berkhamsted and Tring are just too great for the towns and they will lose their market town identity.

It's not just about increased housing it's also the loss of things as a consequence. Walks recreation views and mental health

Climate emergency is already acknowledged - zero emissions by 2030 cannot be met by reducing greenbelt, and conditions required to be met on all new builds will increase cost to build and lower their affordability.

Greenbelt should not be used unless all other locations have been considered. Once greenbelt is released to developers it will be gone forever. It cannot be undone

Loss of greenbelt leads to reduction in air quality and an increase in noise pollution. Priority should be given to brownfield sites and windfall sites, the availability of which in post pandemic conditions may have changed.

**The Development Strategy**

Policy SP2 of the draft Local Plan, the Spatial Strategy for Growth, sets out that the Hemel Hempstead, along with Tring, area will be the focus of growth over the plan period as the two main centres in the area. This approach is supported by Redington Capital as Hemel Hempstead is the most sustainable settlement in the area, and the best placed to support an increased population.

In the policy there is a criterion which sets out that the Local Plan will make provision for '*no net loss of office floorspace from 2025*'. From review of the evidence, it is unclear how this aspiration has been established.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify</p>

development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

- The plan suggests that Berkhamsted and Tring take their 'fair share' of new housing. However that doesn't take into account the geographical constraints of Berkhamsted and the massive loss of Green Belt land.

- Development should be predominantly concentrated around Hemel Hempstead which is the natural centre of local employment, infrastructure, transport hubs, civic amenities etc.

<b>Spatial Strategy for Growth comment</b>	<p>Water supply and waste water disposal</p> <p>The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer which in turn would cause further damage to the Borough’s precious chalk streams. New supplies of water are not likely to be possible until after 2030.</p> <p>Geographers say there are only 210 true chalk streams anywhere in the world and the Chilterns is home to 9 of these rare and precious habitats. The siting of housing must not be allowed to degrade these special places.</p> <p>The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This would take many years to complete, and be extremely expensive as well as disruptive to affected communities.</p> <p>I also think that from a transport perspective that the plan is not sustainable. Berkhamsted's roads are already heavily congested and the proposal to build over 2,000 new homes in the town in the next 19 years period will bring gridlock to the towns transportation system and also place too much demand on the towns services and schools.</p> <p>Nothing in this section can be remotely described as “fully evidenced and justified” as required by the NPPF to remove Green Belt designations. The growth proposed is neither sustainable nor respecting the environmental role of planning.</p> <p>Berkhamsted has a congestion problem and does not have a sustainable transport system as DBC suggests. Building on steep valley sides and along ridge tops at a distance from facilities will exacerbate problems.</p> <p>Delivering Infrastructure to support growth – the IDP fails to adequately address issues, including traffic, water and wastewater, and is incomplete which reflects the reality that infrastructure always lags the development it is meant to serve This is very obvious in Berkhamsted.</p>

<b>Spatial Strategy for Growth comment</b>	<p><b>URBAN CAPACITY, GREEN BELT AND THE AONB</b></p> <p>Policy SP2 sets out the Council spatial strategy. Within this policy, it notes that the primary focus of strategic growth and investment will be in Hemel Hempstead and supported by growth at Berkhamsted and Tring.</p> <p>A total of 10,600 homes are to be delivered in Hemel Hempstead which includes a minimum of 1,500 homes to be delivered through an urban extension to North Hemel (with a further 4,000 homes to be delivered in this location beyond the Plan Period). A total of 2,200 homes are directed to Berkhamsted and 2,700 homes to Tring.</p> <p>The Green Belt and Rural Areas Topic Paper (November 2020), published alongside the emerging Local Plan for consultation, sets out the exceptional circumstances for the release of land from the Green Belt.</p> <p>At paragraph 7.7, the paper states that:</p> <p><i>“The Council has explored all reasonable options to meet its identified need for development without developing in the Green Belt. This should be seen in the context that the Borough is highly constrained and this has limited our available options. Nonetheless, there remains a strong urban focus on the towns and larger villages as sustainable locations for accommodating development and infrastructure needs. Indeed, the draft Plan policies will actively encourage this approach.”</i></p> <p>It is agreed that the Borough is highly constrained and that it is not possible for the Council to meet its identified need without some development in the Green Belt.</p> <p>As set out within the Urban Capacity Study (November 2020), the estimated capacity within existing settlements is 10,440 homes. This is well below the level of housing required and the Council cannot rely on all the sites coming forward in order to produce a sound and robust plan.</p> <p>The Site Selection Topic Paper (November 2020), interrogates the level of urban capacity available, including existing allocations, commitments and windfall allowances. It concludes that 10,954 dwellings can be expected to be delivered</p>

within the urban areas (note this is slightly different from the number set out within the Urban Capacity Study). This is 7,460 dwellings short of the housing requirement of 18,414 dwellings (based on 1,023dpa).

The Council considers that it has optimised the level of housing delivery in the urban area and no more capacity can be found from this source.

This lack of urban capacity and the high level of housing need means that DBC **must** look at Green Belt and other designated areas including Areas of Outstanding Natural Beauty (AONB) to deliver this housing.

AECOM's Site Assessment Study Volume 1 (September 2018) prepared on behalf of the Council, indicates that there is capacity for 15,135 dwellings in the Green Belt (the Council's Site Selection Topic Paper (November 2020), reduces this to 14,897 dwellings). Whilst the headline figure indicates that the Council can meet and exceed its housing requirement when combining urban capacity and Green Belt capacity, it does not mean that all the Green Belt sites are appropriate for development, or that they will come forward in the Plan Period.

It is understood that the Green Belt capacity figure has not been subject to a review of the contribution of each parcel towards the purposes of the Green Belt, as outlined in paragraph 134 of the NPPF.

Another important consideration is how these sites fit into the spatial strategy when taken as a whole. The NPPF is clear at paragraph 138 that when reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account. At this stage, it is not expressly clear how this has been taken into consideration when determining whether many of these potential dwellings would be located in smaller settlements and whether this level of growth be in proportion to the size of the settlement.

It is also noted that the Site Assessment Study was only undertaken on 144 sites identified by DBC. It notes that these have come from various sources and had not filtered before AECOM's review. However, it is not clear from the Assessment what these sources are. Further, the Planning Practice Guidance (PPG) at paragraph ID 3-010-20190722 states that:

*"It is important that plan-makers do not simply rely on sites that they have been informed about, but actively identify sites through the desktop review process that may assist in meeting the development needs of an area."*

It is clear therefore, that DBC should be active, not just passive in site searches, and should consider sites which may not have been actively promoted during the Call for Sites process.

The Site Selection Topic Paper (November 2020) notes at paragraph 3.74 that the outstanding identified housing need (once the urban capacity sites have been taken into consideration), cannot:

*"reasonably be located either in whole or in part in the Chilterns AONB as there is insufficient land available for development and any substantial allocations would be contrary to national policy, namely that it would not conserve or enhance this national important designation (Paragraph 172 of the NPPF)."*

This is in the context as to whether there are any other reasonable options for meeting need **before** releasing land from Green Belt, not in conjunction. It also stems from the basis that residual housing need would be met as a whole within the AONB, rather than considering that some housing could come forward in the AONB and some from the release of land from the Green Belt. This binary approach does not take account of site specific contexts and does not adequately justify the discounting of all sites within the AONB for further consideration.

The Site Selection Topic Paper notes at paragraph 5.2, under the key issues, that:

*“The approach undertaken by AECOM for sites in the AONB was to discount [sites] where they are over 0.5 hectares, unless they comprised of previously developed land.”*

The Council’s justification for this is set out at paragraphs 5.5 and 5.6.

*“The Council’s approach to site selection...is to first consider if there is sufficient sites available on land outside of the Chilterns AONB, including the consideration of (reasonable) alternative sites, which are capable to meet the development strategy of the Local Plan. If this approach concluded that there was an insufficient amount of land/sites capable of meeting future needs, then there would be a greater justification to consider in further detail those sites located in the AONB.*

*The review at Stage 6 demonstrates there are sufficient sites that are available, and therefore the Council considers it appropriate to not carry forward any sites in the AONB for detailed testing. The development strategy reflects the Council’s commitment to protect the special characteristics of the Chilterns AONB through the new Local Plan, and considers the approach taken is soundly based.”*

In the Site Assessment Study, the AONB was immediately discounted at the outset, without considering how some sites located in the AONB could contribute less to the purposes of the Green Belt, as well as to the AONB and therefore could be acceptable sites for housing, subject to appropriate mitigation.

This approach is inconsistent with the PPG which states that [emphasis added]:

*“Identified sites, which have particular constraints (such as Green Belt), need to be included in the assessment for the sake of comprehensiveness but these constraints need to be set out clearly, including where they severely restrict development. **An important part of the desktop review, however, is to identify sites and their constraints, rather than simply to rule out sites outright which are known to have constraints.**” (Reference ID: 3-010- 20190722)*

Again, this demonstrates the issues with the binary approach undertaken by DBC and the lack of flexibility in its site selection process. What is also not clear is whether the whole site needed to comprise of previously developed land for it to be taken forward through the selection, or whether only part of the site comprising previously developed land was considered sufficient. It is argued that a more positive and justified approach would be to include sites within the AONB where part constituted previously developed land. This would enable a more robust analysis of potential sites where more consideration is given to the individual site context and its contribution to the AONB.

It is agreed that exceptional circumstances do exist for the release of sites from the Green Belt. However, the Council should also consider suitable sites that may be located in the Chilterns AONB. It is recommended that the Council reviews its decision to omit virtually all sites located within the AONB and includes land within the AONB for consideration to deliver housing.

<b>Spatial Strategy for Growth comment</b>	<p><b>BERKHAMSTED</b></p> <p>Policy SP20 (Delivering Growth in Berkhamsted) states that Berkhamsted will deliver at least 2,236 dwellings over the Plan Period, with 1,876 homes being delivered through allocations.</p> <p>Policy SP23 (Delivering Growth in Tring) sets out that at least 2,731 dwellings will be delivered in Tring, with 2,274 of these delivered through allocations.</p> <p>Whilst it is acknowledged that both Tring and Berkhamsted are in the same sustainability level (Market town) as described within the Settlement Hierarchy (October 2017), Berkhamsted is the second largest urban area within DBC and is considerably larger than the next largest urban area, Tring <small>[Footnote 3: In 2011, Berkhamsted had a population of 20,542 people compared to Tring with a population of 11,713 (Settlement Profiles Paper, October 2017)].</small> The Settlement Profiles Paper (October 2017), shows that neither settlement has increased in size significantly, in terms of additional dwelling since the last census in 2011.</p> <p>The disparity in size between these two settlements is not reflected in the spatial strategy. Tring is set to deliver 495 more homes than Berkhamsted over the Plan period, despite it being the smaller of the two settlements.</p> <p>Using the 2011 data on the number of existing dwellings, Tring will see a 54% increase in the number of dwellings as a result of allocations, whereas Berkhamsted will see a 24% increase. Given its high level of sustainability, it is considered that Berkhamsted has greater capacity to deliver housing.</p> <p>As previously set out, the increase in the Council's housing target to 1,023dpa, will mean that it needs to find a <b>minimum of 1,818 additional dwellings</b> over what is currently being proposed, in order to achieve the minimum requirement of 18,414 dwellings over the Plan period.</p> <p>DBC should seek to exceed this 18,414 figure in line with the Government's objective to deliver 300,000 homes a year by the mid-2020s and to significantly boost the supply of homes, as set out in paragraph 59 of the NPPF. The Council</p>

needs to ensure that it increases housing supply in order to maintain a five year supply of deliverable homes and ensure that it does not fall back to the current position where housing supply is at a critical level.  
It is proposed that some of these additional dwellings can be sustainably accommodated in the Berkhamsted area.

**Spatial Strategy for Growth comment**

The aims are laudable. The means of achieving delivery in respect of land management are wholly lacking. Consequently, it is undeliverable.

Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites are a key principle of the Strategy. However, this conflicts with some site allocations in Tring and Hemel Hempstead.

There is a danger that increasing retail floorspace will severely degrade the very character of retail that still generates local distinctiveness and trade in the town; for example, building on the Auctions - one of the most distinctive enterprises in the Borough, as well as market site and museum - is a nonsense. How this will enhance the town centre is not credible. In respect of delivering a local economy and society - it is not sustainable.

I support Policy SP6 to reinforce the role of the town centre and support proposals which will maintain its vibrancy. However, it is not appropriate to bring forward a mixed use retail led development including a medium sized supermarket at the High Street/Brook Street town centre site (Growth Area Tr06), or encourage a supermarket on the Dunsley Farm Growth Area (Growth Area Tr01) if the town centre site cannot be delivered.

The Brook Street site already plays a highly important part in the economy and character of Tring - even if it is not in regular use. Furthermore, there is already a supermarket opposite Dunsley Farm, which also supports a Farm Shop and Brewery, two locally distinctive and highly successful enterprises which should be supported, not undermined by another supermarket. Surely this is better located where the majority of the new development is proposed? East of Tring. The nature of Tring is highly vulnerable to such misguided proposals which will have the opposite effect of achieving a sustainable Market Town. All it will do is provide a Sustainable Supermarket town. I do not consider this is a sensible or sympathetic approach to planning a town's future.

<b>Spatial Strategy for Growth comment</b>	<p>I appreciate that we are facing a housing shortage and that homes have to be built somewhere but I have several objections to the local plan put forward by Dacorum Borough Council (DBC). I also appreciate that DBC's hands are tied to some extent to dictats from the government.</p> <p>I wish to object to the "Emerging strategy for growth 2020-2038" local plan as follows:</p> <ol style="list-style-type: none"> <li>1 I only received a copy of the publication from Dacorum Borough Council on Monday 22 February. I am lucky that I have been aware of the plan for some time through social media, but other residents in Covert Road are elderly and may not have ready access to the internet. 5 days is not enough to look into this in more detail – particularly as the library is not open for these people to use resources there. The period for consultation should be longer and after we are back to a more normal life.</li> <li>2 I believe that the number of proposed houses calculated in the plan is flawed. It has been calculated based on an algorithm that has since been ditched by the government and the council has based its calculation on ONS data from 2014 which is outdated and doesn't take into account builds since then. I believe that the proposal should take into account the most up to date data, which I understand is the 2018 ONS data, which would reduce the number of proposed houses substantially.</li> <li>3 The amount of green belt land lost if the proposals are accepted is excessive and the council does not appear to have taken account of the National Policy framework which allows local authorities to restrict the scale of development due to other planning constraints.</li> </ol>

<b>Spatial Strategy for Growth comment</b>	<p>The local plan says very little about sustaining villages; we want vibrant self-sustaining villages that are not just dormitory settlements.</p> <p>This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan</p> <p>Northchurch has not been recognised at all. It has been called West Berkhamsted instead.</p> <p>The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology.</p> <p>There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.</p> <p>This growth in household numbers is a 25% increase over the current housing stock which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. In particular this impacts Tring where a 55% growth in households is planned. Dacorum Borough have chosen to accept these Central Government</p>

imposed growth figures without challenge and they are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

I support the need for a local plan and accept the need to build a reasonable number of new sustainable and affordable properties in Dacorum. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is already pressure on these services and this would only increase with this projected growth given it is unsupported by a commensurate growth in infrastructure. There is little sustainable about the construction nor preserving of our heritage about this plan.

That you want Hemel to have a vibrant town centre is of course good. However, have you thought through the wider post-pandemic and post-Brexit trends that are clearly starting to emerge?

Specifically, the lack of any cultural venue (thank you, Borough Council) will not help attract people into the town. Your plan for a retail-led development of the former Market Square in Hemel is risky and blind to currently changing retail trends. You cannot really want a litter-strewn take-away paradise by the water gardens, can you?

Please stop and think through the provision of cycle lanes and pedestrian routes. That on Station Road just has not worked and is hazardous to both cyclists and those on foot. The lessons from that need learning before setting future policy.

Environmental Impact: the increased water sourcing will damage/destroy the chiltern aquifers and chalkstreams which are of major ecological importance.

Building in such concentration around Shootersway area and it's junction with Kingshill/Kingshill Way is irresponsible. Shootersway is located on the ridge of a long hill with 5% inclines which creates a major water supply and sewerage management problem. Water run off in inclement weather from the new buildings/civil works will create a bigger water run off hazard affecting the already existing problem of flooding down the hill. Traffic is already a problem in this area; increased housing will add to the hazard and exacerbate the danger to young children who have to use the single width pavement or no pavement to access the only state secondary school in the town. The environment is already impacted as many parents drive their children a short distance to the school to avoid them having to navigate this area.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p> <p>I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.</p> <p>The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.</p> <p>I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.</p> <p>Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.</p> <p>I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This</p>

Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.</p>

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamsted, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an

updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty.

think the plan is not suitable for promoting sensible sustained growth that does not irreparably damage Dacorum.

The strategy seems to be concentrating business development in the eastern side of the district particularly in the garden city area on the border with St Albans. This would logically match the proposed expansion of houses in Hemel Hempstead.

However large expansions of housing in Berkhamsted and Tring are being proposed without the same increase in economic growth in the towns. This would only result in increased traffic congestion by commuter traffic across the district.

In both towns the level of housing is being increased without a matching increase in town centre infrastructure to cope with it. There has been some proposals to increase shops in Tring but this means demolishing several key buildings including the fire station and local history museum.

These are both buildings that are important for Tring's civic character and culture.

In Tring the housing would also increase the town's area by approximately 25% and will cover part of the Chilterns Area of Outstanding Natural Beauty which will be lost forever. It would also ruin the appearance of this unique market town which was largely built by the Rothschilds.

The housing development currently being built in Tring seems to be extremely out of character and very anodyne. If the other developments are like this then Tring will become characterless and dull.

I think that Dacorum should reduce the housing programme in general as with evidence from the recent Covid pandemic there will be less need to be located in close proximity to London. This is due to more people choosing to work from home.

With Brexit there will probably be a contraction in the business sector and little business growth in the area so less housing will be needed for it locally. The promotion of the Northern power house by the central government may even lead to expansion in that region rather than Dacorum.

In conclusion I think the plan needs to be revisited in light of recent events.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (Changes in the Current Planning System of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p>

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	We call for fewer houses to be built on green belt land and for the Local Plan to have the climate emergency fully integrated into its targets and objectives.

Dacorum Green Party strongly objects to the Dacorum Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years. This growth in household numbers is a 25% increase over the current housing stock. which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm.

Dacorum Green Party supports the need for a local plan and accepts the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Dacorum Greens Call for:

- The number of new houses proposed in the plan to be substantially reduced.
- Dacorum to implement a local plan that includes firm and ambitious sustainable commitments. We are calling for all new buildings to be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.
- We demand that the 40% minimum affordable homes objective is enforced across the Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental health. We welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, each new major development area.
- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)

- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. We have the knowledge and technology to make good affordable zero carbon sustainable homes. I must demand that the Local Plan prioritises this.

**Spatial Strategy for Growth comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to “play a much greater role in delivering housing growth” within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate

Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has “delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites.” This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to

the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

<b>Spatial Strategy for Growth comment</b>	I have significant concerns about Dacorum's proposed Local Plan, titled "Emerging Strategy for Growth 2020-2038". If implemented, these damaging proposals would result in the loss of a massive 850 hectares of the Green Belt, the wider countryside and urban green space for development. This is the equivalent of 1,214 football pitches, and would cause irreparable harm to the environment. I believe the Council's growth strategy fails to address the climate emergency and the impact on infrastructure, and underestimates the potential to provide housing on existing developed sites.

Green Belt land is threatened at Berkhamsted, Tring, Hemel Hempstead, Kings Langley, Bovington and Markyate.

**Spatial Strategy for Growth comment**

85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns Area of Outstanding Natural Beauty. Although the Council states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”, it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity (including that of the hugely important Chilterns Beechwoods SAC), will cause significant harm to the Green Belt and AONB. It also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.

<b>Spatial Strategy for Growth comment</b>	<p>Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the sheer scale of proposed development. In my view, the council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>I also acknowledge that recent Government guidance on calculating housing need has been, at best, confusing. I firmly believe that housing need should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The council has based its calculations on the outdated 2014 based ONS data which, in my opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p>

<b>Spatial Strategy for Growth comment</b>	The Emerging Strategy for Growth appears to be based on selective strategy documents that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure or 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use or guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment or brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the

existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemet Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to

reduce impact on infrastructure. At Paragraph 5.6. the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been

no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven

that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

I strongly disagree with the proposal of the huge volume of additional housing planned for Dacorum particularly in Berkhamsted and Tring. A large area of valued green belt sites will be lost and the local infrastructure of schools and health facilities will be put under tremendous strain. The additional traffic generated will have a huge impact on air pollution. While I appreciate the need for some much needed housing we do not want our community overwhelmed. I ask in the strongest possible terms for this proposal to be reconsidered.

<b>Spatial Strategy for Growth comment</b>	<p>I am opposed to the development of the Local Plan, in particular the proposals for South Berkhamsted.</p> <p>It will destroy the beautiful landscape on the towns of Berkhamsted and Tring by building on green belt land which is surrounded by the Chilterns Area of Outstanding Natural Beauty. It will waste and destroy acres of farmland and beautiful countryside.</p> <p>Irreparable harm would be done to the unique character of the historic market towns of Berkhamsted and Tring – which must be preserved for current and future generations. It will put a strain on these communities and overload the local facilities in these areas.</p> <p>The additional transport links will cause serious environmental harm - congestion, noise, air pollution, etc - for all of Dacorum's residents, businesses and visitors.</p> <p>You are planning for too many of the wrong houses in the wrong places. This plan needs to be reassessed. Please reconsider the plan and base it on recent housing data.</p>

<b>Spatial Strategy for Growth comment</b>	<p>1 I understand that DBC must plan for extra dwellings, but I would argue the plan should be re-drawn to take account of new brownfield opportunities that will be now be apparent due to the effects of the pandemic and Brexit. These are two very significant events that will fundamentally affect how many people are living and where and how they are working. For example, many will continue to work from home freeing up office space that could be converted to housing. People more expert than I need to compute the effect of these events on brownfield capacity and complete an up to date brownfield review. The plan then needs to be re-drawn using the up to date data.</p> <p>1 Regarding the Green Belt generally around the borough, the plan includes far too much development in the Green Belt. The NPPF states that only where exceptional circumstances exist can land be removed from the Green Belt. Housing need is not an exceptional I realise that DBC does not have enough non-Green Belt land where the houses could be built, but as a responsible Council, DBC cannot simply put forward a plan that is impossible to fulfil. I understand from attending a full Council meeting earlier this week that the great majority of Councillors, both Conservative and Liberal Democrat do not support the building of the numbers of dwellings included in the plan. So that tells me that this plan does not work and is not fit to go forward.</p> <p>1 I also object to the large extent of building on Green Belt as this goes against the Council's Climate Change Emergency Strategy. How can building on large green field areas support low or zero carbon initiatives, if you are removing the green areas that absorb CO2?</p> <p>1 Another concern I have, which is a wider issue in the DBC area, is the water supply capacity. I understand that this is very near at capacity and 16,000 extra homes will likely lead to water Most of our water comes from the chalk aquifer and this could run dry, endangering the locality's chalk streams which are almost unique in the world. Why does the Local Plan not take this into account? The Local Plan should be protecting important features in our borough, not simply ignoring the consequences of the plan.</p> <p>I hope you will take my comments into consideration. Thank you.</p>

**Spatial Strategy for Growth comment**

The local plan says very little about sustaining villages; We want vibrant self-sustaining villages that are not just dormitory settlements.

- This is particularly apparent in the approach to the historic village of Northchurch, which has not been acknowledged in this plan.
- Northchurch has not been recognised at all. It has been called West Berkhamsted instead.
- The local plan simply writes Northchurch out of existence, with no respect for its historical significance, limited infrastructure, or ecology.

There are fears that unique communities with their individual identities such as Northchurch, and the connected hamlet of Dudswell, will simply become part of an enormous, increasingly homogeneous ribbon development from Aylesbury to Watford.

**Spatial Strategy for Growth comment**

The Council notes at paragraph 7.5 that it has progressed the Draft Plan on the basis on a housing need calculation of 922 dwellings per annum (dpa), which uses the method set out within the Government consultation as part of the Planning Reform White Paper (Autumn 2020). The Council acknowledges that there are uncertainties over using this figure and that there may be further changes set out by the Government and that it will be kept under review.

On 16 December 2020, the Government confirmed that councils should use an updated method which takes the original standard method and adds a 35% uplift for boroughs which contain the top 20 largest cities and urban areas (Planning Practice Guidance (PPG) paragraph reference ID: 2a- 004-20201216). This means that the housing need figure for Dacorum will revert back to 1,023dpa:

- The increase from 922dpa to 1,023dpa results in a total requirement of 18,414 homes across the Plan
- This is an increase of 1,818 homes above the 16,596 figure set out within the Draft At present, the Draft Plan contains a supply of 16,899 homes over the Plan Period, only marginally above the DBC's need when using the 922dpa figure.

As such, the DBC will need to update the Plan and find additional sources of housing supply in order to accommodate the higher level of need.

DBC will also need to update its Sustainability Appraisal. Currently, Options A to D are based on a housing target of 922dpa and only Option E considers a higher target of 1,100dpa. Option E does not specify a particular spatial strategy, so this will need to be addressed before the publication of the Regulation 19 Local Plan.

National guidance requires DBC to meet this need in full. There is a historic undersupply of housing in the area and the Council is currently unable to demonstrate a five-year supply of land for housing.

WSP understand that the latest calculation is that DBC can only demonstrate 2.8 years of housing land supply<sup>1</sup>. This housing land supply calculation is based on the current housing target of 403dpa. With the emerging housing need of 1,023dpa set to increase this target by over 150%, the Council's housing land supply will fall to an even more critical level.

The 2020 Housing Delivery Test results, published on 19 January 2021, show that there has been a big reduction in housing delivery in DBC. The 2019 results showed that the Council was delivering 138% against its housing requirement but this dropped by 49% to 89% in the 2020 results. We understand that this means that the Council will now have to prepare an Action Plan to show how it will deliver the housing it needs.

Last year, DBC delivered just 522 homes against a target of 938dpa. This target was temporarily reduced by the Government from 1,023dpa, with a month's worth of demand being taken off due to the COVID pandemic. The next

results will be based on a requirement of 1,023dpa and will require the Council to substantially increase housing delivery in order to avoid being hit with the requirement to add a 20% buffer to its housing target or face the most severe penalty, the “presumption in favour of sustainable development”.

Further, affordability within DBC has worsened significantly over the last 10 years. The ratio of median house price earnings to median gross annual workplace-based earnings has gone up from 7.88 in 2009 to 12.21 in 2019, an increase of nearly 55%<sup>2</sup>.

The issue of worsening affordability shows an acute need for housing placing greater emphasis on the council to exceed its housing requirement. As such, the Council should amend the Plan in order to meet in excess of 18,414 homes over the specified period.

<b>Spatial Strategy for Growth comment</b>	<p>1) The 'sustainable development strategy' isn't a sustainable development strategy at all, it's a house building strategy or development strategy. A 'sustainable development strategy' is a bit of an oxymorn, as development isn't necessarily sustainable. The level and rate of construction (aka development of the build enviroment) is actually causes a significant proportion of our carbon emissions so is currently incompatable with zero carbon. There is significant evidence that reaching zero carbon requires a significant reduction is the amount of construction activity as it is very difficult to decarbonise steel, concrete, bricks and other building materials.</p> <p>Evidence:  <a href="http://withbotheyesopen.com">http://withbotheyesopen.com</a> <a href="https://ukfires.org/absolute-zero/">https://ukfires.org/absolute-zero/</a></p> <p>What the Borough needs is a "sustainbilty strategy" which sit above all other statregy, and determines the overall direction of travel. Then the "Local Plan" can outline what land use change, retrofit of existing buildings, and new buildings is needed to achieve zero carbon and wider sustainability. Development must be constrained by sustainability, or using the word 'sustainability' is pointless, and misleading.</p> <p>2) It is made abundently clear that the 'sustainable development strategy' is really a 'house building strategy' by the fct that all of the rest of the detail about it is all about building housing. This local plans is so disfunctional and confused as</p>

a set of documents that it isn't in a fit state for the public to consider. How can this country call itself a democracy and this exercise call itself a 'consultation' if the basic step of honestly and clearly communicating what the current proposals are and why they've come about doesn't happen.

3) What is needed is a sustainability strategy which is about how the borough can get to zero carbon, restore and enhance biodiversity, and improve sustainability in terms of material use and pollution. This would then be primarily about retrofitting existing buildings, land use change including changing agricultural practice, planting woodland, restoring habitat, urban green infrastructure...

4) Clearly the government arbitrary house building plans are in the interest of the borough so the borough should be telling them so, and refusing to implement them. Yes there is some housing building needs in the area, but these are mostly little bits of small cheap terraced housing for young people currently priced out of the area, selfbuilt plots for all those who've been on waiting lists for ever and rural workers unable to live near where they work.

**Spatial Strategy for Growth comment**

This is a plan I wholly disapprove of as our infrastructure is not able to cope with the vast majority of new housing proposed.

This will have a huge knock on effect to local resources, roads, pollution, potential future flooding and a general overload to our community,

Many people live here because of the green belt, the countryside and the lifestyle that brings, they did not buy into living in a more built up area and to find all the services they rely on overwhelmed.

I would like it noted that I strongly oppose these plans as a local resident, and many thousands of residents would feel the same, but have no idea of these plans as it has not been fairly and widely advertised.

<b>Spatial Strategy for Growth comment</b>	<p>I fundamentally disagree with the approach that DBC has taken in drawing up the Draft Local Plan 2020. The Local Plan is clearly not fit for purpose for many reasons but most crucially, in my opinion:</p> <ol style="list-style-type: none"> <li>1. The increased housing numbers are based on flawed and outdated information, which ignores the most recent ONS information and social trends and leads to an unacceptable and irreversible impact on our natural heritage. The Local Plan must be re-drawn based on more recent information and with more respect for the Green Belt, Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC).</li> <li>2. Absolutely critically, this Plan ignores the climate emergency and the Government's Environment Bill and will not deliver legal commitments related to environmental protection and addressing climate change. The Local Plan must define the practical steps necessary to meet the DBC declaration of a climate emergency, and demonstrate how DBC will contribute to the UK's international legal commitments on the reduction of emissions. At present, the Local Plan admits to the options being put forward having a negative impact on climate targets, which is the opposite of what is legally and morally required.</li> </ol> <p>I see in the Plan no coherent strategy intended to benefit residents but a piecemeal approach using land banked greenbelt, led by developers and designed to deliver advantage to those developers. It ignores DBC's own previous position on the release of greenbelt land and the importance of green buffer zones and the integrity and character of distinct settlements.</p> <p>This Plan should be withdrawn and revised using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the strategy. It is vital that new development is planned intelligently.</p> <p>My comments focus on Berkhamsted as that is where I live but many of my objections apply equally to the plan in general and to the specific undermining of rural market towns and communities.</p> <p>I have laid out below my key concerns.</p>

<b>Spatial Strategy for Growth comment</b>	The Governments housing policy has lost all touch with planning in the countryside.Houses built in the countryside have an intense local impact. Local people should be granted the right to control the amount, pace and infact the nature of any settlements in their communities, if they are required. Planning rules deny this and infact dictate that local people will loose any say in these matters and therefore allowing free reign to developments.

<b>Spatial Strategy for Growth comment</b>	<p>To whom it may concern, I wish to register my objection to the plan based on the following:</p> <ul style="list-style-type: none"> <li>1 It will not improve the environment as it is going to take away green space which in turn reduces clean air and the opportunity for residents to benefit from the space. This in turn has the potential to add to mental health costs.</li> <li>1 There will be an increase in car pollution and the current number of electric charging points either in existence or proposed is woeful.</li> <li>1 The housing itself is unlikely to be truly affordable</li> <li>1 There is not enough infrastructure re doctors, dentists that are NHS, etc</li> </ul>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p>

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council’s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	More context should be provided in the plan. The objectives are seemingly arbitrary - and the truth is that they are - imposed on the borough by central government.

The plan does not state the number of existing homes in any of the towns in the borough, it just states the number to be added.

The document should explain where it thinks that population growth will come from, and hence why it requires the projected number of homes; i.e. is the increase from incomers to work in new industry in the area; is it from commuters; from births? Also, by including the profile of the people requiring homes, the plan could then provide detail of the type of homes required too. This breakdown should be used and tracked again to ensure that development is of the correct type.

These figures should be included so that they can be monitored against changes in behaviours and can be amended against plans. The potential changes of work/life patterns as a result of the pandemic should be included.

If the figures cannot be sensibly derived from forecast growth in the area, then the council have a responsibility to push back on central government and their mutant algorithm for calculating the need for house building. This is widely recognised as flawed - ref

<https://www.building.co.uk/comment/the-governments-algorithm-for-homes-may-be-its-next-a-level-st-yle-fiasco/5107924.article> .

Plans should also be presented within the context of plans for other adjacent local authorities to give a clear picture of overall development of the area - and thereby a clear picture on the overall use and dependence on local infrastructure (roads, hospitals etc).

Planned development must include infrastructure (schools, doctors, hospital etc) to be a pre-requisite, not a 'nice to have' following population growth. The council should resist development unless infrastructure is planned for the area.

My view is that the number of homes proposed is very high for a town of this size, and the justification for these numbers should be CLEARLY reported and disseminated to residents as a priority to collect feedback - rather than requesting feedback on this huge and non-specific plan.

<b>Spatial Strategy for Growth comment</b>	<p>I would like to state my objection to the current Dacorum Local Plan specifically relating to Berkhamsted where I live but in principle my objections will apply to other planned development sites in Dacorum. Whilst I am in agreement with the Dacorum borough council's vision for 'a world with plenty of homes and jobs, excellent education and health, sustainable transport systems, carbon neutral and the environment and natural resources protected' the DBC local plan appears only to prioritise housing and excessive numbers at that.</p> <p>My first objection relates the calculation of housing numbers for the Dacorum Local Plan based on an algorithm from 2014 instead of taking into account the latest ONS projected figures for housing need in the Dacorum area. The difference in numbers planned for Dacorum is significantly inflated (992 versus 355 /year). Importantly exceptional circumstances for this over provision of housing need have not been evidenced in the consultation documents presented.</p> <p>Secondly the plan does not appear to have taken into account the Governments' announcement on 16thDecember showing a change in course for affordable housing investment which is now to be focused in major cities (with a 35% uplift), and also prioritises brownfield sites and urban areas. So why does the current Dacorum local plan not reflect this change and still continue to pursue development on greenbelt the impact of which will be irreversible with damaging consequences to the Chilterns Area of Outstanding Natural beauty.</p> <p>As highlighted by CPRE Hertfordshire the proposed strategy by Dacorum Borough Council underestimates regeneration opportunities of brownfield sites resulting from the pandemic due to expected increases in commercial and retail spaces being made available for residential conversion. The strategy also fails to take into account 'windfall' housing completions due to expanded permitted development rights.</p> <p>Thirdly, I am stating my objection Dacorum local plan commits certainty to delivering inflated housing numbers (a 23% increase in Berkhamsted) without fully demonstrating they have fully considered the impact of 2,200 additional households</p>

on the local infrastructure and on the community itself. Berkhamsted's infrastructure is already at capacity in terms of road traffic, schooling, water supply and wastewater as well as healthcare provision. Any mention of these in the local plan appear secondary with none of the guarantees of proportionate uplift infrastructure or on the timing of delivery relative to statements made about housing numbers. This poses a very real risk of developer led builds with poorly planned infrastructure, at best lagging behind or omitted from final developments.

In the local plan there is no employment strategy for Berkhamsted so planned growth will need to support out of town workers. Berkhamsted already has a significant traffic problem that is not sustainable contrary to what is suggested, but not evidenced based by Dacorum Borough Council. Planned building on valley topography on the outskirts of the Berkhamsted away from essential facilities will only augment the current issue for commuters and increase the same bottlenecks even with the proposed changes to the Chesham Road.

Working for a local healthcare provider I am only too aware of the chronic pressures on local healthcare services prior to Covid and also the importance for the health of our communities to have easily accessible local health resources particularly the greenbelt in Dacorum. The pandemic has highlighted how importance the greenbelt has been in maintaining the physical and mental wellbeing of our local community with minimal associated cost to the council. Developing on Berkhamsted greenbelt and rural sites will result in significant loss of our accessible health resource within walking distance for many residents with resultant increased pressures on transport routes and with knock on effects for neighbouring health resources, but most importantly with the real longer term consequences for health outcomes for the communities you serve.

Examples of poor planning in the current plan include 'the provision for older people' to be built on the top of a valley at a distance from Berkhamsted town centre without considering the importance of maintaining the independence of an ageing population, their social inclusion, their accessibility to town facilities + healthcare. The road to access this site (Swing Gate Lane) already struggles with current traffic for the school and existing housing, the neighbouring roads are often rendered inaccessible with only the smallest of levels of snowfall as they are not on main gritting routes, the pavements are not maintained (eroded tarmac and uneven surfaces) and the gradient of the land is a challenge even for the fit and active to walk to and from Berkhamsted centre.

Finally, the local plan has failed to address that we are in a climate emergency and to provide an explicit evidence based plan on how it will reduce local carbon omissions as required by the National Planning Policy Framework 2004 & Compulsory Purchase Act. Building on greenbelt on the outskirts of the small market towns in the Dacorum Local Plan currently does not state any guarantee for carbon zero standards being set for new homes, how it will reduce our dependency on cars, nor does it state how the Council will work with developers and stakeholders to protect existing nature and increase diversity.

Overall, I believe that Dacorum Borough Council should take a step back from the current plan and develop a new intelligent and integrated approach placing climate change, biodiversity, wellbeing and social inclusion at its centre. I absolutely agree that there is a need for more homes but this needs to be the right number of homes (based on accurate projections of housing need), of the right type (social and affordable starter homes) and in the right place (in accessible sites prioritising brownfield and urban areas over greenbelt).

**Spatial Strategy for Growth comment**

The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open - a sustainable development strategy would protect the Green Belt for future generations. This Local Plan is not sustainable in any meaningful sense.

"The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. "National Planning Policy Framework update 24 July 2018

The council has chosen out-of-date data to generate its housing figures. The impact of coronavirus on working patterns and office space have not been considered. Even were housing targets to be revised down, the council has not shown "fully evidenced and justified" exceptional circumstances to release Green Belt land. Nor have "all other reasonable options for meeting its identified need for development" been explored.

Infrastructure is also an important factor in sustainable development. Specifically, Berkhamsted is already feeling the impact of several large developments in recent years, with traffic congestion in the town centre and along Shootersway. The additional 31% increase in housing on the outskirts of Berkhamsted would generate further congestion and pollution – this is the opposite of sustainable development. Other concerns include: water supply (over-extraction is already an identified problem), waste water disposal, oversubscribed schools and increasingly difficult-to-access medical services.

Green Belt development should not be allowed. The council should not be succumbing to developer-led pressure to secure valuable Green Belt land. Any new developments should show net benefit to the community and the environment. All developments should prioritise affordable low-cost housing and developers should provide environmental impact assessments that demonstrate how they will deliver net benefit to natural habitats, biodiversity and the overall environment.

<b>Spatial Strategy for Growth comment</b>	<p>I am writing to submit my response to the Local Plan. I welcome the opportunity to contribute to this consultation and hope that you listen to my response and to that of other respondents, and look forward to seeing the revised Local Plan once all points raised are properly addressed.</p> <p>The Local Plan is clearly not fit for purpose for many reasons, with two being foremost.</p> <ol style="list-style-type: none"> <li>1 The increased housing numbers are based on outdated information, which leads to an unacceptable and irreversible impact on our natural heritage. The Local Plan must be re-drawn based on more recent information and with more respect for the Green Belt, Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC).</li> <li>1 The Local Plan must define the practical steps necessary to meet the DBC declaration of a climate emergency, and lay out how DBC will contribute to the UK meeting our international legal commitments to reducing emissions. At present, the Local Plan admits to the options being put forward having a negative impact on climate targets, which is the opposite of what is legally and morally required.</li> </ol> <p>The revised Local Plan must be based on evidence that is itself subject to public scrutiny. The current plan relies on aspirational growth strategies[1] and has led to a bias in the plans which must be addressed.</p> <p>In addition to the above, there are a number of other key considerations that need to be addressed when the Local Plan is re-drafted.</p> <p>Thank you again for the opportunity to respond to this consultation. I look forward to DBC taking account of all the points raised.</p> <p>Note that more detail on the points above is given on the following pages.</p>

[1] Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan  
 The housing need used as the basis for the Local Plan is fundamentally flawed, being based on 2014 ONS data. This has led to a significant overestimate of the housing need compared with using the most recent 2018 data. In December 2020, the UK government acknowledged that the formula for locating housing development needs to be reformed.

Even given the level of housing being overestimated, the Local Plan fails to take into account the National Planning Policy Framework (paragraph 11, footnote 6) which allows local authorities to restrict the scale of development due to for example Green Belt and AONB planning constraints. Current proposals are against government policy.

Specifically:

- The land between Shootersway in Berkhamsted and the A41 has always been considered as the “Green Lung” for Berkhamsted – absorbing vehicle emissions from the A41. Traffic has increased significantly in recent years. The revised Local Plan must recognised that a green buffer is needed.
- The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents.

**Spatial Strategy for Growth comment**

I would like to lodge my objections to the proposed above plans. I believe the levels of expansion are excessive and the loss of green belt land cannot be justified.

In the small towns and semi-rural areas there will be a huge environmental impact with destruction of green belt land and an increase in road traffic.

There does not appear to be any well thought out consideration of where additional schools may be built or when/how these would be funded. Existing a school in smaller towns do not have capacity to service such a surge in population.

There does not appear to be sufficient consideration of play spaces for children or outdoor spaces for exercise.

There does not appear to be sufficient consideration of how or where community amenities would be provided such as shops, community centres, post offices and all the facilities and hubs that make a group of houses a community.

I agree that more houses are needed but I would hope they would be built in a way that adds to communities or creates new communities rather than just decimating green belt land with housing estates.

<b>Spatial Strategy for Growth comment</b>	<p>Concern about the overall aspiration for growth and some development areas.</p> <p>In the context of all of the above, and seeing the draft local plan come together as a whole, we do now have concerns as to whether the scale of growth currently proposed can be made to be consistent with the plan's objectives for the conservation and enhancement of the Chilterns AONB, the Chilterns Beechwoods SAC and the health of the area's chalk streams.</p> <p>We have grave concerns about the potential impacts of some specific development proposals, particularly those that narrow or remove the open buffer between existing built-up areas and the AONB. Indeed, a glance at the draft "proposals</p>

map” reveals that the vast majority of new greenfield development has been located in the setting of the AONB, close to the SACs and/or on the sides of the valleys of the chalk streams. We find this pattern of development unacceptable and consider that it is not consistent with the plan’s objectives, with government policy in the NPPF or with the council’s duty under section 85 of the Countryside and Rights of Way Act 2000.

DBC’s focus on planning to meet its identified housing needs in full will no doubt be welcomed and supported by the Secretary of State for Housing, Communities and Local Government, through a planning inspector’s consideration of the future public examination. The plan clearly intends to deliver on the government’s objective of “significantly boosting the supply of homes” (NPPF, 2019, para 59). However, this objective is only one among a range of national policy objectives that the NPPF seeks, many of which are directly countered by the local plan as currently drafted. As such, we consider that the plan is not currently sound.

Ultimately, it is notable that in the context of DBC’s explicit recognition of the sensitivity of the Borough’s environment (e.g. in sections 2, 3, 17, 18 and 19), as well as the acknowledged global climate emergency and biodiversity crisis, the draft local plan proposes to meet identified development needs in full. This conflicts with the NPPF’s flagship “presumption in favour of sustainable development” policy which requires that development needs should not be met in full (or exceeded) where “the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area”. Footnote 6 to that policy explains that the said policies that provide the required “strong reason” to restrict development include Green Belts and AONBs (which between them cover almost all of Dacorum Borough), as well as SACs.

The plan’s vision and sustainable development strategy do not make a sufficient case for setting aside the “strong reason” provided by these (and other) policies that protect these (or other) areas or assets of particular importance. It must be emphasised that the onus is on the council to clearly demonstrate why these policies that provide a strong reason to restrict development should be set aside.

Harmful impacts on the AONB and SACs are not discussed in the “vision” and “sustainable development strategy” sections of the draft plan, and the assumption seems to be that these will be resolved or “mitigated” through the area- or site-specific policies and proposals. However, those policies, and the assessments including sustainability appraisal that support them, are predicated on the assumed level of development being a given. The plan assumes that the harm arising from the proposed level of development may be mitigated, when it arguably should have been avoided in the first place by reducing the scale of development proposed, in line with para 11(b) of the NPPF in the context of Green Belt, AONB and habitats policies.

Green Belt as a buffer for the AONB and means of managing development in its setting Nowhere are the shortcomings in this respect of the draft local plan more clear than in the justification (insofar as it is made in the plan itself) for the release of land from the Green Belt.

This is of importance to the CCB because the Green Belt, especially around Tring, Berkhamsted and the north of Hemel Hempstead, fulfils part of its defined purpose of “safeguarding the countryside from encroachment” by providing a permanent and substantial open buffer between built-up areas and the designated AONB, as well as sensitive habitats such as the Chilterns Beechwoods SAC. The Green Belt here also serves as a key means of managing the setting of the AONB as part of protecting its natural beauty and providing space within which that beauty may be enhanced through landscape restoration. Releasing land from the Green Belt in these locations requires rigorous justification, and the

“exceptional circumstances” demonstrated surely must, explicitly, take account of issues regarding the setting of the AONB, as well as impacts arising from those developments on the AONB itself, such as visitor management, air quality and light pollution.

It is not evident from either the local plan or the “Green Belt and Rural Area” topic paper that this matter has been considered properly by the council. The supporting text to the Green Belt policy (SP11) at paragraph 19.6 of the draft local plan refers the reader to the “Sustainable Development Strategy” section for the demonstration that “exceptional circumstances” apply to release land from the Green Belt. That section runs to some 28 pages and contains no obvious rationale for Green Belt

release. The main justification for “exceptional circumstances” to release any land from the Green Belt in the local plan appears to be that there is a need for development that cannot be met elsewhere (either within the Borough or in a neighbouring authority), e.g. at paras 5.3 and 8.20.

It may be inferred from reading this section (and the topic paper) that the over-riding issue, beyond estimates of need and aspirations for growth (which should, under NPPF para 11(b), be outweighed by the policies that provide a “strong reason” for development restraint), is the sustainable “transformation and regeneration of Hemel Hempstead and renewal of its New Town infrastructure” (para 5.3). This is a laudable objective, but is hard to see how this necessarily justifies significant releases of Green Belt at Tring or Berkhamsted. This objective may justify the release of Green Belt land around Hemel Hempstead, but not necessarily to determine that the main focus for development should be in the setting of the AONB: preferable alternatives are available.

NPPF para 11(b) clearly allows for LPAs to plan for less than their identified need where Green Belt and AONB (or other policies) apply, and case law – as ably summarised in the topic paper – implies that there needs to be a combination of circumstances beyond simply a need for development or aspiration for growth, before Green Belt should be released. Such a justification should, in effect, relate to the proper sustainable development of the whole area, rationally considering alternatives, and taking account of the contribution each location makes to the purposes of Green Belt designation: even if exceptional circumstances apply in general, they must be demonstrated for each type of development in each location.

The draft local plan, however, appears to take the view simply that there would be an unmet need for development if no Green Belt land was released, and therefore sufficient Green Belt must be released to meet all identified needs (plus an extra allowance of “safeguarded land” for unspecified future development needs). This is exacerbated by an unfounded assumption in the topic paper (para 8.22) that the Borough is required to meet all of its identified needs for development if there are “no suitable options available for distributing growth to neighbouring authorities” – this is not the correct interpretation of NPPF para 11(b) nor the PPG guidance. The latter states that “If following this [process], needs cannot be met then the plan-making authority will have to demonstrate the reasons why as part of the plan examination” (Paragraph: 025 Reference ID: 3-025-20190722) – the “reasons why” in Dacorum Borough are clearly set out in NPPF para 11(b) and footnote 6. Hence, the plan’s insistence on meeting its identified need in full by releasing land from the Green Belt in the setting of the Chilterns AONB renders the plan as a whole unsound.

This does not mean to say that some development involving release of land from the Green Belt or impacting upon the AONB or its setting could not be justified, but that this must be related to the specific development needs of each policy sub-area in the local plan and to the character of each site and the reasons for its designation. None of this reasoning is apparent in the draft local plan.

The outcome of the draft local plan's flawed approach to its Green Belt releases is that significant greenfield development is proposed adjacent to and elsewhere in the setting of the AONB, including within the zone of influence of the Chilterns Beechwoods SAC. Our particular concerns will be set out in relation to each relevant proposal. A general point, notwithstanding the acceptance of each proposal in principle, is that the draft local plan proposes in each case to release the whole of each identified site from the Green Belt. We would argue that

a) there is often a clear need for a significant landscape buffer on the proposed sites, and we consider that the location and extent of this would better be determined in the local plan and retained as Green Belt (as appears to have been the case for the "safeguarded land" north of Hemel Hempstead – although whether this buffer is sufficient is open to debate), and

b) the principle and extent of some of these proposals are yet to be determined, with regard especially to impacts on the SAC, and we consider that, again, these sites should be retained in the Green Belt pending that determination.

**Spatial Strategy for Growth comment**

I have followed with interest the consultations process on the DBC local plan and would like to submit my comments. As background, my husband and I live in Berkhamsted and provide affordable housing solutions for young professionals in Hemel Hempstead and local areas. We see that many cannot afford good housing and we feel passionately that more should be done to help this sector of the market. In addition, this is a great part of the world to live in and we think that, where possible, any housing solutions should not be at the expense of green spaces which contribute to the beauty of the area and the mental health of its residents.

Our comments are as follows:

- 1 The plan proposes almost 6000 homes in “greenfield growth areas” i.e. Green Belt. This is well in excess (over 100%) of the new homes proposed in the 2013 Core Strategy. And ignores the national Planning Policy contained in the NPPF and statements by Ministers that Green Belt should not be developed except in ‘exceptional circumstances’. We cannot see anywhere what these exceptional circumstances are. In the event that there are none then there must surely be a case for challenging the Central Government requirements for the next 18 years. This is the point of local government after all. There is no way that Central Government can know the local specifics. They have provided a starter figure and it is our responsibility to push back on that in line with the National Guidance. Please can we encourage you to do that.
2. We welcome the commitment for genuinely affordable housing to be included in developments in Berkhamsted and Tring but believe affordable needs to be properly defined in the plan and must be based on the income of people working in Dacorum. The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.
3. In our opinion, the proposed growth neither respects the environment nor is sustainable. On the environment, the strategy appears to prioritise building on GreenBelt over brownfield and urban development. This is not what the NPPF had in mind. We also question why the bulk of the Hemel Garden Communities allocation has been held back until after the Plan is agreed. There is little in the plan about the protection of existing natural habitats and creation of new ones by rewilding and keeping greenbelt where possible. We would like to see migration corridors that connect the green spaces as far as possible to increase biodiversity. On sustainability... much of the development around Berkhamsted is on slopes or ridges, and part of Tring’s development is in often-flooded locations. Berkhamsted and Tring are identified in the plan to be sustainable locations. These are ‘commuter towns’ where many residents work out of borough. There are insufficient employment opportunities locally in Tring and Berkhamsted to sustain the proposed growth. To ensure future sustainability, there will need to be a significant shift to local employment, there are no proposals in the plan to make the necessary employment space available for a change of this scale. Delivering Great Places Taller buildings should be prioritised over releasing areas of green belt land when aiming to meet house building targets. There should be a programme to actively identify non-designated heritage assets during the period of the local plan. In assessing all developments there needs to be consideration given to the impact of traffic on schools and existing residential areas. If the construction or the finished development will cause significant congestion in the area of a school, it should not be approved.
4. The proposals in the plan for infrastructure and employment growth are not sufficient for the number of new dwellings proposed in the market towns.. To sustain an increase in population, improvements in infrastructure need to be implemented as houses are built. These are commuter towns and residents rely on transport to make journeys out of the town to travel to work. The present rail and road networks will not sustain such an increase in population. In addition, improvements for issues that already exist e.g. Sewage, schools, playgrounds seem non-existent let alone supportive of the new developments. We would like to see these issues addressed head-on rather than assumed as they currently are.

5. We are fully supportive of the Council’s intention to have 40% of new homes on sites of 10 or more homes as “Affordable”. This is a very tough challenge for developments around Berkhamsted and Tring, and we question how the Council’s Strategy arrived at this conclusion. The proposed number of houses to be built should certainly have a primary focus on affordable starter homes. Can this not be achieved by building a higher proportion of houses on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

In conclusion, I oppose the current plan because:

- a) the total number of new houses proposed in Dacorum is too high as I believe the Government’s numbers have been based on wrong calculations.
- b) The justification for building on Green Belt land is weak and flawed; and
- c) The plan prioritises green belt development over brownfield development.

**Spatial Strategy for Growth comment**

Key Diagram and draft Proposals Map  
 Comment. (p.29 and separate document)  
 The key diagram is very helpful, and we welcome the fact that it shows the plan’s key proposals in the context of the AONB beyond the borough boundaries.

While the key diagram shows the extent of the “Rural Area” this is not shown on the draft proposals map, despite the supporting text of the relevant policy (SP12) saying that it is. See also our comment on that policy below.

It would be helpful, given the emphasis placed on the designation in the early sections of the local plan, for the Chilterns Beechwoods SAC areas to be shown on the key diagram, and possibly the SAC’s zone of influence. Note that the relevant policy (DM31) states that the SACs and the zones of influence are shown on the proposals map, which they are not. See also our comment on that policy below.

We would also support having the borough’s chalk streams identified on the proposals map, which is not currently the case (their representation on the key diagram would be welcome, but perhaps not necessary).

#### Sections 5 & 6 – Spatial Strategy for Growth and Settlement Hierarchy

Object. pp.30-34, policies SP2 & SP3

There is confusion and overlap between these two sections, which amount to the same thing. However, the key problem is that both sections seek to distribute growth across the Borough before the plan has justified the need for and hence appropriate levels of growth.

The first two bullet points under paragraph 5.2 (the “key principles behind the [spatial] strategy”) do not influence the spatial distribution of development, merely the quantum of that development. The quantum of development has yet to be established, and should, from a sustainable development perspective, take account both of opportunities for development and constraints upon it. Instead, the plan simply takes its centrally-derived assessment of local housing need figure of 922 homes per annum (not revealed until p.36) and employment needs assessment (p.44) as read, and these (retrospectively) determine clause 1 of policy SP2.

The CCB strongly objects to the direct translation of the “standard method” figure of 922 homes per annum into the local plan housing requirement for Dacorum, in this case represented in policy SP2(1). The NPPF’s flagship “presumption in favour of sustainable development” policy states that LPAs are not required to meet development needs in full (or exceed them) where “the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area”. Footnote 6 to that policy explains that the said policies that provide the required “strong reason” to restrict development include Green Belts, AONBs and SACs, all of which apply here. No strategic justification is given for setting aside the “strong reason” provided by these (and other) policies that apply in Dacorum Borough in order that the identified needs for housing and employment land should not be reduced to protect such areas or assets of particular importance.

The remainder of policy SP2 simply sets out the position, already established in the “key principles” (para 5.2), again in para 5.3, then again in paras 5.4-5.7, that most development will be in Hemel Hempstead, with quite a lot of development in Berkhamsted and Tring, a bit in Bovington, Kings Langley and Markyate, with limited development elsewhere. This is all repeated again in para 6.1 and policy SP3.

There is admirable encouragement for the redevelopment of brownfield sites and other forms of redevelopment within the borough’s existing built-up areas, including an emphasis on intensification. This is strongly supported, and to be commended, especially in the context of a new town like Hemel Hempstead – other, lesser, LPAs insist that there is very limited scope for such regeneration in new towns.

However, other than the opportunities for regeneration, there is very little by way of substantive justification for the spatial development strategy or settlement hierarchy, and nothing in the policies or supporting text that indicates that any account has been taken of the specific constraints applying in or around any of the areas or settlements mentioned. This is particularly concerning given that one of the “key principles” ostensibly behind the strategy was “Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites”.

The result is that the spatial strategy requires significant development on greenfield sites in the setting of the Chilterns AONB, closing the open gaps between existing urban areas and the designated AONB, and frequently running up to the boundary itself. As a result, the CCB strongly objects to the spatial strategy (SP2) and settlement hierarchy (SP3) policies.

That the protection and enhancement of the natural beauty of the AONB and its setting has not been considered by the council in shaping the spatial strategy or the settlement hierarchy is evidenced from the fact that the AONB is not specifically discussed in the supporting text to either policy, or mentioned in relation to any of the locations discussed in the policies themselves. The only explicit mention is in the “key principles” (para 5.2), and the subsequent indirect assertion in para 5.5 that landscape impacts will be managed. Managing impacts of a pre-determined quantum of development is a very different proposition than “restricting the overall scale, type or distribution of development” envisaged by NPPF paragraph 11.

It might be argued that the focus of the NPPF is on restricting development only “within” the designated area of an AONB. This is, of course, a major failing of the NPPF as currently drafted. The online planning practice guidance recognises that “Land within the setting of these areas often makes an important contribution to maintaining their natural beauty, and where poorly located or designed development can do significant harm” (paragraph: 042: 8-042-20190721) and section 85 of the Countryside and Rights of Way Act 2000 refers to “functions in relation to, or so as to affect, land in” and AONB. Furthermore, in response to the “Glover Review”, the government has now proposed to amend paragraph 172 of the NPPF so that it will read “The scale and extent of development within [National Parks and AONBs] should be limited, while any development within their settings should be sensitively located and designed to avoid adverse impacts on the designated landscapes.” Greater consideration of the setting of the AONB is clearly required in relation to the plan’s spatial strategy.

The CCB considers that the decision to meet the identified development needs in full and locate a significant proportion of the necessary greenfield development required as a result in the setting of the AONB and in already narrow gaps between the main settlements and the AONB boundary represents a failure of the council to fulfil its duty under section 85 of the Countryside and Rights of Way Act 2000 to have regard to protecting and enhancing the natural beauty of the AONB; as a result the plan is not sound.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation</p>

rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

**Spatial Strategy for Growth comment**

I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to play a much greater role in delivering housing growth within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has "delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision. Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined.

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should

be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August 2020) prepared in this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as

set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council 's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

**Spatial Strategy for Growth comment**

The emerging local plan identifies the vision for development in Dacorum between 2020 to The Emerging Growth Strategy (EGS) seeks to deliver the planned future growth and demands for the borough through the well-established principles of sustainable development which focus on the economic, social and environmental objectives in the NPPF.

In section 5.2 of the ESG, it identifies several key principle considerations to support the delivery of growth, such as:

- Delivering our requirement to significantly boost the housing supply, and in particular, increasing the number of new and genuinely affordable homes in the Borough;
- Seeking out opportunities to maximise the amount of development on previously developed land within existing urban areas but taking this concept much further in Hemel Hempstead by proactively encouraging substantial increases in heights and densities in the most accessible locations;
- Providing growth that will contribute to the transformation and regeneration of Hemel Hempstead and renewal of its New Town infrastructure;
- Ensuring the important market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement Hemel Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations;
- Providing growth in the villages that reflects their role and character;
- Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites; and
- Ensuring that the preferred strategy is of such a form and scale to deliver the appropriate level and type of infrastructure such as schools, health and transport/movement.

The proposed vision as set out above is broadly supported. However, the proposed housing allocations within the Local Plan, particularly policies HH01 and HH02 do not follow the ESG as identified within the Vision section of the Local Plan.

**Housing Strategy and Over- reliance on large sites and Use of 2014 ONS Data**

Focusing on the spatial strategy for housing growth, the EGS places a significant reliance on large allocations on the outskirts of the main settlements such as Hemel Hempstead with “support” being provided for town and villages to deliver sufficient growth to provide much needed investment.

Policy SP2 (Spatial Strategy for Growth) of the EGS identifies provision for a minimum of 16,596 new homes; no net loss of office floorspace from 2025; a net floorspace increase of 116,500sqm of industrial floor space; additional retail floorspace; and associated infrastructure to support these areas of In order to achieve these ambitious growth provisions/targets, particularly housing and employment, the growth strategy would need to deliver 922 homes per annum over the plan period. The main concentration of new housing and employment space is proposed to be allocated on the outskirts of Hemel Hempstead. Hemel Hempstead will accommodate at least 10,600 new homes, almost 65% of the Borough's total forecast housing supply.

The calculation of 922 dwellings per annum, has been partly used based on Office for National Statistics (ONS) Data from 2014. Accounting for the stage that Dacorum BC are with their Local Plan, it is unclear why the assessment of

housing needs has not been updated to reflect the latest published housing need for Dacorum as published in the 2018 ONS. Whilst it is appreciated that the ONS data needs to be adjusted to reflect market signals, it is important that this assessment is undertaken on the most up to date ONS data, rather than relying on data that is now some 7 years out of date. In this regard, the plan is not considered to comply with paragraph 31 of the NPPF, which sets out a requirement for plans to be underpinned by relevant and up to date evidence. In this regard, it is also important that the Council accounts for the change from office to homeworking as a result of the Covid-19 pandemic. It is considered that this trend is likely to result in a considerably reduced demand for office space within the Borough, meaning that additional brownfield sites are likely to become available for residential development within the key service centres within the Borough.

Paragraph 73 of the NPPF sets out the importance of ensuring the choice and competition for land. It is considered that the provision of 65% of dwellings in and around one settlement, is not likely to provide choice and competition for land. Secondly, it is also considered that this approach is unlikely to meet the objectively assessed housing needs for the Borough as a whole, with an over-provision within Hemel Hempstead and an under-provision within other key towns and villages within. In this regard, this situation is likely to be further exacerbated by the proposed urban extension to the east of Hemel Hempstead, which is within St Albans City & District jurisdiction.

The main proposed housing allocations for Hemel Hempstead are identified as HH01 and HH02. HH01 is North Hemel Hempstead (phase 1) and HH02 is North Hemel Hempstead (phase 2). HH01 is allocated as a New Garden Community, with plans for approximately 1,550 dwellings, a country park, strategic link corridor, a local/neighbourhood centre, and primary and secondary schools. HH02 is a longer term Garden Community allocation, comprising approximately 4,000 dwellings, with associated infrastructure including a strategic link corridor, three local/neighbourhood centres, two primary schools and a secondary school. Both allocations will require large Green Belt releases of land and are wholly within the Green Belt. Whilst HH01 and HH02 are two separate allocations, in reality they are intrinsically linked, particularly in relation to the required infrastructure requirements.

The consideration of a plan's soundness was recently assessed by the Local Plan Inspectors for the St Albans City & District Local Plan which has now been withdrawn. The Inspectors on the St Albans plan raised significant concerns on the soundness of the Local Plan. The Inspectors, amongst other things, raised concerns with the Council's focus of accommodating its housing needs on only strategic sites, particularly given the significant infrastructure requirements relating to larger sites. The Inspectors were particularly concerned that insufficient consideration had been given to the allocation of small to medium sized sites, in order to meet the Council's housing requirements in the short to medium term.

In addition, similar issues were raised in respect of the Uttlesford Local Plan which in 2020 was found unsound, on the basis that it was considered by the Planning Inspector to be highly ambitious and contained three new Garden Communities (Easton Park, North Uttlesford and West of Braintree). The Inspector provided a clear concern regarding the infrastructure required to deliver these settlements and the lack of a robust viability appraisal to demonstrate that the garden settlements were deliverable.

There was a clear recommendation within both of these recent Local Plan decisions of the need to allocate smaller to medium sized sites, as required by paragraph 68 of the NPPF. Small to medium size sites have the ability to deliver housing at a quicker rate due to the smaller infrastructure work/cost, and therefore provide a vital conveyor belt of housing to maintain the supply in the short term.

However, despite the well documented shortcomings of both the St Albans City & District Local Plan and Uttlesford Local Plan, Dacorum appear to be taking a very similar The Dacorum Local Plan is predicated on the delivery of North Hemel Garden Community (5,500 dwellings), Berhamstead Urban Extension (1,870 dwellings) and Tring Urban Extension (2,200 dwellings). Between these three allocations, they will deliver some 9,570 dwellings, which is just over 60% of the total dwellings required over the plan period.

It is considered that this places an over-reliance on a very limited number of strategic sites, and if one or more of these sites were not capable of being delivered, due to the extensive infrastructure costs associated with sites of this size, Dacorum would be in a position whereby they are not able to meet their housing requirements, particularly within the early years of the plan. This approach is considered to be in direct conflict with paragraph 73 of the NPPF.

Therefore, in order to be considered sound, in planning terms, it is considered essential for the housing growth to be more balanced, with a reduced reliance on large strategic sites, with a more dispersed strategy for growth, which seeks to focus housing in a number of smaller and medium sized sites, which are capable of being delivered in the short The plan also needs to be based on the most up to date ONS data.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“ Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’ s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

**I object to the details of the Emerging Strategy for Growth in the Local Plan on the following grounds:**

**1 The figures used to define the Objectively Assessed Need are out of date.**

- They are based on 2014 ONS statistics. If the revised 2018 figures are used, the number of houses needed per year across the borough is much less. When the 'mutant algorithm' was created, it used the latest 2018 figures, but with many alterations to the standard methodology. Having dropped this algorithm due to political pressure, the 'standard method' has reverted to the 2014 figures. This is inconsistent. If applying the standard method to the 2018 figures, the number would be 355 houses per year, not over 1,000. There is also a difference between need and demand which is not recognised in the calculations.
- **I agree that there is a need for genuinely affordable housing, and we have a generation who feel priced out of the housing market, but we also have a responsibility to look after our natural resources for future generations, therefore Dacorum Borough Council should not be building unnecessarily on 2,000 acres of green belt. This imposed over-provision of housing means that the Local Planning Authority is forced to include in this assessment areas of land which have previously been rejected from previous Local Plans, and the principle characteristics of the towns of Berkhamsted and Tring are being downgraded as unimportant.**

## 1 Lack of response to concerns in the Issues and Options Consultation (held in 2017).

- It is disappointing that little has changed in the Local Plan since concerns were raised by groups consulted at that time. For example, on p.7 *Theme: The protection of ecological assets (green infrastructure, corridors, biodiversity areas, wildlife and chalk streams- water abstraction) should be given great weight and priority in the plan* *Officer Comment: Officers will ensure that the Local Plan protects and enhances the natural environment with particular focus on developing a holistic approach to green and blue infrastructure and climate change. An approach to green infrastructure will be developed and further understanding of the water environment will be developed to inform policies. The Council will also look to develop policies around biodiversity.*

### 2.2 And on the Chilterns SAC:

*Theme: Concern around the impact that development will have on the Chilterns Beechwoods from growth in Dacorum and in adjoining authorities. Officer Comment: The Local Plan will be subject to screening for potential impacts in accordance with legislative requirements. If further assessment of the Plan is required this will be undertaken and any mitigation incorporated into the Plan, as appropriate. Consideration will also be given to proposed development in adjoining authorities. The Council will work with adjoining authorities through the duty to cooperate to identify potential impacts on protected sites.*

- **There is insufficient detail in the latest consultation to demonstrate how the natural environment will be protected. There are no robust biodiversity policies, and the HRA has not yet been completed or issued.**

## 1 The strategy prioritises economic growth at the expense of the environment.

- DBC has not completed the legally required Habitats Regulations Assessment (HRA) before publishing this part of the Local Plan. If the environment was a priority the HRA would have formed an integral part of the decision making process.

## 1 The growth strategy does not take into account current economic uncertainty following Covid 19. The Local Plan takes a long time to prepare over several years, and a lot of budget. However, one should not continue on the same path simply because of the effort that has already been expended. The plan needs to be reassessed.

- The UK went into recession in the first half of 2020, and GDP fell by 9.9% across the year. Once the various fiscal support measures come to an end at the end of March (Help to Buy, the furlough scheme and the temporary stamp duty holiday) there is a grave risk of further instability. In November 2020 the Office for Budget Responsibility issued a gloomy prognosis suggesting unemployment was likely to double after furlough is withdrawn, and predicting that house prices will fall 8% by the end of next year. This could also result in more house repossessions if customers can't maintain their mortgages, and landlords removing tenants who are struggling to pay their rent.

- A survey of developers released in December 2020 found that 47%, were pessimistic about the next 12 months.
- **The Local Plan in its current form needs revising to take into account the current economic situation, with Covid 19 having a dampening effect on the economy.**

<b>Spatial Strategy for Growth comment</b>	Dacorum's local plan

I am writing to object to the proposed development. I am very concerned about the development plan that has been published and the impact it would have on the parish of Great Gaddesden.

I appreciate that things should continue in lockdown but for something as important and as significant as this should be done when people have the freedom to engage and discuss this issue which will adversely affect so many people. A proposal to increase housing in the borough by 25% on 2000 acres of Green Belt , countryside and urban green space is a major plan which needs to be fully considered by everyone involved . I hope that this is not being pushed through at a time when people can not easily take a stand or get together to voice their opinions.

The proposed development covers almost 18% of the parish and reaches right to the border of the (Area of Natural Beauty) AONB demarcation line. The increase of sound and light pollution will significantly damage the natural beauty of the AONB. Chiltern's area of outstanding natural beauty should not be made vulnerable to this so called 'vision'.

The area is already suffering badly from the creeping urbanisation as littering and fly tipping and traffic have become major problems. Increasing the number of housing, people and traffic will only make the situation worse. The roads and country lanes are not fit to cope with increased traffic and will only lead to more congestion and more accidents on the narrower lanes where there are many cyclists and walkers.

I appreciate that developers are pushing hard but we need to push back even harder and not permit this plan.

We do not need all this housing. I appreciate that Dacorum has fought hard to have the original number lowered and had expected the original number of 922 to be reduced when the algorithm was cancelled but it has actually been increased by the Ministry of Housing and Local Government to an even more unreasonable figure despite clear evidence that the need is actually likely to be substantially lower.

It is vital that the fight to correct this continues and secures a permanent resolution to help protect this parish and this county from irrevocable harm.

The plan talks about 'developing the transport proposals' but currently the area that this plan encompasses does not have any existing infrastructure and can only result in more road traffic on already overcrowded roads. The proposed link road with Junction 8 will compound the environmental issues and cause significant further environmental and real harm to the surroundings.

I strongly object to the proposals and urge Dacorum to continue to resist inappropriate targets, to continue to fight for fairer ones and make clear the problems and issues which this plan will create.

<b>Spatial Strategy for Growth comment</b>	<p>Again the Dacorum Local Plan needs to address sustainability throughout the Borough including the specific circumstances of each Community.</p> <p>I am using Markyate as an example, but the plan needs to be sustainable for each community in a similar way.</p>

Access to services and employment are limited so any increase in the number of houses planned for development in Markyate is not sustainable.

Historically Markyate has always been an industrial village moving from businesses that served the coaching days to those serving the nearby Vauxhall and London Luton airport ancillary businesses. It has had a full range of shops and service businesses too, although there are fewer than in the past. The Dacorum Local Plan fails to acknowledge this and does not show any commitment to the sustaining of our community.

The area is lacking in rainfall; the water supply for Markyate comes from Grafham Water; the River Ver has been over-abstracted and only flows sporadically. Our local sewage works struggles to cope with the existing households waste. We are still subject to more power cuts than many area as our power is taken from the National Grid pylons which cross the village, internet connections can be unreliable – high speed connections are promised but are not yet fully met. I do not think the Dacorum Local Plan addresses the sustainability of Markyate as it is now, let alone providing for any new housing.

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan

in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development

rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	Very little consideration has been put into the environmental impact your proposal will have. As previously mentioned, the chalk beds are already drying up - focus should be put on this issue rather than building more houses to make it worse. The chalk streams provide habitat for some of Britain's rarest species yet Dacorum Borough Council are prepared to sacrifice this to meet government targets instead of saying no! The proposal to build on Green Belt land is insulting. We live in an area of outstanding natural beauty and as soon as you start giving permission to build on such precious land, you open the flood gates to ruin the area in which we live. Green Belt land should only be released in exceptional circumstances - you can meet the required growth need, you just can't meet the growth demand put on you by the government! People live here because it is beautiful! It is good for people's mental health. With regard to the environment, you have not considered sustainability at all - adding a couple of cycle lanes and declaring that this is your vision for a sustainable environment is so short sighted when you are destroying habitats and causing other environmental issues by building too many houses!

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development

rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

The Local Plan envisages the re-classification of 850 hectares of Green Belt land around the Borough to allow for additional housebuilding. This proposal is quite monstrous and unjustified, and will damage the nature of the Borough irreversibly.

Policy SP2 – Spatial Strategy for Growth – proposes a minimum of 16,596 new dwellings – 922 per annum, over the period of the Plan. Central Government undertook a review of the algorithm that determines housing need to ensure consistency with its stated objective of re-balancing growth between southern Britain and the north. In the case of Dacorum, the new figure for housing need following the Government's review, has actually *increased* to 1,023 per annum.

Adopted less than ten years ago, the Core Strategy for Dacorum covering 2013 to 2036 identified a figure for housing growth of 430 per annum – less than half of the growth rate in the current Local Plan. How can the residents of Dacorum have any faith in the housing growth figures they are being consulted on when they are so widely at variance with growth targets established previously? In addition, Dacorum appears to be unwilling to challenge Central Government's housing need numbers on the basis of the National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Areas of Outstanding Natural Beauty.

The prospective high build rate will adversely impact the principal urban centres in the Borough and lead to the unwarranted loss of swathes of Green Belt, including the northern edge of Hemel Hempstead, around Berkhamsted/ Northchurch and Tring, that are designated in the Draft Local Plan as 'Growth Areas'.

With specific reference to Berkhamsted and Northchurch (now apparently re-named “West Berkhamsted” in the Local Plan) 2,200 dwellings are planned [Policy SP2- item 3b] of which around 500 are in Northchurch parish and 1,700 are planned for Berkhamsted. This equates to a substantial 24% increase in the number of dwellings in Berkhamsted/Northchurch over the 18 year period of the Local Plan. The majority of the proposed sites for these new dwellings are currently in the Green Belt at some distance (3 – 4 km) from the town centre and station, at the top of steep valley sides. I question how new developments at this distance (and difference in elevation) from town centre infrastructure can be considered as “sustainable” when so many additional transport trips will inevitably be generated.

The Local Plan at least recognises in Para 23.119 [Page 225] that Berkhamsted currently experiences high level of congestion. It also acknowledges that there are a very limited number of solutions to alleviate this congestion (“*there are few opportunities for new road capacity in the town*”). Increasing congestion will inevitably hamper economic growth, which will itself have a negative impact on the town, leading to a spiral of decline. At the very least it will detrimentally affect the lives of the existing residents of Berkhamsted, and thereby runs counter to the policy aims of the draft Local Plan.

**Spatial Strategy for Growth comment**

Noting the content of paragraphs 5.3 to 5.5 of the Local Plan, the following comments are made in the context that the overall numbers for housing need are not properly evidenced.

The stated intention within the Draft Local Plan to ‘grow’ Hemel Hempstead by “much greater urban intensification” is of concern since, by definition, “intensification” means that buildings will have to increase in height, many more people will be subjected to ‘high rise living’ in more cramped accommodation, with less green space around them – to the detriment of their health and well-being.

In Berkhamsted and Northchurch, and also in Tring, the statement that Dacorum “will not pursue an urban intensification strategy that detracts from the character of these locations” is to be welcomed. However, given the distance at which new housing is proposed from the centre of those towns, it difficult to understand how these can be seen as “*sustainably located close to passenger transport and other services, facilities and employment opportunities*”.

Item 3b in Policy SP2 makes the statement “*Berkhamsted will accommodate at least 2,200 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities*”. This statement is purely an aspiration, it offers no evidence as to how, where or why the additional housing provision will provide the enhancements and new initiatives stated.

With regard to sustainability of employment, the Local Plan does not offer any commitment to improving or extending local employment opportunities within or close to Berkhamsted. I take this to mean that either Dacorum Borough Council envisages Berkhamsted becoming a ‘dormitory’ town for people working elsewhere, or that more people are assumed to be ‘working from home’ in the future.

**Spatial Strategy for Growth comment**

I have noted references throughout the Draft Local Plan that reinforce the strategy behind the distribution of housing allocations in the manner set out. This will result in very substantial additions to both the major settlements of Berkhamsted and Tring with extensive new releases of Green Belt to be designated as ‘growth areas’, with all the implications this has for assumed outline planning permission when it come to developing those sites. However, in the case of both Berkhamsted/ Northchurch or Tring, growth will be neither organic nor ‘sustainable’ – as local employment opportunities at the scale to match resident numbers does not exist and will lead to additional out-commuting.

In my opinion, it would be better to locate new dwellings at scale closer to centres of industry and hence employment. For Dacorum, industry is concentrated in Maylands and the surrounding area.

Noting the proposals for Hemel Hempstead Garden Communities – the land released for Growth Area HH01 ( Phase 1) to be undertaken 2021 -2038 and the Growth Area HH02 (North Hemel - Phase 2) recorded as being released from Green Belt on adoption of *this* Local Plan but safeguarded for development in the next LP period, 2038 – 2050: this area is designated for around 4,000 homes etc.

I am unconvinced that Berkhamsted and Tring should be developed to the extent proposed for 2021-2038: the capacity to absorb the growth of over 24% and 50% respectively in these towns and hence use of the term ‘sustainable development’ is at best questionable in this case. Appending HH01 and HH02 to the existing urban network is likely to prove to be the more ‘sustainable’ solution.

I therefore request the Borough to:

- 1 Reconsider the allocations [which in any case I dispute as being justified - see my response to **Question 7**], and defer the release of BK01 from the 2021 – 2038 plan
- 1 Re phase the implementation of HH02 to bring forward to 2021 – This would bring forward some 4,000 homes which will be better located for employment opportunities within the Borough.

**Spatial Strategy for Growth comment**

I have noted the content of the Topic Paper entitled ‘Development Strategy November 2020’ which describes the history, marshals the data and argues that the dwelling numbers for the Regulation 18 Plan meets the housing needs for the Borough viz 922, or more recently revised to 1,023, dwellings per annum. I dispute that this is the correct method of assessing local “need” as it based on national rather than local criteria and requirements.

The paper includes a comment:

(see attchement)

The following data is drawn from reliable sources i.e. the Office for National Statistics (ONS) and the study commissioned by the 'Districts' Joint Housing Needs Assessment' quoted in the Draft Local Plan.

The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 dwellings per annum (dpa).

The Data shown in Figure 2 Housing Trajectory 2020 – 2038 on page 38 records anticipated completions across the Borough for 2020/21 as **654** and 21/22 as **1,036** . These are well in excess of the Core Strategy and also the numbers projected by ONS.

The numbers set for the Draft Plan have been based on the ONS projections of housing 'need' but manipulated by a formula adopted by central Government (Ministry of Housing, Communities & Local Government) to determine the 'national requirements' :

#### **Dacorum**

#### **ONS projection of Dacorum annual housing growth**

#### **After adjustment by MHCLG algorithm**

#### **After adjustment by MHCLG algorithm**

ONS 2014

730

1023

new standard applied

ONS 2018

355

922 [mutant applied]

497

new standard applied

I object to the adoption by the Borough of the Ministry's numbers which have no credible foundation. A lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

**Spatial Strategy for Growth comment**

(5) Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.

<b>Spatial Strategy for Growth comment</b>	<p>At the top level this plan was devised before the recent government changes to planning guidance and does not seem to have been amended as a result. As part of the 'levelling up agenda' we should be looking at developing more places to live and work in the North of the country rather than further developing the already overcrowded South East. The numbers of houses required do not seem to have been adjusted to reflect this. Secondly it does not take into account changes in lifestyles as a result of the pandemic. It is very likely that more people will be spending at least part of the week working from home in the future, rather than commuting every day, and therefore proposed housing density should be reduced to allow people the space they need. We know that people value garden space more now than in the past, and yet this plan agrees to an increase in permitted housing density. This will result in developers building houses that do not properly meet people's needs. I cannot see how adding to existing towns without improving roads achieves the objective of reducing congestion, (which is already a problem, as acknowledged in the plan), and can only make this worse. Whilst providing employment sites in the borough is admirable, it is highly unlikely that this will reduce congestion, those jobs are just as likely to go to someone who lives outside the borough and needs to commute.</p> <p>We know we are facing a climate crisis, in the UK we have committed to net zero by 2030, and yet there is nothing that I can see in this plan that says that all new housing must meet standards to support this. As a minimum we must have infrastructure to support our climate change goals. Houses must be built to the highest 'green standards' we must have a commitment that no natural gas supplies are provided to these homes, that each has a heat pump and solar panels. Every home should have an electric charging point. This should all be explicitly described in the plan. Cycle lanes to the town centre and station should be provided which are safe and well away from traffic.</p> <p>I note that the plans propose significant building on green belt. The statements say that this can only be done in 'exceptional circumstances;' but that these exceptional circumstances have been established. I cannot see any detail on how these have been established. If green belt is to be built on I would argue that it would make much more sense to build a new town or towns to meet any future housing needs. That way the development is planned properly with all the amenities required for modern living, rather than bolting on to an existing one which was never designed to be so large. This ensures that roads, cycle lanes, train stations, parking and open spaces are adequate by design, that schools are</p>

available providing enough places and doctors surgeries are adequate. In bolting on to an existing town there is inevitable loss of amenity for existing residents as more pressure is put on roads, schools and healthcare and the additional pressure is often not adequately considered .

I do not agree that it is possible to maximise urban capacity in Tring with the number of proposed houses at increased housing density without resulting in an urban intensification strategy that detracts from the character of these locations. This is totally contradictory

<b>Spatial Strategy for Growth comment</b>	The housing number DBC are proposing will lead to a growth strategy in unsustainable locations on Green Belt. The way in which the housing numbers have been calculated is wrong. The Government has clearly stated that the numbers are not targets and that the new houses should only be built on Green Belt in exceptional circumstances. These exceptional circumstances do not exist. The housing numbers should be adjusted according to the constraints of the towns like Tring and Berkhamsted. Most of the proposed sites in Berkhamsted are several kilometres away from the town centre and train station and on a valley side with very steep gradients. The transport infrastructure can not sustain the volume of proposed housing.

<b>Spatial Strategy for Growth comment</b>	Dacorum's Strategy is based out-of-date projections that do not reflect a true picture of housing demand. Since the projections were made in 2014, significant social and economic changes have reduced the need for dwellings in Dacorum. The 2014 Household Projections: England, 2014-2039 Report acknowledges, on page 2, that their projections cannot predict changing circumstances:

“The assumptions underlying national household and population projections are based on demographic trends. They are not forecasts as, for example, they do not attempt to predict the impact of future Government policies, changing economic circumstances or other factors that might influence household growth.”

The Government acknowledges that circumstances have changed since 2014 when these projections were made. The recent Government response to the local housing need proposals states:

“Since we published the consultation, the way that the country lives, works and travels continues to change more rapidly than at any time since the war.”

In 2014 people needed to live near London to commute to work. This has changed. Even before Covid, surveys repeatedly showed that most employees want to work from home at least some of the time and over a third would take a pay cut in exchange. The experience of working at home, during Covid, has given workers and managers a taste of what could be. according to a report.

According to ‘The future of towns and cities post-Covid-19 report’ in January 2021 by the auditing firm KPMG, a permanent shift towards working from home and increased online shopping could cost more than 400,000 retail jobs on England’s high and vacant retail space. Microsoft, Facebook and Twitter have told staff that they will have the option of working from home permanently. On 23 February 2021, HSBC announced its intention to reduce its office space by nearly 40% to capitalise on new part-office-part-homeworking arrangements after the pandemic. As Global Workplace Analytics concludes: “The genie is out of the bottle and it’s not likely to go back in.”

<https://globalworkplaceanalytics.com/work-at-home-after-covid-19-our-forecast>

So, the 2014 projections are out-of-date and far too high. Even by 2016, the Office for National Statistics (ONS) were projecting far less demand for housing in Dacorum. By 2018 their projections had more than halved.

Dacorum’s Sustainable Development Strategy does not comply with the duty to protect the Green Belt under the National Planning Policy Framework (NPPF). It seeks only to protect the Chilterns AONB:

Policy DM27 - “Landscape Character and Chilterns Area of Outstanding Natural Beauty 1. All development shall help conserve, restore or enhance the prevailing quality, character and condition of Dacorum’s natural and historic landscape. 2. Permission for major developments in the Chilterns Area of Outstanding Natural Beauty (AONB) will be refused unless exceptional circumstances prevail as defined by national planning policy”.

Dacorum’s strategy fails to offer the same protection to the Green Belt. The paragraphs dealing with the Green Belt are concerned only with an intention to build on it:

19.7: “We have undertaken a review of the Green Belt and identified those areas on the edge of the main settlements where exceptional circumstances exist to release land for development or where other minor adjustments are necessary”.

“These proposed releases will make a significant contribution to meeting the long term housing and other development needs of the Borough. Green Belt land has been released to enable the delivery of the spatial strategy for Dacorum.”

In contrast, Dacorum's previous strategy (2017) contained principles to protect the Green Belt:

10.2.2 "These cover the need to make the best use of brownfield land to maximise opportunities for urban regeneration".

"National planning policy is also clear that Green Belt boundaries should only be changed in exceptional circumstances. The protection of the Green Belt from inappropriate development is an important national and local principle".

10.2.3 "Another important principle is to ensure that our urban areas do not sprawl into other existing settlements undermining their distinct and separate identities. Likewise, isolated development which has poor connections with local services and facilities should be discouraged. Protecting the character of our town and villages, and that of important landscapes and countryside will also be important considerations, as will using development to help fund and deliver essential new infrastructure".

In Dacorum's new strategy, the "exceptional circumstances" required by the NPPF to build houses on Green Belt seem to consist of little more than, "because we want to build houses".

The Bulbourne is a rare chalk stream: there are only 250 in the world and most are endangered. The river is a sanctuary for all kinds of wildlife and a source of biodiversity. Hertfordshire's State of Nature report 2019 by the Herts & Middx Wildlife Trust explains the importance of the River Bulbourne:

"Hertfordshire has a national and international responsibility for protecting its special chalk rivers, which have a unique ecology due to their clean, mineral-rich water and consistent flows. A high proportion of the world's global numbers of chalk streams can be found in the South-East of England, specifically in Hertfordshire".

The Bulbourne rises at Dudswell, and runs for 10km alongside the Grand Union Canal through Northchurch and Berkhamsted and joins the Gade at Two Waters, Hemel Hempstead. The Bourne Gutter, a winterbourne, periodically rises and joins it at Bourne End.

Chalk streams are beautiful, flowing crystal-clear over a gravel bed and supporting rich ecologies. Rainfall enters the river basin, works through the chalk strata and emerges via springs as crystal clear water. As this process takes months, the river level rises and falls slowly. However, abstractions for public water supply and for the canal have seriously depleted the quantity and quality of water in the Bulbourne. The Environment Agency recently concluded that unsustainable levels of abstraction for public water supply are contributing to low flows:

<https://environment.data.gov.uk/catchment-planning/WaterBody/GB106039029890>

<http://dacenvforum.org.uk/wp-content/uploads/2019/03/DEF-EA-Presentation-21-Feb-2019.pdf>

The wetland features of the River Bulbourne are fragile and threatened by groundwater abstraction for domestic water. Houses in Northchurch, supplied with water pumped from the chalk aquifer, reduce the water available for the river. To avoid further abstraction from the chalk aquifer and further damage to the River Bulbourne, the proposed developments in Northchurch would require a new reservoir and water imported from other areas. These massive and expensive

infrastructure projects would not only take years but would also require additional land which Dacorum's Strategy has not identified.

The proposed new developments will also damage the quality of the water. Impermeable surfaces, such as roads, paths and roofs and carparks, mean that rainwater, rather than seeping through chalk, runs into drains which flow directly into the river causing it to rise and fall rapidly. Silt, rubbish, chemicals and effluent turn the river into a thick layer of dark, polluted silt and cause localised flash flooding.

Dacorum's Strategy has not considered the negative impact of water supply on the River Bulbourne. The proposed developments will cause irreversible harm to the quantity and quality of the water and its fragile wetland ecology.

### 2.3 Dacorum is not obliged to meet these 2014 figures

The Government has made it clear that Councils are not compelled to meet these 2014 figures at the expense of their legal duty to protect the Green Belt and the environment:

"We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places."

Dacorum's strategy conflicts with Government policy because it causes unacceptable harm to the Green Belt and to the River Bulbourne. It is, therefore, flawed and should be revised to meet current housing needs.

#### Spatial Strategy for Growth comment

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs

**Spatial Strategy for Growth comment**

I am conscious that the preparation of the Draft Plan by the Borough's Officers has been a mammoth task over many years. I commend their work which has drafted a coherent Plan that updates the multiplicity of documents that comprise the Policies set out by the Adopted Core Strategy of 2013. However. Much that follows in this response and our replies to the questions posed will be very much at odds with the Draft Plan's intention that the Borough should meet the directive on the 'target' number of dwellings determined by the Ministry of Housing Communities and Local Government.

I am horrified by the Draft Plan 2020 which provides for the excessive increases in the population and number of houses to be built over the Plan period 2020 -2038. I cannot agree to this as the projections by ONS do not support the increase planned for. Adopting the proposals in the Draft Plan results in substantial incursions into the Green Belt, including sites on the edges of Berkhamsted , with adverse impact on parts of the AONB. The impact of Covid 19, will mean that large numbers of shops and office premises will be asking for change of use to residential, this has not been taken into account.

To restate much of our reply to the 2017 Reg18 'consultation', future development of Berkhamsted should be consistent with the Core Strategy [2006 – 2031] adopted as recently as September 2013. The house building rates and the Green Belt releases around the market towns that were suggested in some options (to the 2017 proposals) are a significant departure from existing policies in the Core Strategy. Adopting an option that requires large Green Belt releases around the market towns would mean that the Settlement Hierarchy described in the Core Strategy will have been abandoned notwithstanding what is asserted in the Draft Plan. The Core Strategy must carry significant weight in the development of the Local Plan.

I note the Statement by the Minister of State Robert Jenrick of 16th December 2020 on the recent consultation (Changes to the Planning System Aug 2020) :

“There were many consultation responses which did not fully recognise that the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for housing in an area. It is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It is crucial that planning is more certain and more transparent, so I will explore how I can make this clearer through our longer-term planning reforms, including considering the right name for this approach.

There is widespread support for ensuring enough homes are built across England to ensure the needs of our communities are met. I heard clearly through the consultation that the building of these homes should not come at expense of harming our precious green spaces. I also heard views that this need can be better met in existing urban areas.”

This conflicts with the proposed releases of Green Belt in the Draft Plan to meet the proposed allocation of housing, especially on the edge of the major settlements, across the Borough.

Moreover, in a letter from the Department of Communities and Local Government, dated June 2016, the then Minister of State for Housing and Planning, Brandon Lewis, states that:

“. . . Green Belt boundaries should be adjusted only in exceptional circumstances, through the Local Plan process and with the support of local people.”

**YOU DO NOT HAVE THE SUPPORT OF LOCAL PEOPLE.**

In the same letter the Minister states:

“I have been repeatedly clear that demand for housing alone will not change Green Belt boundaries”.

However, it is very clear from this consultation that the proposed Green Belt releases are driven entirely by the requirement to allow the development of more housing across the Borough.

There are many examples that could be used, but I have limited myself to highlighting just six examples of guidance issued by Central Government that shows the policy on Green Belt protection is clear and unambiguous:

- 1) The NPPF provides protection for Green Belt and the land due to be released around Berkhamsted clearly pass the tests.
- 2) In June 2016, the Minister of State for Housing and Planning wrote a letter to MPs confirming “demand for housing alone will not change Green Belt boundaries”.
- 3) Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.”

4) On December 16th 2020 the Government published a response to the recent white paper consultations. With reference to protected landscapes and Green Belt it states, “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”

5) The same response goes on to state “We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing communities.”

6) It further clarifies “Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.”

DBC’s sole justification for accepting Government’s numbers (922dpa) as a strict target is simply that “Any option below the standard methodology would have to be robustly justified” (paragraph 5.8 of The Development Strategy Background Topic Paper).

Given that Government has made it clear the numbers are NOT targets and Green Belt should be afforded the highest protection, I fail to understand why DBC Planning felt unable or unwilling to make a case that can be “robustly justified”. Indeed, the 2013 Planning Inspector stated in his Core Strategy report, development in Berkhamsted “has to be balanced against the need to protect the town’s historic character and setting”, but the new retrofit Borough Vision fails to reflect any of this.

I note that the urban capacity of Hemel Hempstead has been revisited in light of recent statements from Central Government on the opportunity to increase building heights in suitable locations. I question whether enough weight has been given to the prospective changes to town centres following the COVID19 crisis with many premises likely to be converted to include dwellings.

The current household build rate per annum in Berkhamsted is nearly twice that targeted. At the current rate most of the estimated target capacity will have been deployed by 2020 (11 years ahead of target) while the rest of Dacorum lags behind target. Such disparities within Dacorum must be taken into account when assessing development numbers and site options going forward.

Infrastructure deficits are now evident across the Borough and only the provision of housing on large sites can deliver the necessary supporting infrastructure without detrimentally impacting on existing settlements. Notwithstanding, contributions from Developers’ S106 and CIL will not meet the full cost of investment in local infrastructure: that will require new Government funding without which residents will continue to suffer the adverse effects of infrastructure deficits.

The blanket assumption that large-scale growth makes delivery of infrastructure easier is misplaced – it will depend on the site and the viability. In the Dacorum Strategic Infrastructure Study [Feb. 2011] this is clearly stated:

“By contrast there are certain types of infrastructure that are more sensitive to the location of demand. Ideally, these types of infrastructure should be located close to the population that they are intended to serve as the extent of the area that they serve (in other words their “catchment”) is very local.”

**Spatial Strategy for Growth comment**

I consider the Housing Growth numbers in the Plan is based on flawed assumptions, I note the text in Para 5.3 – 5.5 [P30]

I acknowledge and welcome the statement “... but will not pursue and urban intensification strategy that detracts from the character of these locations.” However there have been many householder planning applications where greater densification has eroded former Character Area guidance, hence becoming the new default.

The proposed release of Green Belt around Berkhamsted cannot be described as being ‘sustainably located close to passenger transport and other services, facilities and employment opportunities’.

Policy SP2 – the strategic thrust of this policy (Spatial Strategy for Growth) is not supported given that it is based on the contentious growth numbers.

Policy SP2 – Spatial Strategy for Growth includes statement in 3 b.

The Adopted Core Strategy (2013-2036) para 6.2.8 identified capacity (not “need”) in Berkhamsted of 600. Only eight years later this statement indicates that Berkhamsted will have an additional 1600 homes imposed upon it.

The Town Centre already suffers from congestion and suspect air quality, viz data for Lower Kings Road shows the level of NO2 in some periods exceed the 40micrograms/cm3 limit, albeit that the annual record does not show exceedances. In many respects at its current size and topography the Town has reached the limits of capacity as evidenced by traffic congestion, shortage of school places at primary and secondary levels, GP and associated services, sports facilities and

in-town open space. I dispute that the substantial increase imposed on the Town will enhance the quality of life for residents current or future.

I welcome the sentiments of SP2. 4

I have qualified support for SP2.5 with its comment on Neighbourhood Plans: additional growth may not be compatible with community aspirations for their locality.

**Spatial Strategy for Growth comment** The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes

A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development

rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council™s inner settlement plans and their assessment of housing needs.

The government website lists that the Green Belt serves 5 purposes:

- 1 To check the unrestricted sprawl of large built-up areas;
- 2 To prevent neighbouring towns merging into one another;
- 3 To assist in safeguarding the countryside from encroachment;
- 4 To preserve the setting and special character of historic towns;
- 5 To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

I believe that the plan (especially within the Tring and Berkhamsted areas) go directly against every one of these points. The Green belt should absolutely not be built on unless it is absolutely necessary and with the information on population growth and need for housing etc, I believe that we do not need to build on it. We should be looking at taller buildings first rather than spreading outwards.

The UK is one of the most nature depleted countries in the world. One in seven native species face extinction and more than half are in decline. Extensive agricultural lands, road networks and extensive building have reduced the wildlife in the uk to a point hardly seen anywhere else. We are simply not doing enough to turn back the tide. According to the RSPB more than 40 million birds have disappeared from the UK's skies since the 1970s. Tring and Berkhamsted is one of the richest bio diverse areas in the country- we have canals, wetlands, ancient hedgerows, chalk grasslands and woodland. These areas are all incredibly important and desirable which is why it is so important to preserve our Green belt land and this is why I do not support this plan.

If the plan deems it absolutely necessary to build on Green belt land then I would support The Green Party in their idea for every acre of Green belt land in Tring that is developed, 2 acres are re-wilded. I think that this is an excellent strategy to increase biodiversity and keep wildlife loss to a minimum. It would also come under the headline of 'providing great places' as a rewilded green space would become a sanctuary for people as well as nature.

Another point to make is that during the pandemic, green spaces have become of great importance to us all. With nowhere else to go people who would not usually go for walks in the country have discovered their local woodlands making these green spaces so important for our mental health and wellbeing. DBC is part of The Chilterns which has a reputation world-wide as being a beautiful part of the world. Tring and Berkhamsted especially fall under that category. To double the size of Tring would seriously damage, if not destroy its reputation as a beautiful, small market town in The Chilterns.

So by developing on this Green belt I would argue that you would not only be destroying habitats for wildlife, biodiversity and green spaces for people, you would also be seriously harming the towns tourism industry. Green belt land must be protected for this reason. Again, I think that this plan needs to be seriously revised after the pandemic. it is not fit for purpose.

Another point to consider on the topic of sustainability is that there is not enough water to supply this amount of houses. It is a fact that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the boroughs chalk rivers which are classified as priority habitats by the Natural Environment and Rural Communities Act 2006. This is completely unacceptable and shows again, that the plan is not fit for purpose.

**Spatial Strategy for Growth comment** Policy SP2 sets out the spatial strategy for Dacorum. For residential development, it makes provision for a minimum of 16,596 homes between 2020 and 2038 which is then distributed as follows:

Hemel Hempstead

- Hemel Hempstead will grow by over 10,600 new homes and will deliver the majority of new employment space. The town will grow to the north by providing a minimum of 1,500 homes with further land to deliver an additional 4,000 homes released from the Green Belt but safeguarded to meet longer term needs

Berkhamsted

- Berkhamsted will accommodate growth of at least 2,200 new homes

#### Tring

- Tring will accommodate growth of at least 2,700 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities
- At the larger villages growth will be apportioned as follows:
  - Bovingdon (240 homes),
  - Kings Langley (275 homes) and
  - Markyate (215 homes).

For Tring which is our main settlement of interest, we consider that this level of development can be accommodated as it is self-contained in that it has all the necessary shops, services and facilities for its residents and it does not depend on Hemel Hempstead or surrounding settlements for education, health, shopping or However the absence of any meaningful growth in the town over the last 15 to 20 years has detrimentally impacted on the vitality and viability of the town. This is set out in the response from the Town Council as set out in the Settlement Profile Paper which sets out a range of points such as the town centre losing retail units, pressure for car parks to be redeveloped for housing and a lack of services and facilities. We consider that a significant boost to the town's population will assist in reviving the vitality and viability of the town.

The draft DLP does recognise that Tring has the potential for additional development and an appropriate level of development will assist in bringing forward new infrastructure such as retail, schools and open spaces for example. To maximise the benefit to the existing services and facilities in the town, sites with a closer proximity to the town centre, such as Waterside Way should be given greater weight in the allocation process.

Overall we support the recognition that Tring will deliver at least 16.3% of the total requirement. As we will establish in our representation to Policy SP4, there should be an increase in the overall requirement for Dacorum of 1,818 dwellings. On a pro-rata basis that would equate to at least 300 further dwellings to be allocated at Tring. Waterside Way is a site that can meet that additional need.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.</p> <p>Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.</p> <p>The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note</p>

that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	there is no mention in the strategy on how the plans with cope with the extra strain on water supply and waste management. Currently we draw a vast amount of water from out chalk aquifer, and drawing more would have a huge impact on our

local environment, potentially threatening our local chalk streams and rivers, which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. Climate Change Committee Sixth carbon budget report Dec 2020 contained a set of recommendations for Local authorities to consider in helping them meet their Climate Emergency objectives. There is no evidence in the proposed plan on how these recommendations have been considered. The plan as proposed would place an unacceptable burden on services, facilities and other infrastructure in Dacorum, and has not been justified when set against national planning policies and the major constraints that exist in the borough. For instance: clogged traffic in town centres and on the major roads in the borough including the A414 and the A41; insufficient cycling lanes throughout the borough; narrow or non-existent pedestrian pavements in many of the built-up areas; insufficient capacity of the local healthcare system with the nearest acute care in Watford, Buckinghamshire or Bedfordshire.

The number of proposed houses within the development were developed by an algorithm rather than guided by actual requirements. The latest projections from the Office of National Statistics says that 355 dwellings per year are required for Dacorum, but the development plan is putting forward 922 developments or possibly over 1000 developments per year depending on the algorithm of choice at the time. The National Planning Policy Framework expects local authorities to use the latest available information and therefore this should result in housing need calculation that is less than half of that currently proposed in this plan.

**Spatial Strategy for Growth comment**

The proposal is to build principally at low density on sites taken Green Belt. The sites will cover large areas of land that are far from town centres, high streets and public transport hubs - for example the sites around Tring and Berkamsted; and the extension of Hemel Hemstead enveloping Picotts End and reaching Water End. This virtually guarantees that the occupants of the new homes will need to make car journeys for most excursions - eg for shopping, to get to work,

to get to pubs, clubs and restaurants. The Plan fails to factor this in. This in turn undermines the claims made in the Plan regarding sustainability.

It would be far more sustainable to develop brownfield sites with high density housing in or near town centres. Very few such sites are included in the Plan.

I totally support the One Voice alliance in standing against the Draft Local Plan as per the following message:

*"We the Chiltern Society, Chiltern Countryside Group, Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens and Tring in Transition as the 'One Voice' alliance, oppose the 'Dacorum Local Plan - Emerging Strategy for Growth' because:*

- 1 *Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of **how** Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction*
- 2 *The proposed number of houses to be built should be significantly lower than the target to reflect **actual demonstrable need** for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes*
- 3 *A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and **away from areas located in the Green Belt** (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.*

*While not members of the Alliance, the Chilterns Conservation Board and CPRE Hertfordshire are working closely as advisors to the One Voice alliance."*

The plan must ensure adequate Social Housing, which is net zero in operation, as defined in my answer to question 1.

The plan must allow for an increase in electrically powered transport and roads must be designed to encourage walking and cycling.

<b>Spatial Strategy for Growth comment</b>	<p>(5) Spatial Strategy for Growth sets out the number of homes to be built and where to be located – excluding windfalls, 64% will be on Green Belt (77% on Greenfield), including 2200 at Berkhamsted of which 80% will be on new Green Belt releases. DBC has incorrectly taken the housing numbers from Governments Standard Methodology as a strict housing target (plenty of examples where Gov state it is not a target) and leads to a growth strategy at unsustainable locations at the cost of swathes of Green Belt.</p> <p>In simple terms, the facilities we currently have at Cow Lane, Tring are too small and the funds and land available to facilitate any expansion are extremely limited. The playing and support base is largely drawn from Tring, Berkhamsted and surrounding villages but also further afield. The increase in housing and population proposed would actually be detrimental to the rugby club as we simply couldn't manage with the additional demand from the expanded population and would alienate the elements of the community we would have to turn away. The clubhouse, pitches and parking are too limited to enable expansion. While we would welcome an opportunity to cater for more players and supporters the land and facilities in their current form cannot cope.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust.</p> <p>Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement</p>

against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council’s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>The Plan does not achieve the objective it sets itself because growth will be accommodated 3-4km from the town centres. These, by definition are located at a distance away from “passenger transport and other services, facilities and employment opportunities”. Paragraph 19.6 of the Plan does say “In Dacorum, we consider that there is a combination of factors that exist that together constitute the exceptional circumstances that require us to amend the Green Belt boundaries.’ But, beyond that statement there is absolutely no justification offered, except the Government ‘target’ that isn’t actually a ‘target’.</p> <p>Indeed 19.7 also specifically states DBC have “identified those areas on the edge of the main settlements where exceptional circumstances exist”, thus inferring that exceptional circumstance exist for the settlements protected by the specific Green Belt releases. These “exceptional circumstances” are certainly not evidenced.</p> <p>BRAG have demonstrated that DCB is building a massive oversupply of housing compared to ONS estimates. Why? What is the justification?</p> <p>DCB have underestimated the number of windfall developments by 56% this despite the likely impact of change of use as a result of different working patterns following on from the pandemic. The cost is 850 hectares of irreplaceable Green Belt land. It’s almost as though the Council <b>want</b> to join up all the towns in a ribbon development to deprive them of their individual identities and their countryside.</p> <p>As BRAG states :</p> <p>“Statement 2 in SP2 starts “The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring”. BRAG is concerned about this wording as in its current form it suggests that ‘investment’ will be focused on Hemel Hempstead and that investment will be supported by the growth at Berkhamsted and Tring. Certainly, historically infrastructure investment in Berkhamsted has not matched housing growth, while the majority of funds raised through s106 from developers compensating for the failure to build affordable housing and the Community Infrastructure Levy (CIL) payments have gone into Dacorum’s coffers for funding investment elsewhere. With much higher CIL payments in Berkhamsted than elsewhere in Dacorum, it is easy to see the fiscal attraction of promoting development in Berkhamsted, but if that is a driver then it is wrong.” It’s also unjust.</p>

Other key points:

23.119 accepts that “congestion as a key challenge in Berkhamsted resulting in constrained roads, difficulties with bus movements, and limited cycling infrastructure.

The new developments in Berkhamsted and Tring are so far from transport of other amenities that they cannot be justified sustainably, walking and cycling are not solutions.

The numbers proposed by DBC as a whole across the Borough are flawed. It worries me that the Plan has a target of ‘at least 2,200 new homes’ for Berkhamsted and Northchurch. The adopted Core Strategy identified growth of 1,180 homes over that plan’s 25-year lifespan, which equates to 47.2dpa. In reality, Berkhamsted has contributed to the Dacorum’s new housing stock at a rate of 61.9dpa – in other words completions have out-performed the target by 31.2% in Berkhamsted **while new housing stock in Hemel Hempstead has fallen behind the town’s target by 9.3%**. Much of this can be explained by developers’ demand to build in Berkhamsted rather than satisfying need, i.e. Berkhamsted growth is becoming developer led rather than planning led and this Draft Local Plan as proposed is facilitating that process. Another injustice. Besides which, if the housing was affordable then there would not be so much pressure to build in Berkhamsted. Developers are building not for the people who live here but from people moving in from outside the area. This represents a failure to implement the existing Plan and meet existing needs of people living in the area.

Development on Green Belt sites was agreed by ministers to be restricted unless in 'exceptional circumstances' yet the council has made no effort to justify the proposed development.

The increased demand on water supply would have a severe effect on the local chalk streams with new water sources unlikely to be available until long after development has begun.

The towns infrastructure for wastewater and sewage would need major upgrade at a huge disruption to the area and great expense.

<b>Spatial Strategy for Growth comment</b>	<p>The draft Plan does not recognise that patterns of employment in the Borough are likely to change as a result of the Covid-19 pandemic. These may include more home working, less office use and a reduction in commuting to London. The Plan also fails to address the Glover Review, which proposes to make the local Area of Outstanding Natural Beauty (AONB) into the Chilterns National Park and contains proposals that may damage the AONB.</p> <p>The Plan also fails to recognise the topographical constraints that place limits on Berkhamsted's capacity to absorb further development. The substantial increase in the size of the town that is envisaged will do nothing to enhance the quality of life for present or future residents. There is also no commitment to preserve or improve local employment opportunities in or in the vicinity of Berkhamsted.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly dispute the scale of the target for housing in Dacorum raised within this Local Plan - a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period. I believe there is enough non-green belt land identified within the Dacorum Local Plan to provide 5,950 houses.</p>

I agree with the plan's approach to prioritise housing growth in Hemel Hempstead - a 23% growth (10,600 houses) in housing, it is clear that this facilitates the ability to make the most efficient use of brownfield land, local services to facilitate housing growth whilst minimising any potential impacts upon the Green Belt.

The new local plan vision provides for a substantially disproportionate growth strategy for housing within Tring (55% growth) that fails to acknowledge the contribution that Bovingdon, Kings Langley and Markyate should provide towards the Local Plan period - only a 13% growth in housing in these settlements.

I strongly object to the proposal that Tring is required to " play a much greater role in delivering housing growth " within the borough - a 55% growth (2,700 houses) in housing in Tring. As a result of this Council growth proposal for Tring, there is a disproportionate Green Belt allocation required to build the houses than there would be if the housing growth was shared more proportionately across all settlements i.e. 23% growth in Hemel Hempstead with the remaining growth shared equally between the remaining settlements.

Whilst I accept that the aspirations for existing and new residents and visitors should be met, this should not come at the direct expense of substantial and unjustified housing growth that substantially impacts upon the openness of the Green Belt and the Area of Outstanding Natural Beauty.

I strongly object to your claim that your vision of Tring has " delivered a comprehensively planned new neighbourhood to the east of the town in a way that takes account of sensitive views, landscape or protected environmental sites. " This Local Plan draft has failed to bring forward exceptional circumstances so as to justify what is a significant intrusion into the open Green Belt to the East of Tring.

Any new planned development to the east of town would by way of its introduction fail to take account of the sensitive views, landscape and protected environmental sites that is sought to be addressed by way of the vision . Such is the sensitivity of the land in question that any change to its use, particularly that associated with the introduction of built infrastructure would cause unquestionable damage to the Green Belt and the Area of Outstanding Natural Beauty for which there has been no evidence for its justification and no evidence to identify that it can be sufficiently mitigated.

I welcome the requirement to provide a mix of market and affordable housing together with new community facilities and economic growth within the area. I believe that such delivery can be delivered proportionally and reasonably within the existing settlement boundaries associated with Tring and other settlements and that the opportunities in this regard have not been sufficiently examined .

The requirement for two primary schools and a secondary school is a by-product of the substantial housing growth proposed to be allocated within the Local Plan that I strongly object to. Such wide scale growth to Tring has not been sufficiently justified and as such the requirement for two further primary schools and a secondary school are as a by-product and therefore likely to be unnecessary.

The delivery of open space and sports and leisure facilities should be encouraged, however such facilities and open space should not be delivered at the expense of the loss of widespread open countryside and land which contributes to the Area of Outstanding Natural Beauty given that such a loss would be substantial and would defeat the purpose of seeking to secure new open space and leisure facilities for the health and wellbeing of local people. Consideration should be given to the opportunity to deliver new open space and sports and leisure facilities in their own right instead of such facilities being packaged into a wider growth strategy that includes an inappropriate provision of housing growth.

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August

2020) prepared in this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside

of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

- Policy SP2 (Spatial Strategy for Growth) seeks to direct new development towards the Borough's most sustainable settlements and is therefore supported insofar as Berkhamsted is recognised in Policy SP2 and Policy SP3 (Settlement Hierarchy) as one of the Borough's most sustainable towns, being the second largest settlement area in Dacorum, and where significant new growth is to be directed in the next plan period (2020 – 2038).

<b>Spatial Strategy for Growth comment</b>	ICPAM has a proven track record of delivering high quality schemes in sustainable locations throughout the UK, with a history of working in partnership with Local Authorities ('LAs'. Having reviewed the Local Plan and Evidence Base, they have identified a number of reasons why the Local Plan is unsound as currently drafted. Should the Local Plan progress

to the Regulation 19 Stage and be submitted in its current form, there is every chance that the Local Plan may not even reach examination due to the significance of the issues we have highlighted.

The Plan is not justified, as it is not the most appropriate strategy based upon the evidence base.

These representations request that the Council undertake the following:

- Review the Local Plan and Evidence Base and give greater consideration and prioritisation to the reuse of previously developed land;
- Revise the Vision to reflect the pressing needs for older person and care accommodation in the Borough and in turn the important role these play in freeing up housing supply elsewhere in the Borough;

Recognise the important economic role that care homes provide.

The Basis for the Strategy

8. KL&DRA notes the conclusions of the South West Hertfordshire Local Housing Needs Assessment (August 2020) and the calculation of the housing need for Dacorum Borough Council. The total number of 16,500 dwellings for the plan period; at 922 dwellings per annum, shows a marked increase in the rate of dwelling increase compared to the adopted Local Plan. The numbers are underpinned by the Government requirement, set out in National Planning Practice Guidance (NPPG), to forecast housing needs based on a standard methodology using 2014-based projections of population and households.

9. It is understood that the Government intends to review the standard forecasting methodology as part of the delivery of the proposals in the Planning White Paper. In the meantime, local planning authorities are required to use outdated

2014-based projections for the forecasts of housing needs. There has been widespread criticism of this Government Directive. In 2016, the responsibility for the production of the bi-annual forecasts of population and household formation passed from the Ministry of Communities, Housing and Local Government (MCHLG) to the Office for National Statistics (ONS). Using a more updated statistical base, the ONS has published successive forecasts, 2016-based and 2018-based, which are 'much lower than the previous forecasts produced by MCHLG.

10. It is clear that the most recent ONS 2018-based forecasts indicate that there has been a "meaningful change" in the factors which contribute to the calculations, which have led to a reduction in housing needs figures. A recent study by the Hertfordshire Branch of the Campaign to Protect Rural England (CPREH) compared alternative ways of-projecting housing need in the county, using the Government's standard methodology. For Dacorum, the annual housing need using the current standard methodology and the 2014-based

- projections showed an annual rate of housing need for 2020-2036 of 1,022 dwellings per annum. By contrast, using the standard methodology and the ONS 2018-based projections, the rate reduced to 536 dwellings per annum.

11. There are a number of reasons for this fundamental trend, which is common to all local authorities in Hertfordshire. The main cause is a lowering of migration rates into the county,

- both internal and international, plus an excess of deaths over births, with an ageing population profile. Based on the evidence, KL&DRA anticipates that these changes will continue into the future, and will be heightened by the effects of Brexit and the fall-out from the COVID-19 pandemic. In the Housing Topic Paper, at paragraph 6.30, the Borough Council states that it will keep the housing need figure under review. This intention is welcomed, but 'in view of the dramatic reduction in the demographic starting point for projection by 50%, KL&DRA recommends that a fundamental review is required urgently, before the final Regulation 19 draft of the Local Plan is published.

<b>Spatial Strategy for Growth comment</b>	<p>The Spatial Strategy for Growth (Section 5, p.30) follows the Sustainable Development Strategy. Whilst ICPAM generally agrees with the Strategy, they consider that there should be an additional bullet point which prioritises the use of previously developed land in non-urban areas wherever possible over greenfield land. The NPPF is clear at para 138, in that where it is necessary to release Green Belt land, plans should give first consideration to land which has been previously-developed <b>and/or</b> is well-served by public transport (emphasis added).</p> <p>Thus, previously developed land in the Green Belt should be prioritised over and above land that is not previously developed. Whether that previously developed land is well-served by public transport is not a pre- requisite for prioritisation; instead it is a factor that should be weighed in the balance against other considerations as part of the wider considerations for allocating (or not) land.</p>

<b>Spatial Strategy for Growth comment</b>	<p>Draft Policy SP2 (Spatial Strategy for Growth) states that the Local Plan will make provision for a minimum of '16,596 homes' during the Plan period between 2020 and 2038. The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring, and then the large villages, including Markyate.</p> <p>We are broadly supportive of draft Policy SP2 and welcome the minimum targets identified which should enable greater levels of growth to be achieved, through being adaptive to change. This potential flexibility is a crucial factor in the current and foreseeable climate. We believe that the large village of Markyate, which is designated to deliver 215 homes through the plan period, can appropriately deliver a higher number. This is in part because of the existing support services and facilities available and the existence of appropriate sites for development.</p> <p>However, there is an overall lack of emphasis in the draft policy in respect of the importance of the contribution to be made by brownfield sites/previously development land (PDL) which should form the first priority in identifying appropriate development opportunities. In this respect, Paragraph 117 of the National Planning Policy Framework (February 2019) states that:</p> <p>“Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or ‘brownfield’ land.”</p> <p>Thus, clearly highlighting that brownfield sites should be set out in the development strategy and given preferential treatment to enable the delivery of such land, rather than utilising greenfield sites for development.</p>

**Spatial Strategy for Growth comment**

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in

planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would

have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

Our client supports the Council's Spatial Strategy for Growth (Policy SP2) with the emphasis on the delivery of sustainable development through utilising urban land, as well as extensions to sustainable settlements such as Berkhamsted. Our client therefore supports the Council's approach to sustainable development set out under Policy SP1 and consider it to be consistent with paragraphs 11-16 of the NPPF.

Our client does however question the scale of growth at Hemel Hempstead (10,600 new homes) which is dependent on significant infrastructure works which could be delayed and therefore affect delivery. DBC should build suitable contingency into their Local Plan in the interests of delivering housing to satisfy its OAN, as a minimum and therefore ensuring it has been positively prepared in accordance with paragraph 35(a) of the NPPF.

Our client welcomes the identified growth at Berkhamsted for at least 2,200 new homes and enhancements to the town centre to strengthen its market town function. However, this level of growth is low and CBRE argue Berkhamsted can accommodate further growth due to its sustainable location and key market town status.

In reference of the proposed release of Green Belt land on the southern fringes of Berkhamsted, the Council should prioritise the effective use of urban sites and reuse of brownfield land before concluding exceptional circumstance exist to release Green Belt sites in accordance with paragraph 137 of the NPPF. The Council should look at identifying further sustainably located, brownfield sites on the urban area of Berkhamsted to deliver new homes, including Land at 168-192 High Street, Berkhamsted which is suitable for circa 80 new apartments, including either as new market and affordable homes as part of a residential-led mixed use development or 80 new age-restricted apartments for older persons as part of a managed later-living scheme.

Given the profile of Dacorum Borough, the proposed scale of growth required and the Council's obligation to meets its housing requirements, it is accepted that there needs to be some Green Belt release in appropriate locations, however the proposed Green Belt release to the south of the existing settlement boundary of Berkhamsted is not deemed suitable in the interests of sustainable development and crucially, preserving openness in accordance with paragraph 133 of the NPPF.

In response to the Council's Spatial Strategy for Growth (Policy SP2), our client welcomes the identified growth at Berkhamsted, including the provision of at least 2,200 new homes and enhancements to the town centre to strengthen its market town function. However, additional housing growth can be accommodated at Land at 168-192 High Street, Berkhamsted which is suitable for circa 80 new apartments, either as new market and affordable homes as part of a residential-led mixed use

development or 80 new age-restricted apartments for older persons as part of a managed later-living scheme.

The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August 2020) prepared in this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p>

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Heme! Hempstead.

The housing needs delivery strategy was that Heme! Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

The total number of new homes proposed by the Strategy during the plan period is 16,596. Most are proposed to be built on 850 hectares of Green Belt, countryside and urban green spaces, requiring the release of 746 hectares of Green Belt, much of it adjoining the Chilterns Area of Outstanding Beauty. This would cause irreparable harm to the environment and biodiversity of the Borough area. The population would grow by nearly 30%, and much more in Tring, where a 60% increase is proposed. The impact on town centres, infrastructure, pollution, roads, schools, medical services and quality of life for existing residents would be totally unacceptable. Water could be in short supply during drought periods well before the end of the plan period. None of this self-assessed level of growth is justified by national government policy, which allows constraints like Green Belt and protected landscapes to influence housing growth.

Paragraph 1.3 in the introduction states that Dacorum Borough Council 'is having to accommodate a significant increase in development'. Paragraph 1.10 states 'We have known for some time that the level of growth we need to plan for will be significantly higher than before (up from 430 dpa in the Core Strategy) and whilst the final figure from the Government may be adjusted again we expect this to remain a substantial number'.

Paragraph 2.3 in the Vision and Strategic Objectives states 'One of the major challenges for the Borough is delivering a step change in the level of housing growth as required by the Government'.

These statements are all misleading and need to be substantially revised, not least following the announcement made by the Ministry of Housing, Communities and Local Government on 16th December 2020, titled *Government response to the local housing need proposals in 'Changes to the current planning system'*. This included the following text:

- We heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such
- We can plan for well designed, beautiful homes, with access to the right infrastructure in the places where people need and want to live while also protecting the environment and green spaces communities most
- If we do this well, we can achieve all this whilst giving a new generation the chance to access the homes they It would be wrong for our built environment to respond only to the needs of older, wealthier people.
- We can and must strive to build more homes, but to do so with sensitivity and care for the environment, heritage and the character of existing
- Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is

- It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt.
- It is for local authorities to determine precisely how many homes to plan for and where those homes (are) most appropriately located. In doing this they should take into account their local circumstances and

When announcing this consultation outcome to Parliament, the Secretary of State Robert Jenrick added:

- We heard clearly through the consultation that the building of these homes should not come at (the) expense of harming our precious green spaces. We also heard views that this need can be better met in existing urban
- There are good reasons for this. First, our urban centres are the best-served by existing infrastructure – with schools, shops and medical
- Second, building more homes in our cities and urban centres will mean making the best use of brownfield land, of which many cities and urban centres continue to have large quantities, and protecting our countryside as much as possible.
- Third, building homes around our transport hubs will help us to deliver our ambition to tackle climate change by offering greater access to more sustainable forms of transport and reducing unnecessary
- In the months since we consulted, the profound impact of COVID-19 on our towns and cities has become even clearer. It has magnified and accelerated patterns that already existed and while it is too soon to know for certain the scale of the long-term impact, it is very likely to present a generational challenge and opportunity to repurpose more commercial centres, offices and retail spaces into housing and mixed

Paragraph 11b(i) of the NPPF states: the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area. Footnote (6) lists these assets, which include Sites of Special Scientific Interest, Green Belt, Local Green Space and Areas of Outstanding Natural Beauty. Thus the proposals in the Strategy do not accord with the NPPF.

- 1 HOU
- 2 OBJ - HOUS

The Strategy is rightly concerned to achieve a significant increase in affordable housing to meet the needs of the Borough. This should include housing designed to accommodate the 60% increase in the 65 and older age group expected in the Borough in the next 20 years. Heavy reliance on market housing development in the Green Belt is unlikely to deliver the affordable housing needed. A recently published report from CPRE the countryside charity (Countryside next door: State

of the Green Belt 2021, February 2021) found that only 10% of homes in developments planned in the Green Belt between 2015 and 2020 were considered to be affordable.

**Spatial Strategy for Growth comment**

Para 5.2 on page 30 of the Strategy states that a key principle behind the Strategy will include:

- Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected

This is contrary to national policy, the Strategy's own policies, and both the Chilterns Conservation Board (CCB) Management Plan 2019-24 and its Position Statement *Development Affecting the Setting of the Chilterns AONB* (2011, revised 2014). **There should be no such impact.**

Policy DM27 of the Strategy states: 'All development shall help conserve, restore or enhance the prevailing quality, character and condition of Dacorum's natural and historic landscape'.

It goes on to state: 'Planning permission for any proposal within the AONB, or affecting the setting of the AONB, will only be granted when it:

- 1 conserves and enhances the Chilterns AONB's special qualities, distinctive character, tranquillity and remoteness in accordance with national planning policy and the overall purpose of the

AONB designation'.

<b>Spatial Strategy for Growth comment</b>	<p>The CCB Management Plan must be taken into account by Local Planning Authorities when developing local plans within or affecting the AONB and it may be a material consideration when considering planning applications. The 2019-24 Management Plan states:</p> <p>‘A development outside the AONB boundary can cause harm to the AONB, even if it is some distance away. The local authority’s legal duty towards the AONB applies when a proposal affects land in the AONB, regardless of where that effect originates (inside or outside the AONB). We have produced special advice in a Position Statement on Development Affecting the Setting of the Chilterns AONB. The setting of the AONB is not a geographic zone that can be mapped, nor does it cover a set distance from the AONB boundary.’</p> <p>Specific points in the Position Statement include:</p> <p>Views out of the AONB and into its surrounding areas can be very significant. Development proposals that affect views into and out of the AONB need to be carefully assessed, particularly in line with the National Planning Policy Framework and National Planning Practice Guidance, to ensure that they conserve and enhance the natural beauty and landscape character of the AONB. This applies to views of the AONB from outside of it and views out of the AONB, in both cases particularly from public viewpoints or rights of way.</p>

Other impacts mentioned in the Position Statement include:

- The visual intrusion caused by the introduction of new transport corridors, in particular roads and railways;
- Loss of tranquillity through the introduction of lighting, noise, or traffic movement;
- Introduction of significant or abrupt changes to landscape character particularly where they are originally of a similar character to the AONB;
- Change of use of land that is of sufficient scale to cause harm to landscape character;
- Loss of biodiversity, particularly in connection with those habitats or species of importance in the AONB;
- Loss of features of historic interest, particularly if these are contiguous with the AONB;
- Reduction in public access and detrimental impacts on the character and appearance of rural roads and lanes;
- Increase in air or water
- Adverse impacts might not be visual. The special qualities of the Chilterns AONB include A development which is noisy may well impact adversely on tranquillity even if not visible from the AONB.

**Spatial Strategy for Growth comment**

- The 'sustainable development strategy' isn't a sustainable development strategy at all, it's a house building strategy or development strategy. A 'sustainable development strategy' is a bit of an oxymorn, as development isn't necessarily sustainable. The level and rate of construction (aka development of the build enviroment) is actually causes a significant proportion of our carbon emissions so is currently incompatable with zero carbon. There is significant evidence that reaching zero carbon requires a significant reduction is the amount of construction activity as it is very difficult to decarbonise steel, concrete, bricks and other building

Evidence:

<http://withbotheyesopen.com> <https://ukfires.org/absolute-zero/>

What the Borough needs is a “sustainability strategy” which sit above all other strategy, and determines the overall direction of travel. Then the “Local Plan” can outline what land use change, retrofit of existing buildings, and new buildings is needed to achieve zero carbon and wider sustainability. Development must be constrained by sustainability, or using the word ‘sustainability’ is pointless, and misleading.

- It is made abundantly clear that the ‘sustainable development strategy’ is really a ‘house building strategy’ by the fact that all of the rest of the detail about it is all about building housing. This local plans is so dysfunctional and confused as a set of documents that it isn't in a fit state for the public to How can this country call itself a democracy and this exercise call itself a ‘consultation’ if the basic step of honestly and clearly communicating what the current proposed are and why they've come about doesn't happen.
- What is need is a sustainability strategy which is about how the borough can get to zero carbon, restore and enhance biodiversity, and improve sustainability in terms of material use and pollutions. This would then be primarily about retrofitting existing buildings, land use change including changing agricultural practice, planting woodland, restoring habitat, urban green infrastructure...
- Clearly the government arbitrary house building plans are in the interest of the borough so the borough should be telling them so, and refusing to implement them. Yes there is some housing building needs in the area, but these are mostly little bits of small cheap terraced housing for young people currently price out of the area, selfbuilt plots for all those who've been on waiting lists for ever and rural works unable to live near whether they work.

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.</p> <p>This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.</p> <p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.</p> <p>The high levels of air pollution and the continuing lack of clean drinking water in this area have not been considered with increased breathing related illness, asthma etc, this area needs conservation not concrete.</p> <p>The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.</p>

<b>Spatial Strategy for Growth comment</b>	<p>The emerging Local Plan growth strategy focuses housing delivery in the main settlement of Hemel Hempstead, the market towns and suggests a modest uplift in larger villages inset in the Green Belt. The consultation document notes that some windfall development is expected in villages in rural areas and within the Green Belt.</p> <p>A more proportional growth strategy can be established by allocating a moderate level of housing development in smaller villages, commensurate to their: size (population and number of dwellings); services; environmental constraints; and degree to which development would preserve the local character and function of the village. This approach would also further reinforce the NPPF's aspiration to provide a "variety of land to come forward where it is needed" (paragraph 59). The spatial distribution is based on the 2017 settlement hierarchy assumptions which were developed to inform the then Core Strategy review process. Since then, the housing need methodology has been updated increasing the housing targets for DBC. Additional opportunities for development must therefore be explored. This presents an opportunity to re-evaluate the settlement hierarchy used to support the current spatial growth distribution and identify where growth is needed in small villages for these to remain sustainable.</p> <p>The emerging growth strategy allocates a number of small to medium sized strategic and non- strategic sites for housing development, particularly in the earlier years of the plan period. This is said to provide further flexibility and to reduce reliance on larger Growth Areas and strategic allocations.</p> <p>Nonetheless, the consultation document acknowledges the sudden short-term housing market uncertainties caused by the COVID-19 pandemic and challenges caused by the significant increase in housing needs compared to past requirements. On that basis, flexibility awarded by smaller housing developments may need to be available throughout the plan period to ensure a steady delivery of housing.</p> <p>Further growth in the villages can help to strengthen the emerging plan's ambition for further resilience in response to COVID-19 including creating better digitally connected places to help businesses and communities respond to these changes. Such infrastructure improvements may be facilitated by further enabling housing growth, through financial or physical contributions.</p> <p>We believe that a more robust long-term approach must be applied to the borough's growth strategy and further consider the challenges caused by the revised local housing needs and changing ways of working as a result of the pandemic. The consultation document seeks to significantly boost the Council's housing supply, in particular increase the number of new and genuinely affordable homes in the Borough and provide growth in the villages that reflects their role and</p>

character. However, this aspiration arguably does not extend fully to villages washed over by the Green Belt which have been prematurely sieved out as sustainable locations for growth purely as a result of their Green Belt status and site selection method.

DBC seeks to accommodate growth that supports the long-term function of the towns and villages. The emerging plan also acknowledges that all the growth cannot be accommodated within the urban areas, “so despite our approach to increasing densities and heights, we do need to release land in the Green Belt.” We would take this a step further and ask that DBC consider the larger rural villages such as Flamstead.

The spatial strategy, as proposed, avoids directing significant development to the villages on the basis that these areas are the least sustainable locations, more sensitive to change and with poor access and public transport infrastructure. However, these conclusions are not all applicable to Flamstead.

The village benefits from a direct access onto the M1, connecting to Hemel Hempstead and Luton, and public transport access to the nearby village of Markyate for further services. A more proportional growth distribution could be utilised to reflect the additional requirement of 1,818 homes over the plan period. This is explored in more detail in the following section.

Only accurate level of need can be used to weigh up against the constraints and risk assessment of using Green Belt. Aside from Hemel Hempstead, which provides the majority of housing supply, the housing delivery strategy across Tring, Berkhamsted, Bovingdon, Kings Langley and Markyate was to be equally split, however the latter three settlements have been discounted because of constraints on infrastructure. What is the assessment of compounded impact for the proposed allocation across Tring?

SP2 seeking to protect existing office and retail space has not had a chance to consider current market conditions and changes to working practice (still emerging), and the ongoing likelihood of opportunity to convert office and retail space to residential units.

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ("Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

**Spatial Strategy for  
Growth comment**

We are writing to submit our response to the Local Plan. We welcome the opportunity to contribute to this consultation and hope that you listen to our response and to that of other respondents, and look forward to seeing the revised Local Plan once all points raised are properly addressed.

The Local Plan is clearly not fit for purpose for many reasons, with two being foremost:

- 1 The increased housing numbers are based on outdated information, which leads to an unacceptable and irreversible impact on our natural heritage. The Local Plan must be re-drawn based on more recent information and with more respect for the Green Belt, Chilterns Area of Outstanding Natural Beauty (AONB) and the Chilterns Beechwoods Special Area of Conservation (SAC).
  
- 1 The Local Plan must define the practical steps necessary to meet the DBC declaration of a climate emergency, and lay out how DBC will contribute to the UK meeting our international legal commitments to reducing emissions. At present, the Local Plan admits to the options being put forward having a negative impact on climate targets, which is the opposite of what is legally and morally

The revised Local Plan must be based on evidence that is itself subject to public scrutiny. The current plan relies on aspirational growth strategies<sup>1</sup> and has led to a bias in the plans which must be addressed.

We would also like to draw your attention to the proposals for the Berkhamsted Civic Centre as put forward by B-Hive. The Civic Centre has been recognised as an Asset of Community Value, and we hope that you recognise that it is not merely an asset for DBC to extract revenue. The proposals outline how more value can be derived from the area for the community and economy.

We would like to thank you again for the opportunity to respond to this consultation. We look forward to DBC taking account of all the points raised, and would like to offer our help in forming your response to your declaration of a climate emergency in order to inform the revised Local Plan.

Yours faithfully

John Bell, Emma Norrington, Dan Parry, Wendy Conian, Emma Sherrington, Claire Mistry, Bridget Wilkins Transition Town Berkhamsted Steering Group

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure or 16.596 homes or the basis of its calculation can be relied upon to be robust. Subsequently the policy requirement to deliver 2.700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (" Changes in the Current Planning System" of August 2020) prepared In this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use or guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of ' need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and</p>

infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment or brownfield sites or by way of consideration of Increasing density of available sites. Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to iustify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

/

The target is broken down to 922 homes P.er annum, which the Council consider has been derived from the Ministry of Housing,

Communities and Local Government advice justified by the White Paper (" Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional

intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Herner Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate • this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council' s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>As detailed in Sections 2 and 3 of Savills' Planning Document (February 2021), the draft Plan also identifies housing needs on the basis of the draft new Standard Methodology (SM2). However, the Government has since confirmed it does not intend to proceed with SM2 and instead, published a reformed standard methodology (SM1.1). For DBC, this essentially reverts back to the SM1 approach.</p> <p>On this basis, the housing need figure needs to be amended to reflect SM1.1 which accords with the needs identified in the South West Herts Local Housing Needs Assessment ('LHNA') (September 2020) and appropriately plan for 1,023 homes per annum (18,414 homes over the plan period) rather than 922 per annum (and 16,596 homes over the plan period) as drafted at present.</p> <p>It is recommended that the minimum housing target for Berkhamsted is identified at 2,236 units (to 2038) to ensure consistency with draft SP20 (sub clause 1) and as identified within the LHNA. Further commentary on this provided at Section 4 of Savills' Planning Document (February 2021). Such a change is considered necessary to ensure the new Local Plan can be considered to be positively prepared in meeting the NPPF tests of soundness and justified.</p> <p>As detailed in Savills' Planning Document (February 2021), Berkhamsted is a market town which performs a district role and is of a larger scale with a different function when compared to Tring. It therefore provides an opportunity for significant growth alongside Hemel Hempstead which as the focus for development over the last plan period has reached a certain "saturation point". Berkhamsted can alleviate some of these existing pressures and contribute to a more balanced approach to growth as sought through the new Local Plan. It is therefore recommended that Berkhamsted is identified as a "Strategic Settlement" alongside Hemel Hempstead and that this is recognised through the Settlement Hierarchy set out under draft Policy SP3 (as per the comments below).</p>

<b>Spatial Strategy for Growth comment</b>	<p>4.1 SP2 sets out that during the plan period to 2038 the Council will deliver a minimum of 16,596 dwellings. This is based on the Standard Method figure consulted upon by the Government of 922 dwellings per annum. The Government has subsequently confirmed that this Standard Method will not proceed and has reverted back to the Standard Method based upon the 2014 SNHP which produces a figure of 1,023 dwelling per annum for Dacorum Borough. The minimum requirement for the plan period should therefore be 18,414 dwellings and should be stated in this draft policy.</p> <p>4.2 The draft policy sets out the spatial strategy with the primary focus of strategic growth at Hemel Hempstead, supported by growth and Berkhamstead and Tring and then larger villages. It goes on to apportion the housing requirement between the identified settlements; over 10,600 new dwellings at Hemel Hempstead, at least 2,200 new dwellings at Berkhamstead and at least 2,700 new dwellings at Tring. This aligns with the Vision for each of the three main settlements and is carried through to the Settlement Hierarchy and Delivery Strategy for each settlement set out later in the Plan. This approach is generally supported.</p>

<b>Spatial Strategy for Growth comment</b>	<p>8. The DLP Emerging Strategy for Growth appears to be based on selective strategy documents that have no formal planning status and which have not been widely consulted on Dacorum Growth &amp; Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan.</p> <p>9. The Dacorum DLP fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space to residential use. This creates a windfall provision of housing throughout Dacorum. Looking at Brownfield Land would also realise local enhancement of the existing build environment. This would reduce the need to develop on Greenbelt Land.</p> <p>10. The DLP assumes that large areas of greenbelt land east of Hemel Hempstead and in St Albans District will be allocated for residential and employment development as part of the Hemel Garden Communities projection. The St Albans Submission Local Plan has recently been withdrawn from Examination as the inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead in Dacorum must be called into question if there is any doubt about the future viability of the Garden Communities project as a whole</p> <p>11. Nearly all the development proposed in the Dacorum DLP will be on Greenbelt Land. This is against Government Policy. Living in (address removed) the land between Shooters way and the A41 has always been considered as the "Green Lung" for Berkhamsted, absorbing vehicle emissions and noise from the A41. Traffic has increased significantly in recent years, which means this Green Buffer is needed more than ever.</p> <p>Berkhamsted lies along a valley with most residential areas along the bottom and up the sides and air pollution naturally collect in the area. Air quality is borderline in many parts of town, Northchurch has had additional monitoring for several years as air quality is so poor. Excessive developments will result in poorer air quality. It is also noted that DBC are using an outdated Air Quality Action Plan from 2014-2018. Air quality has not improved since then and recently significantly, air pollution has been legally listed as a cause of death. Health and well-being are paramount to our communities.</p> <p>I strongly urge DBC to reconsider the current proposed DLP</p>

<b>Spatial Strategy for Growth comment</b>	<p>The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.</p> <p>*Dacorum Growth &amp; Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan</p> <p>The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.</p> <p>Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning &amp; Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.</p>

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (Changes in the Current Planning System of August 2020) prepared in this regard in 2020. It appears that the Council s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set</p>

out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<p>It is acknowledged that the release of new housing sites on the edge of Hemel Hempstead will require land to be taken out of the Green Belt. Such sites also need to be selected in locations which maintain separation between settlements and maintain the distinctive character of the settlements, whilst avoiding coalescence.</p> <p>At paragraph 5.4, the strategy acknowledges that the expansion of the town will be focused to the north and east of Hemel Hempstead "with further land removed from the Green Belt to meet longer term needs". We are concerned that the large sites currently proposed for development, to the north of Hemel Hempstead, risk placing too many eggs in one basket and, owing to their scale, will take many years to come forward through the planning system.</p> <p>At policy SP2 paragraph 3 (a) we acknowledge and support the level of growth proposed for Hemel Hempstead but would urge the allocation of more small to medium sites, which would provide diversity of choice and allow the quicker delivery of housing.</p>

<b>Spatial Strategy for Growth comment</b>	<b>First</b> , a number of the Sustainable Development policies are not in fact borne out in the proposed site allocations contained elsewhere in the Plan. The nature and location of the site allocations is such that a number of the policies will not be met, or run directly counter to the policies.

**Second**, a number of the policies are not agreed because they place too little weight to DBC’s obligations under the NPPF to protect the Green Belt and preserve Green Belt boundaries to conserve and enhance AONBs and to protect and enhance biodiversity – relevant to, for example, the impact that the proposed level of housing growth in the area will have on protected chalk streams.

This is the case with Policies **SP2** (“Spatial Strategy for Growth”) and **SP3** (“The Settlement Strategy”). These policies are based on a fundamental misunderstanding of paragraph 11 of the NPPF, i.e. that a planning authority must “*make every effort to meet the housing, business and other development needs of an area*”<sup>7</sup>. This is not what paragraph 11 of the NPPF says. The obligation in paragraph 11 is subject to very significant qualifications in relation to (inter alia) Green Belt land and Areas of Outstanding Natural Beauty.<sup>8</sup> DBC’s misunderstanding of this fundamental point creates grounds for judicial review of the Plan and/or review under the Town and Country Planning Act.

**Spatial Strategy for Growth comment**

DBC's plan involves unprecedented destruction of Green Belt land, in particular around the market town of Tring, the market town of Berkhamsted and the village of Northchurch. 18 distinct Green Belt sites within the borough, representing 850 hectares of Green Belt land/other green space would be given up to the construction of over 16,500 new homes, increasing housing in the borough by over 25%. Many of those sites will impact on the Chilterns Area of Outstanding Natural Beauty (**AONB**) and on wildlife and the natural environment more generally.

One has to question whether DBC is fulfilling its obligation under the NPPF to protect the Green Belt, the boundaries of which "*should only be altered where exceptional circumstances are fully evidenced and justified*".<sup>9</sup>

The main justification for proposing to release such large areas of land from the Green Belt appears to be the numbers of houses required for Dacorum to build per year, as assessed under the government's 'standard methodology'. Yet the methodology appears to run counter to the NPPF and leads to perverse results: Dacorum - an area with no large hospital or arts venue - has a higher assessed housing need than large cities such as Hull, Stoke, Reading or Wolverhampton. By contrast, the Campaign For The Protection of Rural England Hertfordshire (**CPRE Herts**) has assessed that a more realistic estimate of Dacorum's annual housing need is between 351 and 536 per annum<sup>10</sup> – significantly fewer than the 922 dwellings per annum proposed in the Plan.

And - as noted above - the government itself has acknowledged the inevitable impact of the pandemic on housing requirements (for example, increased remote working may well mean that more brownfield sites become available for housing), and confirmed in December 2020 that "*meeting housing need is never a reason to cause unacceptable harm*" to the Green Belt.<sup>11</sup> Rather, the standard methodology provides only a "*starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made*"; "*it does not override other planning policies, including [...] our strong protections for the Green Belt*".<sup>12</sup>

The approach adopted by DBC in its current consultation appears to 'put the cart before the horse' - sites are included within the Plan in order to meet the numbers, with the consequence that the sites are slated for release from Green Belt, rather than it being first decided whether any release of land from the Green Belt is warranted.

In fact, earlier rounds of independent evidence provided to DBC have given fuller and more proper consideration to the areas of Green Belt which could be released without undue harm.<sup>13</sup> It is notable that those reports have recommended only very modest incursions into existing areas of Green Belt, and recommend against many of the sites now being taken forward by DBC (e.g. Growth Areas Bk06 and Bk08, considered in more detail below).

It is important to note that those recommendations were not due only to concerns about encroachment on the openness of the countryside itself, but in a number of cases also related to the need to "*preserve the setting and special character of historic towns*" (purpose (d) of the Green Belt).<sup>14</sup> Berkhamsted and Tring, which are each set to grow by a huge 23% in the case of Berkhamsted, and a truly staggering 56% in the case of Tring,<sup>15</sup> are key examples of this. Adding a series of dormitory housing estates at a distance from town centres and public transport hubs, resulting in the vast majority of journeys needing to be made by car (as is the case with the proposed sites in Northchurch / to the South-West of

Berkhamsted - e.g. sites Bk06 and Bk08) detracts from that setting and special character. They are also contrary to other tenets of the NPPF, such as the need to ensure "*appropriate opportunities to promote sustainable transport modes*", to focus "*significant development on locations which are or can be made sustainable, through limiting the need to travel*" and to assess "*the environmental impacts of traffic and transport infrastructure*".<sup>16</sup>

By contrast to the initial independent reports on the Dacorum Green Belt, the latest assessments on which DBC relies, including that by AECOM, appear to have treated the existence of Green Belt protection as one among a large number of factors assessed for each site in order to determine whether it can be put forward for planning/the degree of constraints it faces. Treating the Green Belt as just part of a multi-factorial assessment does not meet the requirement to apply an "*exceptional circumstances*" test for releasing the land from its existing protections.

Similar considerations apply to the impact of many of the developments on the Chilterns AONB. DBC has a legal obligation to protect the AONB, yet a number of the sites selected are either in the Chilterns AONB, or are acknowledged to impact on it, e.g. due to "*intervisibility*" from the AONB itself.

One significant example of this is site Bk06 in Northchurch (to the west of Berkhamsted) which is visible from parts of Northchurch Common, i.e. the southern edge of the Ashridge Estate (an AONB) (see further on this site below). The NPPF requires that "*Great weight should be given to conserving and enhancing landscape and scenic beauty in [...] Areas of Outstanding Natural Beauty, which have the highest status of protection*".<sup>17</sup> Dacorum's own currently applicable Adopted Core Strategy states that: "*development will not be supported where it has an adverse impact on the sensitive open valley sides and ridge top locations*".<sup>18</sup>

Further, the Chilterns Conservation Board (**CCB**) Management Plan 2019-24 states: states: "*A development outside the AONB boundary can cause harm to the AONB, even if it is some distance away. The local authority's legal duty towards the AONB applies when a proposal affects land in the AONB, regardless of where that effect originates (inside or outside the AONB). We have produced special advice in a Position Statement on Development Affecting the Setting of the Chilterns AONB. The setting of the AONB is not a geographic zone that can be mapped, nor does it cover a set distance from the AONB boundary*".

DBC is thus under a legal obligation to take account of (and not only pay lip service to) paragraph 172 of the NPPF (cited above) and to the CCB Management Plan when designing local plans which are within or which affect the Chilterns AONB. More generally, it is noted that DBC's proposals come at a time when the Glover Report (commissioned by DEFRA, 2019) has recommended that the Chilterns AONB should become England's next National Park, making development which adversely affects the area at odds with national policy.<sup>19</sup>

<b>Spatial Strategy for Growth comment</b>	<p>Focusing on the spatial strategy for housing growth, the ESG places a significant reliance on large allocations on the outskirts of the main settlements, such as Hemel Hempstead, with “support” being provided for town and villages to deliver sufficient growth to provide much needed investment.</p> <p>Policy SP2 (Spatial Strategy for Growth) of the ESG identifies provision for a minimum of 16,596 new homes; no net loss of office floorspace from 2025; a net floorspace increase of 116,500sqm of industrial floor space; additional retail floorspace; and associated infrastructure to support these areas of In order to achieve these ambitious growth targets, particularly housing and employment, the growth strategy would need to deliver 922 homes per annum over the plan period. The main concentration of new housing and employment space is proposed to be allocated on the outskirts of Hemel Hempstead. Hemel Hempstead will accommodate at least 10,600 new homes, almost 65% of the Borough's total forecast housing supply.</p>

Paragraph 73 of the NPPF sets out that importance of ensuring the choice and competition for land. However, the provision of 65% of dwellings in and around one settlement is not likely to provide choice and competition for land. Secondly, this approach is unlikely to meet the objectively assessed housing needs for the Borough as a whole, with an over- provision within Hemel Hempstead and an under-provision within other key towns and villages within This situation is likely to be further exacerbated by the proposed urban extension to the east of Hemel Hempstead, which is within St Albans City & District jurisdiction.

The main proposed housing allocations are in Hemel Hempstead (10,600), Berkhamsted (2,200) and Tring (2,730), placing the vast majority of the total growth in Dacorum in just three locations. The reliance on these sites will require significant upfront infrastructure works before housing development can be started. A similar growth strategy was used in the neighbouring District of St Albans without success.

The Inspectors for the St Albans City & District Local Plan recently (November 2020) raised significant concerns regarding the soundness of the plan, resulting in its The Inspectors, amongst other things, raised concerns with the Council's focus on accommodating its housing needs using primarily large strategic sites, particularly given the significant infrastructure requirements relating to larger sites. The Inspectors were particularly concerned that insufficient consideration had been given to the allocation of small to medium sized sites in order to meet the Council's housing requirements in the short to medium term.

Similar issues were raised in respect of the Uttlesford Local Plan, which in 2020 was found to be unsound on the basis that it was considered by the Planning Inspector to be highly ambitious, containing three new Garden Communities (Easton Park, North Uttlesford and West of Braintree). The Inspector provided clear concerns regarding a) the infrastructure required to deliver these communities and b) the lack of a robust viability appraisal to demonstrate that the Garden Communities were deliverable.

There was a clear recommendation within both of these recent Local Plan decisions of the need to allocate smaller to medium sized sites, as required by paragraph 68 of the Small to medium size sites have the ability to deliver housing faster due to the reduced infrastructure needs and associated costs, thus providing a vital conveyor belt of housing to maintain the supply in the short term.

However, despite the well documented shortcomings of both the St Albans City & District Local Plan and Uttlesford Local Plan, Dacorum appear to be taking a very similar The Dacorum Local Plan is predicated on the delivery of North Hemel Garden Community (5,500 dwellings), Berkhamsted Urban Extension (1,870 dwellings) and Tring Urban Extension (2,200 dwellings). Between these three allocations, they will deliver some 9,570 dwellings, which is just over 60% of the total dwellings required over the plan period.

This clearly places an over-reliance on a limited number of strategic sites. If one or more of these sites were not capable of being delivered due to the extensive infrastructure costs associated with sites of this size, Dacorum would be in a position whereby they may be unable to meet their housing requirements, particularly within the early years of the plan. This approach is considered to be in direct conflict with paragraph 73 of the NPPF.

Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper (“Changes in the Current Planning System” of August 2020) prepared in this regard in 2020. It appears that the Council’s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional</p> <p>intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and</p>

infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council's inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	<b>Presumption in Favour of Sustainable Development</b> DBC seeks to deliver sustainable development in accordance with the NPPF, which includes concentrating the bulk of growth to deliver both new housing and employment within the three main towns within the Borough. HCC supports this approach, and the greater role that Tring will play in delivering the necessary growth.  HCC supports the overall spatial strategy and the Borough's step change in the level of housing growth required by Central Government, including the identified growth at Tring. It is recognised that Tring has a number of constraints, most notably in relation to local character, landscape and ecological features, and the ESG seeks to address these, whilst meeting this step change in housing delivery. The Council also recognises that the provision of housing requires the necessary infrastructure to support it. HCC wishes to work with DBC to deliver this infrastructure.

<b>Spatial Strategy for Growth comment</b>	5.2 – Your strategy principle 'Minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB and other protected sites' should include minimising the requirement for development within the flood plain.

- This section should mention avoiding directing significant development within the floodplain as this also causes multiple issues:
  - Flooding causes significant congestion for roads in flood zones
- Causes negative impacts on the economy e.g. business being shut after a flood, damage costs to property/possessions average of £30,000 for homeowners, people not being able to travel to work/schools etc.
- Flooding also has negative long term effects on mental health such as PTSD and depression which can last up to two years after the flood

**Spatial Strategy for Growth comment**

Policy SP2, and the proposed local plan as a whole, are flawed, and vulnerable to challenge, on the following grounds:

(a) **The assessed housing need figure on which the proposed local plan is based is not fit for purpose as a guide to actual housing need in the borough over the next 17 years.** Although based on relatively recent ONS statistics, the housing need figure used by DBC has been rendered unsafe by recent events, in the form of Brexit and the covid 19 pandemic. These events are having significant effects on population levels, especially in the south of England, and are likely to have long-lasting impacts on housing need.

(b) **The policy, and the proposed local plan as a whole, do not adequately reflect DBC’s obligations under the NPPF to protect the Green Belt and preserve Green Belt boundaries, to conserve and enhance Areas of Outstanding National Beauty, and to prevent the loss or deterioration of irreplaceable habitats.** There are indications

in the plan that DBC has failed to understand these obligations. DBC seems to have treated the assessed housing need figure as a target that needs to be met, whatever the environmental costs. That approach indicates a fundamental misunderstanding of the “presumption of sustainable development” in the NPPF.

These points are explained and expanded upon below. They go to the heart of the plan.

**(a) DBC’s assessed housing need figure is not fit for purpose as a guide to actual housing need**

The plan is predicated on an assessment of housing need based on 2018 data, used as input for the officially sanctioned “standard method” algorithm. Obviously, these data were obtained before Brexit and before the covid 19 pandemic: phenomena which have had a substantial, and quite possibly lasting, impact on UK population levels and housing demand.

An ESCOE report published last month indicates that, comparing July-September 2019 with July-September 2020, the population of the UK may have fallen by as much as 1.3 million individuals, with much of that reduction occurring in London. The report notes that “if this is even close to being accurate, this is the largest fall in the UK resident population since World War 2.”[1] The apparent exodus of EU nationals and other non-British nationals from the UK in connection with Brexit and the pandemic have been commented upon by, inter alia, the Financial Times.[2]

In addition, it is widely recognised that the covid 19 pandemic has had a catalytic effect in changing lifestyles and working patterns, which might otherwise have taken longer to develop. It is clear that, to some degree, homeworking has been normalised, and that this will have a significant long-term impact on where and how people work, and on the amount of real estate within towns and cities that is required for the provision of office space. It seems highly likely that a proportion of the land that is currently taken up by business premises will be converted to residential or other use. However, there is of course also a possibility that, liberated from the need to commute to city centres on a daily basis, individuals who currently live in suburbs or close to cities will choose to live further afield. The point is that, at this time, it is impossible to say.

**Given the scale of population change in the last couple of years, due to Brexit, and the widespread acceptance that the covid 19 pandemic will accelerate social changes that might otherwise have taken decades to occur, it is impossible to have confidence that DBC’s assessment of housing need in the borough, based on pre-Brexit and pre-covid data, will bear any resemblance to real housing need over the next 17 years.**

This is not, of course, to say that it is futile to try and assess housing need over this sort of timescale. The NPPF requires such forward-looking assessments to be made. However, the question is whether now is the right time to be attempting

this task, given the very serious and potentially irreversible consequences of getting it wrong. There is a powerful argument in favour of waiting a couple of years until the dust has settled on Brexit, the pandemic has been controlled, and we have a clearer picture of population trends. To do otherwise is simply reckless.

**(b) DBC has failed to understand the presumption of sustainable development, and the importance of its obligations to protect the Green Belt, the AONB and irreplaceable habitats**

Even if it is accepted that DBC's assessment of housing need is objective and reasonable (and this is not accepted, for the reasons given above), policy SP2 and the proposed local plan as a whole are profoundly flawed, due to a failure to give appropriate weight to planning obligations to protect the Green Belt, the AONB and irreplaceable habitats. **The assessed housing need figure has been treated as a target to be met, regardless of the cost to the natural environment. That is quite wrong.**

Para 5.2 in the ESG (on page 30) states that the key principles behind the "spatial strategy for growth" include "*Delivering our requirement to significantly boost the housing supply ...*".

It is further stated at para 7.2 in the ESG that "*In considering the delivery of homes, the NPPF requires that planning authorities: make every effort to meet the housing, business and other development needs of an area (paragraph 11) ...*"

**These excerpts from the ESG are highly revealing. They seem to indicate a fundamental misunderstanding of what the NPPF requires, in terms of meeting housing and other needs, where the supply of unprotected, brownfield land is constrained.**

It is instructive to compare DBC's paraphrase of paragraph 11 of the NPPF with what that paragraph actually says. It reads:

*"11. Plans and decisions should apply a presumption in favour of sustainable development.*

*For plan-making this means that:*

- 1 a) *plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;*

- 1 *b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas ... unless:*
  - 1 *the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area [footnote 6]; or*
  - 1 *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole...*

Footnote 6 refers to policies relating to, *inter alia*, land designated as Green Belt, Areas of Outstanding Natural Beauty, and irreplaceable habitats.

Thus, paraphrasing and abbreviating slightly, what the NPPF actually says is that objectively assessed housing need must be met, unless:

- Other policies of the NPPF regarding the protection of, *inter alia*, the Green Belt, Areas of Outstanding Natural Beauty or irreplaceable habitats provide a strong reason for restricting development; or
- Meeting objectively assessed housing need would demonstrably not be beneficial in the round, taking account of other policies in the NPPF.

**Read carefully, paragraph 11 does NOT make meeting housing need an overriding objective which trumps other NPPF policies. It is clear that, where housing need can only be met through the taking of measures that violate other policies of the NPPF regarding the protection of valuable landscapes or habitats, the presumption of sustainable development is rebutted.**

The policies that are relevant in this case include:

- The policy regarding the Green Belt, contained in chapter 13 of the NPPF, which provides that “*Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified*” (paragraph 136);
- The policy regarding Areas of Outstanding Natural Beauty, contained in chapter 15 of the NPPF, which provides that “*great weight should be given to conserving and enhancing landscape and scenic beauty in ... Areas of Outstanding Natural Beauty, which have the highest status of protection*” (paragraph 172); and

- The policy regarding habitats and biodiversity, also contained in chapter 15 of the NPPF, which provides that “*development resulting in the loss or deterioration of irreplaceable habitats ... should be refused, unless there are wholly exceptional reasons*” (paragraph 175(c)).

**It appears that DBC has misunderstood its obligations under paragraph 11, and misdirected itself regarding how far it is required to go in meeting housing need.**

This is not simply a matter of “planning judgement”, i.e. a discretion given to the planning authority about how much weight should be given to interests or objectives which compete or are in conflict. **There is evidence here of a misunderstanding of the NPPF. Such misunderstandings of planning policy can be reviewed as unreasonable, on *Wednesbury* principles.** It has been held, in a planning context, that:

*“... A failure properly to understand and apply relevant policy will constitute a failure to have regard to a material consideration, or will amount to having regard to an immaterial consideration.”*[3]

The *Wednesbury* case itself makes clear that where considerations are required by a public authority to be taken into account as a matter of legal obligation, and they are not taken into account, the decision is vitiated.[4] In the present case, it appears that DBC has failed to note the derogations, in paragraph 11 of the NPPF, from the obligation to meet assessed housing need. The NPPF is express in requiring the points in paragraph 11(b)(i) and (ii) to be taken into account.

**The fundamental point here is that where housing need can only be met through the taking of measures that violate policies of the NPPF regarding the protection of valuable landscapes or habitats, which provide a strong reason for restricting development, the requirement to satisfy assessed housing need is overridden. DBC’s misunderstanding of planning policy here calls the proposed local plan into question, in its entirety.**

It is important to emphasise that the proposed plan’s non-compliance with the NPPF appears to go beyond the threat to the Green Belt and the Chilterns AONB. As noted above, the presumption of sustainable development is displaced if policies within the NPPF regarding the protection of irreplaceable habitats provide a strong reason for restricting development. Irreplaceable habitats are habitats “*which would be technically very difficult (or take a very significant time) to restore, recreate or replace once destroyed, taking into account their age, uniqueness, species diversity or rarity*” (NPPF, Annex 2).

**There is no definitive, exhaustive list of habitats that fall within this definition. However, a very strong case can be made for including chalk streams, such as the Bulbourne, Gade and Ver.** These habitats are internationally valued and extremely rare, and any species loss within them is likely to be permanent.

The proposed plan and the supporting documents recognise that these habitats are threatened by various risks; above all drought, due to the over-abstraction of water from the aquifers that feed them, to enable water to be provided to residents of the borough. If the population of the borough increases by roughly a quarter, it is obvious that in the absence of a more sophisticated means of providing water to households, the stress on the Bulbourne, Gade and Ver will be greatly increased.

However, although the proposed plan includes a policy on the protection and enhancement of the water environment, discussed below, this policy does not explain how additional water abstraction from the chalk aquifers is to be avoided. The policy looks like empty words. **It seems reasonable to conclude that DBC has no idea how the threat posed to the borough's chalk streams is to be mitigated, and has failed to do anything more than pay lip service to its obligation to protect these special habitats.**

<b>Spatial Strategy for Growth comment</b>	<p><b>2.0</b> In light of Bovingdon’s sustainability credentials and the identified shortfall against housing requirements as proposed by the emerging Local Plan, the indicative target of 240 dwellings in Policy SP2 (Spatial Strategy for Growth) to be directed to Bovingdon is therefore considered to be low. This means that the emerging Local Plan has not planned positively or fully exploited the opportunities to achieve sustainable development at Bovingdon.</p> <p><b>2.1</b> As such, the new Local Plan should recognise the opportunities available to deliver additional development at Bovingdon in a sustainable way to help meet in full the Borough’s identified housing needs. Sustainable settlements such as Bovingdon are best placed to contribute positively towards the delivery of sustainable development and as explored further in these representations, land at Homefield represents an appropriate and deliverable site for allocation in the emerging Local Plan, consistent with the emerging Local Plan’s strategic objective for the distribution of new development across the Borough.</p>

<b>Spatial Strategy for Growth comment</b>	The Plan seeks to provide a strategy for delivering at least 16,596 new homes to the district over the plan period of 18 years. HLM agree that the spatial strategy should focus on the main town of Hemel Hempstead to accommodate the major part of its growth requirements.

**Draft Policy SP2** sets out the proposed spatial strategy allocating 10,600 of the new growth requirements to Hemel Hempstead (63% of total growth). This would increase the towns housing stock by circa 26% from 39,950 <sup>[Footnote 1 VOA 2019 Housing stock data]</sup> to c50,550 households. Given the strategic objectives, the focus on the town's sustainability credentials and its ability to deliver more sustainable forms of growth, HLM consider this should be a minimum.

The town is capable of accommodating a higher proportion of growth to 2038. Of the 5,945 additional homes to be delivered from Strategic Greenfield Growth Areas (36% of total growth), only 1,500 (9% of total growth) is proposed at Hemel.

The proposed approach to site selection relies upon a significant amount of new housing development being accommodated within the existing urban area of the town through urban site allocations and windfall sites (7,783 homes) along a first phase of a new Garden Community, known as Hemel Garden Communities (HGC). The Council consider HGC can contribute 1500/1550 new homes to 2038, with the balance of c4,000-4,500 homes being delivered in a future plan period from 2038 to 2050 through the safeguarding of land in the Green Belt to the north east of Hemel Hempstead. Two existing greenfield allocations from the adopted Core Strategy have been carried forward at Marchmont Farm (385) and West of Hemel (1,150) as these are yet to be delivered.

As part of HGC, a further 4,300 homes had been expected to be delivered through allocations in the neighbouring draft St Albans Local Plan (SALP) which has recently been withdrawn following examination. Work on a new SALP is due to commence shortly and cross-boundary growth will also be considered through the Joint West Herts Strategic Plan. In total, HGC is anticipated to deliver circa 11,000 new homes to the town and will be relied upon to deliver new housing to 2038 for the borough and well beyond.

At this stage in the plan-making process, HLM has two main concerns about the growth strategy for Hemel Hempstead. Firstly, the reliance upon a significant proportion of the growth requirements being delivered through the recycling of previously developed and underutilised land within the towns existing built-up area. Secondly, whether the first phase of HGC is properly justified on its own and can be realistically delivered in advance of a comprehensive allocation for the whole garden community area to be identified through the JSP/other Local Plans. These issues are set out below.

#### **Urban Growth Area Sites and windfalls:**

**Table 2 'Sources of Land Supply'** summarises the proposed distribution of development to 2038. This table emphasises the reliance upon Urban Growth Areas and Windfalls in delivering the strategy at 34% and 15% respectively.

The Urban Growth Area sites are expected to deliver in the early years of the plan to provide short- term flexibility and contingency while the larger planned Greenfield Growth Areas are coming forward. The reliance upon previously developed land is not helpful, particularly where sites are in active use and/or are part of a phased regeneration strategy. HLM consider at least 1,083 plots have been overestimated to be deliverable from this land supply source with many sites still in active use. Should these sites become available during the plan period, they would contribute towards the windfall allowance (**Table HLM1 at Appendix 2 - TABLE SHOWN BELOW**). Overall, there is insufficient evidence for the sites flagged in Table HLM1 which total 2,123 of the housing requirement. Many of these are located in Hemel Hempstead and may not deliver. This is a major concern given the role that the town is expected to play in achieving the sustainable

spatial strategy. HLM do not consider the Urban Capacity Study to be robust. The consequence of this is that it may not deliver a reliable source of housing land to the stated levels.

Agree that site requires regeneration and is a key strategy for DBC. However, the increase in capacity by 60 units from previous allocation requires further evidence as current site is not delivering. FZ2 land.

Complex regeneration site –

capacity increase requires detailed justification

Totals

2,123

Reduction of highlighted sites by 1,083 as a minimum. The delivery of these is uncertain and should form part of the 2,400-windfall allowance.

Other sites need clearer evidence to support allocation in principle and capacity assumptions

The risk of several sites not being released for development in the manner envisaged may affect the ability of DBC to give effect to its spatial strategy and demonstrate a 5-year housing land supply on adoption of the Local Plan which can then be maintained throughout the plan period.

The Council's evidence base needs to be strengthened to clearly demonstrate that these sites will be brought forward in the manner envisaged. To date, the SLAA does not provide sufficient clarity.

The high proportion of urban sites currently in active use require further evidence to support the delivery assumptions. The Councils approach to the intensification of existing allocations which are being carried forward must be properly evidenced, particularly where sites have been allocated for several years and are yet to obtain planning permission for alternative development. The 2019 NPPF definition of developable is that sites should have *a reasonable prospect that they will be available and could be viably developed at the point envisaged*. This includes delivering the target 35% affordable housing anticipated from these urban sites.

The Council has included a windfall allowance for Hemel urban area which is predominantly justified by evidence from past years supply from unallocated sites. The Council has undertaken a detailed assessment of possible brownfield sites and underutilised land which has led it to conclude that the growth needs of the borough cannot be met without the release of Green belt land, as part of its Exceptional Circumstances case. Sites that might otherwise have contributed

to windfall supply have been reviewed and identified for allocation. In light of this, HLM question whether historic levels of windfall supply can be sustained going forward.

To address any potential shortfall, contingency sites may need to be identified at Hemel Hempstead. On the basis that urban sites have been thoroughly assessed and included within the plan where relevant, further greenfield/Green Belt release at Hemel may be needed. This would ensure that the town remains the priority focus for new development to align with the Council's sustainable distribution of growth.

### **Hemel Garden Communities:**

HGC is anticipated to be the primary source of housing in the borough for the longer term extending well beyond 2038. Given the uncertainty of the Emerging Strategy for Growth to secure a longer- term approach, including reliance on a second round of plan-making within St Albans District and a future review of this 2038 Local Plan, there is currently no mechanism in place to ensure the delivery of the wider HGC to secure the Councils aspirations for transformational growth.

The Joint Councils of Dacorum Borough, Three Rivers, St Albans, Hertsmere and Watford have agreed to prepare a joint strategic plan (JSP), specifically to deal with cross-boundary growth requirements in South West Hertfordshire. HLM would expect the HGC to be planned and committed through the emerging JSP. This strategy can the flow into future Local Plan reviews. This is the correct mechanism to ensure that a holistic approach is secured, and the Garden Community principles are met.

A joint strategic plan can consider the most appropriate delivery strategy, Infrastructure Delivery Plan and trajectory expectations for HGC. The land is within several ownerships and requires significant new infrastructure including a new link road, primary and secondary education, employment and community infrastructure to deliver on its fundamental principles. The Council is not in a position to publish its key evidence base for HGC at this second Reg 18 consultation stage, thus highlighting the difficulties for respondents to comment. The consultation is premature in this respect. It is not possible to understand how a first phase of HGC could come forward in isolation, whether it can deliver the full policy requirements including 40% affordable housing provision and whether the anticipated housing trajectory for this site represents a realistic profiling.

The recent examination of the (now withdrawn) Uttlesford Local Plan in Essex has highlighted the extent of evidence relating to new Garden Community proposals that is required to demonstrate that a plan is sound.

The lack of detail currently available to support the Regulation 18 consultation highlights the potential difficulties of seeking to agree a first phase of a significantly larger garden community without any certainty of the remainder being allocated in a future development plan, including within the neighbouring district. This could potentially result in a protracted and lengthy local plan process. Any slippage in the Local Plan timetable runs the risk of the Council not having a 5YHLS for an extended period of time now that the Core Strategy is over 5 years old and the standard method of calculating housing land supply is in play (effectively doubling the annual housing delivery requirements).

HLM are also concerned that the plan is not clear. It states that it is only seeking to safeguard the HGC phase 2 land and remove it from the Green Belt to ensure that Green Belt boundaries are capable of enduring beyond the plan period

(NPPF 136). However, the plan appears to be apportioning an amount of development for the period beyond 2038 for 4,000-4,500 new homes without any detailed evidence to support this approach (Draft Policies SP15 and SP16 refer). This is a significantly higher scale of growth for HGC than the Council is actually proposing to deliver as a phase one by 2038. There is no certainty over the lead in time for phase one and what it needs to commit to in terms of strategic infrastructure and what is viable in the period to 2038.

The emerging strategy suggests that a step change in sustainable transport is a priority for DBC to include an ambitious modal shift through the HGC. HLM consider the infrastructure and transport improvements critical to support the spatial strategy should have been published as part of this consultation. Linked to the lack of cross-boundary co-ordination of these matters the draft Plan does not provide sufficient certainty that necessary infrastructure to support the provision for housing and jobs will be delivered. Further commentary is provided in the transport evidence section of this representation in response to Consultation Question 6.

**Market towns:**

HLM is also concerned that the scale of growth proposed at the two market towns of Berkhamstead and Tring are disproportionate, both in terms of the scale of development proposed and the amount of land that is proposed to be released from the Green Belt to meet this part of the strategy. The proposed allocations at these settlements combine to deliver 30% of the proposed total growth requirement to 2038.

The proposed increase in size of Berkhamstead (by 2,200 homes or 23%) and Tring (by 2,700 homes or 50%) by 2038 is substantial and transformational for both market towns. Taking the points mentioned above - HLM is concerned that the over-reliance upon urban sites for growth at Hemel Hempstead and potential delays and uncertainties over the delivery of a first phase of HGC - the development strategy is geared towards the delivery of new homes in the two market towns, not at Hemel. There is a risk that growth will not come forward at the main town as quickly, to the detriment of the overarching vision, strategic objectives and sustainability targets.

Some of the proposed allocations are within and close to the Chilterns AONB are clearly major development. We do not consider this approach aligns with the policy objective of ‘attaching great weight to conserving the landscape and scenic beauty of the AONB’ required under NPPF 172.

The scale of land proposed to be released from the Green Belt to deliver this amount of housing at the Tier 2 market towns is not justified at this stage. From a cursory review, the extent of land proposed for release appears far greater than might actually be required to deliver the stated growth levels, particularly at Tring.

<p>* Yes</p> <p>* No</p>	
<p><b>Spatial Strategy for Growth comment</b></p>	<p><b>Spatial Strategy for Growth</b></p> <p>St William support the overall spatial strategy, particularly the objective of significantly boosting housing land supply and maximising the amount of development on previously developed land. In particular, the recognition that this strategy will be taken ‘much further’ in Hemel Hempstead by “<i>encouraging substantial increases in heights and densities in the most accessible locations,</i>” recognising that Hemel Hempstead is the most sustainable location in the Borough, is particularly This approach must be fully recognised in the policy guidance for individual site allocations as highlighted in respect of our comments on site HH09 above.</p> <p>Generally, Policy SP2 reflects well this spatial strategy and is supported. The clear need to intensify development and make best use of land within Hemel Hempstead through increased heights and densities is established as a key feature of the Optimising the delivery of homes on previously developed land is also critical to ensuring that the level of Green Belt release is both minimised and justified. Moreover, the optimisation of previously developed land within Hemel Hempstead affords the greatest opportunity to co-locate development in close proximity to existing jobs, shops, education and other day-to-day services that can be accessed by modes other than the private car.</p> <p>It is noted that SP2 requires a minimum of 16,596 homes to be provided during the plan period. Leaving aside the actual number (we comment on this further below), St William welcome the recognition that the requirement must be a minimum and that exceeding this will have benefits in terms of affordability and sustainability. This approach should also be reflected in the individual site allocations by establishing minimum yields that can be exceeded by design-led development solutions.</p> <p>St William accept that the strategy will need to include strategic Green Belt It is important that the plan fully recognises the lead in timescales for such development and fully tests their viability given the infrastructure needed to support them. In most cases such development will not contribute to housing delivery in the first five years of the plan. This is a further reason why maximising delivery on previously developed land within the urban area is crucial to the successful implementation of the plan as such sites – including the National Grid site – are available in the short term and do not have significant infrastructure requirements.</p>

<b>Spatial Strategy for Growth comment</b>	<p>1 The DLP Emerging Strategy for Growth appears to be based on selective strategy documents that have no formal planning status and which have not been widely consulted on Dacorum Growth &amp; Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan.</p> <p>1 The Dacorum DLP fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space to residential use. This creates a windfall provision of housing throughout Dacorum. Looking at Brownfield Land would also realise local enhancement of the existing build This would reduce the need to develop on Greenbelt Land.</p> <p>1 The DLP assumes that large areas of greenbelt land east of Hemel Hempstead and in St Albans District will be allocated for residential and employment development as part of the Hemel Garden Communities projection. The St Albans Submission Local Plan has recently been withdrawn from Examination as the inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead in Dacorum must be called into question if there is any doubt about the future viability of the Garden Communities project as a whole</p> <p>1 Nearly all the development proposed in the Dacorum DLP will be on Greenbelt This is against Government Policy. Living in (address removed) the land between Shooters way and the A41 has always been considered as the "Green Lung" for Berkhamsted, absorbing vehicle emissions and noise from the A41. Traffic has increased significantly in recent years, which means this Green Buffer is needed more than ever.</p>

Berkhamsted lies along a valley with most residential areas along the bottom and up the sides and air pollution naturally collect in the area. Air quality is borderline in many parts of town, Northchurch has had additional monitoring for several years as air quality is so poor. Excessive developments will result in poorer air quality. It is also noted that DBC are using an outdated Air Quality Action Plan from 2014-1018. Air quality has not improved since then and recently significantly, air pollution has been legally listed as a cause of death. Health and well-being are paramount to our communities.

I strongly urge DBC to reconsider the current proposed DLP

Spatial Strategy for Growth

The plan must ensure adequate Social Housing, which is net zero in operation, as defined in our answer to question 1.

The plan must allow for an increase in electrically powered transport and roads must be designed to encourage walking and cycling.

<b>Spatial Strategy for Growth comment</b>	Dacorum's Strategy is based out-of-date projections that do not reflect a true picture of housing demand. Since the projections were made in 2014, significant social and economic changes have reduced the need for dwellings in Dacorum.

The 2014 Household Projections: England, 2014-2039 Report acknowledges, on page 2, that their projections cannot predict changing circumstances:

“The assumptions underlying national household and population projections are based on demographic trends. They are not forecasts as, for example, they do not attempt to predict the impact of future Government policies, changing economic circumstances or other factors that might influence household growth.”

The Government acknowledges that circumstances have changed since 2014 when these projections were made. The recent Government response to the local housing need proposals states:

“Since we published the consultation, the way that the country lives, works and travels continues to change more rapidly than at any time since the war.”

In 2014 people needed to live near London to commute to work. This has changed. Even before Covid, surveys repeatedly showed that most employees want to work from home at least some of the time and over a third would take a pay cut in exchange. The experience of working at home, during Covid, has given workers and managers a taste of what could be. according to a report.

According to ‘The future of towns and cities post-Covid-19 report’ in January 2021 by the auditing firm KPMG, a permanent shift towards working from home and increased online shopping could cost more than 400,000 retail jobs on England’s high and vacant retail space. Microsoft, Facebook and Twitter have told staff that they will have the option of working from home permanently. On 23 February 2021, HSBC announced its intention to reduce its office space by nearly 40% to capitalise on new part-office-part-homeworking arrangements after the pandemic. As Global Workplace Analytics concludes: “The genie is out of the bottle and it’s not likely to go back in.”

<https://globalworkplaceanalytics.com/work-at-home-after-covid-19-our-forecast>

So, the 2014 projections are out-of-date and far too high. Even by 2016, the Office for National Statistics (ONS) were projecting far less demand for housing in Dacorum. By 2018 their projections had more than halved.

Dacorum’s Sustainable Development Strategy does not comply with the duty to protect the Green Belt under the National Planning Policy Framework (NPPF). It seeks only to protect the Chilterns AONB:

Policy DM27 - “Landscape Character and Chilterns Area of Outstanding Natural Beauty 1. All development shall help conserve, restore or enhance the prevailing quality, character and condition of Dacorum’s natural and historic landscape. 2. Permission for major developments in the Chilterns Area of Outstanding Natural Beauty (AONB) will be refused unless exceptional circumstances prevail as defined by national planning policy”.

Dacorum’s strategy fails to offer the same protection to the Green Belt. The paragraphs dealing with the Green Belt are concerned only with an intention to build on it:

19.7: “We have undertaken a review of the Green Belt and identified those areas on the edge of the main settlements where exceptional circumstances exist to release land for development or where other minor adjustments are necessary”.

“These proposed releases will make a significant contribution to meeting the long term housing and other development needs of the Borough. Green Belt land has been released to enable the delivery of the spatial strategy for Dacorum.”

In contrast, Dacorum’s previous strategy (2017) contained principles to protect the Green Belt:

10.2.2 “These cover the need to make the best use of brownfield land to maximise opportunities for urban regeneration”.

“National planning policy is also clear that Green Belt boundaries should only be changed in exceptional circumstances. The protection of the Green Belt from inappropriate development is an important national and local principle”.

10.2.3 “Another important principle is to ensure that our urban areas do not sprawl into other existing settlements undermining their distinct and separate identities. Likewise, isolated development which has poor connections with local services and facilities should be discouraged. Protecting the character of our town and villages, and that of important landscapes and countryside will also be important considerations, as will using development to help fund and deliver essential new infrastructure”.

In Dacorum’s new strategy, the “exceptional circumstances” required by the NPPF to build houses on Green Belt seems to consist of little more than, “because we want to build houses”.

The Bulbourne is a rare chalk stream: there are only 250 in the world and most are endangered. The river is a sanctuary for all kinds of wildlife and a source of biodiversity. Hertfordshire's State of Nature report 2019 by the Herts & Middx Wildlife Trust explains the importance of the River Bulbourne:

“Hertfordshire has a national and international responsibility for protecting its special chalk rivers, which have a unique ecology due to their clean, mineral-rich water and consistent flows. A high proportion of the world’s global numbers of chalk streams can be found in the South-East of England, specifically in Hertfordshire”.

The Bulbourne rises at Dudswell, and runs for 10km alongside the Grand Union Canal through Northchurch and Berkhamsted and joins the Gade at Two Waters, Hemel Hempstead. The Bourne Gutter, a winterbourne, periodically rises and joins it at Bourne End.

Chalk streams are beautiful, flowing crystal-clear over a gravel bed and supporting rich ecologies. Rainfall enters the river basin, works through the chalk strata and emerges via springs as crystal clear water. As this process takes months, the river level rises and falls slowly. However, abstractions for public water supply and for the canal have seriously depleted the quantity and quality of water in the Bulbourne. The Environment Agency recently concluded that unsustainable levels of abstraction for public water supply are contributing to low flows:

<https://environment.data.gov.uk/catchment-planning/WaterBody/GB106039029890>

<http://dacenvforum.org.uk/wp-content/uploads/2019/03/DEF-EA-Presentation-21-Feb-2019.pdf>

The wetland features of the River Bulbourne are fragile and threatened by groundwater abstraction for domestic water. Houses in Northchurch, supplied with water pumped from the chalk aquifer, reduce the water available for the river. To avoid further abstraction from the chalk aquifer and further damage to the River Bulbourne, the proposed developments in Northchurch would require a new reservoir and water imported from other areas. These massive and expensive

infrastructure projects would not only take years but would also require additional land which Dacorum's Strategy has not identified.

The proposed new developments will also damage the quality of the water. Impermeable surfaces, such as roads, paths, roofs and carparks, mean that rainwater, rather than seeping through chalk, runs into drains which flow directly into the river causing it to rise and fall rapidly. Silt, rubbish, chemicals and effluent turn the river into a thick layer of dark, polluted silt and cause localised flash flooding.

Dacorum's Strategy has not considered the negative impact of water supply on the River Bulbourne. The proposed developments will cause irreversible harm to the quantity and quality of the water and its fragile wetland ecology.

### **2.3 Dacorum is not obliged to meet these 2014 figures**

The Government has made it clear that Councils are not compelled to meet these 2014 figures at the expense of their legal duty to protect the Green Belt and the environment:

“We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”

Dacorum's strategy conflicts with Government policy because it causes unacceptable harm to the Green Belt and to the River Bulbourne. It is, therefore, flawed and should be revised to meet current housing needs.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August 2020) prepared in this regard in 2020. It appears that the Council ' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation . The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the

existing settlement boundaries before land outside of it is considered . The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would

have on the area . It has not therefore been proven that the development could occur \-without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

## Spatial Strategy for Growth comment

I recognise that the Borough is being required by the Government's dictat to contribute a share of the dwellings believed to be needed to achieve its house building target of 300,000 dwellings per annum [dpa]. As a result, the Borough has published a Reg18 Plan that shows a distribution of dwellings across the major settlements that will dramatically change them and the landscape as this will also require a substantial [756 ha] re designation of Green Belt land for development.

If the Draft Plan is taken forward and meets the approval of the Planning Inspectorate following the Examination in Public, the protection of the Green Belt land so released will have been lost or compromised [at best] should development on these sites not match the major house builders' appetite for development in the time frame envisaged. I am proposing the Borough adopts a different strategic approach:

- 1 Adopt numbers of housing provision that is needs based, starting from the latest **2018 ONS** projections.
- 1 Provides for 5-10 year land availability, with minimal if any re-designation of Green Belt, which should be restricted to genuinely sustainable locations.
- 1 Commits to review the Borough Plan and land allocation in the 5 year time frame determined by MHCLG, by when there will be less uncertainty of the numbers of dwellings being built or adapted in offices and the town centres as buildings are re purposed post Covid-19.
- 1 Defers large scale allocation of Green Belt/Growth land in light of 3
- 2 Progresses the plans for Hemel Garden Community with St Albans

The extant Adopted Core Strategy [2013-2030] set out an annual build rate of 430 pa. Apart for relatively minor amendments, this recognised the constraints of the Borough which includes a high proportion of Green Belt or AONB. Since then, with Government pressing for greater house building numbers, there is also a requirement to identify land supply of 5yrs [and more recently beyond 10 years], which results in further demand for land to be identified for future development. It is one thing to face demand based on 430 dpa, quite another at over 1023 dpa.

Historical data shows that the Borough's 'windfall' developments have contributed a significant proportion of the annual increase in dwellings.

In a post COVID-19 scenario, it is uncertain whether town centre properties will continue to be viable as shops or department stores. Conversions of such properties is likely to add to 'windfall' numbers once land-owners come to terms with the new opportunities.

Our residents expect Councillors and Officers to develop evidenced based policy; we rely on policy makers to be properly grounded on the issues. The following table sets out the different sets of annual house building numbers that are being considered in proposing the strategy set out in this paper.

Arguably the most objective dataset comes from the base ONS tables – notwithstanding any reservations one might have about uncertainty or reliability of the data.

The principal conclusion is that the projected annual building number based on the 2018 data is 355 dpa. If the Ministry insist on the application of the 'Standard method' the number calculates as 497dpa. I recognise this conflicts with the

numbers arising from the standard method posited by MHCLG of 1023 dpa based on the contentious out-dated 2014 ONS projections which many consider as flawed as a basis to develop policy for the coming decades.

Table 2 of the Draft Plan [p37] shows total commitments at 2708 and Urban Growth Areas at 5638, with Grovehill Neighbourhood Plan contributing 200 to what could be considered as current Urban Capacity of 8,546 dwellings. Without relying on windfall contributions, and adopting say 500 dpa as representing the assessed needs, urban capacity availability is in excess of the first 5-10 years requirement for land availability.

This leads to the judgement that it is feasible to consider adopting the 'target' of 500 dpa over the coming period which together with the projected windfall appears to provide numbers of dwellings, including affordable homes, that will be in excess of the 2018 ONS projections for assessed need.

This will allow the Borough to defer release of Green Belt land in the foreseeable period other than for relatively minor adjustment such as at Hanbury in Berkhamsted following the last EiP.

The Government's ambition to build 300,000 dpa is laudable given the shortage of housing especially of truly affordable housing viz. housing for 'social rent'. The nation has not built in such numbers for over 40 years, which has led to a decline in domestic skilled tradespeople, capacity to supply ample quantities of construction materials and professionals to oversee development. Moreover, economic factors following the COVID-19 pandemic are likely to depress employment and the housing market for some years.

**To consider huge releases of Green Belt [as Growth areas] in light of the uncertainties in the next few years is foolhardy and a disservice to our residents.**

<b>Spatial Strategy for Growth comment</b>	<p>I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.</p> <p>The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper(" Changes in the Current Planning System· of August 2020) prepared in this regard in 2020. It appears that the Council' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.</p> <p>It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.</p> <p>There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b} of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.</p> <p>No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hamel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.</p>

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally spilt between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses. given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council' s inner settlement plans and their assessment of housing needs.

<b>Spatial Strategy for Growth comment</b>	

We refer to the above consultation exercise and respond on behalf of our client, Fairfax Strategic Land (Hemel) Ltd, setting out a number of representations upon the Dacorum Local Plan Emerging Strategy for Growth (2020 – 2038) Consultation (the Emerging Strategy), including in relation to the **omission of land located west of Piccotts End, Hemel Hempstead (LPA Site Assessment Ref HH69) as a housing allocation for up to 400 dwellings** in helping to meet identified housing needs during the plan period.

The following plans and documents are submitted in support of our representations:

- Site Location Plan 1920-PL01 Rev A
- Indicative Site Layout 2037-PL04 Rev.G
- Landscape Assessment (Hyland Edgar Driver) (Feb 2021)
- Green Belt Assessment (CSA Environmental) (Feb 2021); and
- Highways and Accessibility Technical Note: Suitability of Land west of Leighton Buzzard Road, Hemel Hempstead and Analysis of Draft Housing Allocations (SK Transport) (Feb 2021).

The content of the supporting plans and particulars is set out below where relevant to the particular issue/discipline being addressed.

**Land located to the west of Piccotts End, Hemel Hempstead** is controlled by Fairfax Strategic Land (Hemel) Ltd extends to approximately 26ha (Site Assessment Ref HH69) and could provide for up to 400 dwellings.

The land comprises an available, suitable and deliverable opportunity to accommodate housing needs (both market and affordable), in a sustainable location, within the industry standard recommended walking and cycling distances from local services and facilities, including the significant retail, employment, community facility and leisure offer available in the town centre.

In addition, the ability to extend existing bus services into the site further serves to underpin the site's excellent sustainability credentials.

Development of the site for housing provides the opportunity to create a new planned expansion to Hemel Hempstead, and will include a CIL payment and/or commuted sum to be secured through a site-specific planning obligation to enhance the overall offer at Rossgate local centre; thus benefiting the wider community with an enhanced social offer.

The site's proximity to existing local centre, other local facilities as well as Hemel Hempstead town centre demonstrates the sustainability merits of the site for housing when set against the Council's on-going housing need.

A bus stop and turning loop has also been incorporated into the Indicative Site Layout, the provision of which has support from an established local bus provider having and they have confirmed they are willing to use the loop should permission be granted.

Notwithstanding the location of the site within the Green Belt, the character of the site is heavily influenced by the suburbs of Gadebridge, Piccotts End and other surrounding development including the electricity sub-station and garden centre beyond to the north.

The site offers the opportunity to provide a material contribution to the Borough's pressing and on-going housing need and do so in an appropriate manner without impacting upon the wider countryside surrounding Hemel Hempstead. As explained later in these representations, the site is ideally located to be brought forward for development in the early stages of the plan period, and/or in helping to meet a shortfall in the five year supply of deliverable land.

The land has inherent sustainability merits which make it suitable for residential development, and in our view represents a development opportunity providing a logical rounding off to the north of Hemel Hempstead with limit impact upon both the landscape and Green Belt purposes.

For the reasons set out in our submissions there are a number of fundamental shortcomings with the approach to site selection in the Emerging Local Plan Strategy that result in the need for amendments if it is to satisfy the tests of soundness at paragraph 35 of the NPPF.

Based on our assessment of the evidence base that has been used by the Council to underpin the approach to site selection, the Emerging Strategy cannot be said to be justified in so far as it fails to represent an appropriate strategy and nor does it adequately take account of the reasonable alternatives.

This is particularly the case for the approach to site selection at Hemel Hempstead.

We have undertaken a comparative analysis of the draft allocations proposed by the Council, including the 3 no. draft site allocations at Hemel Hempstead, comprising HH-h1b – North of Hemel Hempstead (phase 1), HH-h1b – North of Hemel Hempstead (phases 1 and 2) and HH-h2 – North of Gadebridge (Land at Piccotts End) and conclude that on a proper consideration of the evidence base the Emerging Strategy should have identified our client's land at Piccotts End as a housing allocation(s).

Our representations focus on specific parts of the Emerging Strategy as follows:

- **Policy SP4: Delivering the Housing Strategy**

The consultation draft Local Plan sets out a need to plan for a significant level of growth, including in the form of urban extensions and Green Belt releases. This includes a significant amount of planned growth at Hemel Hempstead. The spatial strategy has purportedly been informed by a number of evidence base documents. They include, but are not limited to:

- Housing Topic Paper
- Site Selection Topic Paper
- Site Assessment
- Sustainability Appraisal
- Green Belt Study
- Highway Studies

Our detailed representations are set out below and include submissions in response to the content of these evidence base documents, including, inter alia, the Site Assessment (prepared by AECOM alongside the Topic Paper) and the Sustainability Appraisal ("SA").

The NPPF sets out the principal components to be included in local plans. Paragraph 35 requires that in order to be “sound” a Development Plan Document (‘DPD’) should be positively prepared, justified, effective and consistent with national policy.

In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.

For the reasons set out below, we are of the view that the evidence base fails to provide a reasoned approach to site selection. This includes for the reasons set out in the accompanying plans and particulars (at (i) to (v) above). In this regard, we place particular emphasis upon the comparative analyses undertaken by Hyland Edgar Driver (landscape impact) and SK Transport Planning (highways) in relation to the Council’s approach to site selection.

The findings of the CSA Green Belt Assessment are also important in so far as they identify the Council’s Green Belt appraisal failed to undertake a finer grain analysis of the site as an individual land parcel. Rather, the Council’s analysis assessed the site as part of a much wider area of land. Had the Council undertaken this finer grain analysis they would have concluded in relation to the suitability of the site as a Green Belt release and carried it forward for further assessment as a housing allocation.

As such, it is our view that **the Emerging Strategy cannot be said to be justified and nor can it be said to be effective**. We expand upon our submissions in the detailed considerations as set out below.

As indicated at paragraph 2.3 of the Emerging Strategy, a key challenge for the Borough is the step change in housing growth to address the objectives of the Government to significantly boost housing supply.

Although paragraph 7.5 of the Emerging Strategy refers to the application of the Government’s draft approach to establishing the Borough’s housing requirements as outlined in its proposed changes to the Standard Method, the final approach has since been confirmed by the MHCLG; the updates to the PPG issued on 16th December 2020 refer (ID ref 2a-004-202001216).

Pursuant to the above, and although paragraph 7.5 refers to a minimum annual need of 922 dwellings (equating to at least 16,596 dwellings over the plan period 1st April 2020 to 31st March 2038), resulting from the revised PPG, the scale

of growth now required is for at least 1,023 dwellings each year (through application of the approach set out in the steps of the PPG).

This results in a need to find additional allocations for at least circa 1,818 dwellings. However, and in reality, the Local Plan needs to allocate significantly in excess of this just to meet the SM requirement. Moreover, there is also the need to satisfy the duty to cooperate. Moreover, there are significant issues with certain of the draft site allocations that cannot be said to be justified when assessed against the NPPF tests of soundness. These matters are expanded upon below.

Policies SP2 and SP4 indicate that the Council's objective is to deliver a minimum of 16,596 dwellings from 2020 until 2038, equivalent to 922dpa as outlined at paragraph 7.5.

We object to the Council's suggested approach both in terms of the number of homes being planned and in relation to the plan period.

In terms of both the planned levels of growth and the Plan period to which it relates, the NPPF is clear that the minimum annual housing requirement for the Borough must be set through application of the Standard Method within the assessment of Local Housing Need.

According to the Council's Local Development Scheme (agreed July 2020), the Local Plan is due for submission in October 2021 following consultation on a proposed submission document pursuant to Regulation 19 in June 2021. Adoption of the Plan is then envisaged for November 2022.

The Planning Practice Guidance (ID ref 2a-004-20201216) is clear that any assessment of need should be derived from considering household projections over the subsequent 10 years (with the current one as the start of the period for the appraisal). Whilst the Emerging Strategy is based upon the ten year period from 2020 until 2030, unlike that detailed in paragraph 7.5 of the document, this would be based upon the household projections from the 2014 base rather than the alternative approach in the Government's consultation.

In order to ensure consistency of housing need with supply, it is essential that the assessment of the requirement also considers the adequacy of supply at the same point in time.

With submission of the Local Plan not due until October 2021, it would be feasible and appropriate to rely upon the Council's annual assessment of the deliverability and developability of sites when reviewed at the 31st March 2021. Since this is not currently available, the assessment below considers the minimum requirement when assessed in 2020 and 2021 using the current approach outlined in Guidance.

The comparison of household projections for the 10 years after both 2020 and 2021 from the 2014 base as currently required in the PPG is outlined in Table 1 below.

*Table 1: Household Projections*

67,664

74,953

7,289

728.9

The Local Housing Need must then be adjusted to take account of the latest affordability ratios as outlined in the PPG (Step 2) (ID ref 2a-004-20201216).

The most recently published affordability ratios are those from 2019 published on 19th March 2020 which indicate that the median workplace based affordability ratio for the Borough is 12.21. The affordability adjustment ratio (using the formula below) relying upon this figure results in a 51.3125% uplift on the base household projections.

This results in the minimum annual need for 2020 being 1,105 ( $730.5 \times 1.513125$ ); and 2021 being 1,103 ( $728.9 \times 1.513125$ ).

Since the Core Strategy for Dacorum Borough was adopted on 25th September 2013, the five year period that the 40% cap pursuant to step 3 of the Local Housing Need calculation only applied until 24th September 2018.

The existing Plan's annual housing requirement from 2006 to 2031 is 430dpa (Policy CS17) and as the annual averages from the household projections above are above the 430dpa in the current Plan, pursuant to Step 3 of the Standard Method a 40% cap is applied to the household projections. This results in minimum housing requirements of 1,023dpa for 20201 and 1,020dpa for 20212.

The 2020 housing affordability information for England is anticipated to be published in March 2021. Consequently, if this is available prior to the consultation on the draft Submission Plan, the Borough's housing requirement should be adjusted to ensure it addresses the minimum outputs of the Local Housing Need calculation in the PPG (ID ref 2a-004-20201216).

As detailed above, the Council's latest Local Development Scheme (July 2020) indicates that adoption of the Plan is anticipated in November 2022, 13 months after it is due to be submitted in October 2021, this is not considered realistic.

A review of the time taken for the examination of Local Plan consulted upon and submitted for examination since the original NPPF was published in March 2012 indicates that on average the period from submission though to the document's

adoption was 572 days (i.e. 1 year 7 months) (for the more than 200 Strategic documents found sound until 1st January 2021)<sup>3</sup>.

With respect of the period from consultation on draft Submission through to adoption, this took on average 749 days (just over 2 years).

For neighbouring Welwyn Hatfield, which Authority also reviewed its Green Belt boundaries as part of the Local Plan process, that Plan was submitted in May 2017 and almost four years later that Plan is still at examination.

Based on the timelines contained in the current LDS, which indicates consultation in June 2021 and submission in October 2021, a more realistic adoption date would be June 2023 (2 years from consultation) or May 2023 (13 months from submission).

Therefore, whilst it is acknowledged that the expected Plan end date of 2038 would provide the minimum 15 years post adoption obligated by paragraph 22 of the NPPF assuming adoption occurred in November 2022, as indicated above, this is not realistic. A more realistic adoption date would be summer 2023 which necessitates an extended plan period until at least 2039.

Although policies SP2 and SP4 indicate that a minimum of 16,596 dwellings are required over the 18 year period (2020-2038), this should be increased to at least 19,437 dwellings<sup>4</sup> over the 19 year period (2020-2039) as explained above. Alternatively, over the 18 years from 2021 until 2039, it would currently be a minimum of 18,360 dwellings<sup>5</sup>. These minimum requirements are therefore an increase of at least 1,764 dwellings on the targets currently outlined in the Plan.

1 730.5 x 1.4

2 728.9 x 1.4

3 Data from Local Plans: the examination process - GOV.UK ([www.gov.uk](http://www.gov.uk))

4 1,023 x 19

5 1,020 x 20

However, the PPG is also clear (ID ref 2a-007-20190220) that:

This reinforces the view that the 1,023dpa output from the Standard Method when appraised using a 2020 start date is clearly the minimum requirement and the Council should consider the scope for increasing this.

The application of the SM at the 2020 base-date results in a 18,414 requirement to be met during the plan period:

*1,023dpa x 18yrs (2020 to 2038) = 18,414 dwellings (to be expressed as a minimum).*

In addition to the minimum requirement derived from the application of the SM, there is a need to consider unmet needs within the context of the duty to cooperate. This is a central pillar of the plan-led system. Moreover, and in so far as this is a legal requirement, any failure cannot be rectified through the examination process. As such, this is a critical component of the plan making exercise that must be addressed by the Council at the outset.

In this regard paragraph 60 of the NPPF, is clear in requiring that any needs that cannot be met in neighbouring authorities should also be considered in determining the Borough's housing requirement.

Although it is recognised that the Council, along with a number of its neighbours, is preparing a South West Hertfordshire Joint Strategic Plan, as noted in paragraph

1.40 of the consultation draft Local Plan, this is designed to set the context of the period to 2050 and therefore post dates that of the emerging Growth Strategy. Accordingly, it is essential that the Council considers the extent of unmet needs from neighbouring authorities, consistent with the requirements of the NPPF.

As the principal and most sustainable settlement within the Borough, Hemel Hempstead will continue to be focus for housing growth, with Policy SP2 stating as follows:

*“Hemel Hempstead will grow by over 10,600 new homes and will deliver the majority of new employment space. A key feature of the strategy will be the intensification of sites within Hemel Hempstead through increased heights and densities.*

*Key areas for redevelopment include sites across the Town Centre and Two Waters Areas. Smaller scale development within the existing urban area will also be provided to ensure previously developed land is optimised.*

*The town will grow to the north by providing a minimum of 1,500 homes with further land to deliver an additional 4,000 homes released from the Green Belt but safeguarded to meet longer term needs<sup>6</sup>.*

*New urban extensions to the north of the settlement will be planned and developed drawing on Garden City principles, with development within and around Hemel Hempstead supporting the transformation of the town. These sites will provide or support delivery of identified strategic infrastructure requirements, and sustainable transport enhancements and improve connectivity across the town.”*

Policy SP3 sets out a settlement hierarchy, which reiterates the role to be played by the town of Hemel Hempstead in helping to meet development needs during the plan period:

*“The most sustainable location in the Borough and the focus for the majority of development and strategic and town-wide infrastructure. Hemel Hempstead acts as the primary service centre for the Borough. The town will also expand on its eastern side into St Albans City and District Council area.”*

Whilst we support the continued reliance upon the settlement of Hemel Hempstead as the principal focus for growth during the plan period, we object to the draft site allocations on the basis that they do not represent the most appropriate locations for growth when assessed against the reasonable alternatives, which include the opportunity afforded by the allocation of land west of Leighton Buzzard Road to the west of Piccotts End to the north of Hemel Hempstead.

Section 23 of the consultation draft Local Plan sets out the sites proposed to be allocated for housing and employment growth at Hemel Hempstead.

We have undertaken a critical review of the draft allocations at the larger settlements of Hemel Hempstead and Berkhamsted (where the majority of the planned growth is proposed). We have then carried out a comparative analysis of certain of the draft allocations against the credentials of the subject site.

It is clear from the landscape analysis undertaken by Hyland Edgar Driver (“HED”) and the highways/sustainability analysis undertaken by SK Transport Planning that the subject site, which is not currently proposed as a housing allocation, performs better than that draft allocations in relation to these disciplines.

In addition to the above, the findings of the Green Belt appraisal undertaken by CSA Environmental (Feb 2021), demonstrates the suitability of providing for development on the site having regard to the assessment to be undertaken pursuant to the five purposes of the Green Belt as set out at paragraph 134 of the NPPF.

Furthermore, the additional technical work undertaken to date, including in relation to archaeology, heritage and flooding/drainage, all demonstrate there are no technical constraints to developing the site for approximately 400 dwellings.

6 This includes allocations HH01 (1,500 dwellings) and HH22 (385 dwellings) located to the east of Piccotts End

The Council’s housing trajectory is set out at Figure 2 of the consultation draft Local Plan, which position should be assessed against the background of the current position where the Council is only currently able to demonstrate a 2.5 year supply of deliverable housing land, which shortfall is substantial<sup>7</sup>.

Whilst the overall sources of supply expected within the Council is provided, there is no information indicating how the level of annual completions within the trajectory is derived.

Although the Housing Topic Paper purports to be able to demonstrate a 5 year supply of deliverable housing land in 2022, this is subject to the both the realism of the Council’s expected sources together with the requirement below the minimum detailed by the NPPF.

Applying a requirement derived from the Standard Method together with the Council’s expectations of delivery (which assumptions we dispute), illustrates that there will be insufficient land delivered to maintain a rolling 5 year supply until at least April 2025 through inclusion of only a 5% buffer and the Sedgfield approach to addressing cumulative under-delivery against a 1,023dpa minimum figure.

Based upon the Council's delivery assumptions, which figures we dispute, the five year supply positions from 2020 onwards is shown in Table 1 below.

Although Table 2 indicates the shortfall could be resolved March 2028, this same does not apply with respect of the adequacy of a 5 year supply. This is shown in table 3 below.

Table 3 indicates that by applying the Sedgefield approach to resolving previous shortfalls, the application of a 5% buffer and a 1,023dpa requirement, the Council might only be able to demonstrate a 5 year supply in the five year period April 2025 until March 2030. For all other years a deficit would arise, even on the Council's assumptions of delivery.

To ensure sufficient land is available to robustly demonstrate a 5 year supply, it is therefore essential that further deliverable land is identified. This should include land controlled by our client's to the west of Leighton Buzzard Road, north of Hemel Hempstead (Site Ref HH69).

In our view, the land at Piccotts End, Hemel Hempstead affords a more sustainable location in helping to meet housing needs than can be said to be the case with certain of the draft allocations proposed around the town.

The allocation of the omission site at Piccotts End would contribute to a sustainable pattern of development, locating housing closer to employment opportunities and the provision of services and facilities, including education, retail and bus services; than is the case with certain of the draft allocations as currently proposed.

The following changes are necessary in order to satisfy the duty to cooperate and the tests of soundness at paragraph 35 of the NPPF:

- **Address unmet housing needs from the neighbouring authorities**, which requirement should be added to the internalised requirement for Dacorum identified through the application of the Standard

- The Local Plan should **provide for at least 1,203 dwellings per annum**, based upon the local housing need derived from the Standard Method. This results in a need to plan for **at least 18,414 dwellings during the plan period 2020 to 2038**.
- However, the Local Plan should **cover a 15 year period from its anticipated date of adoption**, and should cover the period to
- Allocate additional sites to meet the increased housing requirement, whilst allocating more appropriate sites in favour of certain of the draft allocations, that cannot be said to be justified when considered against the reasonable
- Allocate land to the west of Leighton Buzzard Road, north of Hemel Hempstead for up to 400

<b>Spatial Strategy for Growth comment</b>	Please note that owing to a lack of capacity we have been unable to check every site in detail and we have therefore sought to prioritise sites which we consider have the greatest potential to impact on designated heritage assets (listed buildings, scheduled monuments, Registered Parks and Gardens, Conservation Areas). It is worth emphasising that the inclusion of a site within this response does not automatically mean that it should not be allocated, neither does omission

from this list mean that there are no historic environment issues. However it is clear the issues outlined below (in particular the lack evidence and absence of specific development criteria within Policies) will apply to many of the sites proposed for allocation in the Plan. We would therefore urge the Council to review all their site specific policies to ensure that these general principles are applied to all relevant allocations. Site specific details are outlined below.

<b>Spatial Strategy for Growth comment</b>	<p>In respect of the current Local Plan consultation, my client's generally support the Emerging Strategy for Growth and the inclusion of the Strategic Greenfield Growth Areas. However, we do believe the plan should be more ambitious in the identification of sites in order to deliver a greater surplus and flexibility around housing delivery to meet the local need. Given the existing Green Belt nature of the Borough, we consider that further land should be released on the edge of existing sustainable settlements, such as our clients land in Berkhamsted. Furthermore, the importance of small and medium-sized sites and the contribution they can make towards maintaining housing land supply is recognised in paragraph 68 of the NPPF. It is worth noting that recently, both the St Albans City and District Local Plan and the Uttlesford Local Plan failed examination due to their over reliance on large strategic sites coupled with a lack of the small and medium sized sites necessary to maintain supply to meet the Council's housing requirements in the short to medium term. It would be disappointing if the Dacorum Local Plan was found to have similar shortcomings. Our clients combined proposals would represent one such opportunity location. The acute housing need in the Borough, including a delivery requirement of 922 homes per annum should not be underestimated and the current modest projected oversupply is not considered sufficient to provide the degree of flexibility required.</p> <p>The Housing Trajectory 2020 to 2038 at Figure 2 of the Plan (paragraph 7.13) is noted. However, attention must be given to the under supply identified for the two years 2022 – 23 and 2024 – 25. It is considered that the supply in these respective years must be boosted and to do this will require more medium sized development opportunities to be identified. Whilst</p>

it may be premature for our client's land to be able to contribute to years 2022 – 2023 given the need for the plan to be adopted before planning permission can be delivered, reasonably their land could come forward to help make up the shortfall in the years 2024 – 25. Accordingly, we would urge the Council to consider making a further allocation of our clients combined sites to help address this particular shortfall.

In respect of the Growth Strategy, our clients support the principle of the Growth Strategy for Berkhamsted which, whilst seeking to maximise urban capacity, does not pursue an urban intensification strategy which will detract from the character of the town. Instead the strategy seeks to accommodate growth through expansion of the settlement in a manner which manages landscape and Green Belt impacts. As such, they support Policy SP2 – Spatial Strategy for Growth which includes Berkhamsted as one of the primary focuses of strategic growth and investment. However, it is considered that the quantum of growth identified for Berkhamsted could be increased to be more in line with Tring, to improve the delivery of the Borough's acute housing requirements by the inclusion of additional allocations such as our client's land.

<b>Spatial Strategy for Growth comment</b>	Although I can see that more housing is needed, I am appalled that the Council could entertain the proposal to build on Green Belt. They should instead be planning to build a reasonable number of houses in a manner which conserves the Green Belt, increases biodiversity and encourages climate change and carbon reduction. With the risk of sounding thoroughly rude, I don't understand how presumably intelligent men and women can possibly be unaware of the dangerous contribution which such a plan would make to the further deterioration of our planet.

<b>Spatial Strategy for Growth comment</b>	strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper ( " Changes in the Current Planning System " of August

2020) prepared in this regard in 2020. It appears that the Council's justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the

existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovington, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovington, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council ' s inner settlement plans and their assessment of housing needs.

**Policy SP2 (Spatial Strategy for Growth)**

Draft Policy SP2 (Spatial Strategy for Growth) states that the Local Plan will make provision for a minimum of '16,596 homes' during the plan period between 2020 and 2038. The primary focus of strategic growth and investment will be at Hemel Hempstead, supported by growth at Berkhamsted and Tring, and then the large villages, including Bovingdon.

Whiteacre supports draft Policy SP2, which states that 240 homes will be provided in the larger village of Bovingdon to deliver growth. The Local Plan makes detailed site-specific allocations for growth in the village, which can be found in Policy SP27 (Delivering Growth in Bovingdon) and in the Proposals and Sites schedule.

The specific findings of the Council's Sustainability Appraisal in terms of supporting the overall spatial strategy for growth in relation to Bovingdon are addressed under Question 6 within this Report.

I object to draft policy SP2 in its present form. To build so many houses on green belt land in Tring is detrimental to the town and its community. All green belt land should be protected across Dacorum.

It does not appear that assessments have been made regarding infrastructure for any new dwellings, or for the opportunities presented using brownfield areas.

No evidence has been put forward to justify the the vision of building on such a high scale, and certainly none for more than doubling the size of a Market Town like Tring.

<p><b>Spatial Strategy for Growth comment</b></p>	<p><u>HOUSING NEEDS</u></p> <ul style="list-style-type: none"> <li>The LP proposes construction of 16,596 new houses in the Borough in the 18 years between 2020 and 2038, 922 houses pa, with 5,954 of these on high quality Green Belt sites, abutting the Chilterns AONB, mainly in Berkhamsted and Tring. The CCG finds this growth is not equably distributed across the 3 main towns of Hemel Hempstead, Berkhamsted and Tring, taking current size and consequent Green Belt release into account. Development within the villages has been constrained, where there may indeed be small brownfield sites which could be developed for existing local residents, without compromising their village</li> <li>In December, 2020, Government announced revised policy on calculating national housing needs and how this would apply to Local</li> </ul> <p>The Ministry for Housing, Communities and Local Government stated: <i>‘Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, <b>alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt.</b> It is for local authorities to determine precisely how many homes to plan for and where those homes are most appropriately located. In doing this they should take into account their local circumstances and constraints.</i></p> <p>(Government response to consultation: Proposed changes to standard method for assessing local housing need 16.12.20 )</p> <p>The CCG does not accept that DBC’s LP meets this criteria or that robust factual assessment of the Borough’s future needs have been made based upon the ‘<i>standard method</i>’ required above.</p> <ul style="list-style-type: none"> <li>CCG finds that growth should be primarily focused upon Hemel Hempstead, as the main town of the Borough, which has greater existing and potential capacity to support such growth and requisite infrastructure, coupled with better connectivity.</li> </ul>

- There is greater potential within Hemel Hempstead's town centre and within its communities than in Tring and Berkhamsted for redevelopment for housing of unused retail and commercial. Such sites could be valuable in providing low-cost and social housing and would meet Government requirements to utilise brownfield sites before consideration of Green Belt.
- CCG finds that DBC has failed to make proper robust assessment of brownfield sites within the boundaries for the existing settlements of Tring and Berkhamsted, which it is required to do by Government, before proposing release and development of Green Belt outside present urban
- CCG finds the proposed growth for the smaller market towns of Tring and Berkhamsted to be wholly disproportionate, unjustified and lacking in valuing their surrounding environment and

We do not accept the vision for the market town of Tring as being sustainable when vast swathes of Green Belt, some top quality agricultural land, would be irretrievably lost to development of large housing estates outside the settlement's present boundaries nor the view that Tring should bear a more substantial loss of Green Belt than other areas within the Borough.

- Recognising that growth and change can be beneficial if approached in the most appropriate way for the individual location, the CCG finds the LP fails to deliver both this and the DBC's vision statement ( p5 of the Summary). We find the LP contradictory in its identification and selection of large Green Belt sites for development and its vision for existing and future communities and the environment within the
  - CCG finds that growth should be primarily focused upon Hemel Hempstead, as the main town of the Borough, which has greater existing and potential capacity to support such growth and requisite infrastructure, coupled with better connectivity.
- We would suggest there are more opportunities there, which have not as yet been considered, for redevelopment of unused retail and commercial (brownfield) sites for housing, which would be valuable in providing low-cost and social dwellings and would meet Government requirements to utilise brownfield sites before consideration of Green
- CCG finds that DBC has failed to make proper robust assessment of brownfield sites within the boundaries for the existing settlements of Tring and Berkhamsted, which it is required to do by Government, before proposing release and development of Green Belt outside present urban

- CCG finds the proposed growth for the smaller market towns of Tring and Berkhamsted to be wholly disproportionate, unjustified and lacking in valuing their surrounding environment and

## Spatial Strategy for Growth comment

- Policy SP2 sets out the Council's proposed Spatial Strategy and how this is to be Amongst other elements, the Policy identifies that the Plan will make provision for a minimum of 16,596 homes over the period between 2020 and 2038, equivalent to 922 homes per annum.
- On 16th December 2020 the Government published the results of its new Standard Methodology (following the previous consultation version in August 2020). This new Standard Methodology sets a minimum annual requirement for Dacorum of 1,023 dwellings per annum. Clearly whilst the Council was not able to reflect this in the current consultation version of the Local Plan, future iterations will need to respond to this increased minimum requirement and ensure the Local Plan is preparing to meet these needs.
- Accordingly Policy SP2 must be updated to include a requirement for provision of a minimum of 18,414 homes over the Plan Additional allocations will therefore

be required in order to deliver the 1,818 additional dwellings now required over the Plan period.

- In updating the Spatial Strategy, and indeed the Plan as a whole, in order to meet these new housing requirements, it will be important to consider this holistically alongside the other forms of provision required to ensure that the Council's vision is met with the necessary supporting infrastructure delivered alongside the required homes and
- We support the proposed Spatial Strategy which sets that the focus of strategic growth and investment will be at the most sustainable locations. Hemel Hempstead will be a focus of growth, supported by growth at Berkhamsted and Tring. It will be important that the growth to be allocated to the large villages of Bovingdon, Kings Langley and Markyate is proportionate to the sustainability and size of these settlements respecting the Spatial Strategy's approach to
- It is noted that the Settlement Hierarchy Study (October 2017) which supports the Local Plan, identified Hemel Hempstead, Berkhamsted and Tring as all scoring High in the accessibility audit outcome, containing each category of higher order services assessed and having all types of key services. It is clear therefore why these three settlements are the focus of the majority of the required
- The Local Plan as currently drafted proposes 10,600 new homes at Hemel Hempstead, 2,200 at Berkhamsted and 2,700 at Tring. Whilst it is recognised that, although scoring comparably in the Settlement Hierarchy Study, Hemel

Hempstead is a more sustainable location for growth of these three settlements, it is unclear why the disparity in the level of growth afforded to Berkhamsted and Tring is considered. It is recommended that this is reviewed and addressed through the additional growth now required to be met as a result of the new Standard Methodology with additional growth apportioned to Berkhamsted.

- We support the Council's aspiration that in addition to the delivery of housing, development at Berkhamsted will:

*“enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities.”*

- It is considered our client's site, Bulbourne Cross, would make an important contribution to the achievement of these
- Whilst it is considered that when read as a whole the Local Plan and its supporting evidence base make a clear and compelling case for the exceptional circumstances which justify the release of Green Belt in the Borough, it is considered that this could be more clearly expressed within the Local Plan itself. The inclusion of a specific section addressing this point in Section 5 of the Local Plan would aid the clarity of the Local
- Policy SP2 also sets out that the Council is proposing to release additional land to the north of Hemel Hempstead from the Green Belt to meet longer term needs. Such an approach is in accordance with the NPPF and is supported in
- Whilst as identified above the housing requirement for the Borough in the Plan period has increased as a result of the Standard Methodology changes, it is considered that additional allocations should be made to meet this need with the additional 4,000 homes possible to the north of Hemel Hempstead continuing to be safeguarded to meet future needs. Indeed, given the timescales for delivery of such a large site (in addition to the 1,500 dwellings to be delivered to the north of Hemel Hempstead during the current Plan period) it is questionable to what extent these homes could be delivered in the Plan period in any event

<b>Spatial Strategy for Growth comment</b>	<ul style="list-style-type: none"> <li>• This Section of these representations addresses individual policies within the emerging Plan and comments on their soundness. Please note that this should be read in conjunction with preceding sections of this report which considered the Duty to Cooperate, Housing Needs and Need for Specialist</li> <li>• As set out in the preceding sections, Retirement Villages considered the emerging Local Plan is currently 'unsound' on the basis of the following:</li> </ul>

- 1 The Housing Needs figure does not accord with the latest government Local Housing Need figure of 1,023dpa (as per revisions to the Standard Method in December 2020).
- 2 The Plan does not seek to meet its needs in full for older persons At policy DM9, the Plan mistakenly includes the need figures 2020-2036 which is 2 years short of the Plan Period to 2038.
- 3 Whilst the Plan includes meeting the housing needs of older people as a strategic objectives, there are a lack of meaningful policies to ensure this that this translates in to Housing for older people is directed towards 5 “growth area” site allocations which appears an afterthought with no details in terms of quantum or tenure provided. In addition, these will deliver over the longer term and will not address the existing unmet needs which exist within the Borough.

- In order to resolve the soundness issue, Retirement Villages strongly recommends that the DBC Local Plan should:
  - Adjust its annual housing delivery targets within Policy SP2 to state that the Plan will make provision for ‘a minimum of 18,414 homes’ across the Plan
  - Update the needs figure for older persons accommodation at policy DM 9 to ensure that this covers the whole Plan
  - Allocate new sites that have the ability to deliver older persons accommodation in the short term based on existing infrastructure which and can managed by experienced companies such as Retirement Villages (including the Site).
- This Section does not comment on other site-specific allocations. Instead, it focuses on policies of relevance within the emerging Local Plan and sets out Retirement Village’s

comments and recommendations on these policies in terms of the tests of soundness in the NPPF.

- Please note that the following does not seek to comprehensively comment on all policies contained within the Regulation 18 stage We reserve the right to comment on other policies within future consultation drafts of the plan.

<b>Spatial Strategy for Growth comment</b>	I strongly object to draft Policy SP2, as it is not fit for purpose in its current form. Neither the housing need figure of 16,596 homes or the basis of its calculation can be relied upon to be robust. Subsequently, the policy requirement to deliver 2,700 homes within Tring at SP2.3c), wherein the majority is located within the Green Belt, cannot be justified in planning terms. The Council has failed to justify this target as a requirement against market evidence, planning designations

and policy, Government advice and by way of cooperation with surrounding Local Planning Authorities within Hertfordshire, Bedfordshire and Buckinghamshire.

The target is broken down to 922 homes per annum, which the Council consider has been derived from the Ministry of Housing, Communities and Local Government advice justified by the White Paper(" Changes in the Current Planning System" of August 2020) prepared in this regard in 2020. It appears that the Council' s justification is to prepare a plan in relation to this target number despite the knowledge that it was prepared under the use of guidance out for consultation rather than established; with a notional intention to decrease or increase the housing supply number on the outcome of further consultation. The target does not present a requirement in plan making, but instead provides a starting point for the determining the level of 'need' in an area.

It is only after consideration of the level of 'need' alongside the constraints of the Green Belt can the actual land available for development be determined and a decision be made on how many homes should be planned for the area concerned.

There is a requirement for the Council to reassess their initial standard method housing target, but there is then a substantial amount of work to be undertaken to determine the actual practical opportunity for the delivery of housing and infrastructure within the borough in a manner that does not undermine the strong protection for the Green Belt as set out in Paragraph 11b) of the Framework, given that without such analysis the Council cannot bring forward exceptional circumstances so as to allocate Green Belt for such housing.

No evidence has been provided by the Council to justify a different approach to the intensification of sites within Tring in comparison to Hemel Hempstead. No assessments have been undertaken to assess the opportunities to intensify development within the existing settlement of Tring through redevelopment of brownfield sites or by way of consideration of increasing density of available sites.

Irrespective of the eventual housing supply requirement for Tring, there is a requirement to establish the opportunities within the existing settlement boundaries before land outside of it is considered. The same approach to assessment is required within Tring as was undertaken in Hemel Hempstead.

The housing needs delivery strategy was that Hemel Hempstead provides the vast majority of housing supply and the remaining requirement is equally split between Tring, Berkhamstead, Bovingdon, Kings Langley and Markyate - this was appropriate so as to reduce impact on infrastructure. At Paragraph 5.6, the Council have identified that this approach was discounted due to the constraints on the infrastructure of Bovingdon, Kings Langley and Markyate. However, I note that there has been no assessment of the infrastructure impact the proposed allocation of land to the East of Tring would have on the area. It has not therefore been proven that the development could occur without substantial impact occurring to an existing infrastructure already stressed.

Policy SP2 seeks to protect existing office and retail space but fails to provide an up to date review of the suitability of the planned retention of such space and uses, given current market conditions and proposed permitted development rights providing substantial opportunity to convert office and retail space to residential units. The implications of these factors have to be considered within the council' s inner settlement plans and their assessment of housing needs.

**Spatial Strategy for Growth comment**

In additional to the fact that the Development Strategy in the draft Local Plan does not identify sufficient development sites to ensure the minimum housing need is delivered, our client's concerns stem from the inappropriateness of the assessment process undertaken to establish which sites should be allocated for development.

These concerns can be summarised as:

- The blanket assumption that there should not be any development in the AONB,
- The assessment process, and
- The lack of consideration of wider benefits offered by particular

Lack of consideration of sites in the AONB

As set out in the introduction, our client's land lies to the west of Markyate. The site lies in the Green Belt with a small part of the site lying in the AONB, the boundary of which bisects the site near its centre.

As is discussed further below, the proposal put forward through the call for sites would avoid any built development in the AONB other than a length of road to connect the development to Pickford Road to the north, and create a bypass around the settlement, helping to alleviate congestion problems on the High Street.

The Council's Sustainability Appraisal (Page 33, Table 5.3) sets out that the rationale behind not seeking any development in the AONB is that the Council places great weight on its importance and will first look to allocate sites outside the AONB. It concludes that the evidence currently suggests sufficient non-AONB sites are available and therefore the option of allocating land in the AONB has been rejected.

Whilst the need to protect the AONB in line with national policy is understood, the Council's current approach does not allow for a proper assessment of sites, the quality of the AONB across the Borough and the impact that particular development proposals would have on the AONB.

There is nothing in national policy that sets out that development in the AONB should be avoided. Paragraph 172 of the NPPF sets out that:

*Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues.... The scale and extent of development within these designated areas should be limited.*

The NPPF therefore seeks to conserve and enhance the landscape in AONBs and ensure any development in them is 'limited' - it does not prevent development. Therefore, particularly in light of the need to find additional housing land, for the Local Plan to be justified, the Council will need to ensure that assessment process looks at all reasonable alternatives and that the specific impact of any developments on the AONB is properly assessed rather than ruling out any development.

In the case of our client's site at Markyate, the majority of which lies adjacent to but outside the AONB, the site itself makes a limited contribution to the overall value of the landscape. As already stated, the proposed development, which has been carefully thought-out to give regard to the site's context, would look to improve the edge treatment to the west

of Markyate with new buffer planting and open space, and, despite a short length of road in the AONB, would lead to an overall enhancement to the quality of the AONB, in line with national policy.

**Spatial Strategy for Growth comment**

- This section sets out W Lamb Ltd’s position regarding the level of housing need and housing requirement identified in the Draft New Local Plan.
  
- We object to Policy SP2 on the basis that it does not make provision for the full 18,414 dwellings over the 18 year period (1,023 dpa) based on the standard method as set out in the NPPF and PPG. No justification has been given in the draft Plan for adopting a lower figure. In the interests of the soundness of the Plan, it is recommended that the housing numbers are amended.
- In the interests of the soundness of the Plan, it is recommended that the Policy should also be amended at 3 a) to include for 500 dwellings on Land at Shendish, Apsley.
- The Policy wording at 4 should be amended, on the basis that the current Plan does not make adequate housing provision and cannot therefore resist other Development.
  
- The Draft Plan sets out at Policy SP4 – Delivering the Housing Strategy that the Plan will deliver a minimum of 16,596 net additional homes across the Borough over the plan period 2020-2038. The Policy goes on to confirm

that housing growth will be concentrated at the existing urban areas of Hemel Hempstead, Berkhamsted and Tring as well as three of the larger villages of Bovingdon, Kings Langley and

- DBC acknowledge in the introduction to the Housing Topic White Paper that:

*“The Borough of Dacorum is facing challenging pressures for new development over the next 15 years which it must tackle through the Dacorum Local Plan (2020- 2038) Emerging Strategy for Growth. In particular, the need for homes, employment land and associated infrastructure is much higher than faced by previous Plans yet this has to be planned for in the context of the same extensive planning and environmental constraints.”*

- DBC recognises the importance of housing delivery stating at Paragraph 7.3 of The Development Strategy Background Topic Paper:

*“The Council has concluded that it should face up to these challenges and that accommodating lower growth levels would not be the best option for the Borough. While the Council recognises the difficulties of meeting its development needs and securing the necessary infrastructure, it considers the benefits of this scale of growth, on balance, outweigh these problems.”*

- However, the Council based their housing target of 922dpa (a total of 16,596) on the Government’s ‘Planning For the Future White Paper’ August 2020 and the ‘Changes to the Current System’ consultation paper, which indicated that a new element could be added to the Standard Method (as set out in paragraph 6.26 of the Housing Topic Paper) resulting in a different housing figure for the Borough than that identified under the current standard method
- As the new approach had not been formally introduced, to rely on it as the basis for Plan making was not a sound approach, as the formula had not been finalised or included in national policy, unlike the currently adopted Standard
- The Council acknowledges that this formula had not been formally adopted at paragraph 6.29 of the Housing Topic Paper and provides no real justification, as to why it chose to take this approach.
  
- The Governments’ announcement on the 16th December 2020 confirmed that the current Standard Method to assess housing need would not be revised, as proposed in the White Paper, maintaining the method that has been in place since 2018, with some tweaks. The current standard method will now need to be reflected in the emerging Local
- This unsound choice of housing need calculation has resulted in a shortfall of 1,818 dwellings over the plan period and thus it was not appropriate to base a Local Plan on a speculative The Council should have relied on the adopted version instead.
- The Council therefore need to revise their methodology and ensure that the Plan accommodates the growth levels calculated under the current standard method in the new This will also require DBC to undertake a further Regulation 18 consultation in our view.

- Chapter 5 of the NPPF sets the framework for housing delivery, including the Government’s objective to significantly boost the supply of homes (paragraph 59). The Government is committed to ensuring that: *“a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay”*.
- The Government also state at Paragraph 60 that:

*“To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.”*

- The PPG sets out the 3 steps to be followed in calculating the minimum annual local housing need figure calculated using the standard method (Paragraph: 003 Reference ID: 2a-004- 20201216). The fourth step is not applicable as Hemel Hempstead is not in the top 20 cities and urban centres list and the 35% uplift does not therefore
- The NPPF (paragraphs 67 - 69) goes on to emphasise the importance of understanding and delivering a sufficient supply and mix of housing, particularly in respect of:
  - 1 specific, deliverable sites for years one to five of the plan period; and

1 specific, developable sites or broad locations for growth, for years 6-10 and ,where possible, for years 11-15 of the

- In order to maintain supply and deliver, the NPPF expects (paragraphs 73 – 75):
- strategic policies should include a housing trajectory and the anticipated rate of development for specific sites.

#### Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

- an annual update of 5-year supply of specific deliverable sites (including an appropriate buffer moved forward from later in the plan period); and
- local planning authorities should monitor progress in building out sites which have
- As indicated above, DBC has based the emerging housing numbers on the “Planning for the Future White Paper” consultation, which is clearly in contradiction to the advice set out in the NPPF and PPG. However, the South West

Hertfordshire Local Housing Needs Assessment 2020 (LHNA), which assesses future development needs for housing across South West Hertfordshire for the period 2020-2036 has been based on the current standard method

- The LHNA sets out how the three step process in paragraph 004 of the PPG on Housing and Economic Needs Assessment is applied to South West Hertfordshire and its constituent districts stating:

*“In all the local authorities within the SW Herts HMA, the Local Plan is older than 5 years and the increase 2 is greater than 40%. The cap is therefore applied at 40% above the higher of the projected household growth (step 1) or the average annual housing requirement set out in each of the adopted locals plans.....*

*As set out Table 4 in every authority the projected household growth set out in step 1 is also higher than the adopted local plan housing requirement. The 40% cap is therefore applied to the figure in Step 1.”*

- Paragraph 3.8 of the Housing Topic Paper refers to Table 3.1 which summarises the calculations using the standard method for South West Hertfordshire and Dacorum as follows:

Standard Method Calculation

Dwellings per annum

South West Herts

Dacorum

Step 1. Setting the baseline

2,888

731

Step 2. An adjustment to take account of affordability

– this increases the figures to:

4,674

1,108

Step 3. Capping the level of any increase

4,043

1,023

- As the Draft Local Plan was issued for consultation, prior to the Governments' announcement on the 16th December 2020 abandoning the proposed White Paper consultation changes to the Standard Method of Housing Need, the current method that has been in place since 2018 has not been followed. As a result the draft plan sets a housing target of 922dpa (a total of 16,596).
  - The Council's evidence base at paragraph 6.14 of the Housing Policy Background Topic Paper sets out that under the Standard Method the minimum requirement for Decorum is 1,023dpa, which would come to a total of 18,414 dwellings over the 18 year period of the Local Plan, starting from a base year of 2020. The Draft Local Plan therefore underprovides by 101 dpa resulting in a total under provision of 1,818 over the plan
  - This shortfall is particularly concerning as the Council have a track record of under delivery, as shown by the latest Housing Delivery Test results which show that over the previous 3 years, they only delivered 89% of their target, with a declining rate of new homes being completed each year (2017/18: 587, 2018/19: 576 and 2019/2020: 522). This is explored further in Section 5 of this report Housing Supply.
  - Therefore, to arrest this decline, DBC need to take an ambitious and proactive approach to housing needs in their area, and thus should be using the 1,023dpa target set by the Government's Standard Method. This should help provide a greater number of sites in the Local Plan, and thus enable a wider choice of land and dwelling types to be delivered at any given time in the Borough, which is of itself would help towards the Government's wider target of 300,000 homes each year in the country by the middle of the
- 
- Consideration should also be given as to whether a higher level than the Standard Method approach should be planned for. The LHNA recognizes the requirement under Paragraph 010 in the PPG, as to whether it would be appropriate for the SW Hertfordshire authorities to plan for a higher housing need figure than the standard method
  - The LNHA is clear that that some neighbouring authorities including those in London and within the Housing Market Area are likely to have unmet need and that it is for each local authority to consider the extent of the identified unmet need it could
  - The LNHA also considers whether as per the PPG, local authorities should also consider an increase in housing requirements where it could help deliver the required number of affordable homes, but concludes it was not

- As indicated above, the LNHA anticipates that some of the neighbouring authorities are likely to have an unmet need. The Housing Topic Paper indicates at Paragraphs 7.2-7.4 that while DBC has written to the neighbouring authorities and the Council has ‘actively engaged with these authorities’, the matter has yet to be
- It is therefore unclear whether the housing target for DBC needs to take account of unmet need from elsewhere, and in particular the London authorities and other heavily constrained authorities within Hertfordshire, that will need to be reflected in its overall housing

### *Affordable Housing*

- The LHNA addresses affordable housing, other housing needs and housing mix in Part B of the document. The LHNA identifies an estimated net housing need in south west Hertfordshire 2020-2036 for affordable rent/social rent and affordable home ownership of 3,188 affordable homes per annum. Dacorum’s estimated need is 611 homes per annum or 10,998 affordable over the Plan period up to
- It is considered that this level of demand is significant being higher than the overall annual housing target in the adopted Local Plan and 60% of the LHN for Dacorum, based on the current standard
- The LHNA goes on to state “*given the scale of affordable housing need the authorities should seek to deliver as much affordable housing as viability allows.*”
- While, as indicated above, the LHNA indicated that an increase in the housing target is not required to help the delivery of affordable homes, there is no further detailed assessment undertaken by DBC as to whether this would be appropriate, particularly given the significant level of affordable housing need identified in the LHNA.
- At Policy DM2 Affordable Housing it is explained that the Council will seek 40% affordable housing provision, from all Growth Areas and all new dwellings elsewhere and 35% from the existing urban area. The Policy acknowledges, in line with the LHNA, that the overall viability of the scheme will be taken in judgements about the level, mix and tenure of affordable housing. It is clear that the policy provision will generally be expected, representing a high tariff, particularly when combined with Community Infrastructure Levy payments and other contributions which may impede viability and therefore affordable housing
- As such, it is recommended that the Council consider whether increasing the proposed housing requirement would allow for a more achievable affordable housing target to be set, that more fully reflects the identified affordable housing

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

- In summary, the Draft Local Plan housing target has been underestimated by 1,818 over the plan period when compared to the standard method, which should be relied upon in line with the NPPF, PPG and South West Hertfordshire Local Housing Need
- Further, it is unclear whether or not a higher level housing target should be deployed to assist with unmet demand from elsewhere and the shortfall in affordable housing provision within
- In any event, the PPG is clear that the standard method represents a 'minimum' target number and this requirement should be fully reflected in the Plan.

<b>Spatial Strategy for Growth comment</b>	<ul style="list-style-type: none"> <li>The principles behind the proposed spatial strategy set out in paragraph 2 are supported as it is considered DBC should deliver the Borough's housing requirement to significantly boost housing supply as well as delivering economic aspirations, by providing employment opportunities, and supporting retail development.</li> <li>Building on this, Policy SP2 is broadly supported, albeit some amendments are recommended for</li> </ul> <p><u>Quantum of Development</u></p>

- We note that Policy SP2 identifies that the Plan will make provision for a minimum of 16,596 homes between 2020 and 2038, equating to We support DBC in making provision for, as a minimum, the full local housing need of the Borough which we consider is essential for significantly boosting housing supply in line with the principle established at paragraph 5.2 of the Plan and in accordance with the Government's objective of significantly boosting the supply of homes set out in paragraph 59 of the NPPF.
- However, whilst we acknowledge that the proposed supply reflects the evidence available when the draft Plan was being prepared, it will be important that the final Local Plan reflects the latest Government local housing need figures if housing need is to remain as met in For Dacorum Borough, the latest local housing need figure, as per the revisions to the Standard Method in December 2020, is 1,023dpa. The Council will also need to take into account of any changes in the affordability ratio when the latest data is published in March 2021.
- In this regard, Policy SP2 should be amended to state that the Plan will make provision for 'a minimum of 18,414 ~~16,596~~ homes'.
- In addition, the Council must recognise that this is the minimum number of homes that they must plan Paragraph 60 of the NPPF requires the Council to take account of any unmet needs in neighbouring areas. It is therefore vital that the draft Plan reflects the outcome of discussions with neighbouring authorities, including as part of the preparation of the JSP, to address unmet needs that may be identified across the sub- region. Whilst the timeframe for the ongoing preparation of the Joint Plan may be uncertain, we recommend that the Local Plan has regard to its emerging evidence base and seeks to take account of discussions about the apportionment of growth to ensure that it is consistent and sound.
- Finally, we would also suggest the Council need to be cognisant of unmet needs arising in other areas, most pertinently for the wider South East, in respect of London's inability to meet its own housing needs given the strong geographical and migratory links between the capital and the

#### Distribution of Growth and Exceptional Circumstances for Release of Land from the Green Belt

- As set out in paragraph 4.24 of the Development Strategy Topic Paper (November 2020), Dacorum is highly constrained by Green Belt and the Chilterns Area of Outstanding Natural Beauty (AONB). Existing urban capacity is not sufficient to satisfy the identified housing

- The capacity of the existing urban area identified in the Urban Capacity Study (November 2020) is 10,900. If this ambitious total were to be achieved it would equate to just under 60% of the total proposed housing across the plan period (taking account of the increase on the latest December 2020 local housing need figure), leaving approximately 40% of identified housing need to be delivered outside of existing urban
- Moreover, options considered for accommodating growth outside the Green Belt, such as locating growth in the countryside beyond the Green Belt, at existing small villages or a new town, or within the AONB, are evidently not as deliverable or sustainable as the proposed spatial strategy as DBC set out in Chapter 5 of the Development Strategy Topic Paper and within the
- Paragraphs 39-5.42 of the Development Strategy Topic Paper and the Green Belt Topic Paper (November 2020) make clear that all the authorities within the South West Hertfordshire area are facing similar challenges in regard to allocating land to meet their locally assessed housing needs and, as such, housing need arising in Dacorum cannot feasibly be accommodated elsewhere.
- We therefore consider that all other reasonable options for accommodating growth have been examined fully in accordance with paragraph 137 of the NPPF and the proposal to amend the Green Belt boundary around Berkhamsted is justified by exceptional circumstances, as required by paragraph 136 of the NPPF. Specifically, the scale of housing need (market and affordable) which cannot be feasibly or sustainably met on land outside of the Green Belt and the limited contribution the land within the West Berkhamsted Growth Area to the Purposes of the Green Belt.
- To this end, DBC's comment at paragraph 28 of the Topic Paper that 'if housing need is to be fully met, then there is no alternative other than to remove some land from the Green Belt' is supported.
- Turning to locations for growth, paragraph 138 of the NPPF emphasises the need for strategic policy making authorities to promote sustainable patterns of development when reviewing Green Belt. Where it is concluded that it is necessary to release Green Belt land for development, plans are required to first consider land which has been previously developed and/or is well served by public transport. Plans are also required to set out ways removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt Land.
- Against this background, we support the identification of Berkhamsted, one of the three main sustainable settlements in the Borough, as a location for growth. We welcome the principle set out in paragraph 5.2 of ensuring the important key market towns of Berkhamsted and Tring play a much greater role in delivering growth in the Borough and complement

Hemel Hempstead in providing more balance to the growth focus and help deliver housing, employment and infrastructure in these locations.

- We also support the proposed growth strategy for Berkhamsted set out in paragraph 5.5. In particular, we support the recognition that an urban intensification strategy risks detracting from the character of the Berkhamsted and should therefore not be. In this context, the accommodation of growth through urban expansions to the settlement which, as set out in paragraph 5.5, manage landscape and Green Belt impacts whilst also

meeting DBC's aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities is supported.

- To support, evaluate and inform the prospects for Green Belt release, DBC have undertaken a series of Green Belt Reviews, which, divided into three stages, aim to provide a robust assessment of the various function of Green Belt within the Stage 1 of the Green Belt Review comprises a strategic review of Green Belt undertaken by Sinclair Knight Merz (2013) that considers the contribution and role of the land parcels as part of the Green Belt.
- Stage 2 of the Green Belt Review (undertaken by Arup, 2016) is more refined and further breaks down the parcels identified within Stage 1, to consider the potential consequences of development within each parcel with further assessment undertaken to refine sub- areas to consider the sensitivity for each land parcel to residential
- Finally, Stage 3 of the Green Belt Review (undertaken by Arup, 2020) and forming part of the evidence base for the draft Local Plan assesses the potential housing and employment site allocations that lie within the Green Belt, considering the acceptability of the sites in Green Belt boundary. The Stage 3 Green Belt Review identifies that the Site is located within Site No 16 – Land between Shooters Way and A41 bypass. The Stage 3 Green Belt Review identifies that Site 16 is considered to have a Neighbourhood Value, a Low-Moderate Susceptibility, and a Moderate-Low Sensitivity.
- In providing an overview of the findings of the extensive stages of Green Belt review, DBC have prepared a Green Belt Summarising Document (November 2020). This broadly concludes that land parcels to the west of Berkhamsted make a partial or moderate contribution to the purposes of the Green Belt comparative to the east of the town which is identified as making a strong contribution, particularly in relation to preventing the merging of neighbouring
- In reviewing the findings of the stages of Green Belt Review, a Landscape Visual Appraisal and Green Belt review has been undertaken by Barton Willmore (**Appendix 3**). This includes an independent assessment of the Site

against Purposes 1-4 of the Green Belt as set out in Paragraph 134 of the The conclusions of this assessment are summarised in the table below:

- **Purpose**

- Criteria**

- Contribution**

- 1. Check the unrestricted sprawl of large built-up areas

- Development on the Site, Proposed Growth Area Bk08: Rossway Farm, would be well contained by Shootersway to the north and the A41 to the south, along with the associated substantial boundary vegetation; and set on the settlement edge of Berkhamsted, with the existing residential properties off Shootersway to the immediate north of the Site.

- The Site is also located adjacent to between Proposed Growth Area Bk05: Blegberry Gardens to the east of the Site, and Proposed Growth Area Bk 06: East of Darr's Lane to north of the Site, to the immediate north of Shootersway. The Site would therefore not contribute to a disorganised, incoherent, sporadic, dispersed or irregular extension to the settlement of Berkhamsted; and would be contained within robust and defensible boundaries; either in considering the Site specifically, or in combination with the adjacent Proposed Growth Areas BK05 and BK06. The Site would be set within a coherent settlement pattern, both independently, or as part of the extension of Berkhamsted in conjunction with Proposed Growth Areas BK05 and BK06.

- The Site would therefore not contribute to, or be perceived as, sprawl.

- None

- Prevent neighbouring

- towns from merging into one another

- Development on the Site would not result in neighbouring towns merging. The existing settlement of Berkhamsted extends to the north-west, north, east and south-east of the Site, such that development on the Site would not physically or perceptually reduce the separation between neighbouring towns. Furthermore, there is a substantial swathe of the Chilterns AONB and remaining Green Belt to the south-west, west and north west that would continue contribution to maintaining the separation of surrounding settlements.

- None

- Assist in

- safeguarding the countryside from encroachment

- The Site is predominantly undeveloped. However, the Site is located on the edge of Berkhamsted, with recently constructed residential development to the immediate north of Shootersway, and with the south eastern extent of the Site adjoining the settlement the settlement, and connected to the settlement by PROW

033. The Site is subject to urbanising influences from the proximity of the settlement of Berkhamsted and, in particular, intrusive audible traffic noise from the A41.

Limited

- Contrary to some of the conclusions of the Green Belt Summarising Document, the Green Belt Review undertaken by Barton Willmore concludes the Site has limited to no contribution to the purposes of the Green Belt for the reasons set out in the table
- With Land at Rossway Farm, contained by robust existing physical features such as the A41 and Shootersway, defensible boundaries to the Green Belt can be formed, in the event the Site is released from Green Belt for Likewise, when considered comprehensively with neighbouring Proposed Growth Areas Bk05 and Bk06, the A41 and Darr's Lane would further form robust defensible and permanent boundaries to the Green Belt, should the West Berkhamsted Growth Area be released from the Green Belt, as is proposed.
- Therefore, in supporting the distribution of growth, we consider that exceptional circumstances are justified to support the release of the Site and the wider West Berkhamsted Growth Area through the requirement to meet identified housing needs in full to boost the supply of housing following assessment of all alternative spatial We furthermore have demonstrated through an independent Green Belt Review that development of the Site would not prejudice the purposes, or the character, of the remaining Green Belt; and would not compromise the ability of the wider remaining Green Belt to meet its purposes. The removal of the Site from the Green Belt at West Berkhamsted is therefore fully supported.

#### Infrastructure Delivery

- We recognise that development at Berkhamsted offers opportunities for new and improved infrastructure, as referred to in part 3b of Policy However, we recommend that the wording is amended as follows to be consistent with national policy:

Development ... will provide ~~significant~~ new investment into sustainable transport initiatives, education, open space and sports facilities, to ensure the impact of development is appropriately mitigated.

- Section 33A of the Planning and Compulsory Purchase Act 2004 requires that local planning authorities engage constructively, actively and on an ongoing basis in any process by means of which activities associated with the preparation of development plan documents are undertaken so far as relating to strategic
- National Planning Policy is clear that effective and on-going joint working between strategic policy-making authorities and relevant bodies is integral to the production of a positively prepared and justified In particular, it is emphasised that joint working should help to determine where additional infrastructure is necessary, and whether development needs that cannot be met wholly within a particular plan area could be met elsewhere (NPPF paragraph 26).
- DBC's Housing Policy Topic Paper (November 2020) outlines that DBC have been working with nearby authorities and other organisations as part of the preparation of the Local Plan, with discussions focussed on strategic matters that affect more than one authority and include unmet housing, as well as employment and infrastructure needs across the South West Herts authorities grouping (Dacorum, Albans, Watford, Three Rivers and Hertsmere).
- Croudace welcome the ongoing engagement with neighbouring Croudace also welcome the intention to prepare Statements of Common Ground / Memoranda of Understanding, as noted in paragraph 5.46 of the Topic Paper, which will serve as important evidence to robustly demonstrate that the Duty to Co-operate has been fulfilled in the plan making process. In the context of NPPF paragraph 27 which requires that statements be made publicly available throughout the plan-making process to provide transparency, we recommend that statements are prepared and published at the earliest opportunity and updated where necessary to reflect the outcomes of ongoing discussion.
- We consider that it is vital that statements clearly detail the position of neighbouring authorities in respect of assisting DBC in accommodating its full development Paragraph 5.47 of the Topic Paper sets out that assistance from nearby authorities in meeting needs has been sought; however, it is recognised that neighbouring authorities are also facing substantial growth challenges and, as such, have advised that they are unlikely to be able to assist DBC, particularly in the case of housing.
- We agree that nearby authorities are facing substantial growth challenges, with significant identified demand for development and limited availability of suitable land necessitating consideration of Green Belt release. In this context, it is evident that the scale of growth required in Dacorum Borough cannot feasibly be addressed by neighbouring However, clear evidence of discussions regarding the ability of neighbouring authorities to accommodate housing need arising in Dacorum, and responses from these authorities confirming their inability to provide assistance, should be presented as part of the Local Plan. As we detail further below, this evidence will form an important part of the justification of exceptional circumstances to support the proposed release of land from the Green Belt.

- In this context, and as the Plan progresses, it will also be important to take account and be cognisant of any requests from neighbouring authorities to assist in meeting their housing and infrastructure needs to ensure that growth across the wider South West Hertfordshire area can be met in
- In addition to current discussions with nearby authorities, it is noted that work is at an early stage in the preparation of a South West Herts Joint Strategic Plan (JSP), which will include This strategic plan is intended to consider how the challenges of growth in South West Herts can be addressed in the longer term to 2050 and is expected to come into force by the end of 2023.
- It is recognised the JSP is at an early stage of its preparation and therefore should not prevent the Local Plan being prepared in a timely manner to ensure that development needs in the Borough can be met and However, recognising the potential for overlap in the preparation of the Local Plan and JSP it is noted that a consistent approach will be needed in the preparation of the JSP to ensure that the spatial strategy and delivery of growth is aligned with the DBC Local Plan once adopted.

**Spatial Strategy for Growth comment**

- We object to Policy SP2 ('Spatial Strategy for Growth') on the grounds that it fails to promote development on brownfield land, particularly by allowing the redevelopment of sustainable previously developed sites in rural areas. This is not currently in accordance with paragraph 117 of the NPPF which states that "*Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land*".

- We suggest therefore that a new point 6 is added to Policy SP2 that states:  
*“6. The Council will support development on brownfield or previously-developed sites, including suitable brownfield sites in rural areas that are physically well- related to existing settlements”*
- In addition, this policy should also recognise and plan specifically for older persons’ needs within the overall spatial strategy for growth. We suggest that paragraph 1a of Policy SP2 is amended to state:  
*“a. A minimum of 16,596 homes, including provision of older persons’ housing and other specialist forms of accommodation”*

**Spatial Strategy for Growth comment**

Policy SP2 sets out the Council’s proposed Spatial Strategy and how this is to be delivered. Amongst other elements, the Policy identifies that the Plan will make provision for a minimum of 16,596 homes over the period between 2020 and 2038, equivalent to 922 homes per annum.

On 16th December 2020, the Government published the results of its new Standard Methodology (following the previous consultation version in August 2020). This new Standard Methodology sets a minimum annual requirement for Dacorum

of 1,023 dwellings per annum. Thakeham believes the Council must address the shortfall of 101 dwellings per year. Clearly, whilst the Council was not able to reflect this in the current consultation version of the Local Plan, future iterations will need to respond to this increased minimum requirement and ensure the Local Plan is preparing to meet these needs.

Accordingly, Policy SP2 must be updated to include a requirement for provision of a minimum of 18,414 homes over the Plan period. Additional allocations will therefore be required in order to deliver the 1,818 additional dwellings now required over the 18-year Plan period.

In updating the Spatial Strategy, and indeed the Plan as a whole, in order to meet these new housing requirements, it will be important to consider this holistically alongside the other forms of provision required to ensure that the Council's vision is met with the necessary supporting infrastructure delivered alongside the required homes and jobs.

We support the proposed Spatial Strategy which predicates that the focus of strategic growth and investment will be at the most sustainable locations. Hemel Hempstead will be a focus of growth, supported by growth at Berkhamsted and Tring. It will be equally important that the growth be allocated to the large villages of Bovingdon, Kings Langley and Markyate. Further, that any such growth be proportionate to the sustainability and size of these settlements with respect to the Spatial Strategy.

Whilst it is agreed that, when read as a whole, the Local Plan and its supporting evidence base make a clear and compelling case for the exceptional circumstances which justify the release of Green Belt in the Borough, it is considered that this could be more clearly expressed within the Local Plan itself. The inclusion of a specific section addressing this point in Section 5 of the Local Plan would aid the clarity of the Local Plan.

<b>Spatial Strategy for Growth comment</b>	<p>This document has been prepared by a working party convened by the Planning Committee of Berkhamsted Town Council to assess and reply to the consultation on the Regulation 18 Draft Local Plan issued in November 2020. The comments have been assembled by Councillors and residents to reflect the concerns of local citizens on these matters.</p> <p>We are conscious that the preparation of the Draft Plan by the Borough's Officers has been a mammoth task over many years. We commend their work which has drafted a coherent Plan that updates the multiplicity of documents that comprise the Policies set out by the Adopted Core Strategy of 2013. However, much that follows in this response and the reply to the questions posed will be at odds with the Draft Plan's intention that the Borough should meet the directive on the 'target' number of dwellings determined by the Ministry of Housing Communities and Local Government.</p> <p><b>Summary</b></p> <p>This Council is dismayed that the Draft Plan of 2020 provides for the excessive increases in the population and number of houses to be built over the Plan period 2020 -2038. We cannot agree to this as the projections by ONS do not support</p>

the increase planned for. Adopting the proposals in the Draft Plan results in substantial incursions into the Green Belt, including sites on the edges of Berkhamsted<sup>1</sup>, with adverse impact on parts of the AONB.

To restate much of our reply to the 2017 Reg18 ‘consultation’, future development of Berkhamsted should be consistent with the Core Strategy [2006 – 2031] adopted as recently as September 2013. The house building rates and the Green Belt releases around the market towns that were suggested in some options (*to the 2017 proposals*) are a significant departure from existing policies in the Core Strategy. Adopting an option that requires large Green Belt releases around the market towns would mean that the Settlement Hierarchy described in the Core Strategy will have been abandoned notwithstanding what is asserted in the Draft Plan. The Core Strategy must carry significant weight in the development of the Local Plan.

We note the Statement by the Minister of State Robert Jenrick of 16th December 2020 on the recent consultation (Changes to the Planning System Aug 2020) :

*“There were many consultation responses which did not fully recognise that the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for housing in an area. It is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It is crucial that planning is more certain and more transparent, so we will explore how we can make this clearer through our longer-term planning reforms, including considering the right name for this approach.*

1 The Draft Plan refers Berkhamsted with Northchurch

*There is widespread support for ensuring enough homes are built across England to ensure the needs of our communities are met. We heard clearly through the consultation that the building of these homes should not come at expense of harming our precious green spaces. We also heard views that this need can be better met in existing urban areas.”*

This conflicts with the proposed releases of Green Belt in the Draft Plan to meet the proposed allocation of housing, especially on the edge of the major settlements, across the Borough.

Moreover, in a letter from the Department of Communities and Local Government, dated June 2016, the then Minister of State for Housing and Planning, Brandon Lewis, states that:

*“. . . Green Belt boundaries should be adjusted only in exceptional circumstances, through the Local Plan process and **with the support of local people.**”*

The adoption of the Core Strategy, following the statutory consultation, with its commitment to the Settlement Hierarchy, would imply that large Green Belt releases around Market Towns do not have the support of local people.

In the same letter the Minister states:

*“We have been repeatedly clear that demand for housing alone will not change Green Belt boundaries”.*

***However, it is very clear from this consultation that the proposed Green Belt releases are driven entirely by the requirement to allow the development of more housing across the Borough.***

We note that the urban capacity of Hemel Hempstead has been revisited in light of recent statements from central government on the opportunity to increase building heights in suitable locations. We ask whether enough weight has been given to the prospective changes to town centres following the COVID19 crisis with many premises likely to be converted to include dwellings. A revised and increased urban capacity for the Borough's main centre would reduce the need to provide for more Green Belt releases.

The current household build rate per annum in Berkhamsted is nearly twice that targeted. At the current rate most of the estimated target capacity will have been deployed by 2020 (11 years ahead of target) while the rest of Dacorum lags behind target. Such disparities within Dacorum must be taken into account when assessing development numbers and site options going forward.

Infrastructure deficits are now evident across the Borough and only the provision of housing on large sites can deliver the necessary supporting infrastructure without detrimentally impacting on existing settlements. Notwithstanding, contributions from Developers' S106 and CIL will not meet the full cost of investment in local infrastructure: that will require new Government funding without which residents will continue to suffer the adverse effects of infrastructure deficits.

The blanket assumption that large-scale growth makes delivery of infrastructure easier is misplaced – it will depend on the site and the viability. In the Dacorum Strategic Infrastructure Study [Feb. 2011] this is clearly stated:

*“By contrast there are certain types of infrastructure that are more sensitive to the location of demand. Ideally, these types of infrastructure should be located close to the population that they are intended to serve as the extent of the area that they serve (in other words their “catchment”) is very local.”*

It is manifestly the case that the infrastructure of Berkhamsted is not fit for purpose in relation to current needs let alone any future housing development of the scale proposed by this Draft Plan.

We refer in particular to:

**Town Centre Junctions and congestion;** with only one crossing in the town centre, HCC transport studies are clear there is no scope for new roads or widening in central Berkhamsted. The traffic lights perform at 'over capacity' at busy periods.

**Water and Sewage capacity;** with the need to maintain the unique chalk streams in the area, the Environment Agency has capped abstraction from the local aquifer at current levels. The Sustainable Assessment identifies the need for additional capacity for the Borough as early as 2031.

**Medical and Social Care;** the Plan makes no provision for additional local GP services, nor for Social or Dementia Care in Berkhamsted. We recognize that these services are not the remit of the Planning Authority but adequate and sound Public Health provision must not fall between the cracks of HCC/CCG/PHE.

**Schools;** we note the potential provision of new Primary Schools, while a new 6FE Secondary School is posited on Site BK 06 in Northchurch. Capital Funding to build the school is unlikely to be sourced from a single development: additional revenue funding will be needed until its roll can attract funding to be sustainable. This must be identified in the IDP.

**Infrastructure Development Plan;** the Draft Plan references ‘Masterplans’ to guide development of major sites. Notable for their absence are proposals that link or integrate the sites with the host community viz roads/walking/cycling/footpaths together with prospective costs which must be included in the respective IDP.  
Comments on the Consultation Questions follow on the next pages.

<b>Spatial Strategy for Growth comment</b>	<p>With the proviso that this Council considers the Housing Growth numbers in the Plan is based on flawed assumptions, we note the text in Para 5.3 – 5.5 [P30] :</p> <p><i>“5.3 – The spatial strategy aims to deliver the significant uplift in growth in a sustainable way across the Borough, seeking out opportunities to regenerate Hemel Hempstead and to continue to act as a catalyst for its transformation. Elsewhere, we are looking to accommodate growth that supports the long term function of the towns and villages and that delivers sufficient growth to provide much needed investment in infrastructure. We know that we cannot accommodate all the growth within the urban area, so despite our approach to increasing densities and heights, we do need to release land in the Green Belt.</i></p> <p><i>5.4 – The strategy focuses growth in and around the most sustainable settlements in the Borough, principally Hemel Hempstead, Berkhamsted and Tring through utilising urban land as well as through extensions to each settlement. Hemel Hempstead’s growth will be focused through much greater urban intensification reflecting the wider availability of development opportunities and the sustainability of the town and access to services, facilities and employment. The expansion of the town will be focused to the north and east of the Hemel Hempstead, with further land removed from the Green Belt to meet longer term needs.</i></p> <p><i>5.5 – The Growth Strategy for Berkhamsted and Tring will also seek to maximise urban capacity but will not pursue an urban intensification strategy that detracts from the character of these locations. Instead growth will be accommodated</i></p>

*mainly through expansions to these settlements in a way that manages landscape and Green Belt impacts but also meets our aspirations for growth to be sustainably located close to passenger transport and other services, facilities and employment opportunities.”*

We acknowledge and welcome the statement “... but will not pursue an urban intensification strategy that detracts from the character of these locations.” However there have been many householder planning applications where greater densification has eroded former Character Area guidance hence becoming the new default.

The proposed release of Green Belt around Berkhamsted cannot be described as being ‘*sustainably located close to passenger transport and other services, facilities and employment opportunities*’.

**Policy SP2 – the strategic thrust of this policy (Spatial Strategy for Growth) is not supported** given that it is based on the contentious growth numbers.

We comment further at **5.A**

Policy SP2 – Spatial Strategy for Growth includes statement in 3 b.

*“b. – Berkhamsted will accommodate growth of at least 2,200 new homes. Development will enhance the town centre and strengthen its function as a key market town in the Borough and will provide significant new investment into sustainable transport initiatives, education, open space and sports facilities.”*

*The Adopted Core Strategy (2013-2036) para 6.2.8 identified capacity (not “need”) in Berkhamsted of 600. Only eight years later this statement indicates that Berkhamsted will have an additional 1600 homes imposed upon it.*

The Town Centre already suffers from congestion and suspect air quality, viz data for Lower Kings Road shows the level of NO<sub>2</sub> in some periods exceed the 40micrograms/cm<sup>3</sup> limit, albeit that the annual record does not show exceedances. In many respects at its current size and topography the Town has reached the limits of capacity as evidenced by traffic congestion, shortage of school places at primary and secondary levels, GP and associated services, sports facilities and in-town open space. We dispute that the substantial increase imposed on the Town will enhance the quality of life for residents current or future.

Nonetheless Council welcomes the sentiments of SP2. 4

*“4. – Development that does not fit with the scale, distribution or requirements of this policy will not be permitted.”*

We have qualified support for SP2.5 with its comment on Neighbourhood Plans: additional growth may not be compatible with community aspirations for their locality.
