APPENDIX C

HISTORICAL ORDNANCE SURVEY EXTRACTS
Hertfordshire
Published 1877 - 1878
Source map scale - 1:2,500

The national maps drawn were obtained from maps predominantly
of the 1850's, later with the larger areas of England and Scotland in the
1860's. In 1864, the 1:2,500 was adopted for mapping where areas and by 1896 it
covered the area of what were considered to be most culled parts of
Great Britain. The published date given below is the surveying year later than
the surveyed date. Before 1868, as OS maps were based on the Ordnance
Survey Projection, all subsequent surveys of a single county of Group of counties,
giving rise to significant misalignment in outlying areas.

Published 1878
Source map scale - 1:2,500

The historical maps shown were reproduced from maps painstakingly held at the scale adapted for England, Wales and Scotland in the 1840s. In 1854 the 1:2,500 scale was adopted by mapping urban areas and by 1896 it covered the whole of what were then considered to be the cultivated parts of Great Britain. The published date of this map is often some years later than the surveyed date. Before 1838, all OS maps were based on the Cassini Projection, with independent surveys at a single county or group of counties, giving rise to significant inaccuracies in boundary lines.

Published 1940 - 1947
Source map scale - 1:10,560

The historical maps were reproduced from 1:4,800 maps, predominately held at the scale needed for England, Wales and Scotland in 1942. In 1944 the 1:1,000 scale was adopted for mapping urban areas. These maps were used to create a 1:500 scale 1940 map published in 1945. The published maps were often made later than the surveyed date. Before 1938, all OS maps were surveyed to the 1:10,560 scale. The survey was updated in 1939 and the boundary survey of towns and cities was updated in 1938. After the war, government survey of urban areas and the Rural Survey of England and Wales, a series of maps of each county or group of counties (H/M) may be significant inaccuracies in new mapping. At the time (1940) a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear associated with 1:25,000 mapping. These maps were mostly overlapped with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The series continues until recently, with new editions appearing every 10 years or so by urban areas.

Large-Scale National Grid Data
Published 1993
Source map scale - 1:1,250

Large Scale National Grid Data superseded SIM cards (Ordnance Survey's Survey of Interim Mapping) in 1992, and continued to be produced until 1999. These maps were the first examples of digital mapping and so provide detailed information on house and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
